KHASSIA, a great tribe in Kumaon and Garhwal, who claim to be Rajpoots, but this is doubtful, and Rajpoots do not acknowledge the connection. In Kumaon the hill dialect is in the main Hindi, but has some curious grammatical affinities to the Bengali.—*Campbell*, p. 67.

KHASSIAT-US-SATIB, AR., HIND., PERS. *Eulophia virens*, *R Br*, *W Ic*.

KHASTA, HIND. See Khista.

KHAT, ARAB. *Catha edulis*.

KHAT, AR., PERS., HIND. A letter, Khat-i-sharif, a royal letter.

KHATA, a river near the town of Purneah.

KHATAI, HIND. Cathay, China.

KHATAI. Be-biang khatai is *Nepeta ruderalis*, Dedwar khatai is *Cedrus deodora*.

KHATAI, HIND. *Flacourtia sepium*.

KHATAK? a tribe in the Oomraoti district, 1,105 in number.

KHATAKAR, MAHR. A butcher.

KHATAN or Kossye, a river which passes near Midnapoor.

KHATAR, HIND. A sweetmeat.

KHATAW, HIND. of Pangi, &c. *Quercus semecarpifolia*, alpine oak.

KHAT BIRI, HIND. *Rumex vesicarius*.

KHATI-MAR, in Nagpur, the village blacksmith in Hindustan a wheel.

KHATIP, HIND. *Viburnum cotinifolium*.

KHAT KARWA, HIND. Morel.

KHATMANDU. At the foot the northern range, situated upon the eastern bank of a small river, called the Bishenmuttee, in lat. 27° 42' N., long 85° E., stands the city of Khatmandoo, the capital of Nepal. It is not the largest of the towns in the valley, but enjoys the eminence of a metropolis, because it is the residence of the rajah, or king, of Nepal. In length, Khatmandoo may measure about a mile, its breadth is inconsiderable, nowhere exceeding half and seldom extending beyond a quarter of a mile. The name, by which the town is distinguished in ancient books, is Goigoolputten. The Newari race call it Yindes, whilst among the Parbutia, or mountaineers, it is styled Kultipoo, an appellation which seems to proceed from the same source with Khatmandoo, and derived, it is believed, from its numerous wooden temples, which are among the most striking objects in the city. These edifices are not confined to the body of the town, but are scattered over its environs, particularly along the sides of a quadrangular tank, or reservoir of water. The houses are of brick and tile, with pitched or painted roofs. On the street-side, they have frequently enclosed wooden balconies of open carved-work, and of a singular fashion, the front piece, instead of rising perpendicularly, projecting in a sloping direction towards the eaves of the roof. They are of two, three, and four stories, and almost without a single exception are of a mean and poor appearance. The streets are exceedingly narrow, and very filthy. See India, Nepal.

KHATMI, HIND., or Buia gul khana, *Althæa rosea*, Hollyhock. The seed is considered cooling in medicine one tola is given. The corollæ and pericarps, when fresh are exceedingly mucilaginous and used in sherbets.—*Gen Med Top*, p. 143.

KHATMI KOCHAK, PERS. Is the small mallows. It grows in moist ground, and is useful when applied as a cataplasm to parts of the body stung by wasps or hornets.—*Ouseley's Travels*, Vol. I, p. 216.

KHATMI SAFAID, HIND. *Malva mauritiana*.

KHATNA, ARAB., HIND., PERS. Circumcision.

KHATON NIRURI, MALEAL. *Phyllanthus vitis idæa*.

KHATRAW, or Pindiau, HIND. of Sutley valley and Bassahi. *Picea webbiana*, or *Picea pindrow*, the silver fir.

KHATRI. Amongst the hindoo races the second pure tribe, the soldier and the sovereign caste. The Khatri of India, Chetrya or Kshetrya are a scattered race, a Khatri village is unknown. They, however,

monopolise the trade of the Punjab, of the greater part of Affghanistan and further to the west in Central Asia and even to St Petersburg. They are the only hindoos in Central Asia. In the Punjab they are almost the sole people who perform the scriptory work, and there they are the chief civil employés of government, and in the villages they keep the village accounts, act as bankers and buy and sell the grain. They are also the gurus of the Sikh sects, both Nunnak and Govind were Khatin, and the Sodhi and Bidhi of the present day are so. They do not usually engage in military pursuits, but the dewan Sawan Mull, governor of Multan, and his successor Mulraj, and very many of Kunjit Singh's chief functionaries were Khatin. It is said that a Khatin was dewan of Badakhshan or Kunduz. Under the Affghans, a Khatin was governor of Peshawar, and Akbar's famous minister Tudar Mull was a Khatin. Joti Palsad, the Agia contractor, was a Khatin. The Khatin claim to be descendants of the old Khetriya, written also Chetriya and Kshetriya. They are hindoos, none have ever become mahomedans, and few have become Sikhs. The Khatin of northern India are a very fine, fair, handsome race. Those of the western part of Peninsula India, about Bombay, are equally fair. In Bombay and the adjoining districts, they are part of the writer class, whom Europeans style Purbhis, and the Rai or Roin of northern India are said to be Khatin. In Affghanistan they are petty traders and shop-keepers, many of them in the Punjab hold land and cultivate. The Kukka, a handsome race on the east of the Jhelum, are said to have been Khatin, originally and of the Gaddi, an interesting race of fine patriarchal looking-shepherds in the interior of the Kangra hills, the most are Khatin. In Behar is an agricultural class, called Kshatrin, Khatin or Chatin, who sometimes serve as soldiers or as the darwan or door-keepers in Calcutta. In Loodianah there is a large number of thriving merchants of the Khatin race with a numerous colony of Kashmir shawl-weavers. Multani, is a term applied to several trading classes in the north-west of India, wandering pathan merchants and others—*Campbell*, pp 109, 112. See Kshatriya, Hindoo.

KHATRI, MAHR A caste who are silk-weavers.

KHATTA, HIND Sour, the acid lime or citron, *Citrus medica*.

KHATTAK, a tribe lying between Attock and Peshawar. The chief town is Akorrah.

KHATTA MITHA, HIND Oxalis corniculata.

KHATTAN, HIND *Bombax pentandrum*.

KHATTI KAN, HIND. *Rumex acutus*; *Khatti mal, HIND*, *Rumex hastatus*, *Khatti tan, HIND* *Rumex vesicarius*.

KHATVAM, SANS. *THE* The Sanscrit words Khatin and Khatti, mean a cot, but Khatta is said to be *Lapocenis* (*Andropogon*) *scirata*, also a fragrant grass, which is likewise the meaning of another syn *Katuka* *valli*.

KHATUN, TURK A lady. See *Khanum*. **KHIAU, HIND** *Olea europæa*, also, a species of *Allium*.

KHIAUN, HIND A grass, *Panicum maximum*, of Lahoie.

KHIAUI, HIND *Andropogon inarancusa*.

KHIOR, a territory south-east of Ladak and eastward of the Byltre. Its people are supposed to be the Chauramani Seythæ of Ptolemy.

KHIAVEY, TURK *Coffea arabica*, *Linn* Coffee.

KHAWA, HIND A pass in the Salt Range, scarcely frequented, yet may be considered the most practicable. Timur crossed it on his march into Hindustan.

KHAWAK, a pass in the Hindu-Koosh, in lat 35° 38', long 70°. About fifteen miles long. The crest is 13,200 feet. The ascent on north side is an uniformly inclined plane.

KHAWAN, or Khowan, HIND of Trans-Indus, *Olea europæa*, *O ferruginea*, *O cuspidata*. The olive.

KHAWAN, see *Luristan*.

KHAWE, HIND *Mulgedium tataricum*.

KHAWI, or Khavi, HIND *Cymbopogon inarancusa*, sometimes applied to *Anatherium muricatum*.

KAWID, or Khavid, HIND, PERS Green wheat, cut for fodder, &c.

KHA-YAN-KA-YOE, BURM *Aglaia rohituka*.

KHAY-PALU, see *Maryul* of India.

KHAZERIJ, or Khezerj, is a very ancient Arab tribe, and was in possession of Medina when Mahomed fled thence. Abu Osaibi was of this tribe. The Rubina, once the most celebrated tribe in Arabia, is now a small broken clan. The Anizeh Arab come of this race.—*Rich's Residence in Koordistan*, Vol II, p 258.

KHAZYA STRICTA, DeC Is the Sewur or Sihar of SIND.

KHEALIG, see *Kunawar*.

KHECHARA, SANS From *kha*, the sky, and *chara*, going.

KHEDA ? an enclosure for capturing wild elephants. See *Kraal*.

KHEE, HIND Kotahia land broken upon the steep slopes of hills.

KHEEL, the non pillar of the Pandu race mentioned in the poems of Chund. A

same name, and Khodadad Khan half-brother of the late chief. The list was recognised by the British government as khim of Khelat, and the payment of the subsidy of Rupees 50,000, under the treaty of 1854, which had been suspended during the disturbances in the country, has been revived. In 1863, a convention (No xviii) was made with Khodadad Khan, by which he engaged to secure the protection of the Mekran telegraph within the territories of his feudatory chiefs in consideration of a subsidy of Rupees 5,000 a year, to be paid to the chiefs, and authorized the British government, to make their own arrangements for subsidizing his feudatories. During the revolution in Khelat, this convention was declared to be in abeyance — *Treaties, Engagements and Sunnuds, Vol vii, pp 70, 73, 74*. See Kalat, Kelat, Baluchistan.

KHELBENAH, HEBREW Galbanum

KHEL, a boat in use in Assam. Its roof is covered with the leaves of the *Livistona Jenkinsiana* palm. *Summond's Diet*

KHELI, HIND *Dioscorea deltoidea*

KHELMA, see Kuki

KHEM, see Ken

KHENGAR, the most celebrated man of the Yadu line in Samashtra, was the personal opponent and rival of the celebrated Sidhraj for the hand of the Deoria princess Mandhika, though a proper name, is also titulu, viz, Lord of the Region, this and Khengar are the two names best preserved by tradition, and to one or other many things at Joonar-gulh-Gunai are attributed. Khengar is the name of the prince who erected the palace there — *Tod's Travels, p 511*

KHENTA, of the Veudidad, the modern Candahar

KHENTI, HIND *Indigofera heterantha*, Dng-Kenti, HIND of Kighan, is a species of *Indigofera*, and the I arboria, a shrub growing to 7 000 feet in the Panjab Himalaya, is also called Kanthi

KHEORA, HIND *Pandanus odoratissimus*

KHEP, HIND *Crotalaria bulhira*

KHER in lat 18° 59', long 76° 4'6, in the Dekhan, on the right bank of the Godavari. The mean height of the village is 1,293 feet, level of the Godavari is 1,245 feet. It is also known as Ganga-Khar and Khan. It is enclosed by a strong wall and was a place of importance until the middle of the nineteenth century, when it was plundered by Rohillas — *Cullen*

KHERABA or Kheroa HIND *Cotoneaster obtusa*

KHERBEK. or Kumbek-Aswad, APAB Kheibek shah, PERS, *Helleborus niger*, black hellebore

KHERCHI, an important branch of the Chohan Rajpoot

KHERD'HUR The land of Kher, also called Kheraloo, but more properly Kherala, 'the abode of Kher,' the Kher being a shrub of great utility in these regions. It is a remote part of Rajputana, in which the Rahtor Rajpoots first established themselves, expelling the Gohil tribe. Kherd'hur is named, in all probability, from the superabundant tree of the desert termed kher, and d'hur, 'land.' Its astringent pods, similar in appearance to those of the libanum, are used in food. Its gum is collected as an article of trade, the camels browse upon its twigs, and the wood makes then huts — *Tod's Rajasthan, Vol ii, p 303*

KHERI, HIND A kind of iron

KHERIAH, an aboriginal tribe settled on the plateau of Chota Nagpur. The Kheriah build substantial, comfortable, houses. They say that their first settlement was Poia, a village on the Koel river. Their language, customs and appearance is sufficiently approximate to those of the Mundah as to evidence a consanguinity, and they are regarded as an offshoot of the Santal or Ho race. They worship their river, the Koel, with rites similar to those with which the Santal or Ho adore the Damuda. The Kheriahs, Bendkui, Buhore and Buhari are described as regularly wild inhabitants of the hills and jungles who have no fixed villages, but move about from place to place, burning down the jungles, sowing in the ashes, and after the harvest, moving elsewhere — *Dalton, p 155, Campbell, p 36, W W Hunter*

KHERKHAH, a river in Khuzistan

KHERNIA, BENG *Phaseolus mungo*, *Linn*, Kidney bean

KHEROYA, *Phaseolus mungo*

KHERSON, the road from Nicolneff, towards Kherison, is excellent. The views around are all steppe, it holds the remains of the great Howard, the friend of the captive and the miserable. It is a very considerable town, on the right bank of the Dnieper, the ancient Boiystenes. It owes its existence to prince Potemkin — *Porter's Travels, Vol i, p 16*

KHERTIK, AR, also Kheibek and Kumbek-ul-aswad, AR *Helleborus niger*

KHESAREE, BENG *Cluckling vetch*, *Lathyrus sativus*

KHET, HIND A field

KHETI-BARI, also Khet-kain, HIND Agriculture

KHET-PAPRA, BENG Indian madder or five-leaved Mollugo, *Mollugo pentaphylla*, also *Hedyotis buxmaniana*

KHETRANI, the occupants of Balkhan, a mountainous district to the north of Beluchistan.

KHETRI, see Khatī, Kshetīya, Suva.

KHEW SINDI *Bignonia undulata*, *Rorb*

KHETTRU-PUTPUTEE, BENG In-
dian madder or five-leaved Mollugo, *Mollugo*
pentaphylla, also *Hedyotis burmaniana*

KHEZAIL, a powerful and warlike tribe
inhabiting the banks as far as the large vil-
lage of Semavah, on the Enphites, where
the women are proverbial throughout the
country for beauty of feature, and perfect
symmetry of form — *Mignan's Travels*, p 194

KHICHAR, HIND *Lyrium ruthenicum*

KHICHIRA, also Khichu, HIND A mixed
food of rice and dholi

KHICHIUR, see Sanatania

KHIDR, see KHIZI, Khajah Khizi

KHIDMATGAR, PERS, HIND A ser-
vant, a lacquey, a personal attendant

KHIDMATI, HIND A sweeper, an at-
tendant of a mosque

KHIKIURI, HIND *Zizyphus jujuba*

KHILAF-I-BALKI, PERS *Leila-o-Maj-*
nun, HIND *Sals babylonica*

KHILA HARIVANSA PARVA, a mo-
dern supplement to the Mahabharata, con-
taining legends about Krishna

KHILAT, PERS A robe or dress of honor
bestowed by rulers in Southern Asia, on ser-
vants whom they desire to honor. It usually
consists of a set of shawls and pieces of silk,
kimkhab, &c, presented as a mark of honor,
but it may be any article of dress pre-
sented by the ruling or superior power as a
mark of distinction

KHILJI Lieut Leech, in his valuable
vocabulary of the languages west of the Indus,
advances the opinion that the Affghans were
originally a Turkish or Moghul nation, but
that, at present, they are a mixed race, con-
sisting of the inhabitants of Ghaur, the Tur-
kish tribe of Khilji, and the Perso-Indian
tribes dwelling between the eastern branches
of the Hindoo Knsh and the upper parts of
the Indus. But though the Khilji are Turk,
by descent, they had been so long settled
among the Affghans that they had almost
become identified with that people, but they
probably mixed more with other nations, or
at least with their Turki brethren, and would
be more civilised than the generality of
Affghan mountaineers. The Khilji, or Khajji,
however, are a Tartar tribe, part of which, in
the tenth century, was still near the source of
the Jaxartes, but of which a portion had even
then been long settled between Seistan and
India (i.e., in the Affghan country). In the
tenth century they still spoke Turki. They
seem very early to have been closely con-
nected with the Affghan, with whom their

name is almost invariably associated — *Pro-*
ceedings of the Bombay Geographical
Society for 1838, *De Guignes, Vol III*,
p 9, Note, D'Herbelot, article "Khaladj,"
Ibn Haukal, pp 207, 209, *Elphinstone's*
History of India, Vol I, pp 528-29, Vol II,
p 26

KHILLU, HIND of Muzaffargarh, the pith
inside the flower stalks of *Saccharum moouja*,
eaten as a diet

KHIVOR, HIND *Viburnum cotinifolium*

KHIND-RRAY SHAIL, a mohurium
fuquer

KHINIE, a Chinese who travelled in
India. There was much intercourse between
the buddhists of India and China, for some
centuries after the introduction of buddhism
into China, but in the 10th century, after A.D.
975, the religious visitors from China became
greatly more numerous. Chinese pilgrims
passed years in India in studying their
religion and wrote narratives of their travels.
Of these, there have been published the
travels of Fa Hian A.D. 399-414, of Hi-
wen Thsang A.D. 628-645, of Hsueh Shih
who set out A.D. 518. A later traveller Khin-
Nie, who journeyed A.D. 964-976, was sent
by the emperor of China at the head of 300
monks to seek relics of Buddha and to collect
books of palm. These pilgrimages continue,
and Col Yule had met pilgrims at Haidwar,
who had crossed the Himalaya from Mahachin
to visit the holy plains at Jawala Mukhi in
the Panjab — *Yule Cathay, Vol I, p XXII,*
Vol II, p 411

KHINJAK, HIND *Pistacia terebinthus*

KHI-OUT-CHI-U-HI KAI-TSI-KIO, see
Kibul

KHIOU PING In China, the first civil and
military mandarins who distinguish them-
selves in the administration or in war, receive
the titles of *houng, leon, phy, tze, and nan*.
All the officers, civil and military, of the
Chinese empire, are divided into nine orders.
The Khiou-ping, distinguished one from the
other by certain buttons, or rather balls,
of the size of a pigeon's egg, which are worn
above the official cap. This distinctive ball
is of plain red coral for the first order, of
carved coral for the second, of a transparent
deep blue stone for the third, of pale blue for
the fourth, crystal for the fifth, of some
opaque white stone for the sixth, and for the
seventh, eighth, and ninth, of gilt and wrought
copper. Every order is subdivided into two
classes, the one active and official, the other
super-numerary, but this makes no difference
in the balls. All the official personages com-
prised in these nine orders, are designated by
the generic term of *houang-fou*. The term
mandarin is unknown to the Chinese, it was

KHISMIS, PERS, HIND Seedless musus

KHISHNIZ, HIND? Comidium siti-
um

KHISIT and Komatei, in the 14th
century, held a higher rank than at present,
although the inhabitants have, probably,
retained their character unaltered. Hamdal-
lam Mastowfi describes them as two cities
or towns situate in the midst of the moun-
tainous region of the Gurmum or wum
country they have running streams and
produce date-trees and corn, watered both
naturally and by rain, the men are thieves
and highway robbers, expert in the use of
arms—*Ouseley's Travels, Vol 1 p 269*

KHISTA, HIND Pinus amurensis

KHITAT, see Ken

KHITAI is the name by which China is
styled to this day by all or nearly all, the
nations which know it from an inland point
of view, including the Russians, the Persians
and the nations of Turkestan, and yet it
originally belonged to a people who were not
Chinese at all. The people of Khitu were
a Manchurian who inhabited for centuries, a
country to the north-east of China, lying
east of the Khingan mountains and north of
the river Sui, and whose allegiance was
rendered alternately to the khakans of the
Türk and the emperors of China. In the
beginning of the tenth century the chief of
one of their tribes made himself supreme,
first over his own entire race, and then suc-
cessively over the adjoining nations of Asia
from the sea of Corai to the Altai. The son
of this conqueror having assisted to place
on the throne Kao-tsu of the brief dynasty of
the later Tsin, this prince in return not
only transferred to the Tsin a large tract
of northern China, but agreed to pay him
yearly tribute, and to acknowledge his supre-
macy. The next Chinese sovereign kicking
against these degradations, the Khitai rebelled
overran all the provinces north of the Yellow
River, and established his own empire within
them, under the name of Liao or the Lion
Dynasty. This Khitai empire subsisted for
two centuries in northern China and the ad-
joining regions of Tartary—*Yule, Cathay,*
Vol 1, p 116

KHITMI, PERS Malva sylvestris

KHIU, SINDI. Bignonia undulata

KHIVA The khannate of Khiva comprises
a vast region along the Caspian from Persia,
north to the Kughistanai country and east to
the Oxus and the lake Aial. It has only, ac-
cording to Burnes, a population not exceeding
two hundred thousand inhabitants. He de-
scribes them as organized bandits, and, accord-
ing to other authors, they are not generally
better than predatory savages. It is agricul-
tural where the ground is sufficiently fertile
for cultivation. There are few horned cattle.
sheep, goats and horses are numerous, and all
these are used as and considered the chief,
food of the inhabitants. There are few
manufactures except some coarse cotton and
silk stuffs, made by the women. The inhabi-
tants of Khiva, including the Turkoman, are,
however, estimated by M. Moravief at three
hundred thousand of these, thirty thousand
are Usbek, lords of the soil by right of
conquest. Khiva, amongst orientals is gener-
ally known by the name of its principal city
Haughum, i. e., Hui Gungo (signifying the
town or place of the Hui) it was so named
by Timur Lang (Tamerlane), either from the
brandy of the place, or of the women, and the
Great Desert, Sahara, or plain of Central
Asia, is usually called by them the Dhasht, or
plain, of Kaptchak. M. Moravief describes
Khiva as a rich oasis watered by irrigation
from the Amu, or Oxus, on which it is situated,
and productive. He estimates its length and
width at more than one hundred miles, says
that it contains five considerable towns and
many villages, and that three hundred thousand
persons acknowledge the khan of Khiva as
their sovereign. From its centre to the banks
of the Caspian extends a vast and mid steppe,
three hundred miles in extent which is passed
by camels in seventeen days. On the north,
it is bounded by the course of the Amu, on
the south-east a steppe separates it from the
kingdom of Bokhara, and on the south-west it
is separated by sandy plains and steppes from
Teke, which he adds is an oasis refreshed by
watercourses swollen by the rain. The lati-
tude of the town of Khiva is forty-one degrees,
forty minutes, and its longitude, from the
Islands of Ferro, seventy-eight degrees, ten
minutes. The desert between Khiva and
Meiv, is a broken and irregular surface of
deep sand with a small growth of brush-wood
affording excellent fuel, and the thorny herb
which the camel loves.

The Hayat families tributary to Khiva,
were 195,000, viz

Yamut...	15,000	Kazzak	40,000
Goklan.	20,000	Ihdn	15,000
Chosdm	2,000	Saiokh	15,000
Kalpuk	30,000	Uzbek	40,000

The Chosdm are said to have been brought

from the further borders of the Oxus by Mahomed Rahim Khan. The people of Khizir are estimated at 300,000, of whom are 30,000 Uzbek, 100,000 Sait, or Sait and 100,000 Kina kalpak, south of lake Aral, the remainder are Turkoman a few Kughiz and Tajik—*Maikhams's Embassy*, pp 116-117, *Fraser, Ferrier, Dr Wolff's Bokhara*, Vol II, p 121, *Vigne's personal Narrative*, pp 401 and 463, *Bjornstjerna's British Empire in the East*, p 214, *Moravief Travels in Turkomania*. See Khairism.

KHIYAR, HIND *Cucumis sativus*

KHIYAR or Shambai, HIND *Cathartocarpus fistula*

KHIZA, HIND *Phelipæa calotropidis*, *Habat-ul khizir*, is the *Rhus acuminata*

KHIZR. The Hebrew notions about the identity of Phineas and Elias have been adopted and expanded by the mahomedans, who also identify in some way with them, then mysterious prophet Khidr or Khizir. Hermitages or chapels dedicated to Khidr and Elias appear to have been very numerous in mahomedan countries, especially on hill-tops. And the oriental christians and semi-christians also always associate Elias with mountain tops. There seems to be scarcely a prominent peak in the Greek Archipelago with which the name of Elias is not connected. Throughout India, Khizir is a popular mahomedan saint who was, it is said, a servant of Moses, a great prophet, also Phineas, Elijah. The people of Bengal launch boats on the Ganges in his name. He is supposed to be immortal, having on one occasion, drank of the waters of immortality, said to be situated in regions of darkness in a remote corner of the world, and some identify him with Enoch, some with Elijah. He is supposed to perambulate the world, like the wandering Jew, and has occasionally appeared to different people. He is always clad in green, is his name in Arabic indicates. The government of Kassar terminates, and that of Sulmania in Kurdistan commences at the river Leilan. Near this is a small building, a shrine or place of pilgrimage, called the Mahan of Kidder Elias, or resting place of the prophet Elias. The mahomedans believe that Elijah never died, and that he is still on earth, where he is to remain until the coming of Jesus Christ. They call him Khizir, or ever-green on account of the everlasting life which he enjoys, and by which he is kept ever in a flourishing condition, in a paradise which, say they, might be taken for heaven itself. In reference to this Turkish poet observes "keep yourselves from believing that this world is your home, your home is in heaven alone, strive therefore

by the means of virtue to reach that home where Elias dwells, and where a place is prepared for you." These notions of the mahomedans are derived from the Jews. Jesus himself was taken for Elias, re-appearing after nine centuries of concealment. The prophecy that Elijah should come before the great and terrible day of the Lord, has probably given rise to the notion, that he had not yet completed his part on earth. In northern India, on the Fridays of the month Shaban, along the banks of the Jumna and Ganges, mahomedan women launch tiny boats on the rivers in his name—*Ibn Batuta*, *Bruton's Scinde*, Vol II, p 249, *Rich's Residence in Koordistan*, Vol I, p 52, *Yule's Cathay*. See Khajir Khizir.

KHIZRABAD, see Lat

KHNENTA. The eighth settlement of the Arian was in Khnenta, where Velikana is situated. According to Haug, by this country, Kandahar is to be understood. Velikana cannot be Hyrcania, as is generally supposed, but is the city now called Uighandab, situated in Kandahar. The curse of Ahurman was pæderastism, a vice known historically to be un-Arian and Turanian.

KHO, is a population of about 400,000 people occupying the delta of the Mekhong, in Kamboja, between Siam and Cochinchina. The remaining 100,000 of the population being Chinese, Cochinchinese, Siamese, Malays, Portuguese and mixed races. See Kambogia.

KHOGILU. According to the *Jahru Numa*, one of the earlier divisions of the province of Fars, was into the five circles or departments called Kureh, and named Istakhr, Darabjird, Shapur, Aidashu and Kobad. At present, it consists of three principal parts, viz, 1, Fars proper (Persia Proper), 2, Laristan near the Persian Gulf, and 3, Belbehru, or the country of the Khogilu, which represents the Kureh of Kobad. Belbehan is bounded on the north by the great belt of mountains which separate Irak Ajem from the southern provinces of Persia. The northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the K'ib country lie to the west while

Shahistan separates Behbahan on the east from the direct dependencies of Fais. On the east and south-east Behbahan is surrounded by the Mamaseu tribe, on the north and north-west by the Bakhtiyari, and on the west and south by the Karb'Arab. Also, the mountainous region to the north and north-east of the plain of Behbahan is occupied by the Khogilu tribes,—and the districts of Luran and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbahan. On leaving the country of the Mamaseu, we enter the territory of the Khogilu, a tribe as wild and as lawless as their neighbours to the east, and as the Bakhtiyari clans who occupy the mountainous tracts to the west. The Khogilu, together with the two above mentioned tribes, belong to the great family of the Lur, and speak a rude jargon of the Persian language, or, more probably, the corrupted old tongue of Fais—the Farsi Kadim. The other great divisions are the Lek and Kurd. The origin of these three tribes has never yet been satisfactorily ascertained. They are neither of the Arab nor of Turkish descent, and may therefore be looked upon as the aborigines, or at least the oldest settlers of Iran. They seem always to have occupied the hilly country, which runs from the south-east to the north-west of Persia, and served to constitute the kernel of the Zend race. The different dialects spoken by these mountaineers are said to contain a number of words of the old Zend language, and up to the present day there is a clan among the Lek, which bears the name of Zend, and gave, in the last century, a ruler to Persia, in the person of Kerim-khan, Vakil. The Poles, whose true name is Lakh, are said to have descended into the plains from the Caucasus mountains, together with the Chekh, inhabitants of Bohemia. All these tribes are spread over the mountainous range and the intervening valleys, on the southern face of the great chain, which stretches from Hamadan and Zohab, towards Fais, from north-west to south-east. As to their external appearance De Bode met with fewer tall men among the Khogilu than among the Mamaseu, but they are a very hardy race, and undoubtedly owe much of their vigour and muscular frame to their active pursuits, the simplicity of their diet, and the bracing air which they inhale in their mountain fastnesses. Their chief occupation consists in tending their flocks of sheep and goats, and they resemble in this respect, all the wandering tribes of Persia. Their usual food is the acorn, which is first bruised between two stones, and made into

flour, by being dried in the sun. The women bake cakes of this flour. Independently of the Khogilu, there are several other tribes, who inhabit these mountains, such as the Jarumi, the Yusufi, and upwards of a thousand families occupying the plain of Behbahan, and settled in villages or dispersed in tents. These are the Juma-Buzurg, the Afshar, and some Arab settlers. The names of the Turkish tribes are, the Karabagh, Agbaghi, Begdeli, Golebi, and Sheni, speaking the Turkish language, while the Afshar, although of the same origin, have forgotten their mother-tongue. The Doreti, Ghesti, Mayar-kuli, Barash, Milosi, and Juleki, are of the Lur race, and speak the Lurish dialect.—*Baron C. A. DeBode's Travels in Luristan and Arabistan*, pp. 275–284.

KHOHAH, HIND Milk boiled till reduced to one-fifth its bulk and quite thick.

KHOIBU, a rude tribe near the source of the Liawadi.

KHOIRA, URIA? *Acacia catechu*?

KHOIT, see Kalka.

KHOJ, HIND, literally, information, a system of tracking criminals to their homes and haunts. It rests in India solely on the responsibility of village headmen for the good behaviour of their charge. The men who meet the responsibility also enjoy certain privileges.—*Calcutta Review* No. lxxiii, Sept. 1861, p. 11.

KHOJA, a tribe of mohamedans in Sind, Guzerat and Western India, said to be converts from the Bhatyn, a hindoo tribe of Cutch. The Khojah profess the sunni, but some the Ismaili doctrines of the shiah, persuasion. See Khujah.

KHOJEIN, see Klumma.

KHOJEND. At or near Khojend is a turquoise mine, but the stones found there are of a greenish hue, and far less esteemed than those of Nishapur, in Khorasan. There is another of very insignificant note somewhere in Kerman. These mines, yield all the fine turquoise in the world.—*Fraser's Journey into Khorasan*, p. 105.

KHOKHAN, HIND *Allium inbellum*.

KHOKAR, HIND *Salvadora oleoides*, also its dried berries.

KHOLANGA, AR *Galaugai*.

KHOLASSAT UL AKHBAR, see Khondemni, Vathek.

KHOLENSTOFF, GER Charcoal.

KHOLLUM DEEMISH, see Kush.

KHOMAN RASA, a hindi work, descriptive of the last sack of Chetore.

KHOMASEE, a particular kind of magic square.

KHOMIYE, HIND *Macrotomia euehroma*.

KHONAR, see Jelalabad, Kaffi.

KHOND, see Kond

KHOND EMIR, the son of Minkhond, composed the *Khalasat ul Akhbar*. Khond Emu's second and larger chronicle was the *Habib-us-Siyar* or *Friend of Travels* — *Ouseley's Travels*, Vol II, p 400. See Kondemir.

KHONG, a name of certain Kumbojan tribes, see Ka

KHONGANI, see Affghan

KHONG-BONG, a musical instrument of the Siamese, composed of a semi-circle of suspended tongues

KHONG-JAI, or Ku-ki, until lately, occupied the hills to the south of the Koupoee, whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Looser, and other tribes, better armed than they were, and of the same gens as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khong-ju themselves, and the Khong-jai are now scattered around the valley of Mumpore, and thence through the hills to north and south Cachar. Thus they broke into distinct tribes, although occupants of the hills to the south of the valley of Mumpore their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the north. The salique law rigorously prevails amongst the Khong-jai, but the influence of woman is great amongst them.

The Kuki country lies to the south of the Garo, Kasia and Mikir areas, on the hill ranges of Garo, Jaintia and Cachar in Sylhet, Tipperah and Chittagong—among the mountains to the north-east of the Chittagong province. There are new Kuki who came from the inner parts of Tipperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Manipuri dialects and the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes,—the Thadou, the Shingshion, the Chungsen and the Lumgum, were driven into north and south Cachar and into Manipur, from their locations by the Lushai people who speak a Kuki dialect but dwell further south. They were driven back by Colonel Lister and his Sylhet light Infantry. He entertained the new Kuki as soldiers, and they formed good outpost soldiers on the frontiers of both the Lushai and the Angami countries. Puthen is their chief deity, he is benevolent and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and divine, is not hereditary, and his

office is not coveted from fear of the initiatory rites. The Kuki occupy Sylhet, Tipperah and Chittagong, with an offset in Cachar who are called the Old Kuki. Those in Cachar are skilful in the cultivation and weaving of cotton. The Cachar Old Kuki are under 4 000 and are arranged into three divisions, the Rhangkul, the Khelma and the Betch. The Kuki are also called Laughta. They are little civilized, are of an active, muscular make, but not tall. The tradition of the Kuki respecting their origin is, that they and the Mug, are the offspring of the same progenitor, who had two sons by different mothers. The Mug, they say, are the descendants of the elder, and the Kuki of the younger son. The mother of the younger having died during his infancy, he was neglected by his step-mother, who, while she clothed her own son allowed him to go naked. According to Coleman, (p 234,) the Kuki are divided into a number of distinct tribes, totally independent of each other. The rajaships, he says are hereditary and the rajahs by way of distinction, wear a small slip of black cloth round their loins, and, as a father-mark of superior rank, they have their hair brought forward and tied in a bunch, so as to overshadow the forehead, while the rest of the Kuki leave their hair hanging loose over the shoulders. The Kuki arm with bows and arrows, spears, clubs, and the dah, or hand-hatchet, resembling the knife of the Nani on the Malabar Coast, and a most destructive weapon in close combat. They also wear round their necks large strings of a particular kind of shell found in their hills, about their loins, and on their thighs, immediately above the knee, they tie large bunches of long goat's hair of a red colour, and on their arms they have broad rings of ivory, in order to make them appear the more terrific to their enemies. The Kuki are vindictive, blood must always be shed for blood. They have but one wife, but they may, however, keep as many concubines as they please. Adultery may be punished with instant death by either of the injured parties, if the guilty be caught by them in the fact. The Kuki on the eastern frontier, the people are an entirely different race from the Kuki of the Chittagong jungles. The name by which they are commonly known is "Tipperah". In physiognomy some of them are like the Manipuri, but the greater part bear more resemblance to the Khasia tribes having strongly marked Calmuk, or Mongolian features, with flat faces and thick lips, not in general shorter in stature than Bengali, but far more muscular and strongly made. Many of them, with complexions scarcely darker than a swarthy

European The villages contain perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. The Kuki race of Assam were much addicted to make incursions on the plains, not for plunder, but to procure heads, and they have been known to carry off fifty heads in a night. On the death of a chief, the body is smoke dried and kept for two months with the family. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill, hold feasting and dancing and, after cutting the head into pieces, send a portion to each village. This is considered in the light of a sacrifice to the manes of the deceased. In the spring of 1871, they made several incursions into Assam, for the purpose, as was alleged, of obtaining heads for the manes of a chief's daughter.

The Looshai dwell on the southern frontier of Cachar. In 1848-49, they drove up the Kuki, from the south, into Cachar. In their turn, they are being pressed up into Cachar, by the Poi, a tribe who are advancing from the south-east. The Looshai inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of Chatter Chooia hill, and east of hill Tipperah to the Tepai river, is Burmese frontier.

Dr Latham says, Khum means a village, Khumia, a village. The Khumia and Kuki tribes occupy the hills of Sylhet, Tipperah and Chittagong, the Khumia on the skirts and the Kuki on the top of the hills, the Kuki are the ruder or more pagan, though also tinged with hinduism. They term their supreme being, Khojem Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq, is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war, or of animals of the chase.

If a Kuki man die at night his body is burned in the morning. Vegetables and rice are placed on the spot where the body was burned, and the relatives of the deceased address the ashes of the consumed corpse thus, "We bid you farewell to-day, whatever money and rice you have acquired, leave with us." On the following day friends resort to the deceased man's house, and offer up a sacrifice of a fowl to the gods Tevae and Sangion. Liquor is freely partaken of, the good qualities of the deceased are recited, and much lamentation is made. When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the

left side of the corpse with a gourd or bottle of liquor. Amongst the Beli clan of Kuki, soon after death the corpse is washed with warm water, and covered up with a cloth. The principal deities worshipped are the Tevae and Saugron, to them fowls, pigs and spirituous liquor, are offered, in sacrifice, on all occasions of sickness, famine, or other affliction which they conceive is the surest method of averting evil and bringing their wishes and undertakings to a successful termination. The Kuki have no images or temples of any kind. The object of the Kuki incursions on the plains is not plunder, for which they have never been known to show any desire, but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajahs that their incursions occur. The Kuki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence. Nothing comes amiss to a Kuki—the elephant, rhinoceros, and beef, being equal delicacies. The new Kuki clans are presided over by rajahs and muntrees, who decide all matters of dispute brought before them, and in such respect do they hold their rajahs that their word is law. One, among all the rajahs of each class, is chosen to be the Prudham or chief rajah of that clan. The dignity is not hereditary, as is the case with the minor rajahship, but is enjoyed by each rajah of the clan in rotation. The Kuki smoke dry the dead bodies of the rajahs. After the death of a rajah his body is kept in this state for two months before burial, in order that his family and clan may still have the satisfaction of having him before them. Should a rajah fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancing, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kuki rajah by the Nimzai Naga race. This is considered in the light of sacrifice to appease the manes of the deceased chief.

The Kuki cultivate rice and cotton, but in a manner quite opposed to the system pursued by the Cachareo and Naga, the former of whom raise three crops of rice from the same land, and the latter four. The crop is not cut till November, whereas that of the other hill tribes is cut in August and September, their cotton is also very fine. Besides this they grow tobacco, and all the usual

vegetables met with in the hills. The men are powerful and hardy but turbulently inclined. Having been accustomed to war in their own country, they are exceedingly well suited for soldiers, and those that have been enrolled in the Kuki levy at Silchar have turned out well. They are also particularly modest and decent, each man living with his family in a separate house. The widows also live in houses of their own (in this respect like the Naga and Cacharee), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. Underneath this they wear nothing, the whole body being bare, in which they consider there exists no want of modesty, as such has been their custom from time immemorial. The women wear a short striped petticoat, reaching from the upper part of the stomach half way down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a similar cloth to the petticoat wound round the bosom underneath the armpits. They wear their hair prettily plaited at the back, the two ends being brought round in front and tied just above the forehead in the form of a coronet. Like all hill people, the Kukis are dirty in their habits, very seldom washing their bodies. The sites of the Kuki villages are well chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between three and four feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.—*Butler's Travels and Adventures in Assam*, pp 85, 99, *J. H. Reynold's Embassy, Vol of 1864, of B. A. S. J., Aitchison, Latham, McCulloch's Records, Government of India, Financial Department*, pp 42, 58.

KHOONGHO? A tree of Akyap, which grows to a large size, and is plentiful in the Sandoway district. The wood is used for making oars for boats, and sometimes in house-building.—*Cal Cat Er* 1862

KHOORD CABUL, a very formidable defile or pass about five miles long, shut in by lofty hills, between whose precipitous sides the sun, in winter, only looks in for a little. It was through this, after the evacuation of Cabul, that 4,500 fighting men, including 700 European soldiers and 12,000 native camp followers, with their women and children endeavoured to retreat, but the Afghans fired on them and 3,000 souls perished in the attempt.

KHOORAPELUM? Cucumis sativa

KHOORPA, or Kaipra, HIND A weed

KHOORUM, afterwards Shah Alam, was son of Amungzeb, by a Rajput princess of Amber, of the Cutchwaha tribe, and hence probably his name Koorim, synonymous to cutchwa, a tortoise.—*Tod's Rajasthan, Vol 1, p 367*

KHOOSII, PERS, HIND Pleasant, agreeable, hence Khoosh Bash, a well-to-do person. Khoosh Khared, an open market, Khoosh-hal, in good condition, Khoosh, pleasure

KHOOSIIKA, HIND Boiled rice

KHOOTAN, BURM A loose-grained light wood of British Burmah, recommended for packing cases used for black boards in Burmese schools, breaking weight, 114 lbs.—*Cal Cat Er*, 1862

KHOOSH-ROZ The Noroza, or 'New Year's Day,' when the sun enters Aries, is one of great festivity among the mohamedan princes of Persia, but of that alluded to by Pintha Raj, we can form an adequate idea from the historian Abul Fazil. It is not New Year's Day, but a festival especially instituted by Akbar, and to which he gave the epithet Khooshroz, 'day of pleasure,' held on the ninth day (no-roza), following the chief festival of each month. The court assembled, and was attended by all ranks. The queen also had her court, when the wives of the nobles and of the Rajput vassal princes were congregated. But the Khooshroz was chiefly marked by a fair held within the precincts of the court, attended only by females. The merchant's wives exposed the manufactures of every class, and the ladies of the court were the purchasers. His majesty was also there in disguise, by which means he learned the value of merchandize, and heard what is said of the state of the empire and the character of the officers of government. Abul Fazil

thus softens down the unhallowed purpose of this day, but posterity cannot admit that the great Akbar was to obtain these results amidst the Pushto jaigon of the dames of Islam, or the mixed Bhaka of the fair of Rajast'han. These 'ninth day fans' were the markets in which Rajpoot honour was bartered, and to which the brave Pithi Raj makes allusion, "bartering then honour on the 'No-1021'" At these royal fans were also sold the productions of princely artisans, men and women, and which out of compliment to majesty, made a bounteous return for their industry — *Tod's Rajasthan, Vol 1, p 345*

KHOOSROO The Tak-i-Khesia, formed part of the royal palace of Ctesiphon. The palace was commenced by Sapor II, the ninth king of the Sassanian dynasty, at the beginning of the fifth century. It was added to about a century later by another king of the same line, Nooshirwan, usually called Kooshroo I, and was finished by his grandson, Kooshroo Parvez or Khoosroo II. The part remaining is merely a portion of the facade and one of the halls of audience,—not a tenth part probably of the original building. It was covered with brilliant white stucco, and the halls were decorated with historical paintings and figures of the heavenly bodies. It was taken from the Persians by the Arabs in the time of the caliph Omar, in the sixteenth year of the Hijra, and was called by them the 'White Palace'. Its splendour and magnificence as related by the Arabian historians is scarcely credible. The dimensions of the hall are,—105 feet in height, 95 feet in width, and 180 feet in length. The building remained entire till the time of the caliph Al Mansoor, who endeavoured to destroy it in order to make use of the materials in the construction of his palace at Baghdad. At the close of the ninth century, the caliph Muktassir-billah regularly rebuilt the White Palace, in order to erect his famous edifice called the Taj, at Baghdad, and merely left this hall as a specimen of the Sassanian architecture. See Khoosroo Parviz.

KHOOSROO, a famous poet of Hindustan, near whose tomb are those of Khajah Kutub-ud-Din, of Muazzam, son and successor of Aurangzeb, of Bahadur shah, the tomb of Altamsh, whose daughter the sultana Raziah, occupied the throne. The tomb of Imam Mushudee, the spiritual guide of Akbar is west of the mosque of the Kutub-i-Islam. The massive tomb of Toghlaq shah is outside the southern wall of Toghlaqabad, and was built by his son Mahomed. The Leela Buij, a blue tomb near the Humayoon, covers the remains of a holy syed. The poet Khoosroo's

tomb is side by side in the same court-yard with the saint, his friend and contemporary. No imaginary being, but a living hindoo princess, Dewilde, inspired the songs of Khoosroo. His honey-tongued muse got him the surname of the Parrot of India. The date of his tomb is 1350 — *T. of Hind, Vol II, p. 222*

KHOOTBA, AR Amongst mahomedans, an oration or sermon, a prayer in behalf of the ruling sovereign.

KHORA, HIND, PUSHTU Saltpetre.

KHORAHA, see Kol.

KHORAN, a tribe who, a little before the birth of Christ, ruled over Affghanistan, the Punjab and Khorasan.

KHORASAN, a province in the S. E. of Persia. Khorasan means the province of the sun, or of the east. Nadir shah who belonged to the tribe of Affshai, one of the seven Turkish tribes that had attached themselves to the family of the Suffavean dynasty, was born of obscure parentage, in the province of Khorasan, A. D. 1688. The emperor Baber tells us, in his Commentaries, that in his time the people of India applied the term Khorasan, to all the regions west of the Indus. Khorasan has for its boundaries the Oxus and country of Balkh to the N. E. and E., Cabul and Seistan to the S., and to the W., the provinces of Irak and Asterabad. Meshed, the capital of the Persian division of Khorasan is situated about two farsung from the ruins of the ancient city of Tous, and is celebrated for a very superb sepulchre, in which repose the relics of imam Raza, and those of the caliph Harun-ul-Rashid. Those provinces which lie immediately north of Khorasan, between the Oxus and the Caspian, and which formed part of the kingdom of Khaurizm, are possessed by a number of tribes, which trace their descent from some

men of a Moghul family, who are represented to have emigrated at a very early period from the northern parts of Tartary to the provinces they now inhabit. They married, according to this account, the women of the country where they settled, and, though their descendants were not deemed worthy of being ranked in the tribes of their fathers, they were, as a robust and warlike race, denominated Turkoman, which signifies "like or resembling to Turks." The ancient Khorasan stretched far into Chinese Tartary and was founded and occupied by several colonies. The kingdom of Persia is bounded to the east by Khorasan, which is upwards of four hundred miles in length, and near three hundred in breadth. This celebrated region contains many fruitful plains, some lofty and irregular ridges of mountains, and several wide tracts of desert. It is, except in its most fertile districts, but partially supplied with water, and from local position, has, perhaps, been more exposed to predatory invasions than any country in the universe. Whenever Persia was distracted by internal factions, or had to sustain foreign attack, the tribes of Tartary crossed the Oxus and spread themselves over Khorasan. It was this province which the valour of Roostum had to defend against the continual inroads of Afrasiab. The Seljuk chiefs invaded it long before their rule was extended over the other parts of the empire to which it belongs. It suffered greatly from the ravages of Chenghiz and of Timur, and, during the reigns of the first Suffavean kings, the Usbeks, who had conquered the country of Bokhara, made annual attacks upon its fields and cities. The genius of Abbas the Great checked these ruinous inroads, and the victorious sword of Nadir made this race of plundering Tartars tremble for their own possessions. But the death of that conqueror left his native province more exposed than ever to hostile invasion. For, while his descendants, spite of the vast inheritance which he had bequeathed them, exercised a mock sovereignty over the city of Mashed, several military chiefs, taking advantage of the distracted state of the empire, seized upon the different forts of Khorasan, and, aided by the confusion of the times, succeeded in establishing a number of small principalities, over which they exercised an almost regal sway, making war or concluding peace with their petty neighbors as it suited their interest, and sometimes defying, and, at others, paying homage and tribute to the powerful monarchs by whom they were surrounded. This province has Irak to the west, the country of Candahar, and Cabul to the east.

It stretches to the north as far as the banks of the Oxus, and is bounded to the south by the arid plains of Seistan. Khorasan is peopled by many races. Its warlike inhabitants boast their descent from Arabian, Kurd, Turkish and Affghan tribes, who came into the province at different periods to subdue or to defend it. But neither their having so long inhabited the same soil, nor a sense of common danger, has softened those inveterate prejudices, or abated their rooted hatred, with which these races regard each other. And it had been the policy of the monarchs of Persia to increase divisions, which enable them to keep in subjection a country, whose inhabitants, if united by any feeling that resembled patriotism, would have been dangerous, for the men of Khorasan, from the robustness of their frame, and from their being continually hurried to war, are proverbially brave. And Nadir Shah, with the vanity of a native, but not without truth, used to term this fine province "the sword of Persia." The Kayn Arabs have long enjoyed the reputation of being the hardiest and the bravest of the infantry of Khorasan. A part of the district of Kayn borders on the desert of Seistan, while it is bounded in another quarter by the territories of the Affghans. The Kayn Arabs are computed at about twenty thousand families. The usual force which their chief maintains, is between two and three thousand infantry, and a few horse. The Iranian races, called also Indo-Atlantic, also Caucasian, have always been known for their refinement, and high civilization, from which Europe borrowed through the Byzantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them, but has exerted over them a powerful influence. According to Khrankoff, the Iranian race of Persia came from the east of modern Persia about Segestan and Khorasan and moved to the west in prehistoric ages, and though altered by the attacks of the Turko-Tartar tribes from the north, or, from contact, on the west and south, with Turanian and Semitic elements, the Mede is everywhere recognisable as the same as described by Herodotus and later Greek writers. The arrow-headed writing at Persepolis enumerates the Iranian people of that day. The form of the Iranian is spare, but elegant, even noble, but there have always been differences between the Eastern and Western Iranian. Iron and native steel is met with in Mazanderan, Khorasan and Bactria. The former as well as copper and

lead ores, prevail in different parts of the eastern provinces, but more abundantly in the pashahs of Diyar-Bekr and Sivas, with the addition of gold, silver and precious stones — *Markham's Embassy*, p 108, *Townsend's Outram and Havelock*, p 72, *Tod's Rajasthan*, Vol II, p 282, *Kinner's Geographical Memoir*, pp 169-175, *Malcolm's History of Persia*, Vol II, pp 239-240, *Malcolm's History of Persia*, Vol II, pp 215-216, 224-225, 239-240, *Khanikoff "Sur l'Ethnographie de la Perse"* See Arian, Iran, Kuman, Khalif, Kandahar, Kabul, Koolk, Khoian, Khond Emir, Kuvu, Fais, Persia

KHORDAD, PARSEE, from Hauivatat, completeness, the sixth Amshashpaud of the Parsees

KHORD-I-AVASTA, one of the religious books of the Parsee religion

KHOREWAH, also written Kharawah, a considerable tribe dwelling near the Oraon and to the north of the Lurka Kol, in the highest hills to the north of Jushpur, and in those between Saigujah and Palamow. They speak much the same language as the Ho, Sontal, Bhumi and Mundah, and they appear to be of the same stock, though much less civilized. They are described as of small stature, with shaggy heads of hair and some beard, and to be of a lighter colour, and better looking than their neighbours. They occupy the hills and highest tablelands of Saigujah and Jushpur, and they possibly were forced into that position by one of the Gond tribes. They are a considerable, ugly, and ill-favoured tribe, in the district of Palamow, in Singrowli, the hilly country of Mizapore and Rewah, and on the borders of Benares and Behar and westwards in parts of Saigujah and Jushpur, and they are numerous to the N E in those parts of the plains adjoining the hills. They are also found on the outskirts of the Patna and Arrah districts. A division of the Kharawa tribe is the Bhogtah. The Kharawa are the dominant tribe of

Palamow and Singrowli. They are labourers, palanquin bearers and porters. The Kharawa are mentioned by Captain Blunt (*Vol VII, As Res*) as, in his time, very savage and speaking quite an unintelligible language, which they now seem to have forgotten as they now speak a dialect of Hindi. The rajahs of Singrowli and Jushpur are Kharawa, though claiming to be Rajput. They have no caste distinctions and eat anything. The Kharawa of Saigujah do not use the plough. The race are mostly short of stature but with well-knit muscular frames, complexion brown, not black, sharp, bright, deep-set eyes, noses not deficient in prominence, somewhat high cheek bones, but without marked maxillary protuberances. The Kharawa of the hills are wild savages, armed with battle axes, bows and arrows. The Kharawa are nomadic and migrate every second or third year. Their villages are therefore mere standing camps, consist of about forty houses built round a large square in the centre of which is the dancing area — *Dalton*, p 176, *Campbell*, pp 36, 40, 378, *Captain Blunt in Bengal As Soc. Res*, Vol VII

KHORFAKEN, the date trees on the coast of Oman form a continuous grove to Khorfakan, a distance of one hundred and fifty miles, and the Arabs have a saying that a traveller may proceed the whole distance without ever losing their shade. Dates form the principal export from Oman, large quantities being taken to India, where a considerable share is consumed in making the government attack. The middle classes of the mahomedan and hindoo population of India are very partial to them. The best are brought from Basrah and Bahrein, those from Oman being classed next in excellence. There are several methods of preserving them, some are simply dried and then strung on lues, others, which is the usual plan, are packed in baskets. Notwithstanding their great number, every tree has its separate owner, and disputes between the relations of those who die intestate, are, in consequence, very frequent — *Wellsted's Travels*, Vol I, p 188

KHORSABAD, see Ken

KHOR-SA-KA, see Kuimsaq

KHOSA, a tribe in the delta of the Indus. There are in the delta other pastoral and peaceable classes besides the Jut of mahomedan persuasion, such as the Khosa in upper Sindh, the Sikh Lohana in the delta, and

emigrants from the Panjab, who have in many instances become amalgamated with the people of the country. The Khosa occupy the sandy tract called the Jhal between Hindustan and Sindh, and become a predatory tribe on the eastern confines of Sindh, veiging towards the Cutch territories, where they are very troublesome. There are, also, on the eastern boundaries, Rajputs located as wandering herdsmen. The Daudputia who inhabit generally the country of that name in the north are to be met with in various parts of Sindh. The Sumrah are Jut, though they are generally known by the former title, such also are the Machi and numerous other subdivisions of the Jut tribes. Up till the early part of the nineteenth century, the Man in the south, the Laikhami in the north, and the desert Sahrai and Khosa in the west, carried on a system of pillage in the Rajput countries—*Tod's Rajasthan, Vol. II, p. 155*. See Jut, Kosah.

KHOSROO PARVIZ, king of Persia, of the Sassanian dynasty, was the grandson of Chosroes Nushirwan. He married a daughter of the emperor Maurice, who is generally supposed to be the same person as the heroine of the eastern romances of Khosroo and Shirin, and of Ferhad and Shirin. Khosroo Parviz, waged war with the Roman powers, at first with the greatest success. He invaded the dominions of the emperor, wasted a vast amount of territory, overran the holy land, took Jerusalem and burned the christian churches, carrying off immense booty. He next reduced Egypt and great part of northern Africa. He made the scraped surface of the rock at Be Situn, the back part of his palace, and it is supposed probable that the Syriac inscriptions on the surface may then have been etched. He was assassinated, A.D. 529, by his own son, who had conspired against him—*Rich's Residence in Koordistan, Vol. II, p. 264*. See Be Situn.

KHOST, see Kush, Uzbek.

KHOTEN, a territory east of Kashgar. According to Lassen, the old original inhabitants of Kashgar, Khoten, Turfan and Yarkand, and of the adjacent highlands are the Tajik, who speak Persian, and are all agriculturists. The Swedish chronicles bring the Swedes from Kashgar, and the affinity between the Saxon language and Kipchak is great. Khoten may be considered the most central and accessible state of all Asia, but it was a seat of very ancient civilisation, and was already in friendly relations with China, in 140 B.C. In the fourth century of our era, buddhism was in high development here. Though much of the surface appears to be rugged mountain, it is interspersed with level tracts, which are both fruitful and populous.

At one time, like the other states of eastern Turkestan, it was under a mahomedan chief of Turkish or Mongol descent. Khoten is the subject of a short chapter in Marco Polo. In modern times its only European visitor has been Adolphus Schlegel, who never returned to tell his tale. Mr. Moorcroft doubted the existence of the city of Khoten, although referred to by Marco Polo. Its position has been laid down not only by Chinese geographers but by the Jesuits in lat. 37°, and long 78° 15' 30". The city of Khoten may have some new appellation, but Elelu, or, as it occurs in the maps, Ilitsi, is identified with the city called by older travellers Khoten—*Bunsen, Tod, Yule Cathay, Vol. II, p. 567, Ed. Moorcroft's Travels, Vol. I, p. 367, Klaproth, J. Asiaticque, No. XVII, Histoire de la Ville de Khoten, Remusat, Quarterly Oriental Magazine, Calcutta, Sep. 1834*. See Kashgar.

KHOUNAY, TAM, also Kakay, MALEAI CAN. *Cnthartocarpus fistula*, a Malabar and Canara tree, produces the Cassia fistula pod or Banda lotte, which is considered an excellent purgative in habitual constipation. It grows to thirty feet long, and from twelve to eighteen inches in diameter, it is curved in growth, its wood is rather close-grained and heavy, and very much resembles the Mangosa—*Edye, Forests of Malabar and Canara*.

KHOZDAR, a valley and town in Beluchistan. The valley is extensive, in shape somewhat like a Maltese cross, and through it, from north to south, passes the caravan road to Wudd and Beyla. The portion of the cross runs northward some five or six miles. The village is small, containing, perhaps, 200 houses, and half a dozen bazaar's shops. There are one or two mounds in the valley from which have been obtained bits of copper, glass beads, cornelian ornaments, old coins, &c., and there is a mound near the town surmounted by masonry. As Khozdai was formerly the capital of Jhalawan, this might have been the residence of the chief. Very deep ravines cut up the base of the mountain and run out into the valley, showing that the bed of the valley for some four or five miles is formed of a talus of the debris from the mountain side. These narrow and deep ravines are inhabited by Brahmin families, whose presence is totally unseen and unsuspected until suddenly come upon in this manner. The strata of the mountains about Khozdai, frequently dip in two, or sometimes three, directions with an anticlinal axis. Khozdai appears to be the focus where the ranges from the north stop, and those from the south com-

mence In the hills near Khozdar, lead is found, which, being easy of fusion, is smelted by the Brahmi tribes to make bullets, but no advantage beyond this is taken or derived from the presence of the metal Antimony is also said to occur West by a little north of Khozdar, and distant about ten miles, is the small town of Khappan, capital of the district, inhabited by the Kaidami tribe Khozdar, figures in Persian romances, and was formerly beyond doubt a place of note A considerable tappi, or mound lies north of the town From Khozdar along the bank of the Rudkhana, the soil is strewn with fragments of burnt brick and pottery, and further on, a rude ohelsk of mud, twenty to twenty-five feet in height, the base of cemented stones—*Dr Cooke in Bombay Medical Transactions, No vi, New Series, 1860, p 64, Masson's Journeys, Vol II, p 41*

KHUBANI, HIND *Armenia vulgaris*, Lam Apricots, dried for eating The term is sometimes erroneously applied to figs Astak, khinstak, kishita and khubani, are varieties of the apricot known in the Panjab and to the westward This fruit is grown with great success in some of the hill stations of the Panjab Himalaya It makes an excellent preserve, and large quantities are dried and exported to the plains The unripe apricot dried hard, forms the "kishita," which besides forming an ingredient in chutneys, is also extensively used as an acid brightener in dyeing with safflower and other colours that will not bear sun dried apricots called "pating" in Tibetan, are taken from Balti to Lahul and sold usually at the rate of 4 to 6 seers per rupee The varieties from Kabul and Kandahar which are brought via Peshawar, are named as follows—

"Khubani" is the fruit dried for eating, containing the blushed kernels, and sells at 4 seers per rupee

"Astak-be-magz," is the same but without kernels

"Khaista" are the best dried apricots and sell at 2 seers per rupee Kishita, are dried unripe apricots Apricot trees grow in great luxuriance in Kabul and in Kughan the people have tried grafting, but never prune or take care of the trees In Kandahar there are eleven varieties of apricots When dried, without removing the stone, they are there called "taifi" Sometimes the fruit is split open, the stone taken out, and the kernel being extracted is replaced this forms the khubani, a term sometimes erroneously applied to figs The taifi is what are called in Lahore, kishita, being made of the unripe fruit and very acid A hot decoction of these is used by goldsmiths to restore the lustre to old silver and

gold ornaments the article is first heated and then plunged into the kishita solution Silver combs can be cleaned in this way with great success Kishita is used also in dyeing—*Powell's Handbook*

KHUBAZI, HIND *Malva rotundifolia*, seeds, see Khatnu, Malva The Persian name is Nan-i-Kelagh, and the Arabic Khaz-ul-ghalab, signify 'crow's or raven's bread'

KHUBER, also Ubhul, HIND Berries of *Juniperus communis*, Juniper berries

KHUB KALAN, HIND *Sisymbrium* iris

KHUB-KALI, or Khub-Kala, the seed of the yellow fruit of a small tree about 12 inches very mucilaginous considered refrigerant—*Gen Med Top, p 113*

KHUD, PERS Self, Khud-ian, self-opinionated, Khud-pasand, vain, conceited

KHUD or Khād, HIND Sometimes means simply a precipice, but its ordinary signification is a precipitous valley, flanked by high and nearly perpendicular rocks or mountains—*Mrs Henry's Adventures of a Lady in Tartary, Vol I, p 39*

KHUDA, HIND God, Khuda-wand, master, Nao-khuda, a ship-master, the English nakoda

KHUDAH HAFIZ, may God protect you, a common mahomedan salutation when parting with a friend

KHUBBAT, soft silk fabric made for shawls

KHUD KASHT, HIND A person cultivating his own (khud) soil, (ka-kht) land so cultivated

KHUDUSH, AR, or Shajrat-ul-Khudush, AR, mentioned by Forskal as a tree of Arabia Perhaps Kudus, blessed, the sacred tree, the olive Many trees are Kudus

KHULLU, TAM, TEL Toddy

KHULLU, TEL Ariack

KHULM, a town near Kunduz with many beautiful gardens, with apricot, cherry and mulberry trees This country is called Turkistan, but the Qazal Bashi of Kabul have named it Kafistan, or country of infidels, on account of the slave trade The inhabitants are Turk, or Uzbek Pity, justice, wisdom and policy are entirely unknown here The inhabitants are fair, tall, and look as if they were brought up in hardship They are vulgar, ignorant and dirty Disputes respecting religion are a frequent cause of tumult among them They keep their heads entirely shaved, and allow a few hairs to grow on their chins, which does not appear like a regular beard Khulm receives annually numerous loads of tea, which is plentifully used here, and largely re-exported, to Bokhara Silk is largely produced in this country, and passes through Kabul in the route to Multan The sand in the bed of the Oxus yields a great quantity of gold The caravans of Bokhara and Kabul, which in summer pass successively to Khulm, have rendered it very populous and rich The prevailing religion at Bokhara is sunni mahomedanism and the followers of other creeds, though not vexed, are scornfully treated The Qazalbash are shiah This state exercises a certain influence on those around it, and its preponderance is not inferior to that of Kabul, Herat, or Bokhara, a great majority of the inhabitants are of the Tajik race, but the Mu Wali is an Usbek The population is reckoned at 700,000 souls, the revenues of the principality amount to 24,000*l* in silver and nearly 50,000*l* in cereal produce Khulm appears to have been at one time in the possession of a family called Khallach or Killich On the north side of the Oxus in this longitude occupying part of the hill country east of Bokhara, is a poor but independent people of Persian race called Ghalcha Meyendorff calls them very

swarthy, but Valikhanoff says expressly "the Tajik have dark complexion and hair, whilst fair people are found among the Ghalcha" This might explain the yellow-haired people mentioned by Goez, and his use of the expression *Calcensium populos* — *Mohun Lal's Travels, p 129, Ferrier's Journal, p 211, Elphinstone's Caubul, Vol 11, p 196, also Burnes' Travels, Vol 111, Yule Cathay, Vol 11, p 558*

KHURJJOOR, BENG Wild date tree, Phoenix sylvestris, properly Khujri
KHURM The inhabitants of Khurm seem to be in more comfortable circumstances than any in their neighbourhood They call themselves Tajik, but have no tradition of their origin They are evidently a mixed race, some of them with remarkable large heads and features some with small heads and sharp lineaments The complexion of the men was dark, but that of the girls and young women fair, although they had all black hair and eyebrows, the latter as regularly arched as if they had been pencilled, they are generally pretty, almost handsome—*Moorcroft's Travels*, Vol II, p 398
KHURMA, PERS., GUZ, HIND, MALAY Phoenix dactylifera Dates, the dried drupes, also sugar of dates The name is also given to the dried drupes of P sylvestris
KHURMOOJ, BENG Musk-melon, Cucumis melo
KHURPA, HIND A sort of flat trowel, or short-handled shovel, a weeder used by gardeners, properly Khāpa
KHURPHA, HIND Portulacca sativa, used as a salad
KHURRA, HIND Clay
K'HURRAWAN, HIND Wooden pattens
K'HURRAY-PAN BANTNA, HIND A mahomedan ceremony
KHURRI MITTI, HIND Pipe-clay
KHURSENG, MAR Bignonia xylocarpa, *Roxb*
KHURWAR, PERS A measure of weight for rice, or any other article is an ass-load or about 180 lbs English weight—*Adventures of a Lady in Tartary*, &c, *Mrs Hervey*, Vol 1, p 25-7
KHURSOWAN, near the Colehan, an estate belonging to a Rajpoot thakur
KHUS, PERS Cuscus root
KHUSB-SINI, ARAB China root
KHUSH, PERS Good, well Khush amadaid, you are welcome Khush-kharid, an open market Kush-dil, pleasant-hearted Khush bashi, a well-to-do person, living on his property Khushi, pleasure Khushbu, sweet smell
KHUSHAB, a battle was fought here on the 8th February 1857
KHUSHKA, HIND Plain boiled rice, also

the mark of sovereignty placed on the forehead of a hindoo prince The Maasai-ul-Uma states that at the time when it was written the rajahs of Udipui were exalted over all the princes of Hind Other hindoo princes, before they can succeed to the throne of their fathers, must receive the khushka, or tilak of regality and investiture, from them This type of sovereignty is received with humility and veneration The Khushka of these princes is made with human blood — *Tod's Rajasthan, Vol 1, p 235*

KHUSH KHUSH, ARAB, DUK, HIND, properly Khāsh-khāsh, seeds of *Papaver somniferum*, Poppy seeds, used in confectionary, as well as to make oil Khash Khash ka-tel, HIND Poppy seed oil — *Riddell*

KHUS-KHUS, BENG *Anatherium muricatum*, the cuscus of Europeans. The Karen and Burmese cultivate little bunches of this grass for its fragrant roots The fibres of the khushkus or vetivey, are remarkable for their agreeable odour — *Mason*

KHUSREH SURVEY, in India a private survey of land — *Simmond's Dict*

KHUSRU PARVEZ, A. D 591-628

KHUSRU SHAH, the thirteenth and last of the Ghaznavi dynasty He was deposed by Hussain Gori in 1151 or 1155 — *Orie*

KHUSSAK-I-SAGHIR, ARAB Tribulus terrestris Khussak-i-Kabu, ARAB Pedalum murex See Gokeroo

KHUT, see Kandeh Rao

KHUTAI, or Daykar, HIND, of Trans-Indus Flacourtia sepiaria, *Roxb, W & A*

KHUTAN produces jade, emeralds, copper, lead, and sulphur See Khotan

KHUTBAH, a part of the mahomedan religious service in the mosque, in which the king of the country is prayed for — *Elphinstone's Kingdom of Cabul, p 83*

KHUTEEB, ARAB A mahomedan preacher, who reads the Khootba

KHUTIKA, BENG *Andropogon muricatus*

KHUTNA, ARAB Circumcision, properly Khālna

KHUTRAN Behind the Bozdar hills live the Khutian, a Puthan tribe, numbering 3,000 fighting men, of whom 500 are mounted, dwelling in the midst of the Beluch tribes, with whom they are frequently at feud They are special enemies of the Bozdar and the Murree, their hills scarcely touch the British frontier Once they sought British alliance against the Murree, and also offered them support, if an expedition were undertaken against that tribe, but the government refused to have any relations of this nature with them, in order to avoid being implicated in the feuds of the hill tribes.

KHUTREE, see Chatiya, Chetiya, Khatu, Kshatiya

KHUTUM, the seal or conclusion, the end of a book, a term in the science of exorcism

KHUTUM - I - QORAN, the reading through of the entire Quran

KHUTTAB, the father of khalif Umar

KHUTTUK and Sagiee Between the plain of Peshawar and the Salt Range at Kalā Bagh lies the country of the Khuttuk and Sagiee Affghans The Khuttuk have about 6,000 or 8,000 armed men, and are divided into the petty chiefships of Acora and Terec Acora lies east of the plain of Peshawar, on the river of Cabool The Khuttuk of Acora live in the hills The southern division is under the chief of Terec, who is able to assert his independence Part of the Kohat district consists of the Khuttuk country This had belonged to the Sikh dominions, and had then been farmed out to khaja Mahomed Khan, a local chief In the Kohat valley, also, they are the predominating tribe They hold the Khoo-shalgurh pass, leading from the Indus into Kohat, and offering the easiest entrance to the valley On the whole the Khuttuk have been loyal subjects They are good soldiers and can muster 12,000 fighting men Many of them are in the British service They are considered the best conducted and most respectable tribe on this frontier The Trans-Indus Salt Mines are on the southern Khuttuk hills, situated near the villages of Buhadoorkheyl, Kuiruck and Lutumui There is also a separate mine at Malgeen, a place lying east of Kohat The headmen of these villages receive a fixed percentage on the collections at the mines to obtain their good will The Sikh never managed these mines at all They farmed them out to some local chief, and left him to collect what he could Under British rule, the control and working of the mines is in the hands of government officers, the salt is excavated and sold at the mine at a fixed duty of two, three and four annas per maund of 80 lbs, covering all expenses The first Khuttuk of note, and influence regarding whom there is any information is Akore, the founder of Akoriah, lying one march on the Peshawar side of Attok The Khuttuk tribe is said to trace its descent from the Kuitani, from whom also the Orukzye of Thyruh, the Afieedee, Bungush, Mohmund, Khuleel, and Daoodzye, claim descent The Kuitani were called also Burdoorianee, in contradistinction to the Dooranee, now divided into Populzye, Bamzye, Suddozye, Noorzye, Alkozye, Esufzye, Alezye, and Barukzye (divided into Mahomedzye, and Hussuzye) Akore came from Shuwal, near the Wuzui country, to a

place called at that time Hussnu Tungee, and now known as Kutboghā, near to Duismanumund, an independent village of upper Meeranzye, which lies between Hingoo and Khoonum. He is said to have been accompanied by 3,000 of his relations and friends, and 8,000 other men of Shuwal. At that time Kohat and Teere were occupied by the Orukzye. Akore with his adventurers drove the Orukzye from Teere and held that country, then opponents retiring on Kohat, at which place the Bungush, rising on them and joining the Khuttuk, they were driven fairly out of the country to Thyub Tuppee, a village lying 3 miles S E of Kohat, and on the Kalabagh road, is pointed out as the spot where the engagement took place between the Khuttuk and Bungush on one side, and the Orukzye on the other, after the battle the conquerors distributed the country, making a range of hills, which divides Guddukheil, and Luchee, the boundary between the Khuttuk and Bungush. This range still forms the boundary between the two tribes. The Khuttuk country extended to Resee, a village near to, and above, Mukhind on the Trans-Indus side. There were then two divisions of the tribe, Turee and Buluk. On the country being divided, Chountia, Dullin, and Duilah fell to the former, and from Buluk sprung two branches, Khurum and Senee. Joullae Ghuzudye, and Unjookhulu lie in one valley, and belong to Khurum, and the Senee branch passes from Teere to Purlshai. Akore and his followers having entered the country as adventurers, left their wives and families at Kurbagha, and had difficulty afterwards in bringing them to rejoin them in their new country—*Selections from the public Correspondence*, p 62, *Papers, East India, Cabul and Afghanistan*, 1859, p 21, *Burnes' Cabul*, p 105, *Records Govt of India*, No 11. See Affghan, Khyber.

KHUUR, HIND A tree of Chota Nagpore, with a hard, yellow timber—*Cal Cat Ex* 1862

KHUZISTAN represents the Susiana of Strabo, as well as the Cissia of Herodotus, and is also called Arabistan. Towards the eastern frontiers are the ruins of Rhajoun and Kerdistan in the centre, those of Agines (probably represented by Ahwaz) towards the west. That the geography of the province was well-known before the time of Herodotus may be inferred from a passage in his works, where it is said, that Cissia is watered by the river Choaspes, on which is the city of Susa, and the palace of the great king. It is added, that its waters alone were thought worthy of being drunk by the monarch. Presuming that Alexander, after setting

out from Sirs, made a detour, in order that he might have but one river to cross, four short marches might be required to bring the army, with its supplies, across the Karun, and then both the distance between the Keikhah and Karun, and the description of the course of the latter, will afford ground to believe that this is the same as the Pasitigiris of Quintus Curtius and Arrian, as well as the Eulæus of Pliny and Ptolemy. The Persian Dictionary, "Bulham Katia" under the words Khuz and Khuzistan, states that these are both names of a country in Persia, of which Shuster is the capital, and that the first signifies, also, sugar and the second any country productive of the sugar cane, or a manufactory of this article.

Khoi, in Khuzistan, means a deep inlet, of which several have been, at times, supposed to be the mouths of the Euphrates. Khoi Muso, is deep, that of Lusbah is close to the Jelali, and, there is one near Saieema, on the banks of the Hindian, rather westward of the borders. The inland Khoi are those near the towns of Dorak and Mohammerah, one still more extensive is formed by the overflowing of the river Keiah at the town of Hawiza; and, lastly, the Samidah marshes above Kurnah which appear to be part of the ancient Chaldean lake. One of the most important of the water-courses of Khuzistan is the Keikhah or Keiah, which begins to flow in three branches, all springing considerably eastward of Kurnah-shah. The first, and most considerable, has its commencement about 25 miles west of Hamadan. A little south of the spot where the Keikhah is joined by the Abi-i-Zal, are the remains of a bridge, and at one mile and a half from the celebrated ruins of ancient Sús, the Keikhah bends a little west of south, and continues in this direction through the rich plain of Khuzistan, passing through the extensive marches which surround Hawiza, a commercial town of about 12,000 inhabitants from thence it winds S W, and falls into the Shatt-el-Arab, below Kurnah, after a course of upwards of 500 miles. The Dizful is an important stream in Khuzistan. The bed of an occasional torrent in ancient Susiana, called Ab-i-bald, which falls into the Dizful, is covered with a peculiar kind of pebble, which being filled with little fossil shells resembling grains of rice, is called Sang-i-birinj, or the rice stone. These stones are also found in the river at Shuster, but of an inferior quality, and they are in much request throughout Persia for the head of the Naigil pipe, which is almost invariably composed of this material, set in silver. The Karun river in Khuzistan is met with in proceeding eastward from the Dizful river. It

ises according to Kinnien (who is followed by Major Rawlinson) at Corieng in the Koh-i-zard, or Yellow mountain, at about 40 miles south-west of Ispahan, and runs west by north through a mountainous country. Again, it about 40 miles further, in the previous direction of west by north, and at nearly 20 miles from Shuster, it makes an abrupt bend towards the S. S. W., as it finally breaks through the Zagros range, and pursues its onward course towards that city, a little way short of which and near the upper extremity of the well known bend of Shalpu, a temporary bifurcation takes place so as to insulate the town. The branch last mentioned, which is called the old Karun, after washing the eastern side of Shuster, becomes navigable for boats of considerable size. The bed of this branch is still to be traced at a spot about a mile and a half below the town, and it appears to have come from the north-west. At this place, which is $2\frac{1}{2}$ miles short of Karabuk, the Karun becomes exceedingly tortuous, and thus continues for a distance of 20 miles, in the general direction of south 33° west to Ahwiz. The course of the Karun then becomes less tortuous, and for 29 miles to Ismaili, it runs in the general direction of south 22° west, making a sweep more westward before it reaches the latter place. From hence the river again curves to the westward, previously to forming a great bend in the contrary direction. After this last bend, the windings become more moderate and so continue as far as the castle of Sibi, which is situated on the left bank at $60\frac{1}{2}$ miles by the river, south 5° west of Ismaili. The ancient bed of the Karun was followed by the officers of the Euphrates expedition for some distance towards the sea, on which occasion they found it to be about 200 yards broad, running in a south-easterly direction, or nearly parallel to the Bah-a-Mishu, and with every appearance of having contained a large body of water in former times. From Sabla, the main trunk of the Karun pursues a course south 65° west for $10\frac{3}{4}$ miles, by the Hafai canal, to the Shatt-el-Arab, through the rising commercial town of Mohammerah, but $7\frac{3}{4}$ miles distance, and before it reaches the town just mentioned, the derivation called the Bah-a-Mishu takes place. This is a large navigable branch, running 31 miles from the Karun, in the general direction of south 25° east to the Persian Gulf, but making a gentle curve a little eastward of this line, which is, in fact, nearly parallel to that of the Shatt-el-Arab, as will be seen by the maps. After the junction at Kalphabad, the Kerdistan river flows a little more southward, and then, under the name of the Jerahi, becomes not only navigable for country boats,

but carries a large body of water in a S. S. W. direction towards Dorak. At six miles from this town the river makes a deep short bend to the south, and a great diminution of its water takes place, in consequence of six irrigating canals being cut from it, to fertilize the populous country stretching westward. Dorak, the capital of the district is situated in a marshy plain, and contains about 6000 inhabitants, who live in houses built with sun-dried bricks, and having sloping roofs. It is defended by a fort and a mud wall, and is surrounded by date plantations. Commerce is carried on by means of the canal with Mohammerah and Basrah, and the people sometimes call it Little Basrah. The Tab River is only partly in Khuzistan. Near Beirbalhem, now of considerable size, it preserves a western course as far as Indim, a town of about 4,000 inhabitants, up to which, when ascended by Lieut Whitelock, of the Indian navy, in 1836, it was found to be navigable for boats of twenty tons. From hence the river inclines more southward, and has a tortuous course through in alluvial soil to the Persian Gulf, an extensive population have then dwelling on its banks. A little way northward of the city of Shuster, at the bifurcation of the river Karun, is the famous reservoir called Shadawan, with the bridge of Sharpu, and several deep and fine Khanat. While Timur was in the province of Khuzistan, of which Dizful was then the capital he repaired the famous dyke across the Karun and Shuster, which had been constructed, many centuries before, by the Sassanian king Nourshirwan. It is made of hewn stone, cemented by lime, and fastened together by clumps of iron, and is twenty feet broad and one thousand two hundred long. In the centre there are two small arches which allow part of the water to flow in the natural bed of the river, while the remainder is led off to irrigate the plains. The dyke was again repaired by Colonel Monteith, under the orders of Mohamed Ali Meerza, eldest son of the shah of Persia, in 1810. In Khuzistan, there is an abundant supply of sulphur, and rock-salt, alum, antimony, and o pigment, as well as mineral waters, we found in abundance in different states — *Markham's Embassy*, p. 11, *Ouseley's Travels*, Vol. 1, p. 148, *Euphrates and Tigris*, Col Chesney, p. 205, *Miqnan's Travels*, p. 294. See Iran, Tigris.

KHWAGAWALA, HIND, PUSHTU. Salix caprea, S. ægyptiaca.

KHWAJEH pronounced Khwajo, Khoja and Khojo is a small tribe of strangers settled in Sindhi principally at Khatree where there may be about three hundred families. Their own account of their origin is, that they emigrated from Persia. Probably they fled the country when the Ismaili heresy to which they still cleave was so severely treated by Hulaku Khan, the grandson of Chingis Khan. They differ from the Ismaili in one essential point viz. whereas that sect believes in only seven immi the Khwajeh continue the line down to the present day. They are therefore, heterodox shahs as they reject Abubakar, Umar and Usman and reverence Ali, Husain, Husun, Zund-Abidin, Mohamed-i-Baki and Imam Jafar-i-Sadiq. In Sindhi they have no mosques but worship in a Kamo, or house prepared for the purpose. For marriages and funerals they go to the sunni kazi, but then Mulkhi, or head priest at Khatree settles all their religious and civil disputes. The Khwajeh are termed Tundo by the sunni sect, but the name is considered to be an insulting allusion to their bad habits of abusing the memories of the Imams — *Burton's Sindhi* pp 248-50. See Khwajeh.

KIWAN, HIND *Oleocarpus bignonioides*, is *Astragalus multicaps*.

KHYAR-I-BADRENG, PERS *Cucumis nullissimus*, *Roxb*.

KHYBER PASS, in lat 33° 58', long 71° 30', is about 33 miles long the crest of the pass is 3,373 feet, and Ali-Musjid is 2,433 feet. The pass rises gradually from the east but has a steep declivity westward. It is called the key of Afghanistan. At Ali-Musjid it is merely the bed of a rivulet, with precipices rising on each side at an angle of 70°. Near Lamdee Khana, it is a gallery 12 feet wide, on one side a perpendicular wall, and on the other, a deep precipice. It was twice forced by the British, once by General Pollock on the 5th April 1842. The Khyber mountains are in length about 50 miles, breadth, about 20 miles, and run between 33° 30' and 34° 20', and 71° 10' and 71° 30', they connect the Hindoo-Koosh with the Safed-Koh. Sultana summit, the highest point, is 4,800 feet. The Khyber mountains appear at first irregularly grouped, but the distinct arrangement of a chain is afterwards observable. The hills

generally consist of slate and primary limestone, with overlying sandstone. There are four passes through this range. The Khyber pass extends from a collection of caves called Kadan, three miles south-east of the fort of Juttahabad, built by the Sikhs, which again is nine miles west of Peshawar, to within 7½ miles of Duka opposite to Lalpore, on the Cabool river, a distance of 24 miles. These 7½ miles are included in the pass is the road, though not through a plain, is no longer confined by perpendicular commanding heights. Like all roads through ranges of mountains, the Khyber pass is, chiefly, the bed of a torrent liable to be filled by a sudden fall of rain but at the other times dry, with the exception of a winding rill supplied by springs. It is a formidable pass 18 miles in length, leading from Peshawar to Kabul, and as it approaches the Kabul territory, it becomes more formidable. Nadir shah paid a sum of money to secure his passage through it. Its water is prejudicial to health.

Of the Khyber tribes, proper, there are three great divisions, the Afiedhi, the Shinwari and the Orak Zai. Of these, the Afiedhi, in their present locality, are the more numerous, the Shinwari, more disposed to the arts of trade and the Orak Zai the more orderly, it amongst such people may can be so pronounced. The Afiedhi occupy the eastern parts of the hills, nearest Peshawar, and the Shinwari the western parts, looking upon the valley of Jellalabad. The Orak Zai reside in Tundi, intermingled with the Afiedhi, and some of them are found in the hills south-west of Peshawar. It was a malek of this tribe who conducted Nadir shah, and a force of cavalry, by the route of Chura and Tnah, to Peshawar, when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westernly still, under the same hill range, they are found south of Jellalabad, and are their neighbors of the Khogani. There are also some of them in Ghorband, and they dwell in great numbers bordering on Bajaur to the north-west, where they are independent, and engaged in constant hostilities with the tribes of Bajaur and of Kafistan.

Tnah and Chura are said to be fertile and well-peopled valleys, enjoying a cool climate, in comparison with that of Peshawar, and it was not unusual for the sudras, and others, who have an understanding with the inhabitants, to pass the warm weather in Tnah, which, also, has frequently

been a place of refuge to the distressed. At Chini resided Khan Bahadur Khan, Afiedhi, who attained eminence amongst his tribe from the circumstance of his attendance at court during the sway of the Sadoz Zai. Shah Supah married one of his daughters to, and on more than one occasion, found an asylum with him. The Khyber, like other independent Afghan tribes, have their mullahs, or chiefs, but the authority of these is very limited, and every individual has a voice on public affairs, unanimity is out of the question, and it often happens that a nanawati, or deliberation on any business, terminates in strife amongst themselves. The portions of the Afiedhi and Shikhar tribes who inhabit the defiles of Khyber, through which the road leads from Peshawar to the Jellalabad valley, are but inconsiderable as to numbers, but they are extremely infamous on account of their ferocity, and their long indulged habits of rapine. Under the Sadoz Zai princes, they received an annual allowance of twelve thousand rupees on condition of keeping the road through their country open, and abstaining from plunder. They called themselves, therefore, the servants of the king. Though they were in those days little scrupulous still the kafilas followed their road,—so manifestly the better and nearer one,—submitting to their exactions and annoyance, and satisfied with being not wholly rifled. They are, in the mass, very numerous, and it is boasted that the Afiedhi tribe can muster forty thousand fighting-men,—a number, which might be presumed to include every man, woman and child amongst them. On various occasions, when their strength has been exhibited, from two to five thousand men assembled. Jinn, is a little village at the entrance of the pass on the Peshawar side. Upon Ruyit Singh's expedition to Peshawar, the Khyber opened the bands, or barriers of the Bara river, and inundated his camp by night, and profiting by the consequent confusion they carried off much spoil and many horses. The maharaja then precipitately left for Lahore, having made only a stay of three days. The British government has never allowed armed bodies to seek protection in its territories, nor to organise resistance on attack. It has freely permitted hill-people on its frontier to settle, to cultivate, to graze their herds, and to trade in its territories. It has accorded to such the same protection, rights, privileges and conditions as to its own subjects. Its courts have been available and its officers accessible to them. Its markets have been thrown open to them, all restrictions on trade and transit, all duties (except one) which would be imposed under

my native government, have been removed and remitted for them. It has freely admitted them to its hospitals and dispensaries, its medical officers have attended them in sickness, and sent them back to their mountain homes cured. The routes of its caravans are open to them, if so inclined. Some of the Khyber tribes live in miserable caves, and the Momunzye Afiedhi are said to sell the wives and children of a deceased brother, and inter-change them as wives. The Khyber valley is of an irregular form, but the average breadth is about fifteen hundred paces—the hills which border it may be about seven hundred feet high. When Moorecroft passed, each house was enclosed by a high wall, in some part of which was a tower for look-out and defence. They are tall for mountaineers, and of a singularly Jewish cast of feature. Of the young women whom he saw, none could be regarded as pretty. The men were dressed in long cotton tunics of a kind of plaid, in which blue was the prevailing colour—the women wore an imitation of chintz. Amongst neighbouring tribes, the Waziri, although notorious robbers, regard the descendants of their prophet with awe and a feeling of respectful reverence, and esteem themselves fortunate to receive their benedictions. Further south, the Suliman Khail tribe occupy the district which ranges from north to south on the Ghuzni side of the pass. There are said to be about twelve thousand of them, but not so blood-thirsty or formidable as the Waziri of the mountains near Derabund. The Suliman Khail were in possession, Vigne was told, of a million of sheep. Their country extends from north to south, for seven or eight caravan marches, between Ghuzni and Kandahar, and for two or three from east to west. He describes the Shikhar Khyber, as a race even more infamous for their robberies than the Afiedhi Khyber.

Thus, as will have been seen, in the Khyber pass itself, and stretching away on the north and south, along the north-west frontier of the Punjab, are tribes of barbarous, warlike and predatory habits. This frontier line commences from the top of the Kaghan glen (a dependency of Hunza) near Chelas on the north-west corner of maharajah's territory, and then passes round the north-west boundary of Hazara, on the east side of the Indus to Tombeila, then, crossing that river, it winds round the north and north-west boundary of the Peshawar valley to the Khyber Pass, then round the Afiedhi hills to Kohat, then round the western boundary of the Kohat district, along the Meezanzye valley and touching the confines of the Kabul dominions, then round the Waziri hills to

the Bunnoo line and to the head of Sulmani range, and then, lastly, right down the base of Sulmani range to its terminus on the upper confines of Sindh and of the Kelat kingdom. The extent of this frontier is very vast, and its length is full 800 miles. It is also as arduous in its nature as it is extensive. Along the outer side of this frontier line, and, therefore, beyond British jurisdiction, there dwell a series of independent tribes. On the inner side of this frontier up to the right bank of the Indus, there also dwell various tribes, in many respects resembling those first named, but who are British subjects. The topographical position of each tribe, both without and within the frontier, may be enumerated in their local orders as follows —

Independent Tribes, dwelling along the outer face of the north-west Punjab frontier and inhabiting hills, viz

Adjoining frontier of Hazara district — Hussunzye

Adjoining frontier of Peshawur district — Judoon, Bunoowall, Swatee, Raneezye, Osmankheili, Upper Momund

Adjoining frontier of Peshawar and Kohat districts — Afzeedi

Adjoining frontier of Kohat district — Buzotee, Sepah, Oukzye, Zymoosht Affghan, Tooree

Adjoining frontier of Kohat and Dehra Ishmael Khan districts — Wuzni

Adjoining frontier of Dehra Ishmael Khan district — Sheorani, Oshterani, Kusrani, Bozdai

Adjoining frontier of Dehra Ghazee Khan district — Khntian, Kosah, Lughani, Gooichani, Muili — Boogti

British Tribes, within the frontier and British subjects, inhabiting partly hills and partly plains

Hazara district — Tarnohi, Gukkar, Doond and Sntti, Kaghan Synd and other tribes of Hazara

Peshawur district — Eusnfzye, Khaleel, Momund of the plains

Peshawar and Kohat districts — Khuttuk Kohat District — Bungush

Dehra Ishmael Khan district — Bunnoochi, Mnrwuti, Bntani, chiefs of Tank, chiefs of Kolachi, chiefs of Dehra Ishmael Khan, Nootkani, Loond

Dehra Ghazee Khan district — Dieshuk, Muzani

General Ferrier gives the following approximately as the amount of the population in Afghanistan. In the provinces of

Total 2,500,000 Affghan, and 1,700,000 Parsivan, Eimak, Baluchi and Kazzilbash, making a general total of 4,200,000 inhabitants

The Kohistan regions commence from Kaghan, which is a narrow glen stretching upwards from the northern-most part of the Hazara district for a distance of nearly 90 miles, and separating the maharaja of Kashmir's territory from the independent mountaineers. Adjoining Kaghan and reaching the Hussunzye country, separating the Hazara border from the Indus, and adjoining the Agior fiefship in Hazara, is the country of some hill tribes named Kohistani and Swati, who originally came from the Swat valley. Between the extreme northern frontier of the Hazara district and the Indus in Cis-Indus, that is, on the left bank of the river, there lies a somewhat narrow strip of rugged and mountainous territory—inhabited by the Hussunzye. They could number, perhaps, 2,000 fighting-men. The principal hill is known as the Mahaban, or "Black mountain," from its dark and gloomy aspect, and is of classic celebrity. In the adjoining tract, within the Hazara border, lies western Turnoulee, the fief of a chief politically dependent on the British.

The Judoon of Mahabun inhabit a tract below the Hussunzye country, and on the right bank of the Indus opposite the British town of Torbeila, and thence stretching westward. Near the base of Mahabun, and on the bank of the Indus, is the Sitana colony of syuds, the remnant of the followers of an adventurer, named Syud Ahmed, who, gathering a handful of "Ghazi," (warlike devotees,) from various parts of India, raised a formidable rebellion in Peshawar. After winning and losing Peshawar and Eusnfzye, the syud was eventually slain at the mouth of the Kaghan glen by Sher Singh, the son of Runjeet Singh. Most of his adherents, chiefly foreigners to the Panjab, dispersed, and the remainder settled at Sitana. These Sitana people are evil-intentioned. They endeavour to rouse the bigotry of the surrounding mahomedan tribes, and especially of the Swati. The king of Swat indeed was elected to his present position from among these very people. They endeavour to intrigue with the Wahabi and such like fanatic religionists among the mahomedan population in various parts of India. More than once, correspondence relating to them has been intercepted, but nothing tangible has been elicited. In 1852, they co-operated with the Hussunzye against Jehandad Khan, and actually seized a small fort belonging to that chief, but evacuated it on the approach of a

British force with Colonel Mackeson. They harboured murderers and bad characters of all kinds. In 1854 a band of reformed thugs, who were working on the road near Peshawar, fled to Sitana.

Booreie or *Bunoor* is beyond the Judoon country on the north-west. It is a rugged country, extending from the lower range of the Hindoo Kush downwards to hills which command the Chumla valley and the central plain of Eusufzye. On its western frontier lies the Swat territory. The Booreie people could muster a force of some thousands, their neighbours are the Swati.

The Swat country consists of a long valley, running downwards, generally, in a south-westerly direction, but turning half round from east to west as it nears the British frontier, from which it is separated by a lofty range. It is difficult of access to a force moving from British territory. The Landye or Swat river flows right through and fertilizes the valley, and then debouching through a gorge in the hills, enters the Peshawar valley and joins the Cabul river near Chaisudda. The Swat valley is fertile, chiefly growing rice, it contains upwards of 300 villages, and its inhabitants may number 100,000 souls, of whom 20,000 might be fighting men. As soldiers, the Swati rank below several of the most martial tribes. Politically, the Swati consist of various clans, united under a loose federal government, at the head of which is an elective chief, styled padshah or king. In 1855, the king was a Syud, named Akbar, from the fanatic colony of Sitana. The high priest is called the 'Akhoond' (equivalent to the term doctor or reader) and is held in great veneration.

Towards the lower extremity of the Swat valley a formidable range of hills bounding the valley runs for many miles from east to west nearly parallel to the British frontier, and at the eastern extremity of this range stands the Micia mountain. Between this range and the frontier, however, intervene two tracts, named Rancezye and lower Osmankheyl, both quasi dependencies of Swat. The best of the passes leading into Swat is one named Mulkhund, which opens from Rancezye. A little further to the eastward of Rancezye, also, there are some passes, leading into the Loondkhor valley, which belongs to British Eusufzye. These latter passes are not available for passage from Swat to British territory, because leading into Loondkhor, they can be stopped by any party holding that valley. The passes via Rancezye and Osmankheyl, if the people of those tracts accord a passage, lead straight on to the British Plains of Hushtnuggui. Above the Loondkhor valley, just beyond the

British frontier, is the strong village of Pullee. The subdivisions of the Peshawar district, adjoining the tribes above described, are Loondkhor or north-west corner of Eusufzye, and then Hushtnuggui.

The *Upper or Hill Momund* country extends from the south-western Swat border to a little beyond the Cabul river. Both banks of this river are in their possession and their capital, Lalpoora, where the head of their tribe resides, is situated near the left bank. They own allegiance to the Cabul government, though subject to an almost nominal control, and by treaty, Dost Mahomed Khan undertook to restrain them from hostilities against British subjects. Their militia can muster about 12,000 fighting men. They are tolerably good soldiers though not equal to the men of the most martial tribes. Their hills overhang the fertile strip of British territory, enclosed between the Swat and Cabul rivers near their confluence known as Dorba, and this portion of the border is not more than 25 miles distant from Peshawar. The three sections of the tribe that have come in contact with the British are the Pindie Alec Momund, the Alumzye Momund, and the Michnee Momund.

The Michnee Momund, after annexation, were allowed to hold a fief or jagheer from the British Government in Dorba, the fertile triangle near the junction of the Swat and Cabul rivers, of which they collected the revenue. Many of their clansmen dwell in the plains of Michnee and some in the neighbouring hills. They traded in the Peshawar valley. The Alumzye Momund, whose head quarters are at Gundao, in the hills, also had a fief of Punjpro in British Dorba, chiefly cultivated by tenants. A few of their men lived in the plains and the majority in the hills. These also traded in the valley. The Pindie Alec Momund at a former period, had held a similar jagheer in Dorba, but not since British rule. They inhabit a very strong locality in the hills. The fiefs were originally granted by preceding Governments to the Momund as black mail to buy off depredation.

The *Aficedi* come after the Momund and is the most important tribe of all on the Panjab frontier. Their territory, commencing in the hills between the Cabul river and the Khyber pass, forms the western boundary of the Peshawar valley, then it stretches round the south-western corner and skirts a portion of the southern boundary of the Peshawar district till it approaches the Khuttuk lands. It thus projects abruptly into the British frontier, separates the Peshawar district from that of Kohat, and forms the northern boundary of the latter district. The Aficedi hills,

intervening between the Kohat and Peshawar districts, are crossed by two principal passes communicating from one district to the other, the best of which is the well-known Kohat pass or Gull, and the other the Jewaki pass. Thus, the frontage of the Afieedi hills towards British jurisdiction extends over a total length of 80 miles, and this territory stretches far back in a westerly direction towards Cabul. Thus, the Afieedi hold a large geographical area and have a long border common with the British. The Afieedi are entirely independent. Their hills are lofty, steep and rugged, most arduous for military operations. The villages are strongly posted and difficult of access. The Afieedi are fierce by nature. They are not destitute of rude virtues, but they are notoriously faithless to public engagements. They are split up into factions. The sub-divisions of this tribe are numerous. They can muster 15,000 or 20,000 fighting men. As soldiers, they are among the best on the frontier. They are good shots. Their tactics resemble those of the other tribes. They retreat before the foe as he advances and press upon him as he retires. From the size of their country and the strength of their numbers, the Afieedi, if united, might prove formidable opponents, but they rarely or never combine. If their independence were threatened, or if some peculiar opportunity offered, they might act together, otherwise they will usually be found at war with each other. The Khyber Pass Afieedi, among faithless tribes, are considered the most faithless. A section of these Afieedi, named the Kookeekheyl, manifested symptoms of a friendly spirit towards the British. The Afieedi on the south-western corner of the Peshawar border have not signalized themselves. For the guardianship of the Kohat pass or Gull and the Jewaki pass, the Afieedi received some kind of consideration from successive dynasties, Ghiznavi, Mogol, Durani, Barukzye, Sikh, and British, and broke faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hill-sides would not alone suffice to afford. The British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afieedi to sore straits. These passes are of importance. The Gull or Kohat pass is the direct and best route from Kohat to Peshawar. The government port between these two important stations runs usually by this route. The Afieedi of

the Jewaki pass even among the Afieedi clans, are considered particularly daring and ferocious. Their mountains are very strong. When the Afieedi of the Kohat pass misbehaved, the Jewaki Afieedi offered to engage for that pass, or to conduct the communication through their own pass. The Jewaki pass was actually used for a short time, but the Jewaki Afieedi soon proved themselves to be worse even than their neighbours. They committed numerous raids and murders in the Peshawar and Kohat districts, and even robbed boats on the Indus. They also murdered a British officer, named Dr. Healy, who was travelling towards Kohat, for no other reason than that he was a defenceless Christian with a little property about him.

The Bungush tribe of the Kohat valley, are British subjects. They offered to guard the Kothul and asserted that they had a claim stronger than that of the Afieedi to hereditarily occupy the ridge.

Sepah and Buzotee are small, but very brave tribes numbering—Buzotee, 500, and Sepah, 300 fighting-men. They live in tolerably close connexion with their more powerful neighbours, the Afieedi, and manage to hold their own.

The Orukzye country extends from the Sepah tract (which adjoins the Afieedi hills) round the north-western corner of the Kohat district, and then nearly onward to the top of the Meeranzye valley (which belongs to Kohat) till it joins the country of the Zymoosht Affghin. The tribe is one of the largest of the frontier, and numbers 20,000 fighting-men, most of whom are good hill soldiers. The Orukzye hills stretch a long distance to the west. In the interior of these hills, there is the cool table-land of Terah, where the clansmen resort in the summer with their cattle and in the winter return to the pasturage grounds of the lower ranges near the British frontier. The sections of the tribe that have come in contact with the British, are the Shekhan, the Mishtee, and the Rabeuhkheyl. The portions of the Kohat district adjoining the Orukzye hills are the sub-divisions of Samilzye, Huugoo and Meeranzye.

The Zymoosht Affghan tribe come after the Orukzye, they are a small, but brave tribe, numbering about 5,000 fighting men, some of whom are well-mounted. They inhabit a valley leading from western Meeranzye onward to the crest of a range called the "Powai Kothul." Their country of right belongs to the Cabul kingdom. They are usually ready to combine for mischief with the Tootee and Orukzye, and to threaten

Meeranzye, but they hold some land in the plains, which holding affords some pledge for their good behaviour.

The *Tooree* are a warlike tribe occupying a portion of the valley of the river Khoorum. In 1856 they could muster 5,500 fighting-men. They are nominally subjects of Cabul, but they are under no real control. They repeatedly leagued with other tribes to harass the Meeranzye valley. They would sow among the Meeranzye people, they would harbour fugitives from either party, they would encourage all to resist the British, they would attack some villages in force. They frequently committed raids on the Bunnush and Khuttuk villages of the Kohat district. In August 1853, Captain Coke seized a *Tooree* caravan on its way to the salt mines, taking the property as security for repayment of value of plundered property, and the men as hostages for their tribes. This measure was soon followed by an embassy from the tribe and an agreement was concluded with the tribe from the commencement of 1854. The value of plundered property was made good, the prisoners were released, and five *Tooree* were made over to the British as hostages, but in the following March (1854) a serious attack was made by the *Tooree*, with 2,000 men (foot and horse,) on a Meeranzye village.

The *Wuzerees* are one of the largest and most important frontier tribes. They hold the rugged and lofty hills adjoining the south-west portion of the Kohat district (that is the western part of the Meeranzye valley and the hills round Bahadoorkheyl,) and the north-western border of the Dehla Ismael Khan, that is, the valley of Bunnoo, and the plains of Muirwat and Trank. These hills run down to the point where the great Sulimani range commences, near this point the Goomul range debouches from the hills almost opposite Trank. The valley of the Goomul forms the Golaree pass, through which a large portion of the traffic to and from Affghanistan and Central Asia enters into India, and is severely inferior to the Khyber pass of Peshawar or the Bolan pass of Sindh. The hills on either side of this pass are held by *Wuzerees*. It will also be seen that the *Wuzerees* hills form the western limit of the Joorduk pass, which is the main line of communication between Bunnoo and Kohat. Just to the east of this pass lies Bahadoorkheyl and also the villages of Khaniah and Lutumur, at which three places the Trans-Indus mines are situated. The *Wuzerees* hills also command the outlets of the Khoorum and Goombehe rivers into the Bunnoo valley. The *Wuzerees* are a numerous tribe, sub-divided

into various sections. The birth-place of this race would seem to be the snowy range, which runs to the south-east of Jellalabad and Kabul. From this range they appear to have moved downwards towards the Derajat border. They are noble savages, of pure blood, pastoral habits, fierce disposition, and wild aspect. They can muster probably (were the whole tribe united), as many as 20,000 or 30,000 fighting-men, and if combined might make themselves formidable. But though they are less addicted to internecine contests than other hill tribes, and are so far united, they are yet not apt to join all these forces together against an external foe. They are bold and ferocious, but, as soldiers, not equal to the most martial tribes. Many of them live in tents, or in temporary dwellings resembling tents, in the winter frequenting the more genial clime of the lower ranges, and in summer retreating to feed their flocks in higher altitudes. Some of them have engaged in cultivation and have encroached on the weaker tribes of the plains, of these, again, many will only cultivate during the cold months, and as the heat approaches will reap their crops and retire to the mountains. But the tendency to extend their cultivation and even to settle in the plains, has of late years, been increasing among the *Wuzerees*. The tribe generally is quite independent, both of the Kabul and the British governments, but some members of the clan who have taken up their abode as cultivators in the Bunnoo valley have become British subjects.

Many sections of *Wuzerees* have, ever since British connexion with the frontier, maintained peaceable relations with the British. These people, driving the aborigines of Bunnoo before them, have occupied pasture grounds on the western border of the valley, and have taken possession of cultivated lands in the same vicinity, amounting to about one-third of the cultivable area of the valley. Under the Sikh regime, there were constant disputes between these *Wuzerees* and the government (asmuch as revenue could in those days only be collected by force of arms), and also between them and the Bunnoo people, who asserted claims they could not enforce, to a patrimony which had been gradually usurped. In 1848, Major Edwards effected a settlement with these *Wuzerees* and with all the inhabitants of the valley on behalf of the Sikh government, he confirmed them in their possessions and arranged with them for the regular payment of their dues to the ruling power. The *Wuzerees*, for the most part continued as valued agriculturists and tax-payers. The revenue was first collected in kind, and then

money settlements were made. Before 1855, however, three sections of the Wuzzeerie tribe misbehaved, namely, the Cabulkheyl, the Mushood Wuzzeerie, (both of which entirely dwell in the hills and have no possessions in the plains,) and the Omeizye Wuzzeerie, which latter clan originally cultivated in Bunnoo and afterwards rebelled. The Cabulkheyl Wuzzeerie inhabit the northern portion of the Wuzzeerie hills, not far from the right bank of the Khorum. They are near neighbours of the Toorie. They overlook the western portion of Meeranze and then adjoin the Buhadoorkheyl sub-divisions of the Kohat district. They are a wild lawless set. They are always ready to join with the Toorie, Zymooslit Affghan, and Orukzye in mischief, such as raids on the Bungushi and Khuttuk villages of the Kohat district. In the autumn of 1850 they signalized themselves by an audacious attack on Buhadoorkheyl and its salt mines. For this purpose they assembled in considerable force and induced many of the Khuttuk villages round Buhadoorkheyl itself to league with them. The affairs with the Omeizye have been serious. Like other Wuzzeerie, they at first cultivated in the Bunnoo valley lands which had been wrested from the Bunnoochee of the neighbourhood.

The Mushood section of Wuzzeerie is strong and mischievous. They inhabit the most southern of the Wuzzeerie hills. It is the section which occupy both sides of the Goleerec Pass. Even they are hardly strong enough to attack the caravans of hardy, well-armed traders from Central Asia. But they plundered travellers and carry off the herds of camels chiefly belonging to merchants that graze near the foot of the hills.

Valley of Dour—Surrounded by the Wuzzeerie hills, and adjoining the western border of Bunnoo, is the small valley of Dour, inhabited by a distinct race, and containing about 8,000 inhabitants. This valley originally belonged to the Dooranec kingdom. It was, together with other outlying tracts, formally ceded to Runjeet Singh by the tripartite treaty of 1838, but afterwards, in 1847, the British relinquished all claim to it on behalf of the Sikhs. The people of Dour more than once expressed a wish to come under British jurisdiction, but the offer was not accepted. During the treaty negotiations of 1855, the Ameer of Kabul's representative urged that the valley once formed an integral portion of the Dooranec empire, and that His Highness then wished to take it, provided that the British did not claim any title. The government replied that the British did not desire to assert any claim, nor to interfere with the amir, if he chose to re-annex it to his kingdom.

The Sheorani—Below the Wuzzeerie limits, a little south of the Goomul river, are the Sheorani hills, stretching from the latitude of Dehra Ishmael Khan downwards to nearly the latitude of Dehra Futteh Khan, a distance of fifty miles. In these hills is the lofty square-shaped mountain called Tukht-i-Suliman or Solomon's Throne, which gives its name to the Sulimani range, running parallel for 300 miles to the Indus and forming the western frontier of British India. At the base of this mountain runs the important Zeikunnec pass, the high road for caravans to and from Kaudahai. The Sheorani are of Pathan lineage, of inferior stature to the Wuzzeeri, they are warlike and predatory, and quite independent. The number of their fighting-men has been set down at 10,000 but this is found to be high. They can muster 1,000 men within a day's notice, in the course of three or four days they will muster 3,000 more. They adjoin the British tracts of Tik (partially) in the north, then Kolachee, then Durabund, and lastly Choudwan—all in the Dehra Ishmael Khan district, and forming the border plains of the Upper Derajat up to annexation. With all the above tracts the Sheorani were long at feud. They would attack towns, burn villages, and carry off prisoners and cattle. The people of the plain would make reprisals and retaliation, and thus the feud would be inflamed. The Sheorani were so much feared, that the arable lands skirting the base of the hills were all left untilled, and the neighbouring plain villages paid them regularly one-fourth of their produce to buy off depredation,—the Sikh government being unable to restrain them.

Oshterani—South of the Sheorani hills, on the continuation of the Dehra Ishmael Khan and Dehra Gazee Khan districts, there dwell the small Pathan tribe of Oshterani, mustering about 1,000 fighting-men. They are brave and pugnacious, but not predatory. They dwell chiefly in the hills, and are so far independent, but many of them possess and cultivate lands in the plains at the foot of the hills, and consequently within British territory. Before annexation they used to be quite as violent as their neighbours, especially during the continuance of a deadly feud with the Khasanee. The quarrel was, however, composed by Major Edwardes before annexation, and subsequently they evinced a good and friendly disposition.

Vooch Pass—On the border of the Oshterani hills, and nearly opposite to Dehra Futteh Khan, is the Vooch or Korah pass, faced by the British outposts of Doualwalla and Vehoa. This point is of some topographical import-

ance, as constituting the boundary line between the Puthan and Beluch tribes

The border tribes previously noticed are all Affghan or Puthan, those that will follow here, are all (with one exception) Beluch

The Beluch tribes extend along the lower half of the Derajat frontier. These Beluch tribes are less warlike and interesting, but even more predatory. The Puthan are almost entirely independent, very few of these people are British subjects. The headquarters of Beluch tribes and the majority of the clansmen are generally in the independent hills, beyond the British territory, the boundary line of which runs along the base, but a large number of each tribe also hold lands in the plain and are British subjects. Some of the chiefs will also be found residing there. The Beluchi of the plains have for the most part since annexation behaved as well-disposed subjects but the Beluchi of the hills continued their old habits of plundering. All the tribes continued at feud with each other, they not only fought in the hills, but they carried their contests into the plains, they attacked all villages in the plains, except those belonging to their own tribe. The men of the plains usually resist the attacks with spirit at the time, but they are not allowed to retaliate afterwards, as they used to do under the Sikh rule, and as they would do still, were they not prevented by the British government. To guard British villages and people from their constant aggression, a strong cordon of military posts has been fixed along the base of the Sulman range. The marauding parties were 50, 100, 200, 300, occasionally even 500 strong. They were often mounted and would fly if hotly pursued for 15, 20 and even 30 miles. Many of the villages and much of the cultivation is close to the hills and in front of the posts, so that the plunderers can, in the shortest time, carry off their booty to the hills before the detachment comes up. The tribes in their topographical order, are as under:

The Kusiani are in the hills which extend from the Korah pass downwards for a distance of about fifty miles, about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain, and the half desert tract at its base, and the remainder live in the hills. The hill Kusiani can muster some 1,200 fighting men, of whom 50 are horsemen. They are very thievish, and were in the habit of proceeding through the land of their brethren in the plain to plunder in the villages near Dehra Ishmael Khan. The country round Dehra Fattch Khan was also harassed by them, and

many hundred head of stolen cattle were conveyed through the passes into the interior.

The Bozdar—From the Kusiani limits the hills of the Bozdar tribe extend along the British frontier for about 15 or 20 miles. The range is intersected by some nine passes leading into the plains, the chief which is the Sungurh pass, through which there is considerable traffic with Kandahar and the Punjab. Opposite these hills lies the Sungurh low-land (forming the upper portion of the Dehra Ghazee Khan district and cultivated by several peaceful tribes) and very much at the mercy of the Bozdar. There is only one Bozdar village in the plains but there is much scattered cultivation belonging to the tribe. Almost the whole tribe and their chiefs live in the hills. They can muster 3,000 or 4,000 fighting-men, some portion of whom are horsemen. They are probably the most formidable robbers in this part of the frontier. Under the Sikh regime they repeatedly carried fire and sword into the Dehra Ghazee Khan district.

The Khutram—Behind the Bozdar hills live the Khutram and Puthan tribe, numbering 3,000 fighting-men, of whom 500 are mounted, in the midst of the Beluch tribes, with whom they are frequently at feud. They are special enemies of the Bozdar and the Munce, their hills scarcely touch the British frontier. Once they sought British alliance against the Munce, and also offered their support, if an expedition were undertaken against that tribe, but the government refused to have any relations of this nature with them, in order to avoid being implicated in the feuds of the hill tribes.

The Kosah extend from the Bozdar southern border to a point somewhat below the latitude of Dehra Ghazee Khan, distance of 300 miles. The tribe dwells partly in the hills and partly in the plains and can muster about 1,200 fighting-men. In 1855 they were at amity with the Bozdar above them and the Lugharee below them, but are on good terms with the Khutram who are situated behind them. In 1848 the Lugharee sided with the officials of the rebel Moolraj but the Kosah rose on the side of the government, under their chief, Kowrah Khan, and his son Gholam Hyder Kowrah Khan, and his son then joined Major Edwardes' irregular force in the Multan province with a contingent of 400 horse. Kowrah Khan was confirmed in the possession of a jagheer of rupees 1,000 per annum for his own life and for that of his son, he himself was granted a life-pension of rupees 1,000 and a garden at the native place of the family was confirmed rent-free in perpetuity.

The Lugharee, well-affected tribe, come next after the Kosah. They live partly in the hills and partly in the plains. Their country extends from Fidoora southwards about 30 miles. In these hills is situated the town of Sukkee Lmwar, a place of some sanctity, and venerated by both hindoos and mohomedans. An annual fair is held there. The pass which runs by this point is one of the chief thoroughfares to Kandahar, and the route traverses the Khutran country to the westward. The enmity of the Khutran with the Kosah has been already mentioned. They were greatly favoured by the government of Sawun Mull, who desired to use them as a counterpoise against other tribes.

The Goorchanee are next in order. They can muster about 2,000 fighting-men. Many of them live in the hills and some in the plains. They are a thoroughly debased and thievish set, and contemptible even as savages. They have no respectable chiefs. One chief was put to death by Sawun Mull. Their hill frontage is not more than 20 miles long, but it is intersected by about 30 passes. Towards their southern limit stands the fort of Hurund, a strong masonry structure, erected by Sawun Mull for restraining them. Near Hurund is an important pass leading towards Kandahar, they do not make daring forays. In 1850, one raid of theirs was reported, in 1852, two, in 1853, it was proclaimed that one of their hill-men found in the British territory would be seized and placed in confinement, in 1854, their head-man entered into engagements to protect the passes and receive an allowance of rupees 1,000 per annum. In the midst of the Goorchanee passes are four passes, which in 1855 were in the separate charge of one Kosah chief, and two chiefs of the Rind tribe, for which they receive rupees 300 per mensem.

The Lisharee are a section of the Goorchanee tribe. The Lisharee is a more degraded creature even than the Goorchanee, his ideas do not extend much beyond robbing. Being in the constant habit of harassing their neighbours, they do not commit many eminent crimes. They are always ready to join in forays with the Muntee, a more powerful tribe. In 1850, however, one raid was reported against them, in 1852 one, in 1853, four, and in 1854, four. These raids were not however successful.

Dreshuk—In front of the Goorchanee and Lisharee hills, and between Hurund and Mithunkote, are plains inhabited by the Dreshuk, British subjects.

The Muntee and Boogtee dwell in the hills forming the continuous boundary of Sindh and the Punjab. Near Hurund, the

great Sulman range having run in almost a straight line parallel to the Indus for 300 miles approaches its termination and joins the Marla Mount, which leads on to the Muntee hills, behind which lies the table land where Kalun, the capital of the Muntee tribe, is situated. But in front of these Muntee ranges, there rise a series of sterile rocky hills which run towards the Indus, and form themselves into an apex near the Gundheer peak, approaching to within a few miles of the river bank. It is at this point (Shawulla) that the continuous boundary of Sindh and the Punjab has been marked off. These last-named hills, projecting into the Lower Derajat, opposite the cantonment of Asnee, are very thinly peopled. They are crossed by passes leading towards the Muntee hills, and are claimed partly by the Muntee tribe and partly by the Boogtee tribe, whose hills lie further to the south, but in fact they are not held in strength by any tribe. It is seen therefore, that the Muntee and Boogtee hills, properly so called, are continuous with the Punjab frontier. The head-quarters of both these tribes are situated within the political circle of the Sindh authorities and the relations with both are generally carried on through that medium.

The Muntee are a strong Beluch tribe, numbering 3,000 or 4,000 fighting-men. They occasionally committed raids in British territory, in the lower extremity of the Derajat. In 1850, one case was reported against them, in 1853, two, in 1854, one, in 1855, one. They once threatened Rojhan and Kusmors, but desisted, seeing that preparations were made to receive them. They once attacked a forager's guard from a cavalry regiment at Asnee, and killed several men. Living at some distance in the interior, they cannot well make incursions upon British territory without guides, but the classes who could furnish them such aid can generally be brought under the influence or fear of the British authorities.

The Boogtee do not now give the British any cause of offence. Some of their men are serving in the Punjab cavalry and many are in the Sindh service. They are subjects of the Khan of Kelat.

The following tribes are within the British frontier.

Hazarah—Their most important political district is western Turinulee. This petty principality, with a geographical area of 250 miles and a revenue of Rupees 28,000 per annum, is held as a fief from the British government, and the chief possesses independent internal jurisdiction. The tract chiefly lies on the left bank of the Indus,

a portion only being on the right bank, and confronts the Hussunzye country. It is inhabited chiefly by the Turnoulee, a tribe of martial Puthans. Paynda Khan, was a wild and energetic man, and was never subjugated by the Sikh or by the Jummoo rajahs. His son, Jehandad, though loyal and respectable, was wanting in moral and physical force. He behaved well to Gholab Sing at a time when that chief had no friends in Hazara and was confined in his fief and received some additional landed grants.

The Syuds of Kaghan claim a brief notice. This long narrow glen, stretching upwards till it nearly reaches Chelas, the latter outpost of the maharajah of Kashmir's kingdom, is a barren dependency of Hazara. It is inhabited by pastoral and aboriginal races, and was given by the predecessors of the British in fiefdom to a family of Syuds who were confirmed by the British. These Syuds exercised international jurisdiction and kept certain members of the family in attendance on the Deputy Commissioner of Hazara, virtually as hostages for good behaviour. The Syuds were summoned to answer numerous complaints preferred by the people of Kaghan. They came, but afterwards fled and assumed an attitude of resistance and intrigued with the Sitana fanatics and with the Hussunzye, then hostile to the British.

The name "Hnzaha" or thousands, indicates that the tribes are numerous. The principal of the Hazara tribes are the Turnoulee, Gukknr, Swatee, Doond, Sutte. The petty chieftains are equally numerous. To all were granted jagheers, some for life, some for two or more generations, and some in perpetuity. The liberality of the British government has been very great in Hazara. The landed grants are in the proportion of one-third of the revenue of the district, which amount to less than two lakhs of rupees per annum. Each chief is bound to turn out his contingent of militia, if required, some 40,000 armed men could in an emergency be presented. The principal chieftains are the Gukknr chief of Khaupoor, the Turnoulee chief of Daiwazy, the Swatee chiefs of Agoie, Manseira and Gurhee. Hubeeboollah. Under British rule nothing can exceed the loyalty of the Hazara people, who, under the Sikhs, represented by Hurree Sing Nulwa, and maharajah Gholab Sing, resisted cruelty and oppression with the most stubborn contumacy.

The Eusufzye, in the Peshawar district, claim political importance. As soldiers, they are not inferior to any of the independent tribes. They are the most martial of all the British subjects on the frontier, and the

history of many generations attests their military exploits. Participants in every war that has convulsed the Peshawar valley, and always the recusant subjects of the Sikhs, they literally turned their swords into ploughshares and became good hedges of the British. Their customs have been respected, the allowances of the chief and their village head-men have been confirmed. Though constantly tampered with by the Swat government to rebel, they only once in 1849 yielded to temptation.

The Khuleel are a class of the Puthan, dwelling in a portion of the Peshawar valley opposite to the Momund hills. Their chiefs held jagheers on condition of service. During the disturbances they permitted a number of hostile Momund to escape through their fief. For this misfeasance their jagheers were reduced, and they were temporarily exiled, but were shortly allowed to return to their homes.

The Momund of the Plains are a section of the Momund tribe who have colonized in the south-western portion of the Peshawar district. They are now respectable cultivators. They maintain friendly relations with their neighbours, the Afied. Their chiefs hold jagheers, but the support they give to government in return is lukewarm. They have not fraternized with their fellow Momund of the hills, but they have not cordially co-operated against the Afied, of whose vengeance they are perhaps apprehensive.

The Bungush Puthan are the principal tribe in the Kohat district. They are a large tribe, can muster 15,000 fighting-men, and are fairly good soldiers. They highly appreciated the light money assessments of the British, after what had been long termed the 'robber rule' of sultan Mahomed Barukzye, who up to 1848, he held Kohat as a fief from the Cabul government. It was then taken possession of by the British on account of hostility to the British during the second Sikh war. The late Khan of Hungoo in the Bungush country was in the British service as revenue collector, but he was murdered by one of his own relatives, and the Khanship descended to his son. The Bungush suffered much from the raids of their hill neighbours, Orukzye, Toorie and Cabulkheyl Wuzere. The inhabitants of the Meeranzye valley are also Bungush. This valley belonged to the fief of sultan Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Meeranzye, which appeared to have been vacated, so Sudar Azim Khan, the governor of the

Khohium province, in 1851, summoned the Meeranzye to surrender, but they petitioned the British to include them in Kohat, and this request was granted. They were in their hearts hostile to the British government, as indeed they were to any government whatever.

The Khuttuk—The remainder of the Kohat district consists of the Khuttuk country. This had belonged to the Sikh dominions, and had been farmed out to Mirza Mahomed Khan. There were also other jagheers similarly situated, belonging to other Khuttuk chiefs, but two chiefs failed to prevent Afghani marauders from passing through their lands, to cross the Indus and then to plunder and murder in the Rawul Pindie district. On the whole the Khuttuk have been loyal subjects. They are good soldiers and can muster 12,000 fighting men. Many of them are in the British service. They are considered the best-conducted and most respectable tribe on this frontier.

In the southern Khuttuk hills are the Trans-Indus salt Mines situated near the villages of Buhadookheyli, Kunick and Lutumm. There is also a separate mine at Malgeen, a place lying east of Kohat. The headmen of these villages receive a fixed percentage on the collections at the mines to obtain their good-will. The Sikhs never managed these mines at all. They farmed them out to some local chief, and left him to collect what he could. Under British rule, the control and working of the mines is in the hands of government officers, the salt is excavated and sold at the mine at a fixed duty of two, three and four annas per maund of 80 lbs, covering all expenses.

Derajat is the term applied to the territories styled Derah Ishmael Khan and Dehia Ghazi Khan.

The Dehia Ishmael Khan district is divided into two halves by a range of hills running at nearly right angles from the Sulhman range to the Indus. The passage from one part of the district to the other is through the Peyzoo and Mulezye passes which intersect the range. Above the passes there is the valley of Bunnoo. The Bunnoo Wuzerees have been already described. The Bunnoochees themselves were, and are still, to a certain extent, a vicious race. They cultivate with some industry; and are well-affected to the government. Below the valley, and immediately above the range is Murwut. The Murwutees are a fine race, of striking appearance, loyal to government, and both willing and able to check the depredations of their hill neighbours. In Murwut stands the fort of Lukhee. In the hills near

the Peyzoo pass dwell the Buttanees. They were once a robber tribe, but have reformed since annexation. Their co-operation against the Muhsood Wuzerees could be reckoned upon.

Below these are two important families, namely, the Gundapoori of Kolachee, and the chiefs of Tank. These two tracts are exposed to attack from the Sheoranee and Wuzerees. The revenues of Kolachee amount to between Rupees 8,000 and 10,000. Of this, up to 1855, the Gundapoori received 25 per cent on condition of good service in defending the tract. The Tank chief holds a lease of the revenues of that tract, he makes the collections which amount to Rupees 65,000 per annum, and receives one-third for himself and the establishment he maintains. This lease is conditional on good service in defence of the fief. The chief is a Pathan of good family. There is also the Nawab of Dehia Ishmael Khan, he belongs to the princely race of Suddoozye, and was formerly the Lieutenant of the Duranee government in the Upper Derajat and Lower Sindh-Sagui Doab. He was deprived of his power by the Sikhs.

Derah Ghazee Khan—The principal chiefs in the Dehia Ghazee Khan district, the Nootkanees, Loond and Dieshuk, have been mentioned in connexion with the hill tribes. Those sections of the hill tribes who reside in the plains have usually behaved well, even at times when their brethren of the hills were in a state of hostility against British subjects. The plain tribes are the Nootkanees, Loond and Dieshuk, all of them well-conducted, they can muster a certain number of fighting-men, but they are unable to resist effectually the marauding aggressors of the hill-men, and are victimized by such tribes as the Bozdai and Goochanee.

The Muzarees formerly dwelt in the hills, but migrated to the plains where they have since remained, and have been a cause of trouble to successive governments. They can muster 4,000 fighting men, and more than a hundred horsemen. Their head-quarters are now at Rojha, below Mithunkote, and near the confines of Sind. When Mithunkote was conquered by the Sikhs, they harassed the new-comers and laid waste the acquisition. The vicinity of Mithunkote still bears traces of desolation. A strong Sikh force moved against them, and thus the lower extremity of the Derajat, down to Shahwullees, was then added to the Sikh dominions, and at annexation became included in British territory. Maharajah Runjeet Sing subsequently received the Muzaree chief at Lahore. The Muzarees are not disloyal subjects, and aid in keeping the Murrees in check, against

whom they are bitterly opposed. But they were addicted to cattle-lifting and carrying on more or less an organized system of theft not only in British territory on both sides of the Indus, but also in Baluchistan territory. To prevent this, a river police was formed and then depredations diminished.

The independent and dependent tribes of the Punjab frontier having been thus described in detail, it may be well to give a summary of their respective forces. The numbers of fighting-men of the independent tribes may be thus estimated —

Tribes on Hazara frontier and near the Indus north of Peshawar	8,000
Swat and its dependencies	20,000
Momund	12,000
Afreedi	20,000
Orakzais and other tribes on Kohat frontier	30,000
Wazir	20,000
Sheoranis and others in Dera Ismail Khan district	5,000
Beloch tribes on Dera Ghazi Khan border	20,000
Total	135,000

Besides the above, there are other wild but dependent tribes within British territory with the following numbers of fighting-men —

Tarnoli (including Jalandhar's)	8,000
Other tribes of Hazara	10,000
Eusufzai	25,000
Khattak	12,000
Bugti	15,000
Derajat tribes in British territory	10,000
Total	80,000

Only a very small portion of these forces would ever be arrayed at one time and in one place—it is but rarely that even two or three tribes can combine. When one tribe, or section of a tribe, is hostile, it generally happens, that another tribe or section is friendly, and the support of some tribes could be always counted upon in the event of hostilities. Anything approaching to a general combination is a contingency quite beyond the range of probability.

The independent tribes beyond the frontier are savages, noble savages perhaps, and not without some tincture of virtue and generosity, but still absolutely barbarians nevertheless. They have nothing approaching to government or civil institutions. They have for the most part no education. They have nominally a religion, but mahomedanism, as understood by them, is no better, or perhaps is actually worse, than the creeds of the

wildest races on earth. In their eyes, the one great commandment is blood for blood, and fire and sword for all people not mahomedans. They are superstitious and priest-ridden. But the priests (Moolla) are ignorant as they are bigoted and use their influence simply for preaching crusades against unbelievers and inciting the doctrine of rapine and bloodshed against the defenceless people of the plains. The hill men are sensitive in regard to their women, but their customs in regard to marriage and betrothal are very prejudicial to social advancement. At the same time they are a sensual race. They are very avaricious—for gold they will do almost anything, except betray a guest. They are thievish and predatory to the last degree. The Pathan mother often prays that her son may be a successful robber. They are utterly faithless to public engagements, it would never even occur to their minds that an oath on the Koran is binding if against their interests. It must be added that they are fierce and blood-thirsty. They are never without weapons—when grazing their cattle, when driving beasts of burden, when tilling the soil, they are still armed. They are perpetually at war with each other. Every tribe and section of a tribe has its internecine wars, every family, its hereditary blood feuds, in every individual, his personal foes. There is hardly a man whose hands are unstained. Each person counts up his murders. Each tribe has a debtor and creditor account with its neighbours life for life. Reckless of the lives of others, they are not sparing of their own. They consider retaliation and revenge to be the strongest of all obligations. They possess gallantry and courage themselves and admire such qualities in others. Men of the same party will stand by one another in danger. To their minds hospitality is the first of virtues. Any person who can make his way into their dwellings will not only be safe, but will be kindly received. But, so soon as he has left the roof of his entertainer he may be robbed or killed. They are charitable to the indigent of their own tribe. They possess the pride of birth and regard ancestral associations. They are not averse to civilization whenever they have felt its benefits, they are fond of trading, and also of cultivating—but they are too fickle and excitable to be industrious in agriculture or anything else. They will take military service, and though impatient of discipline will prove faithful, unless excited by fanaticism. Such, briefly, is their character, replete with unaccountable inconsistencies, and with that mixture of opposite vices and virtues, belonging to savages—*Mr Temple in Nos VIII*

and in of Records of Government of India, Moorcroft's Travels, Vol 11, pp 352-4, Vigne's A personal Narrative, pp 106-7, Masson's Journeys, Vol 1, pp 162-165, 101

KHYEN is a name given to several populations,—one tribe who tattoo their skins, dwell on the Koladyn river, in Annam. Another dwell on the Yuma mountains south of the Koladyn river, the Miao are sometimes called Khyen. Khyen, indeed, as also Kia, are probably, names given to most of the rude tribes of the Annam and Burmese mountains. Those of the Khyen to the south of the Koladyn river, are Burmese subjects, pay taxes, serve as soldiers, and live a quiet life. But the Khyen on the hills are independent. They say that they fled thither from the plains of the Irrawadi. They are ruled by their village chiefs. Their religious chief is the Papin, whose office is hereditary, and is that of prophet, soothsayer and priest. They believe in the metempsychosis. They worship the Subu tree, a thick bushy tree, bearing a small berry, they also worship the thunderbolt. The Khyen grow and spin cotton into cloth, which they dye black and wear. The women tattoo their faces. The true and typical Khyen is the independent mountaineer of the central districts. The Khyeng or Khyen residing to the south of the Koladyn, in the Yu-ma range as far as the north border of Pegu, but chiefly in the upper basin of the Lem-yo, have a tradition that they once possessed the plains of Pegu and Ava. The name seems to be the soft Burman pronunciation of Karen, and they may be a remnant of an old horde from the north pressed into the mountains or restricted to them by the Karen, as the other Yuma tribes probably were. Linguistically, the Khyen are connected with the Yuma tribes to the northward. Physically, they are of the earlier and purer of the Mongolian race of the Irrawadi family like the Nicobarian, Kumi and Kuki. Their faces are flatter and less regular than the Burman and consequently than the Karen. Captain Phayre says their manners and appearance are similar to those of the Kumi. They make iron and cloth and have the usual weapons of the tribes of the upper Irrawadi. They are interspersed amongst the Burmese and Karen, from lat 23° N, along both sides of the Annam range and range southwards to the mouths of the Irrawadi, and a few are found eastward. They are most numerous about 20° N lat. Their women tattoo their faces entirely of a dark-blue colour. The eastern portion of the district from the Yeomadong to the Lemioo river is mountainous and hilly. The hill tribes living on the eastern frontier are Khyen,

Mioo-khyen, and Koo. The Khyen differ from the Burmese in dress, language and habits. They occupy both banks of the Lemioo river from the Wah Kheong to the Khee Kheong, and the low hills west of the Jegaendoug range visible from the plains, to the valley of the Tai ooe Kheong and the low hills and plains within the Tandan, Ganacharan, Piwamhry and Damboung encles. They are a quiet, inoffensive people, and number 3,304 souls who pay land revenue and capitation tax to the amount of rupees 3,883. The most northern village occupied by the Mioo Khyen, paying revenue, is Sikeh uoa situated 14 miles north of the junction of the Sieng Kheong with the Lemioo river. The Mioo Khyen occupy the valleys of the Wah Kheong, Sieng Kheong, Man Kheong and that part of the valley of the Lemioo between Peng Kheong and Saeng Khcong. They number 4,020 souls, of whom 37 cultivators pay an annual revenue of rupees 111. *Khyen or Kayn, or Chin*, are a considerable tribe on the Yoma mountains that stretch from Annam to the Naga hills and scattered in small settlements on the north of Pegu as far as Tonnghoo. Dr Mason regards them as Karen, but Yule thought them Kooki, and Phayre regarded them as Burmese. They tattoo the faces of their women, to mar their beauty. They call themselves Shyou or Shyu or Sho, and the Burmese style them Pwo-meet-khyen, meaning river Khyen.—*Latham, Mason, Burmah*, p 96-97, *Yule*. See Kami, Karen. KHYEN BOUNG PHYOO, and Tau khyen boun and then-ban, BURM, are species of Hibiscus.

KHYENDWEN, a tributary to the Irrawadi, in lat 26° 28', long 96° 54', runs generally south into the Irrawadi, near the town of Amyenmya, length, 470 miles. It receives Myitth Khyong, 170 miles. See India.

KHYEN RWÆ, BURM. Abies precatorius, *Linn*.

KHYET-THWON-NEE, BURM. Allium roseolonicum, *Linn*.

KHYONG, BURM. A small river.

KHYOUNG, see Pagoda.

KHYOUNG SHA, BURM. Calosanthus indica, *Blume, IV I*.

KHY-OUNG-T'HA. The sea board of Annam and the lower portions of the valleys opening into it, form the country of the Rakhoung-tha or Annam tribe, of whom the Burmans are a branch. Some are found residing on the banks of the mountain streams and are distinguished by the name of Khy-oung-tha. Their language proves that they do not belong to the Yuma group, but are intruders from the north, and their own traditions recognise the Ku-mi as the tribe in

possession of the serf bond, when they entered Arakan. Amongst the people speaking one of the Yuma dialects, according to Mr Logan, is the Khy-oung-tha, of Arakan, a rude tribe, speaking the Rikhomg dialect of Burman. The Khy-oung-tha, with the Klu-mi or Klu-mwi (properly Ku-mi), of the middle basin of the Koladyn, belong to the Burman family. The more eastern tribes, such as the Lung-khi (perhaps the Lmktu, a branch of the Ku-ki) of the upper Koladan, and the Heumu of Shindu, and the Khon or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Ku-ki, Ku-mi, &c. The Lungkhi are said to be composed of an offshoot of the Heumu of the Shindu (Shentu, T-cundu or Shuandu) and two tribes called Lung-khe and Bowng-jwe which it subdued. Captain Tickell says that the feeders of the M-Khyoung, the principal eastern affluent of the Koladyn, descend from masses of high hills about 21° 50' N Lat, inhabited by the Kun. See India.

KIHYONG-YOOK, *Gnugu pinnata*, *Rorb*

KIHYOUK PIYOO, a town and harbour in the island of Ramree or Yambie

KHYRALLU, see Kol

KIHYRODA, is a tuppa, or sub-division of one of the greater khalsa or fiscal districts of Mewar, and consists of fourteen townships, besides their hamlets. Its land is of three classes, viz, peewul, or watered from wells, goima, also irrigated land, extending three or four khet, or fields, around the village, and mai or mal, depending on the heavens alone for moisture. There are two harvests, viz, the oonloo (from oon, 'heat'), or summer-harvest, and the sealoo (from see, 'cold'), the winter or autumnal. The sealoo crop, consists of mukka or Indian corn, sorghum or joom and baji, with the different pulses. Its agricultural economy, discovers distinct traces of the patriarchal system. The share of the crown, as in all the ancient hindoo governments, is taken in kind, and divided as follows.—Of the first, or oonloo crop, which consists of wheat, barley and grain, the produce is formed into kulla (piles or heaps) of one hundred maunds each, these are sub-divided into four parts, of twenty-five maunds each. The first operation is to provide from one of these the seed, or one seed on each maund, to each individual of the village establishment, viz, the patel, or head-man, the patwar, register or accountant, the shauah or watchman, the bullai or messenger, and also general herdsman, the kat'h (alias sootai) or car-

penter, the lohar, or blacksmith, the Flo-mu or potter, the dhobi, or washerman, the chumar, who is shoe-maker, carrier, and scavenger, the nae, or barber-surgeon. This rough sketch of the agricultural economy of Khyroda, may be taken as a fair specimen of the old system throughout Mewar.—*Tod's Rajasthan*, Vol II, pp 595, 598

KI, the name being also written Ke and Kei or Key, a group of three large and many smaller islands near New Guinea, about 60 miles west of the Aru islands. The Ki appear like so many isolated mountains, thinly peopled, one of them is famous for its potteries. At another are built the prahu, celebrated among the numbers of Banda and Ceram, for their sailing qualities and strength.—*St John's Indian Archipelago*, Vol II, p 90, *Horsburg*

KIAB, an Arab tribe of Suzistan. See Ka'ab

KIAMIL, HIND *Odium wodier*

KIANG, the King, or wild horse (*Equus hemionus*), according to the Messrs Schlagentweit, has been often confounded with the Gor-khan, or wild ass, though they differ considerably in appearance, and inhabit countries with very dissimilar climates. The Kiang exists in the high cold regions and mountains of Tibet, the ass in the heated sandy plains of Sind and Beluchistan. The Kiang is found in great numbers nearly in the same localities as the yak, he does not, however, go up the mountains so high as the yak, but the range of his distribution is greater than that of the yak. The greatest elevation where they found the king, was 18,600 English feet, whilst they traced yaks as high up as 19,300 feet. The regions where the yak and the King are found are, in a zoological point of view, among the most remarkable and interesting of our globe. The highest absolute elevation coincides here, it is true, with the greatest height of the snow-line, or rather it causes the snow-line to be higher. But those large, high, plateau and regions, though free from snow and ice in summer, remain a desert throughout the year. The amount of vegetation on them is less than it is in the desert between Suez and Cairo, in Egypt. Nevertheless, these high,

sterile regions are inhabited by numerous herds of large quadrupeds, and, besides those already mentioned, numerous species of wild sheep, antelopes, and a few canine animals, chiefly wolves, as well as hares, are abundant. The herbivorous animals find here their food only by travelling daily over vast tracts of land, as there are only a few fertile spots, the greater part being completely barren. The great scarcity of vegetation, particularly the entire absence of mosses and lichens has a very different effect, though an indirect one, on the occurrence of birds. Those small plants are the chief abodes of insects: the want of mosses and lichens, coinciding with a total absence of humus, limits, therefore, to its minimum the occurrence of insects, the exclusive food of small birds in all extremely elevated parts of the globe, where grains are no more found. They indeed met, travelling twenty consecutive days between heights of 14,000 to 18,200 feet, only with three individuals belonging to a species of *Fringilla*, but occasionally a few large carnivorous birds as vultures, were met with. Major Hay sent a kiang to the Zoological Society of London. He mentions that the mares are highly esteemed by the Tibetans for breeding with the thorough-bred Chinese stallion, the produce being a horse with great powers of endurance and which, on this account, are much in request by the Zulus, a race of hill robbers who inhabit the mountains. The kiang are abundant near the Pangong Tso, and between Chusai and Haule. They roam on plains 14,000 to 15,000 above the sea. They are shy. See Gorkhan, India.

KIANG, BURM. A fortified city.

KIANG-KIEN, Kiang-tung, see Shan.

KIAONG, BURM. The monastery house of the Phongi, or buddhist priests or monks.

KIAO-YOU, the Chinese christians call themselves by this name — *Huc, Chinese Empire Vol 1, p 232*

KIAR, HIND. *Capparis spinosa*

KIAT, HIND. *Pyrus variolosa*

KIAT, BURM. The tical, a piece of silver money, weighing 10 dwts 10 $\frac{3}{4}$ grains — *Simmond's Dict*

KIAYN of Ariacau, inhabit the mountains of Yumab, which separate Ariacau from Ava. These people, upon the skirts of the mountains, are subject to the Burmese, but, in the less accessible districts, have preserved their independence — *Cole Myth Hind, p 326*. See Khyen, India.

KIAYU, a pass in China. The great highway, between Peking and Europe, has from time immemorial been the caravan tract from the western end of the great wall across the desert of Gobi. The route issues from the

western end of the great wall, and moving through the Kiayu pass, has to traverse N. W., 500 miles of a desolate and tract to reach the city of Khami. At this town the road bifurcates, the upper branch leading through Baykul Uimchi, and Kuitun-ush into Dzungaria, the lower through Pijm, Tuisan, Karashan, and Kuchin to Aksu in Eastern Turkistan. While Chinese rule prevailed, Dzungaria and Eastern Turkistan formed the province of Ili.

KIBABEH, or Cabab-chim, PLRS. Cubebs

KIBITKA, a tent made of felt, called in Russia Jouta or Kibitka is in Mongol called ghei, several tents together, forming a kind of village or station, are called ourto. Oulons, or olos, signifies in Mongol, empty, people, Oido, a chateau, or imperial palace — *Timonsh's Journey to Peking, Vol 1, p 12*

KIBLAH, AR. Signifies point of adoration, and is usually applied to the kabba or holy edifice of the mahomedans, situated in the bair-ullah or temple of Mecca. All Eastern sects appear to have had some Kiblah or holy point, to which the face was to be turned during prayer. The Jew looked towards Jerusalem. The Sabæan, according to some, to the north star or, according to others, towards that part of the heavens in which the sun rises, or towards the meridian, and the Magian to the rising sun. According to the Ved, brahmins should direct their prayers to the east. The early christians chose the east, Mahomed, who recognised the general custom, and found it necessary to adhere to it, appointed the holy Kabba of Mecca to be the Kiblah of his disciples. Kiblah is, also, a respectful term in common use in India by mahomedan children towards their parents, or inferiors towards superiors, and in this case means the source of honor and esteem. One of the titles of the king of Persia is Kiblah-i-alam, point of the world's adoration — *Tavernier, Layard's Nineveh, Vol 1, pp 300-1, quoting Hyde's Reliq Vet Persar, p 8, Prideaux Connect, Vol 1, pp 3 and 7*

KIBLAH-I-ALAM, ARABO-PERS. Asylum of the world, in letter-writing, is an expression of respect in mahomedan countries from dependents to their masters, children to parents, or servants to a prince, implying towards whom all the world turns with veneration — *Ouseley's Travels, Vol iii, p 133*

KIBR, or Kabi, HIND. A kind of wheat of Lahore, uncommon and not good.

KIBRIT, also Cholok, ARAB. Sulphur

KICHAKAI, SINGH, or Bongu veduru, TEL. *Bambusa arundinacea, Willd.* Bamboo

KI-CHAN, see Koung-kouan

KICHA VIRIGI CHETTU, TEL. *Cordia latifolia, R, Vol 1, p 588*

KICHICHILI CHETTU or Napi chettu, TIL Citrus aurantium, L. Kichih-pindu, Kichih-palam or Chollung-palam, TAM The orange

KICHILI-GADDA, TIL Cinnamon zedaira, Rose

KICHIRI, generally a mixture of lentils and rice, with clarified butter poured over it. This has become common in El Hejaz as well as at Suez, under the name of El Kayma, a corruption, which denotes its foreign origin, and renders its name pronounceable to Arabs — *Burton's Pilgrimage to Meccah, Vol 1, p 269*

KICHORION, GR. Cichorium intybus, Linn

KIENRUSS, GR Lamp black.

KIEP-DEP In Amherst, a strong wood, resembling Kha boung

KILP-MAUP In Amherst, a superior timber employed for cart-wheel spokes, free from attacks of insects, the tree is said to have an edible fruit

KILP-YO In Amherst, a heavy, good wood, but small, used for house-posts and rafters

KILRP, BING Canthia lucida, Rob

KILW Dio-pyros melanoxylon

KIFRI Near this town, in the pass through which the Ak-Su penetrates to the plains is a naphtha pit. The hills are about a mile S E of the town of Tuzlunmatti close to the gypsum hills of Kifri and, being in the bed of the torrent, is sometimes overflowed by it, and, for a time, spoils. The pit is about fifteen feet deep, and, to the height of ten feet filled with water, on the surface of which black oil of naphtha floats, small m-bubbles continually rising to the surface. They skim off the naphtha, and ladle out the water into a channel, which distributes it into a set of oblong, shallow, compartments, made in the gravel, where they allow it to crystallize, when it becomes very good salt, of a fine, white, brilliant grain, without any intermixture of bitterness. Great quantities of this are exported into Kuchistan and it is worth annually about 20,000 piastres. The oil of naphtha is the property of the village. Part of it is consumed by the manzil khanch, or sold for its support, and part for religious establishments, &c. About two jars, each containing six oku or one Bigdad bitman, of naphtha, may be skimmed from this well in twenty-four hours. The spring is at the bottom of the pit or well, and once a year they cleanse the well, on which occasion the whole village turns out, victuals are distributed to all the poor, and sacrifices of sheep are made to the sound of drums and oboc, in order to insure the good flowing of the spring again — a ceremony, in all probability, derived from remote antiquity. The principal naphtha springs are, however, in the hills, a considerable distance south of this, towards Kifri. They are five or six in number, and are much more productive than this pit, but no salt is found there. Indeed, it is probable that naphtha may be found in almost any part of this chain. Near the naphtha pit in the hills are alum (zak or sheb) and chalk (tebesn), of a very fine, close, white, grain, but the natives make no use of these productions. An earth, also, is found, which they employ to give an acid flavour to some of their dishes, no doubt it is vitriolic. Sulphur is also found and is used by the peasants to cure the itch in their cattle and themselves — *Rich's Residence in Kooristan, Vol 1, pp 27-9* See Kara-Oghlan, Keikook, Kikook

KILPATRICK, Mjoi, a brave intelligent officer of the E I Company in the time of Lord Clive In May 1751 he served in the fight of Volcondah In November he marched with a detachment to relieve Clive at Arcot On the 7th August 1753 he led the attack at Sugar-Loaf-hill at Trichinopoly, and was desperately wounded He was frequently engaged in the various parts of the country He died in October 1757, in command of the Beugal troops and Member of Council at that Presidency

KILPATTAR KILLU, HIND *Acer cultratum*

but, among the eastern nations, this has always been considered as closely connected with, or indeed as forming a part of, the search for the philosophers' stone, and of the art of magic, supposed to be the constant and favourite study of Indian sages, enchanters who are much dreaded in Persia. With the Arabic prefix *al*, we have the European word *Alechemy*.

KIMIS, a fermented beverage in use amongst the nomade Tartars.

KIMKHAH, silk brocade, worked in gold and silver flowers. The costly and superb fabrics of cloths of gold and silver or the *Kimkhab*, and the classes of washing satins or *Mush-100* and *Hemroo*, even if European skill could imitate them by the hand-loom, it would be impossible to obtain the gold and silver thread unless it were imported from India. The native mode of making this thread is known, but the result achieved by the Indian workman is simply the effect of skilful delicate manipulation. The gold and silver cloths, or the *kimkhab*, are used for state dresses and trousseis, the latter by men and women, and ladies of rank usually possess petticoats or skirts of these gorgeous fabrics. *Mush-100* and *Hemroo* are not used for tunics, but for men's and women's trousers, and women's skirts, as also for covering bedding and pillows, they are very strong and durable fabrics, wash well, and preserve their colour however long worn or roughly used, but they can hardly be compared with English satins, which, however, if more delicate in colour and texture, are unfitted for the purposes to which the Indian fabrics are applied. For example, a *libada* or dressing gown made in 1842, of scarlet *mush-100* was washed over and over again, and subjected to all kinds of rough usage, yet the satin is still unfaded, and the colour and gloss as bright as ever. The *kimkhab* or loom-made fabrics of silk and with gold and silver wire, although only employed in India as articles for personal wear, might be used in Britain for covering chairs, couches, &c.

KIMLEEA, see *Kinnawai*.

KIMLU, HIND *Odina wodier*.

KIMPURUSHA, in hindoo, the celestial musicians.

KIMRI, HIND *Ficus canescens*.

KIMSANA, HIND A kind of bronze leather of Kashmir and Peshawar.

KIMUKHT, Turquoise green leather, made at Yarkand and at Bareilly, much used

in Kabul and Peshawar. It looks like shagreen, is used for making native shoes, and also for sword scabbards. About 2,000 Rs worth is annually exported from Bareilly to Delhi and other places.

KINA BALOW, a mountain near Bawang, in Borneo, estimated between 13,000 and 14,000 feet in elevation, properly *Kim-ballu*, the Chinese widow. The interior of Borneo is still almost unknown. The existence of lofty ranges of mountains in the centre is undoubted, and in the north-west so far as the country was penetrated by Mr Spence St John, in 1858, the whole was found to be mountainous, each range becoming more lofty as he approached the interior, but presenting one uniform aspect of jungle covering hill and valley when looking from the summit of the great mountain *Kina Balu*, in the north-east of Borneo, towards the interior in a southerly direction, Mr St John obtained a distant view of a mountain peak which he supposes to be very considerably higher than the one on which he stood, and to be situated very nearly in the centre of the island. The land on all sides gradually slopes towards the coast. Borneo may be said to bear the same relation to Eastern India that the continent of America has borne to Europe, being a region in which tribes inhabiting the remotest East have occasionally found a refuge from religious persecution and from the pressure of a superabundant population—*Jour Ind Arch.* See *Kim-ballu*, Ambong, Borneo, Kyan.

KINANG, MALAY Sulphuret of antimony.

KINAREE, a stream in the Jubbulpore district.

KINAR-KA-BIJ, HIND Seeds or stone of *Zizyphus jujuba*.

KINCINJUNGA, forty-five miles distant from Darjeeling, is the prominent object, rising 21,000 feet above the level of the observer, out of a sea of intervening wooded hills, whilst, on a line with its snows, the eye descends below the horizon, to a narrow gulf 7,000 feet deep in the mountains, where the Great Rungeet river, white with foam, threads a tropical forest with a silver line—*Hooker Him Jour*, Vol 1, p 122. See Mount Everest.

KINDERSLEY, J. R., a member of the Madras Civil Service, author of a Manual of the Law of Evidence of the Madras Provinces.

KINDLE BELLEROM, TAM A wood of Malabar and Canara resembles the Angely wood of Cochin and Ceylon. The Company's cruiser, *Arion*, was built, by way of experiment, of this *Kindle* wood, it was procured from the forests in the north of Malabar, and it appeared to answer its purpose—*Edye, Forests of Malabar and Canara*.

KING-FISH, *Polynemus seie*, Buch

<i>P. plebius</i> , <i>Brouss</i>	<i>P. gelatinosus</i> , <i>McClell</i>
<i>P. luertus</i> , <i>Lacep</i>	

Kathu, BURM, (the young), <i>O Riley</i>	Lukway, ARRAKAN
--	-----------------

Polynemus seie, is found from Calcutta to Orizaba. It produces isinglass of the best quality, and Mr. O'Riley estimated that two thousand pounds might be obtained annually off Amheist alone. Its sounds are a constant article of traffic among the Chinese. The largest sounds were exported from Rangoon, and they sell in Tenasserim at about half a rupee a pound. About ten thousand of the fish large and small, are taken annually in Arracan, and the sounds sell there for about a third of a rupee per pound to the Chinese, who export them to Peking, where they are said to bring more than a rupee a pound. Specimens prepared in India for the European market were complained of, "as being too thick if intended to come into competition with the superior varieties of Russian isinglass. The first quantities sent from India brought only 1s 7d, others have been sold for 3s and a few samples have been valued at 4s per pound" — *McClelland, Mason*

KING-FISHER, a bird of the family Icthyophaga, of which there are several species in the East Indies. The *Tinysipterinus* of Amboyna is the racket-tailed king-fisher and is one of the most singular and beautiful of that beautiful family. King-fishers are

numerous in India, one as small as the common English king-fisher, another as big as a jay, and two others very little less. They live on fish of small fish, but then bright plumage is then run, for it is saleable, and a class of men make then living by capturing them. In solitary places, where no sound breaks the silence except the gurgling of the river as it sweeps round the rocks, the lonely king-fisher, an emblem of vigilance and patience, sits upon an overhanging branch, his turquoise plumage hardly less intense in its lustre than the deep blue of the sky above him, and so intent is his watch upon the passing fish, that intrusion fails to scare him from his post. The common king-fisher, (*Alcedo bengalensis*, *Gmel*), the black and white species (*Ceylonia*), and the Indian king-fisher (*Halcyon leucos*, *Bodd*), are often observed. The first is common in rice-fields, streams, and river banks, the two latter are not so plentiful, the Indian king-fisher is a tenant of gardens and pools, the large black and white king-fisher is the Ceylon guttate. Bird's feathers, from the cranes and king-fishers, form a considerable article of trade in south-eastern Asia, the feathers of a large, green king-fisher, are exported from Malacca, one lac at a time, to Singapore, to be used by the Malays, Javanese and Chinese. They sell there at 200 per cent profit — *Tennent's Shet Nat Hist*, p 249 *Wallace's Eastern Archipelago*, Adams. See Feathers

KINJIK HIND A kind of small pistachio nut

KINJUL, MAHR *Terminalia alata* and *Pentaptera paniculata*

KIN-LE-SUNG, one of the finest trees seen by, and quite new to, Mr Fortune, was a beautiful species of cedar or larch, which Dr Lindley, to whom he sent specimens called *Abies Kämpferi*. It is called by the Chinese, the Kin-le-sung or Golden Pine, probably from the rich yellow appearance which the ripened leaves and cones assume in the autumn. Their stems were fully five feet in circumference, two feet from the ground, and carried this size with a slight diminution, to a height of 50 feet, that being the height of the lower branches. The total height was estimated about 120 or 130 feet. The stems were perfectly straight throughout, the branches symmetrical, slightly inclined to the horizontal form, and having the appearance of something between the cedar and larch. The long branchless stems were, no doubt, the result of their growing close together and thickly surrounded with other trees, for he afterwards saw a single specimen growing by itself on a mountain side at a much higher elevation, whose lower branches almost touched the ground. He procured a large supply of curious cones which were sent to England in the winter of 1853 — *A Res. among the Chn*, pp 266, 274-5

KINO

Dam-ul-akwan, AR
Pulas-gond, BENG
Padouk, BURM
Gomme de Kino, FR

Kino-harz, GER
Kumr kusala, KINI, HIND
Chino, IT
Tamble-hoan, TAY

Kino is a product of the *Pterocarpus marsupium* of India, *Linn*, *P cinaceus*, *Pouet* of Senegambia, the *P Wallichii* and *P Indica* or *Padouk* of Tenasserim, the *Butea frondosa* of India and the *Eucalyptus resinifera* of Australia. The juice of the *Pterocarpus cinaceus*, and that of the *Eucalyptus resinifera*, have much the same properties as the catechu and have been proposed to be used in dyeing green. Although the colour of kino is a deep-red, it has the power of communicating a green colour to the salts of iron. But the true gum kino is obtained from the *Pterocarpus marsupium* which yields on incision a large quantity of blood-red juice. Though the juice of *P indicus*, *P Wallichii* and of *P dalbergioides* are said to be also dried and exported under the name of kino, and the articles sold as kino are produced from trees of four different families of plants, and come from many opposite parts of the world, it is probable that the properties on which their value depends are of a general nature, and therefore that *P dalbergioides*, equally with *P marsupium*, affords the gum kino of India, and this opinion is also entertained by others. *P dalbergioides* is found in the northern parts of the Pegu province in the Prome district chiefly in the vicinity of towns and inhabited places rarely in the forests. The kino of Botany Bay and Van Diemen's land is the produce of the Iron Bark tree, *Eucalyptus resinifera*. This tree sometimes yields, on incision, 60 gallons of juice. Kino is imported in boxes. A substance chiefly used as cast Indian kino, is said to be an extract formed by inspissating a decoction of the branches and twigs of the gambier plant. Vauquelin analysed it, and found it to consist of, tannin and peculiar extractive matter, 75, red gum, 24, insoluble matter, 1. The east Indian kino, imported from Bombay and Tellicherry, is the produce of *Pterocarpus marsupium*, a lofty, broad-spreading, forest tree, which blossoms in October and November. The bark is of a greyish colour, and is upwards of half an inch in thickness on the trunk. When cut, a blood-red juice speedily exudes and trickles down, it soon thickens, and becomes hard in the course of fifteen or sixteen hours. The gum is extracted in the seasons when the tree is in blossom, by making longitudinal incisions in the bark round the trunk, so as to let the gum ooze down a broad leaf, placed as a spout, into a receiver. When the receiver is filled it is removed. The gum is dried in the sun until it crumbles, and then filled in wooden boxes for exportation. Another species, *Pterocarpus cinaceus*, a tree 40 to 50 feet in height, a native of the woods of the Gambia and Senegal, furnishes kino, but none is collected in or exported from Africa. *Butea frondosa*, or the dhak tree of the East Indies, furnishes a similar product in the shape of a milky-coloured, brittle, and very

astringent gum Some specimens of *Butea* kino, analysed by Prof Solly, after the impurities had been separated, yielded 73½ per cent of tannin—*McClelland, Royle, White's Jour of a voyage to N S Wales*

KIRGANELLI, MALLAL *Phyllanthus niruri*

KIRGHIS, a Khassak horde, who inhabit an extensive country to the north-west of the town of Ili In the twenty-first year of the reign of the emperor Kien Lung (1756), a Chinese army entered their territory Their khau, Abdoulla (Ablai), came to meet it, and submitted It is the custom for their widows to marry the brother of their husbands There are, however, two hordes of Khassak The Great Kughis horde is adjacent to Ili and Taibagatai, is under the dominion of China, and exchanges large quantities of cattle on the frontiers for silk goods The second horde, which is next to this on the north (the Middle horde), is much more numerous, and not dependent on the Chinese empire The Kughis Burut are a nomade tribe inhabiting the western parts of eastern Turkestan Their vast territory is situated between Andzian and Kashgar They call their princes Bi Several of these Bi govern from ten to twenty, and others from twenty to thirty outposts or camps they treat their subjects as slaves Kughis is the general denomination of all these tribes, which are divided into several hordes, each of which has its Bi, whose dignity is hereditary The Kughis have the head, and abstain from eating pork They wear dresses with tight sleeves, and their caps are square, and flat at the top The women adorn their caps with peacock's feathers Their language and manners very nearly resemble those of the inhabitants of eastern Turkestan Their habitations, food and beverage are the same as those of the Eluth or Sungarian They are fond of Chinese porcelain, tea, silks, linen, tobacco and wine The Kughis are poor, courageous, inconsiderate, interested, given to pillage, and valiant in war. They are feared by the

Khassak and Belue, and the Sungarian, even when they were at the height of their power, were never able to subdue them. The Kirghis pillaged eastern Turkestan, as well as the caravans from Great Bucharía, and other countries, which went to Turkestan with merchandize. Kirghis also inhabit the mountains and forests of the territories of Yarkand, Kashkan and Ouchí, where they follow the peaceable occupation of tending cattle. Kirghis inhabit the steppes of Pamer to the north of Hunza Nager beyond the Karakoram range. Southern Siberia is the mother-country of the Kirghis, one of the most numerous tribes of Turko-Tartaric origin. The Kirghis lived originally between the Ob and Yenisei, where Mongolic tribes settled among them. At the beginning of the seventeenth century the Russians became acquainted with the eastern Kirghis then living along the Yenisei. In 1606 they had become tributary to Russia, and after several wars with two neighbouring tribes, they were driven more and more south-westward, till they left Siberia altogether at the beginning of the eighteenth century. They now live at Buriat, in Chinese Turkestan, together with the Kirghis of the "Great Horde," near the town of Kashgai, north as far as the Irish.

Another tribe is that of the Western Kirghis, or Kirghis Kasak, who are partly independent, partly tributary to Russia and China. Of what are called the three Kirghis Hordes, from the Caspian Sea east as far as Lake Tenghiz, the Small Horde is fixed in the west, between the rivers Yemba and Uial, the Great Horde in the east, while the most powerful occupies the centre between the Saïasu and Yemba, and is called the Middle Horde. Since 1819, the Great Horde has been subject to Russia. Other Kirghis tribes, though nominally subject to Russia, are really her most dangerous enemies. The Turko-Tartaric race stretches from the Polar sea to the Hindu Kush, and from the interior of China to the shores of the Danube. Vambery divides the Turks who from east to west occupy this extent into—

- | | |
|------------------------------------|--------------------|
| 1 Buriat, black or
pure Kirghis | 3. Karakalpak, |
| 2 Kirghis, properly
Kazak | 4 Turkoman,
and |
| | 5 Uzbek |

Baïon de Bode relates that, going up the Oxus, he reached the Wakhan valley, (the Vokan of Marco Polo) he stumbled on a horde of the Kirghis from Pamer, who that season, for the first time on record, had come down to pass the winter in Wakhan, instead of descending along the table-land of Khokand, &c. The natives of the valley, how-

ever, were no less interesting than these strangers, since all the rulers around professed to be descendants of Alexander the Great.

Burut, pure or black Kirghis, dwell on the eastern boundary of Turkestan, viz., in the valleys of the Thian Shan chain of mountains, and they inhabit, also, several points on the shores of the Issik Kol, close upon the frontier chain of mountains. They are powerful, thick set, strong-boned, figures, but remarkably agile and have acquired much warlike renown. Their face is less flat than the Mongolian and Kalmuk, and less fleshy, their foreheads somewhat higher, and their eyes less almond-shaped than the Kalmuk, few of them have red or fair hair or a white complexion. The Burut are in contact with the Kalmuk and Mongol, and in consequence their language has many Mongolian words, and now and then they profess themselves more or less mahomedans, but shamanism largely prevails.

The Kirghis and Karakalpak—In Bokhara, the former occupy the northern portion of the khanat, the latter approach nearer to the cultivated grounds, and roam in preference between Jizah and Uratupéh. They are, generally speaking, poorer than the Kirghis under the dominion of Russia, especially such as wander between Kara-zatai and Kizilkum. Among them the alien is a substitute for the kumis, and camels replace horses. The true occupancy of the Kirghis is Independent Tartary. The Kirghis total 790,000, fall into the Middle Horde, 500,000, the Little Horde 190,000, the Great Horde 100,000.

The Middle Horde belongs almost as much to Siberia as to Tartary, its occupancy being the drainage of the Upper Ishim and the Upper Obi. In 1823, some of its sultans put themselves under the protection of Russia. At first they paid no tribute. Now they pay some. One of its tribes, the Naiman, has a Mongol name. Two others are the Aïgm and the Tutul, and these names re-appear on the Tshulm.

The Little Horde became, more or less, Russian about the middle of the 18th century. With the exception of Katal, the names of the tribes of the Little Horde are purely Turk.

The Great Horde lies north and east, and reaches the drainage of the upper Yenisei. The name of one of their tribes is Buriat, a name identical with that of the Buriat Mongol—*Baron Clement A de Bode's Bokhara, its Amir*, pp 20-21, 90-2, *Latham's Nationalities of Europe*, Vol 1, pp 256-7, *Timkowski's Journey to Peking*, Vol 1, p 217.

KIRKOOK Naphtha is obtained near here. It is scooped out with ladles into bags made of skins, which are carried on the backs of asses to this town, or to any other mart for

its sale The profits are estimated at thirty or forty thousand piastres annually The *Kirkook naphtha* is principally consumed by the markets in the south-west of Kurdistan, while the pits not far from *Kurfa* supply *Baghdad* and its environs The *Kirkook naphtha* is black and close to its wells lies a great pool of stagnant water, very muddy, and covered with a thick scum deeply tinged with sulphur A few hundred yards to the eastward on the summit of the same hill, is a flat circular spot, measuring fifty feet in diameter, full of small holes, to the number of a hundred at least whence issue as many clear flames without an atom of smoke, but smelling most sulphureously In fact, the whole surface of this perforated plot of ground appeared a crust of sulphur over a body of fire within, and on digging a hole into it with a dagger, to a depth of ten or twelve inches, a new flame instantly burst forth From this spot the government derives another source of revenue from the sale of its sulphur The natives call the place *Baba Gungui*, *Gur* being an Arabic name for naphtha or bitumen *Mr Rich* describes the principal bitumen-pit at *Kit* (which place must have furnished the builders of *Babylon*), as having two sources and being divided by a wall, on one side of which the bitumen bubbles up, and on the other the oil of naphtha The manner of qualifying the bitumen for use as a cement, he observes, is very troublesome, for to render it capable of adhering to the brick it must be boiled with a certain proportion of oil Its chief purpose, when applied to building, appears to have been in the lower parts as a preservative against damp, and at present it is used for coating cisterns, baths, caulking boats, &c in short, to every thing put in the way of injury from water The black naphtha springs at *Buku*, on the *Caspian*, are of similar benefit to the inhabitants of that part of the country and *Jonas Hanway* describes their appearance and application to be nearly the same as they exist at the present day He mentions, that when the weather is thick and hazy, the springs boil up higher, and that the naphtha, sometimes taking fire on the surface of the earth, runs like burning lava into the sea In boiling over the oily substance makes so strong a consistency as to gradually become a thick pitchy substance all round the mouth of the pit The poorer sort of people use it as we would do oil, in lamps, to cook their food They find it best with a small mixture of ashes but, for fear of accidents, they preserve it in earthen vessels, under ground, and at some distance from their dwellings There is also a white

naphtha, a thinner fluid than the black, and not found in such great quantities. It is sometimes recommended medicinally inwardly, for chest complaints and outwardly, for cramps and rheumatism. Both it and the black are used for varnish. When it takes fire by accident, the consequences have often been fatal, and Strabo, who calls it liquid bitumen, asserts that its flame cannot be extinguished by water. The experiment tried by Alexander was horrible in its effects, and with a very little addition made by a poetical fancy, might induce us to believe that the celebrated consuming garments which Medea bestowed, were robes dipped in the naphtha that flowed so near her native land. The flaming soil of everlasting fire, as it is called, of Baku, is not less famous than its naphtha springs. It is now part of the eastern territory of Russia—*Porter's Travels, Vol. II, from pp 440-443*. See Kifin.

KIRM, HIND A worm, any small insect or creature.

KIRMAN Fars, Fais or Faisistan, is the province of the kingdom of Persia, to which it gives its name. It lies between 27° 20' and 31° 42' N lat., and 49° 20' and 54° E long, being nearly square and about 220 miles in length and breadth. It has Kirman and Laristan on the east, the Persian gulf on the south, Khuzistan on the west, and Irak-Ajem on the north, with a superficies of about 44,335 geographical square miles, or nearly one-third of France. In the space intervening between the great mountain chains, in most places, the surface is largely impregnated with salt and saltpetre, which prevail to some extent on the plains of Fais and the contiguous provinces of Irak and Kirman. Kirman fills up the space between Khorasan, Fais, Afghanistan and Mekran. From the eastern side of Cape Jask, it stretches irregularly along Mekran, in the general direction of N N E, as far as its northern extremity, in 30° 15' N lat, and 60° 28' E long, and from thence it runs N W about 90 miles to the south-eastern extremity of Khorasan. The surface of Kirman (including Laristan) contains about 72,741 square miles, but, excepting the information derived from the natives, and the accounts furnished by Tavernier, Pottinger, and some other European travellers, little has been known of the interior of this province since the time of the ancient geographers. The southern portion of Kirman, viz, Laristan and Moghostan, formed the chief part of the Hymanitic kingdom of Hormuz, through which ran an important commercial line from the capital, Hormozote. These districts, together with the different islands, formed

part of the territory of Mithrophiastodung to time of the visit of Nearchus, who, and from this monarch that the tomb on the east of Tyima (Kishm) was that of Erythias, is of Ariarius, satrap of Phrygia, who was banished to this place by Darius, (*Strabo*, lib xvi, p 776), whose name was given to the adjoining part of the sea. Artemidorus, however, thought the name was derived from the reflection of mountains glowing with the heat of a vertical sun (*Strabo*, lib xvi, p 779,) which certainly cause a deep tint on the waters in this part of the world. The province of Kirman is bounded on the east by a part of Seistan and Beluchistan, west by the province of Fais, south by parts of Laristan, Mekran, and the Persian Gulf, and north by Irak and Khorasan. It has from the earliest ages been partitioned into the habitable and desert regions, a division proceeding, in the first place, to a consideration of the former, its extreme length, from Regan in Nuimaushee, to Robat on the boundary of Fais, is about three hundred and sixty-five miles, and its breadth, from the southern limit of Irak to the town of Gamberoon or Bunder Abass, on the shores of the Persian gulf, about two hundred and eighty. Even the soil of this tract is in many places very unproductive, and the face of the country barren and waste. Generally speaking, Kirman is a very mountainous province, the principal range of mountains is that which divides Nuimaushee from Laristan, and thence running in a south-westerly direction, approaches within four days' journey of Gamberoon. It here seems to take the turn of the coast, and trending away to the west and north-west, joins the mountains of Fais in the latitude of 29° 40' north, and longitude 54° east. In this course, it throws out numerous ramifications, both to the northward and southward. Many of the former, particularly the more easterly ones, which stretch into the desert, terminate between the thirteenth and thirty-first degrees of latitude, while some of the western arms reach the province of Irak. They are, in some places, from their height, scarcely worthy of being called any thing but hills, and in others are no way inferior to the great mass from which they have their rise. So entirely do they intersect the country, that the plains which they separate, are seldom seen to exceed ten or twelve miles in breadth, though often of an indefinite length. The climate of this province is as varied as the face of the country, and it is accounted the least salubrious of any part of Persia, they have seldom any heavy falls of rain, but snow lies to a great depth on the mountains in winter, and from their loftiness it does not melt for the greater

part of the year, so that it is not unusual to see the people in the plains panting from the extreme heat, while it is freezing on the summits of the mountains close to them. To the southward of the great chain of mountains, described above, and between their bases and the sea, lies the Garmsair or Hot country, being a narrow stripe from thirty to ten leagues in breadth, which extends all along the sea-coast of Persia from Meenab, the capital of Laristan, to the mouth of the Shat-ool-Arab or Bussorah river. Within the limits of Kirman this tract is almost solely composed of saline sand, and the climate is peculiarly unhealthy. It produces nothing but dates, which are of a very inferior quality, and is, in consequence, nearly depopulated. The city of Kirman is situated in north latitude $29^{\circ} 56'$, and east longitude $56^{\circ} 6'$, on the western side of a capacious plain, so close to the mountains, that two of them, on which there are ancient decayed forts, completely command it. The population of Kirman is not, now, more than thirty thousand souls, of which a small proportion are the guebers or Parsees, but there are neither Armenians, Hindoos, or Jews, resident in the place. Its manufactures of shawls, matchlocks, and numud or felts, are celebrated all over Asia, and are said to afford employment to upwards of one-third of the inhabitants, whether male or female. In Kirman, to the northward, there are no towns and Gambaroon or Buuder Abass is the only one to the southward that needs to be mentioned. It lies eighteen munzil, or days' marches from Kirman, which we may average at eight farsuks each stage. The desert region of the province of Kirman extends in length two hundred and seventy miles from the northern boundary of Nuimansheer, in latitude $20^{\circ} 30'$ north, to the mountains of Khoisan, in latitude 34° north, and, in breadth, two hundred miles from the city of Yezd, in longitude $50^{\circ} 40'$ east, to a range of mountains separating it from Seistan, in 60° east. The soil of this tract is impregnated to such a degree with salt, and so decidedly barren, that it does not even produce grass, or any other vegetation. As above related. The southern portion of Kirman, viz, Laristan and Moghistan, formed the chief part of the Homyanitic kingdom of Holmuz, through which ran an important commercial line from the capital Harmozonte. These districts, together with the different islands, formed part of the territory of Mithro-phrastes at the time of the visit of Nearchus. The town of Kirman had, at a former period, been one of the richest and most populous in Persia. When the European

factories were established at Gombroon, it became a great emporium of trade between Europe and India, and the countries of Persia, Cabul and Tartary. The province of which it is the capital was not productive, but it boasted some rare articles of commerce, particularly the celebrated wool of its goats, which approaches nearer than any other in fineness, to that of Cashmere—*Pottinger's Travels in Beluchistan and Sind*, p. 229, *Euphrates and Tigris*, Col Chesney, Vol 1, p 231, *Malcolm's History of Persia*, Vol 1, p 206

KIRS, HIND of Bukhara, Chaiyas of India, resin of the hemp plant, *Cannabis sativa*. Its resin seems to have been employed as an intoxicating substance in Asia and Egypt from very early times, and even in medicine in Europe in former times, as Dr Royle mentions it as noticed in Dale (*Pharmacologia*, 1, 133) and Murray (*Apparat Medicaminum*, iv, p 608—620), where it is arranged, in this work, next to the *Humulus*. It has of late years again been brought into European notice by Dr O'Shaughnessy. The Indian plant has by some, been thought to be a species distinct from the European one, but, Dr Roxburgh, Dr Royle and others, have been unable to observe any difference between the plant of the plains and that of the hills of India, nor between these and the European plant. The Indian secretes a much larger proportion of resin than is observable in the European plant, but a difference is observed in this point in India between plants grown in the plains, and those of the moun-

tains, and also when grown thickly together. The natives plant them wide apart, to enable them to secrete their full powers. In Europe, the thick sowing, and moisture, often dull climate will prevent the due secretion of the peculiar principles of a plant of the Persian region. Hemp leaves are sometimes smoked in India, and occasionally added to tobacco, but are chiefly employed for making bhang and subzee, of which the intoxicating powers are so well known. But this peculiar substance is yielded by the plants on the hills, in the form of a glandular secretion, which is collected by the natives pressing the upper part of the young plant between the palms of their hands, and then scraping off the secretion which adheres. This substance is well known in India by the name of *chunus*, and is considered more intoxicating than any other preparation of the plant, which is so highly esteemed by many Asiatics, and serves them both for wine and opium. It has, in consequence, a variety of names applied to it in Arabic, some of which were translated to Dr. Royle as "grass of fakes," "leaf of delusion," "increaser of pleasure," "exciter of desire," "cement of friendship," &c. Linæus was well acquainted with its "*vis narcotica, phantastica, dementens*," (*anodyna et repellens*). It is as likely as any other to have been the *Nepeuthes* of Homer. The products of the plant are the dried leaves called "bhanga," the flower tops with their resin, called "ganja," and the resin, from the seeds and flower tops, called *charas* or, in Bokhara, *kus* — *Royle*, p. 569.

KIRTA, see Kelat

KIRTAN, the relation of the deeds of Rama, during the nine days of the Rama Naumi.

KIRTHIPOOR, occupies the summit of a low hill, about three miles west of Patu. It was at one time the seat of an independent prince, and its reduction cost the Goolkhan prince so much trouble, that in resentment of the resistance made by the inhabitants, he barbarously caused all the males, whom he captured in it, to be deprived of their noses. Chobai is also situated on an eminence, which, with that of Kirthipoor, forms a kind of saddle hill.

KIRWAH, KASHM. A weight equal to 384 lbs English.

KIS, BENG., HIND. *Costus speciosus*.

KISARI, HIND. *Lathyrus sativa*.

KISCHYIM, ÆTHIOP. *Cucurbit*.

KILHAN, see Kelat,

KISHDI, see Affghan

KISHENGUR and Bikanir, according to Colonel Tod, arose out of Marwar, and Macheri from Amber, to which we might add Shekhawati, which though not separate, is tributary to Amber, now Jeypoor. The Kishengur family according to Aitchison is an offshoot from Jodhpore. A treaty was formed with maharajah Kullian Sing in 1818. Prithee Sing succeeded in 1840, he was granted the right of adoption, and he receives a salute of fifteen guns. His territories cover an area of 720 square miles and contain a population of 70,000 souls. The revenues are about rupees 600,000. The State pays no tribute and contributes nothing to any local corps or contingents. The army consists of 250 cavalry, 300 infantry, and 30 guns — *Tod's Rajasthan*, Vol. 1, p. 420; *Treaties Engagements and Sunnuds*, Vol. 14, p. 103.

KISHEN KOMARI BAI, was born in 1792. Her father, the rana of Odeypur, was the highest prince of Rajputana. Her mother was of the Chawaria race of Anhalwaria. She was very beautiful and had an engaging manner, both the Jeypore and Jodhpore chiefs asked her in marriage, and to obtain her overran the kingdom, but to settle the matter, Kishen Komari Bai, when only 16, took poison, and in a few days her mother followed her to the funeral pile. When the Roman father slew the dishonoured Virginia, appeased virtue applauded the deed. When Iphigenia was sacrificed, the salvation of the country was the consolation, and Jephtha's daughter sustained her resignation in her father's fame, but Kishen fell a victim to a false sense of honour — *Tod's Rajasthan*.

KISHLAQ, PUSHK. Winter station of the pastoral Affghans.

KISHM ISLAND, called Jeznah-ut-tul, by the Arabs, and Jeznah-i-Daraz by the Persians, both meaning Long Island, is the Oaracta or Verokhtha of the ancients, where Arabian states that Nearchus saw the tomb of king Erythias, after whom the Persian Gulf was named the Erythrean Sea. In the 13th century it was called Jeznah-i-Laset, and one of its towns is still called Laset. The whole island and a large portion of the opposite coast, in which are mines of sulphur, was famed by the imam of Muscat. Kishm town is in lat 26° 57' N, long 56° 19' E at the N east end of the island. Kishm island is within ten miles of Hormuz, and is the largest by far in the Persian Gulf, being about 55 miles long, but very narrow. It presents the same kinds of rocks as those of Hormuz and Larack, but in addition to these there is a stratified sedimentary formation upon it of great extent, and upwards of 500

feet in thickness. Its eastern extremity is within ten miles of Hormuz, nearly opposite Gombroon, it runs for sixty miles parallel with the Persian shore, but is in no place more than twelve miles in breadth, and is surrounded with coral reefs. The appearance when sailing along the deep and narrow channel, interspersed with wooded islands, which separates it from the mainland, is particularly mild, but the interior produces dates, wheat, vegetables, mangoes and other fruits, including grapes without stones, and the usual abundance of water melons. Bassadore is on a barren spot at the western extremity. The people are chiefly Arabs, subject to the umm of Muscat, and their number may amount to 16,000. Neuchus says its length is upwards of 800 stadia, which, at 1,111 $\frac{1}{2}$ to a degree, would give 13 geographical miles — *Ouseley's Travels, Vol. 1, p. 162, Col Chesney's Euphrates and Tigris, p. 229, Kinnien's Geographical Memoir, p. 14, Lieutenant Kemphorne, Vol. v, Part II, p. 277 of the Royal Geographical Soc Journal*

KISIMIS are the small sweet seedless raisins from a variety of the grape vine, the *Vitis vinifera*, they are called *sultana* raisins by European grocers. *Kishimis Sukh*, red raisins, sun dried. *Kishimish Sabz*, shade dried. *Munakka* are common dried grapes or pudding raisins — *Powell's Hand-book, Econ Prod, Panyab, p. 16*

KISHINA, see *Kishina*

KISHON, a brook in Palestine that rises in Mount Tabor and disembogues into the Bay of Acre. See *Cnifa*

KISHIR, ARAB. A decoction of the husks of the coffee berry, greatly used in Yemen. The decoction of the berry, itself, is not much used there, the natives prefer the husks, and the beverage is called *Kishi*, it is sometimes flavoured with ginger and other spices

KISIT, PERS. *Helictes isola*, Linn

KISITA BAHIRA, HIND. *Pyrus communis*

KISITAH, HIND. Dried, unripe apricots, brought from the hills and from Kabul, &c. They are used to clean gold and silver, also in dyeing and in making chutney — *Powell's Hand-book, Vol. 1, p. 453*

KISHTEE, HIND. A boat, ship, vessel, bark

KISHTEE, or *Kuchhole*, HIND. A cup or bowl, generally of beggars, a faqeer's wallet, also a kind of tray.

KISHTOKEE, see *Kush*

KISHTWAR occupies the middle part of the Chenab valley between Lahul and Jamu. The elevation of the Chenab about the middle of the province is from 6,000 to 7,000 feet

Kishtwar is separated on the north from the Tibetan valleys of Zaskar and Dias by the axis of the Himalaya which is crossed by the Unasi pass into Zaskar, elevated 18,000 feet, and by other passes from Wardwan into Dias. The Wardwan district is to the west and to the south, *Kishtwar* is separated from Chamba by a range of 10,000 to 11,000 feet of elevation — *Hooler, f. et 7, 209*

KISMIS, see *Kishimis*

KISNA, SIAM. Eagle-wood

KISREE of Bombay. Arnott

KISSA, in lat 8° 5 S, long 127° 7 E., is a small island, near Timor

KISSA-I-SANJAN, a work compiled in the year 1599, by one Biliham, a zoroastrian, resident at Nowsaree, a town about twenty miles south of Smat. It details the various emigrations of the Parsis, p. 75

KISSIA, RUS. Mushm

KISSILKORUM PASS, in lat 35° 57', long 77° 50', in Turkistan, in the ridge between Yankand and Yunkah. The top of the pass is 17,762 feet above the sea. From *Kissilkorum*, following the direction of the principal chain of the Kuenlueh, now turning to the south south-east, *Kinkinkul lake* is reached. It is slightly salt, and is situated at the northern foot of the *Changchenmo*. Close to the *Kinkinkul lake*, is a group of more than fifty hot springs, chiefly containing murate of soda (common salt) and a great quantity of carbonic acid. Their temperature varies from 25° C to 49° C, (77° to 120° Fahr.) In the valley of the Nubia, are two other groups, the one near *Pannumick* (hottest spring, 78.1° C=172.6 Fahr.) the other near *Changtung* (74.1° C=165.4 Fahr.) A march of seventy miles brings the traveller to (S?) *Pumgal*, where a route branches off to the valley of *Bushia*, and to *Elchn*, the capital of *Khotan* — *Report on the Proceedings of the Magnetic Survey of India, pp. 1 and 2, Robt Schlagentweit*

KISSING is a token of love and affection with most of the nations of the East Indies as of Western Asia and Europe. Kissing of the cheeks and shoulders is noticed in *Gen. xxviii, 4, xlv, 14 and 15*, and in *Luke xv, 20*. Smelling then heads is a mode of expressing intense affection, parental yearning, still common in India, and a very ancient oriental practice, however odd it may appear to European notions. It was perhaps rather the result of this practice than chance that Isaac noticed the smell of Jacob's person. "And he came near and kissed him, and smelled the smell of his raiment, and blessed him and said, see, the smell of my son is as the smell of a field which the Lord hath blessed" — *Hind Th, Vol. II, p. 45*

KISTEE, DUK Bina orellana

KISTNAGHERRI, in lat $12^{\circ} 32' 3''$,
long $78^{\circ} 12'$, in the Kaimatic, in a plain
with hills in the distance The dāk bungalow
is 1,698 feet above the sea —*Rob Schl*

KISTAPA TAMARA of Konda tamara,
TEL Smilax ovalifolia, R A local name
given from the large leaves, at Devaypalli in
the Vizianagarum zamindari

KISTNAH or Krishna, a river of the
peninsula of India, which rises on the Mahab-
leshwari table-land in the Deccan, in lat
 $18^{\circ} 1'$, long $73^{\circ} 41'$, and about 40 miles from
the Arabian sea, 4,500 feet above the sea
It runs S E 145 miles, N E 60 miles,
S E 105 miles, N E 180 miles, S E to
Chentapilly, S E 70 miles further, then,
parting into two arms, one flows S E 30
miles, the other S 25 miles into the Bay
of Bengal, after a course of 800 miles It
receives many affluents, viz, Bccmah, which
is 510 miles long, Tumbudia or Toongabudia,
325 miles, Gutpuiha, 160, Malpuiha, 160,
Waina, 80, Dindee, 110, Pedda Wag, 70
miles, and 110,000 sq miles are drained In
consequence of the rapid declivity of its water-
way and rockiness of its channel, it cannot be
navigated by small craft, even for short
distances, but a weir has been thrown across
the Tumbudia, to form an extensive system
of irrigation, at an estimated cost of £150,000
The weir is thrown across it at Bezwarah
The basins of the Kistnah river and its
affluents, the Gutpuiha and Malpuiha and
Bccmah are occupied by quartzites, slates,
limestones, &c, which cover the larger por-
tion of the districts of Cuddapah and Kurnool,
westwards through the Raichore Doab by
Gogi, Gulbargah, to Knlladghee and Belgaum,
and appear to represent the older portion of
the great Vindhyan series Rocks of the
same mineral character appear under the
great flows of the Dekhan trap, and resting
quite unconformably on the gneiss rocks in
parts of the Raichore Doab, and the vicinity
of Belgaum, and under parts of the ghats on
the western coast That they belong to the
same general series as the rocks in Cuddapah
and Kurnool, there is no doubt Of the
rocks of aqueous origin, the sand-stones and
limestones, the whole of the valley of the
Kistnah and a great part of the valleys of its
affluents, the Gutpuiha, Malpuiha, Bheema,
Toongabudia or Tumbudia, and much of
the valley of the Godavery and of the
valleys of its northern affluents, have lime-

stone, clay slate and sandstone rocks, and the
houses and more extensive buildings are all
built of these The limestone of Kurnool,
westward to the Bheemah is an excellent
building material It is on the banks of the
Kistnah that the richest diamond mines occur,
and that the sandstones acquire their greatest
elevation, amounting to more than 3,000 feet,
the river passing through mural precipices of
this rock and of a schistose limestone It
passes through the plains of the Eastern
Dekhan amongst the same rocks which are
there sometimes a little elevated above the
level of the sea, at others forming the caps of
granite mountains, or broken up by varieties
of greenstone and basalt Thence, passing
through a narrow gorge in the gneiss hills of
Bezwarah, it enters the alluvial plains con-
tinuous with the delta of the Godavery Its
waters, however, are more loaded with mud
than the last-mentioned beautiful river, and
the deposit of new land may be seen, by the
inspection of a common map, to be propo-
tionably great —*Carter's Geological Papers
on Western India, p 3, Captain Cullen in
Madras Lit Soc Journ, Report of the
Royal Sanitary Commission* See India,

Ah'l-i-Kitab, people of the book, meaning
the believers in the old or new testament or
in the koran This has the same meaning as
Kitabi, a follower of the book, a term appli-
ed to Jews, Christians and Mahomedans, as
possessing books of revealed religion In
few mahomedan countries, however, will the
mahomedan religionists eat with a christian,
to salute him, even in error, with their ordi-
nary salutation salam alaikum, peace be unto
you, is deemed unfortunate and he is looked
upon as unclean, and a mahomedan of India
will rarely return the salutation of alaik-us-
salam, and unto you be peace But amongst
the Affghans none of these difficulties or feel-
ings exist The christian is respectfully called
a Kitabi, or one of the book An invidious dis-
tinction of dress, is, however, enforced gener-
ally on christians at Bokhara according to an
edict of no remote date. It is possible that
previously the same liberality of deportment
towards christians distinguished Turkistan
Katib, is a scribe, a copyist, a writer, and
Katibat, the act or cost of copying a book.—
Masson's Journeys, Vol II, p 245

KITABAT, ARAB The inscription on a mahomedan tomb.

KITAB-I-KOOSLUM NAMAH, a book put forth by a conclave of seven learned ladies of Persia, on the rights of women. According to these ladies there are three classes of husbands in the world, viz, a proper man, a half a man, and a Hupul pupil. If the wife of the last man absent herself from his house, even for ten days and nights, he must not, on her return, ask where she has been, and if he see a stranger in the house, he must not ask who it is, or what he wants.—*Tr. Hind, Vol 1, p 399*

KITAMA KURA, JAPANESE A fish, *Tetrodon hispidus*, so poisonous, that when eaten, it proves frequently fatal, or according to the signification of the Japanese name, makes the north one's pillow, it being a custom with these people to turn the heads of those that are dying, towards the north.—*Thunberg's Travels, Vol III, p 68*

KITAY, see India, China, Kintay.

KITCHELLY CAPOOR of China, a scented root, chiefly used in the perfumery powders called sica, sautha, and also used for medicine. This is, also, called Kitchelly Kehm-goo in Tamil, sold at from 40 to 60 rupees a candy. That from Malabar, from 28 to 40 rupees a candy.

KITCHILI, TAM *Citrus aurantium, L.*, the orange. *Citrus decumana*?

KITE or Pattanga, are flown by men and boys of the mahomedans, by all classes, high and low. Kite-flying is a pastime universally practised amongst the Chinese, who excel all other people both in the varied forms of their kites and the heights to which they can make them rise. They are constructed of paper made of refuse silk and bamboo. They assume every possible shape, and sometimes it is impossible when they have reached the culminating point, to distinguish them from birds. By means of round holes, supplied with vibrating cords, on which the current of the air acts, the kites when ascending, issue a humming noise, similar to the hum of a swarm of bees.—*Burton's Sindh, p 286*, *Hon'ble Mr. Morrison's Compendious Summary.*

KITE, is a general term applied by the British in India, to many different birds. The Dung kite, or Dung bird, the *Neophron peronopterus*, *Linn*, called, in Egypt, Pharoah's Chicken and the Egyptian vulture, is known to all the races in the south of India, in which it is abundant southwards from Bengal, also in N Africa, W Asia, S Europe, and even in England. The male has a dirty blackish brown colour, but the hen-bird is white with yellow about the cheeks. It

walks with ease and with a stately gait and frequents localities where flesh or sweepings are thrown. It builds on cliffs, houses and trees.

Of the Kite Vultures, one species, the tamest, boldest of all, the *Milvago Anstralis*, is of the Falkland Isles. Amongst the *Milvinae* or true Kites, of the family of *Falconidae*, are several of the birds known to Europeans as kites.

The Brahmany Kite of India, the *Habastur Indus*, *Bodd*, also one of the *Milvinae*, known to all by its clean moon-coloured black and white breast and abdomen, and frequenting the river valleys, lakes and sea coasts, wherever wet cultivation is in progress, swarming where fishers throw their nets, and about shipping in the harbours, picking up small fishes, prawns or offal, the fogs from rice-fields, water insects, mice and lizards, and young or sickly birds and wounded snipe. Near towns it is very tame and fearless, and every Sunday pious hindoos may be seen calling Hari! Hari! to attract the bird's attention, and then feeding it by throwing to it bits of flesh. The audacity of the Brahmany kite is admirable. Major Moor mentions as one instance, of which he was a witness, viz, stooping and taking a chop off a grid non standing over the fire that cooked it. It receives its name from Europeans, because brahmins and religious hindoos worship it, and regard it as the type or vahan of Vishnu. The birds are expert fishers.

The *Milvus govinda*, *Sykes*, the common parula kite, extends through all India, Birmah and Malacca, and is one of the most abundant and common birds in India, every town, emmentment, camp and village has its colony of this kite, which ply their vocation from morning till night, picking up fragments of food and garbage. In Calcutta, two or three hundred may be seen at a time. They are bold and fearless. Of all rapacious birds, the govind-kite is the most useful, and abundant, wherever offal exists there this bird is to be found, hovering over the butcher's shop, the kitchen, or the barnack—now leisurely sailing in circles—now darting like an arrow upon its prey, which it devours while on the wing, uttering a clean shrill cry whenever a companion disputes its possession. Its ordinary name is the Chul, from its peculiarly shrill call. The govind-kite, Egyptian vulture, crow, Indian jackdaw and mina, may justly be termed “the great scavengers of India.”

The crested black Kite of all India, the *Baza lophotes*, *Cuv*, is not abundant. Its very handsome white and black plumage at once attracts attention.

The Lophastui Jerdoni, *Blyth*, is a kite of Malaya and the isles

The black-winged Kite of India, the *Elanus melanopterus*, *Daud*, lives near the skirts of jungles, and is not much on the wing.

The Kite Eagles of India belong to the genus *Neopus* of the *Aquilinæ*. The *Neopus Malaiensis*, *Reinwardt*, the Black Eagle is found in most of the hilly and jungly districts of India, in Burmah and Malaya. It is generally seen circling or questing for prey at no great height. It is a bird of easy and graceful flight. Its chief food is obtained by robbing bird's nests of the eggs and the young—*Moor*, p 344, *Adams*, *Jardine's Mammals of India*. See Birds, Garuda, Serpent, Vahan

KITHI, HIND *Dioscorea deltoidea*

KITHU, HIND *Pyrus variolosa*

KITTALI KAYA or Narija chettu, TEL *Citrus aurantium*, *L*

KITTA NARA, TEL The fibre of the aloe, *Fourcroya cantala*, *Haw*, also called Kittali nara

KITTESOL, or Kittysol, the distinctive name by which China paper summer-heads are known. They are an extensive article of export from China to Bombay, Calcutta, &c. They are a cheap sort of umbrella, made of bamboo frames covered with oiled paper or cheap silk. They are sent to the Archipelago and India in boxes containing 100 umbrellas each, which is estimated to be a pecul. Considering the material they are made of, this sort of umbrella, or parasol, wear a long time (for their use is for the most part as a protection against the sun). This kind of umbrella, or parasol, is made of oiled paper, or cheap oiled silk, and is largely exported by the Chinese to India, the article is durable, considering its material, and its cheapness induces a large consumption.—*Faulkner*, *Morrison*, *Williams' Middle Kingdom*, Vol II, p 401

KITTAN, TAM, TEL Canvas.

KITTICUM, HIND One of the plants with the flowers of which Kama, the Indian god of love, tips his arrows. See Kama, Hindoo

KITTOOR, a town of peninsular India. The central parts of peninsular India have several times needed coercion. At Kittoor, a battle was fought on the 23rd October 1824,

and the fort was besieged and taken on the 5th December of that year.

KITTUL, SINGH *Caryota urens*, *Linn*. Jaggeery or native sugar is produced abundantly in the northern districts of Ceylon from the juice of this palm. The sap is drawn off much in the same manner as that from the coconut palm, but it does not flow so readily, and to remedy this the natives are in the habit of inserting within the surface of the cut flower spike a small mixture of lime, garlic, salt, and bruised pepper. This is left on the incision for a few days, when it is removed and the flower again cut, the sap will then flow readily for several months continuously. The collected juice is boiled in earthen vessels to a certain consistency when it granulates and forms a fine sugar capable of being refined to a good degree of purity. It is a curious fact that the wood of those trees which have been thus tapped is very much harder than that of the unemployed trees in the forests which is quite soft and spongy, the trees longest tapped are much the hardest.

KITU is a form of salutation in Japan, where the inferior, laying the palms of his hands on the floor, bends his body so that the forehead nearly touches the ground, and remains in this position for some seconds. The superior responds by laying the palms of his hands upon his knees, and nods or bows more or less low according to the rank of the other party.

KIU, BENG, HIND *Costus speciosus*, *Smith*

KIUN, in the Tartar language, the sun. or according to Abul Ghazi, the sun and moon

KIUR, HIND *Allium*, *sp*

KIU-SIU, or Ximo. The Japanese island of Kiusiu or Kewsew, is well-cultivated and generally fertile, with the exception of its eastern coast. The best known Japanese towns of importance are, Nagasaki, Sanga and Kokoord—*MacFarlane's Geo and His of Japan*, p 145. See Japan

KIUTU, HIND *Astiagalus multiceps*

KIWACH, HIND Cowhage. *Mucuna pruriens*

KIZAL BASH, see Kazzilbash

KIZAN, see Tigis

KIZA UT TAWIL, ARAB *Cucumis ulissimus*

KIZHANELLI, TAM *Phyllanthus niruri*

KIZIL IRMIK. The elevated plateau which extends from the base of Mount Ararat into northern Armenia, Kurdistan, and part of Asia Minor, contains the sources of four noble rivers, having their estuaries in three different seas, and thus, from Armenia, as

from the centre of a great continent, giving an easy communication to the several nations of Europe and Asia. By following the Kizil Irnak through Asia Minor we reach the Black Sea, from whence there are inlets to Russia, Austria, Turkey, &c. In the same way the Aras, by terminating in the Caspian, opens several routes towards Great Tartary, as well as towards the rest of Central Asia and China, while the Tigris and Euphrates, with their numerous ramifications, afford abundant means of communicating with Persia, India, Arabia, and the continent of Africa. An extensive mercantile intercourse is also maintained with the same regions by means of numerous caravans, which, since the time of Abraham at least, have traversed the countries watered by those four rivers.

KIZIL OZAN, a river of some geographical celebrity, being supposed by Major Rennell to be the Gozan of the Scriptures, II, Kings, xvi, 6, and the following is his description of it in his inquiry concerning the disposal of the ten tribes of the Jews which were carried into captivity to Nineveh. This river springs from the country anciently named Matiene, between Tadmor and Hamadab, and taking its course eastward, falls into the southwest part of the Caspian sea, penetrating in its way the great ridge of mountains that divides Media from the Caspian provinces. Travellers describe with horror the road which leads along the side of the chasm and which is the only one practicable for loaded beasts from Ghilan to Ispahan. It is generally excavated from the steep rocky cliff which impends over the dreadful gulf below, and along it the traveller holds loosely the bridle of his beast while he leads him along, fearing to be drawn after him should a false step be made. This chasm is about 180 miles to the westward of the Caspian sea.—*Rich's Residence in Koordistan, Vol 1, p 226, quoting Olearius, Harway, &c*

KIZ KALASI, see Kizil Oghlan

KIZLA SAFED To the west of the province of Fars are the ruins of Kizla Safed, and, nearly in the centre, are those of the ancient capital, Persepolis. The territory of Fars represents ancient Persis, which was watered by the Araxes, Gyndes, Oroatis, Arasis, Pelevai and Bagind. Its cities were Cora, Arima, Arbica, and Articana, besides many others whose sites are unknown. Persepolis was the capital in the time of Alexander more anciently, the seat of the government was at Pasargada,—Strabo, lib xv, p 729, the Pasagadis of Quintus Curtius—Lib. v cap vi, but as this historian speaks of the fortress of Persepolis, and the city of Pasagadis (qu. Farsa—Gerd?) it is possible

that the extensive ruin in the plain, near the former, may be the Pasagada of Pliny,—Lib vi, cap xxvi.—*Euphrates and Tigris, Col Chesney, p 210* See Fars

KOCCHI BAHAR, is a native State ruled by a rajah subject to the supervision of a British Resident. It is situated between Bengal and Assam, on the N E frontier of British India, and is separated from the highlands of Bhutan by the Doon. Fallacotta is the most central town, for the jungles, Chiamoochee, Bala, Buma, and Beygoe passes into Tibet and Bhootan. The abolition of slavery in Koch Behar has recently been formally proclaimed. Up till this proclamation, if a ryot, or peasant, owed a sum of money, and was unable to satisfy his creditor, he was compelled to give up his wife as a pledge, and possession of her was kept until the debt was discharged. It sometimes happened that the wife of a debtor was not redeemed for the space of one, two or three years, and if, during her residence with the creditor, a family should have been the consequence, half of it was considered as the property of the person with whom she lived, and half that of her real husband. The country has a most wretched appearance, and its inhabitants are a miserable and puny race. Up to a comparatively recent date, the lower tanks without scruple disposed of their children for slaves, to any purchaser, and for a very trifling consideration, nor was the agency of a third person ever employed. Nothing was more common than to see a mother dress up her child, and bring it to market, with no other hope, no other view, than to enhance the price she might procure for it. The Coch or Kocch are partially converted to mahomedanism. The pagan portion live in the woods and cultivate the soil with the hoe, they are well-fed and clothed. They abstain from beef. They sacrifice to the god Push and his wife Jago, also to the sun, moon and stars, to the deities of the rivers, hills and woods, and to their deceased parents. The Deosh, their sacrificial priest, marries and works, and the office

behari is bounded on the north by the great belt of mountains which separate Irak-i-Ajam from the southern provinces of Persia the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Kanb county lie to the west, while Shuistan separates Behbahan on the east from the direct dependencies of Fars. On the east and south-east, Behbahan is surrounded by the Almascan tribe on the north and north-west by the Bakhtiyari, and on the west and south by the Kab Arabs. Also, the mountainous region to the north and north-east of the plain of Behbahan is occupied by the Khogla tribes,—and the districts of Lami and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbahan.

KOBAD or Kaode, a Sassanian king, a d 488 or 481. See Fars, Sassanian
KOBAD, or Kei Kobad, an emperor of Delhi, who made his aged father undergo the subject oriental obsequies of kissing the ground before the royal throne. He fitted up a palace at Kholokere, upon the banks of the Jumna, to enjoy their soft society, but nobody in that village now recollects the site of that palace—*J of Hind*, Vol II, p 199

KOBIDAR, BENG Bahinia purpurea, KOBIN or Jobin, BURM Melicocca tri-

KOBO, or Kobo, or Saigoun, the head of the executive government at Jeddo. The Dairi, at Miko, is the ecclesiastical head. In this singular government, there were two emperors, reigning conjointly, the Dairi, or spiritual emperor, who resided at Miko, and the temporal or lay emperor, who usually lived in the great city of Jeddo. The word Kobo does not strictly mean emperor, and it appears that the Japanese angrily deny that there is any other emperor than the Mikado, or Dairi. The power, however, of the Kobo was decidedly imperial, and far greater than that of the Dairi—*MacFarlane's Geo and Hist of Japan*, p 192, *Tsungh, Illustrations of Japan*
KOBRA TEL, SINGH A substance sup-

is not hereditary. The blood of the sacrifice goes to the deity, the flesh to the worshippers. Polygamy, polyandry, concubinage and adultery, are punished by fines. The husband resides with his mother-in-law, is the property of the wife, and after her to her daughters. They keep the dead two days and then burn them at the river side. Their name is written Kocch, Koktsh, Koksh, or Kuksh. In the Yogini Tantra, they are named Kavach and are there styled mhech. When the mohomedan power was established in Bengal the Koch (Kocch or Kavach) kingdom extended from 88° to 93° E L, and from 26° to 27° N L from the south-eastern extremity of Nepal along the southern extremity of Sikkim and Butan into Assam, with Kocch Bahar as its capital, and the people consisted of the present Kocch, Dhimal and Bodo. They dwell in the Sal forests with impunity. The Kocch, are called Hasa by the Assamese Bodo, and the Dhimal style them Kamul. The northern parts of Ruugpur, Purnea, Dinajpur, and Mymensing are the chief Kocch localities. The Kocch and Bodo serve a fixed period for their brides, and they marry within the tribe.—*Turner's Embassy*, p 11, *Treaties, Engagements and Sunnuds*, Vol VII, p 367, *Latham's Descrip Ethn*, *Hodgson*. scorching climate and his simplicity of manners and benevolence, soon made him known to and beloved by the Dutch, French, and British, with whom he met. He became naturalist to the nawab Mahomed Ali, and while at Madras, made the acquaintance of Dr James Anderson. In 1778, the government of Madras granted him a salary to enable him to carry on his researches, and with this aid he visited the Straits of Malacca and Siam, towards the end of 1779, and made known the occurrence there of tin ore. His salary was again increased in 1780, and he then visited Ceylon. He travelled along the coast to Calcutta from which he was returning in 1785, when he was attacked with diarrhoea or dysentery, and died on 26th June. He bequeathed all his plants to Sir Joseph Banks. His example and instructions diffused a similar taste among his companions, and hence originated the botanical labours of the society of "United Brothers." But, although it may be said that scientific botany took its rise in India from Koenig, the flora of the East Indies had not been entirely neglected by European botanists prior to that period, as the works of Rheedee, Rumphius, Plukenet, the two Buirmans, and finally a large and well preserved, yet unfortunately almost unknown, collection of Indian plants in the Oxford herbarium, formed in the early part of the eighteenth century, amply testify.

KOERI, HIND In Hindustan, vegetable gardeners and agriculturists. In Bahar they grow the poppy, they are in general very respectable.

KOES? or Jack tree? *Artocarpus integrifolia?* yields a moderately hard, but rather coarse and open grained, though heavy, Ceylon wood, of a beautiful saffron yellow colour, emits a peculiar, but by no means unpleasant odour — *Edye, Timber of Ceylon*

KOET, HIND *Feronia elephantum*, Roxb

KOEUR-TAN, see Kalka

KOFFE, Rus Koffe, also Koffebohnen, GER, Koffy, also Koffibohnen, DUT Coffee *Coffea arabica*, Linn

KOFTGARI, HIND, is steel inlaid with gold in patterns which, in former days, was carried on to a considerable extent in various parts of India. It was chiefly used for decorating armour, gus, coats of mail, helmets, swords, and sword handles. These, however, are not the manufacture of the present day. Since the rebellion in India of 1857, the manufacture of arms has been generally discouraged, and koftgar work is, consequently, now chiefly applied to ornamenting a variety of fancy articles, such as jewels, caskets, pen and card trays, paper weights, paper knives, inkstands, &c. The process is exactly the

same as that pursued in Europe, and the workman can copy any particular pattern required. The work is of high finish, and remarkable for its cheapness. Koftgar is chiefly carried on in Guzerat and Koth, in the Seal-kote district. Several admirable specimens of inland metal work by the native artizans of Bhoj were likewise found in the collection of arms contributed to the Exhibition by H. H. the Rao of Kutch. Some of the cutlers still remain at Lahore, but many of them went to Nizamabad in the Gujranwalla district, others to Guzerat, and the koftgar artizans, also, have mostly left Lahore to reside in the Koth Loharian in the Seal-kote district — *Cat Universal Exhibition, 1862, Powell*

KOGAR of Chenab Holanahena anti-dysenterica, Wall

KOGHANI, an Affghan tribe occupying Gandamak. They formerly held the country in the west, but were expelled by the Jabbari Khel Ghilji. They claim to be Ghilji.

KOGHILU, see Lui

KOH, PRRS A mountain, a prefix to many solitary mountains and hill ranges from west of the Himalaya and the Indus even to the Caspian sea. The Koh-i-Kush or Caucæus, one of these, is the great stony belt that separates northern from southern Asia. In traversing the kingdoms of Hindustan and Cabul, from the east of Bengal to Herat, we find them everywhere bounded on the north by a chain of mountains, which is covered with perpetual snow, for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain commences near the Brahmaputra, and runs nearly north-west as far as Cashmeer, during this part of its course it is (from hima Sanscrit, for snow), called the Himaleh by the natives of the neighbouring countries, and is the Himalaya of the English (hima, snow, alaya, abode). From Cashmeer, its general direction is a little to the south-west as far as the high snowy peak of Hindoo Coosh, nearly north of Cabul. From this peak its height diminishes, it no longer bears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Cabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia, as to justify, if not completely to establish, the opinion of the ancients, which connected this range with mount Caucasus on the west of the Caspian sea. From Cashmeer to Hindoo Coosh, the whole range is known by the name of that peak. From thence to the meridian of Herat, the moun-

tractory, and it pressed, betook themselves to the hills. These portions, however, which are held by the hill-tribe of the Khuttuk were usually quiet. The Khuttuk indeed have, in their neighbourhood, been uniformly faithful and obedient. The valley is famous for its salt mines, the chief of which, at Bahadur Khesl, is guarded by a fort. At Kohat itself there is also a force with a cantonment and a fort. In the Kohat district, the principal tribe are the Bangush Pathan. They are a large tribe, can muster 15,000 fighting-men, and are fairly good soldiers. They highly appreciated the light money assessments of the British after what had formerly termed the "robber rule" of suha Mahomed Barozzy. Up to 1848 he held Kohat as a chief from the Cabul government. It was then taken possession of by the British on account of hostility to them during the second Sikh war. His conduct of the Bangush in reference to the Kohat pass needs to be noticed. The Akhram of Haugoo in the Bangush country was in the British service as Revenue Collector, but he was murdered by one of his own relatives, and the thanah descended to his son. The Bangush suffered much from the raids of their hill neighbours, Orakzye, Toorke, Chalkhed, Wazirke. The inhabitants of the Merauz valley, near to Bangush. This valley belonged to the chief of suha Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Merauz, which appeared to have been vacated, so suha Akhram, the governor of the Khooran province, in 1851, summoned the Merauz to surrender, but they petitioned the British to include them in Kohat. Under the circumstances this request was acceded to. They were in then hostile to the British government, as indeed they were to any government whatever. Now Kohat indifferent coal is found, generally on the surface. Specimens of asbestos, occur in veins parallel with the coal stratum Kamgornu, and both are stated to be in a hill. Jet, and other bituminous product, are also brought from the neighbourhood of Kohat, as well as fluid bitumen, or mumu. Haugoo is a dependency of the province of Kohat. The plain of Kohat and the valley of Haugoo are well-cultivated and populous. Wheat is grown, but the stony soil in many parts seems more adapted to the culture of maize, or as here called jann, the quality of which is excellent, and the returns large, while its flour makes admirable bread, and is the general food of the inhabitants. The great command of water, in many situations, is made avail-

able for the irrigation of rice lands. The inhabitants of the villages in the valley, leading from Haugoo to Kohat are principally shah, as are all the tribes of the Turu, their neighbours, although not so bigotted as these, or, being under control, they are compelled to conceal their fervour. The Turu, when they see a stranger, ask him if he be straight or crooked, putting at the same time the forefinger to their forehead, and holding it in a perpendicular position, and then in a contorted one. If desirous to be kindly received, the stranger had better reply that he is straight, by which they understand he is a shah. The plain of Kohat appears on all sides surrounded with hills, on the summit of one of which, to the north is a crenelated tower, by which the road to Peshawar leads. The hill south of Kohat, and the districts of Tank and Bannu are likewise peopled by genuine Afghans, the pasand Waziri and others, or a agricultural tribe claiming such a descent, and indeed, throughout the mountains on either side of the Indus, every valley has its separate tribe or family, always opposed to one another, and sometimes differing in speech and manner. Generally, it may be observed, that on the north, the Afghans are to be found, and the Toorke on the other, are generally pasand, even the old, but less energetic Durand. The British government has been concerned chiefly with the Afghans of the two passes to Kohat, i.e., the Kohat pass or Gulle and the Jewakee pass. To the guardianship of these passes the Afghans have received some kind of consideration from successive dynasties, Ghazniwids, Mogol, Durand, Barakzye, Sikh, and British, and have broken faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation on their rugged hill-sides would not alone suffice to afford. This is a fortunate circumstance, inasmuch as the British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afghans to sore straits. These passes are of importance. The Kohat or Gulle pass is the direct and best route from Kohat to Peshawar. The government post between these two important stations runs usually by this route. Kohat contains numerous mines of different metals, including son-makhi and pitalmakhi. A high range of neighbouring hills abounds with mines of coal. The Peshawaris bring it in great quantities, and often burn it for the purpose of melting iron, but do not

succeed naphtha, is also found, which the villagers generally use for lamps. Momyai, deemed in India a useful and valuable medicine, is dug out of the hills of Koh-i, it is black, and resembles gum. It is very dear in India, and scarce. The Afridi lie between Peshawar and Kohat and the Derajat strip of land extends from the hills and valleys of Kohat to the Sind frontier — *Mohan Lal's Travels*, p 358, *Schl. Ad. Rec of G of I*, No 11, *Masson's Journeys*, Vol. 1, pp 114 to 117, *Cunningham's History of the Sikhs*, pp 6-7

KOHATAR, see Kohtai, Koriambai

KOHEE, female Koheela, male, also called shaheen, black-eyed hawks, found in Sindh

KOHEN, HIND Edwardsia hydaspeica

KOHER, HIND Sageetia biandethiana

KOH-I-BABA, a remarkable snow-clad ridge in the Hindoo Kush, the peaks of which are about 18,000 feet in height. It is the great continuation of the Hindoo Kush, is about 60 miles long, in lat $34^{\circ} 30'$, and between long $67^{\circ} 30'$, and $68^{\circ} 30'$. It is at the S W extremity of Hindoo Kush, with which it is connected by the transverse ridges of Kaloo and Hajeguk. According to Burnes and Lady Sale, it is about 18,000 feet in height, Outram, 20,000 feet, Humboldt, 2,800 toises, or 17,640 feet, the most probable is 16,000 feet. The highest accessible point is in lat $34^{\circ} 40'$, long $67^{\circ} 30'$, and is 13,200 feet, Hajeguk pass is 11,700 feet. It is a vast rounded mass, the culminating ridge ascending in lofty peaks, covered with perpetual snow, stretching as far as the eye can reach further to the west it sinks into the mazy mountains forming the Hazarah highlands. It is supposed to be the Paropamisus of the Greeks.

KOH-I-DAMAN, Charekar, at the head of the Koh-Daman valley, north of Kabul, is famous for the gallant defence made there by Eldred Pottinger and Maughton, during the Kabul outbreak. It is mentioned by Ibn Batuta as Chaikh Leech, in his Report on the passes calls it Chaika.

KOH-I-DUZDAN, see Khash Rud

KOH-I-HAMON, see Kashmir

KOH-I-KAF, PERS The Kaf mountain

KOH-I-KAS, or Koh-i-Kush or Caucasus, is the great stony belt that separates northern from southern Asia. In traversing the kingdoms of Hindustan and Cabul, from the east of Bengal to Herat, we find them everywhere bounded on the north by a chain of mountains, which is covered with perpetual snow, for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain com-

mences near the Bishmaputia, and runs nearly north-west as far as Cashmeeri during this part of its course it is (from hima, Sanscrit, for snow), called Himaleh by the natives of the neighbouring countries and is the Himalaya of the English (hima, snow, alaya, abode). From Cashmeeri, its general direction is a little to the south-west as far as the high snowy peak of Hindoo Coosh, nearly north of Cabul. From this peak its height diminishes, it no longer bears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Cabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia, as to justify, if not completely to establish, the opinion of the ancients, which connected this range with mount Caucasus on the west of the Caspian sea. From Cashmeeri to Hindoo Coosh, the whole range is known by the name of that peak. From thence to the meridian of Herat, the mountains have no general name, among the natives, but that of Paropamisus has long been applied to them by European geographers. As seen from the plains of Peshawar the fourth is the principal range of the Indian Caucasus, and is always covered with snow. It is conspicuous from Bactria, and the borders of India, and is seen from places far off in Tartary. Elphinstone says that the ridge of Imaus or Himalaya, is seen for a distance of 150 and even 250 miles. The Paropamisian chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is such a maze of mountains as the most intimate knowledge would scarcely enable us to trace, and, though it affords a habitation to the Eimank and Hazarah, it is so difficult of access and so little frequented, that no precise accounts of its geography are to be obtained. It is certain however, that the range of Hindoo Coosh is no longer so lofty, as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of the elevated region is inhabited by the Hazarah, and is cold, rugged and barren. The level spots are little cultivated, and the hills are naked and abrupt. The western part which belongs to the Eimak, though it has wider valleys, and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh. Their activity is less on their other extremities, except perhaps on the west or south-

west On the north-west they seem to sink gradually into the plain which borders on the desert The slope of the whole tract is towards the west See Koh

KOH-I-MEERIAH, a hill north of the Oxus which produces coal of good quality It is near Baljawai, one day's journey north of the Oxus river — *Wood's Journey to the Oxus* See Baljawai

KOH-I-MUBARIK, a rock which British sailors call Bombareck Koh-i-mubarak, means blessed mountain, but it is also called Ras mubarak, the fortunate or auspicious head land

KOH-I-NOKREH, or Silver Mountain Mines were formerly worked near the villages of Sahr Rud, Hassa and Mahomedabad This mine had probably been abandoned, like many others in Persia, when the produce was found inadequate to the labour of working, or when, as the peasant significantly said, deb kharch, nuh hasel, the expense amounted to ten with only nine of profit.—*Ouseley's Travels*, Vol II, p. 106

KOH-I-NUR, or Mountain of Light, a celebrated diamond, said to be the immemorial heirloom of Indian sovereignty from the days of the Pandu Colonel Sleeman would have it that this great diamond was first found in Goleonda by Meer Jumla, and presented by him to Shah Jehan, as a nuzzul for a passport to his aggrandizement But Baber states that on his capture of the palace of Ibrahim Lodi at Agra, he found 'one famous diamond, which had been acquired by sultan Allah-ood-deen It is so valuable, that judges of diamonds valued it at half the daily expense of the world' Most probably this gem was no other than the famous Koh-i-Nur, which is said to have been an inch and a half in length, and an inch in width Being carried off by Nadir shah, it was afterwards seized in the plunder of that monarch's tents, by Ahmed shah, from whom it descended to his son, Shah Shooja, and is now in London His highness the Guicowar of Baroda purchased the celebrated diamond Star of the South for the sum of eight lacs and three-quarters of rupees, £87,000 sterling The Star of the South is next to the Koh-i-Nur, the largest diamond in the world, weighing 125 carats, and is a gem of extraordinary purity and lustre — *Tr Hind*, Vol II, p. 318 See Diamond

KOH-I-RUD, an artificial reservoir at Ispahan

KOH-I-SAFED, or White Mountain, forms a most majestic boundary to the southern side of a plain, at a distance of about fifteen or twenty miles from the town Its height, at a guess, is about seventeen thousand feet, and along the whole southern side of the

Himalaya, from the Hindoo Koosh to Nipal, the Safed Koh is visible Its snowy top, is also visible from Peshawar, but it cannot be seen from Cabul, even from the top of the Tukht-i-Shah, which rises behind it.—*Vigne's A personal Nar*, p. 234

KOH-I-SAFI Behind, or east of the Sial Koh, is a hilly tract, not mountainous, although waste and desolate, named Koh-i-Safi, from the tribe that pasture their flocks in it, and this tract intervenes between the Sial Koh and the valley of Taghow, moreover, through it meanders the river of the Kohistan — *Masson's Journeys*, Vol III, p. 151

KOHISTAN, literally, hill country, but commonly so applied to mountain tracts on the N W frontier of British possessions in India

In the *Kohistan of Cabul*, the people occupy partially the valleys of Ghori-bund, Punji, Nijou, Tagow, Alishang, Alighui and the lower Kunai To the south-east, the Kohistan extends to the hills of Tagow, and farther away, to Lughman, the Lamghan of Baber, and so called, according to him, because the tomb of Lamech, the father of Nuh or Noah, is to be seen there From Charikar to Jellalabad the road is open, and it is supposed that Alexander, whether he re-crossed the mountains at Bamian, or at Beghram, marched by this route towards India On a detached and comparatively low hill, a whitish streak is observed, extending from the summit to the foot of it This is the Beg-i-awan, or running sand mentioned by Baber. The natives say that it runs up again, and that it is never diminished, and that there is a cave at its foot where noises are heard It has been described by Burnes, Vigne and other travellers

The *Kohistan of Jullandhur* is interesting ethnologically The revenue of the rajah of Mundi is reckoned at four lacs of rupees a year, much of which is derived from salt and the half is paid to the British Government The hamlets in Kooloo, near the Tiri pass, in the Jullandhur Kohistan, seldom contain more than from fifteen to twenty houses Single houses are numerous, and, from being scattered amongst the fields, give an agreeable variety to the bold landscape This distribution of houses arises from lands available for cultivation being usually of small extent and widely separated, and consequently unable to support large communities It is also imperatively necessary for the husbandman not to place a ravine or any other impediment between his hut and his fields, as all communication with them would probably be cut off during the greater part of the rains, an important season of the year in India The

natives of Sookeyt, Mundee, and Kooloo in the Kohistan of the Jullandhri, have swarthy complexions and appear to be of the same race as the inhabitants of Bushahr. In fact many of the coolies employed in carrying baggage between Simla and Kalka are men from these states, who are attracted there by the wages, which average one anna a day in their own districts, but from four to six annas on the left bank of the Sutlej. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a dark-coloured woollen frock, trousers of the same, or of leather, and a flat skull cap, generally black, with sandals made of coarse grass. The woollen cloth called puttou is manufactured by themselves and resembles thick coarse blanketing. It is sold in pieces of 10 inches in width and about 21 feet in length at 2 Rs 8 As, or 3 Rs a piece, according to the quality. Both sexes wear a girdle around the waist, and the men generally go bare-legged during the hot weather. They seldom, if ever, wear shoes, the richer classes, however, wear woisted stockings and shoes when they go out. The women, instead of the cap, sometimes have a coloured piece of cloth tied round the head, and occasionally twist their hair into one long plait, the end of which is then ornamented with slips of coloured cloth or shreds of woisted. The plait is by no means unbecoming to the young. The dress of the women on the western side of the Seukundri range consists of a tightly fitting body and sleeves with a full petticoat having a broad border at the bottom. Their favorite colour is a light yellowish chocolate, whilst the border is generally of a deep blue or of some other dark colour. A veil is thrown over the head and shoulders, as in the plains. If they meet a European they stop and turn their backs to him until he has passed. The men dress pretty much in the same manner as those on the plains. The women of Kooloo and the adjoining states are inordinately fond of ornaments. These are of the usual description, with the exception of mother o'pearl amulets, which both men and women use, consisting of small thin plates of mother o'pearl of various sizes and engraved with mystical figures. Several of these are hung around the neck and hang conspicuously on the chest. Polyandry is said to be unknown amongst them, nor are they guilty of infanticide, but polygamy is general. Travelling is generally performed in the janpan by those who can afford it. The janpan is like a large tray with a pair of bamboo shafts behind as well

as in front. Ladies have their faces covered over with scarlet cloth. All agricultural labours, with the exception of ploughing, are performed by the women, while the men sit idling at home, grain crops are cut with the sickle, and burdens are usually carried in the kitta or large conical baskets hanging over the shoulders on to the back, which is the general mode of carrying loads in the Himalaya mountains. The mountaineers of those parts had long been in the habit of ill-treating their wives, and on the introduction of English laws the desertion of their husbands by the women was pretty general. The men of Kulu laid their grievances before the proper authority, by whom they were told that since, before the British rule, they valued their cattle more than their wives, they must now reverse the custom, and take greater care of their wives, a system of valuation they evidently could not appreciate, as wives were more plentiful than cattle. About Subathoo one sometimes sees infants wrapped up like little mummies and laid in such a position that a small rill of water falls on their heads. These infants are usually watched by some elderly female whilst their mothers are employed in the fields. The natives believe that this ordeal strengthens the children and renders them hardy, and that it cures dysentery and various other diseases. But the common object is to keep them asleep, and this is found to be the most effectual means of so doing. It is not known whether the inhabitants of the mountainous district on the right bank of the Sutlej adopt this plan or not. They dread the evil eye, and have recourse to witch finders, who feign the power of discovering evil spirits which wander over the mountains in the tangible form of witches. If a cow or any other living creature die, its death is immediately attributed to some evil eye, and a witch finder is employed to discover it. This impostor having selected some old woman who had no means of propitiating him by gifts, placed his victim in the centre of a group, whilst all interested in the case sit around her in a circle. He then dances round the poor creature, and ultimately nods his head towards her, whereupon all the lookers on do the same, which coincidence is deemed a sufficient proof of guilt. Formerly she was subsequently condemned to be burnt to death! But since that district became a British province and these inhuman proceedings have not been allowed to take place, they declare the victim of their superstitious credulity an outcaste, and refuse her the commonest necessities of life, thus she is abandoned to her fate, and would probably starve to death, but for the timely gift of a goat or a

sheep by some one of her relatives to the witch finder, who forthwith fastens the guilt on some other person in the hope of extorting in a similar manner from the relatives of the last accused.

The inhabitants of the Chumba range appear to be a different race of men. They are shorter and appear much stronger, and are certainly cleaner about their persons. They call themselves Rajpoots, and say they belong to the Guddeerat. They are shapely and able to impose upon their less knowing neighbours. Most of the witch-finders are of the Chumba Guddeerat. When Europeans made their first appearance in the Kangra valley, these men had very slight notions of caste and would eat or drink anything the former gave them, whereas, since their contact with the natives of the plains, they have become as bigotted as any Hindoo. The Chumba Guddeerat may always be known by their peculiar conical caps, with lappets to turn down over the ears like an English travelling cap. As the traveller proceeds from the plains into the interior, it is very interesting to remark the gradual change in the features, from the Hindoostani to the Tartar-like countenance of the Lahouli. These last are a totally distinct race from the people of Kulu or the Chumba Gaddi range. The Lahouli are a short sturdy set of men, very ugly and filthy dirty. The women are decidedly plain. The costume of both sexes consists of a pair of loose woollen drawers, with a flock of the same material, whilst a wrapper is also often wound around the body by being thrown over the shoulders and fastened by a brass clasp in front. Their dress, generally of a black colour, is of a kind of plaid, and their caps are of the same. The women wear their hair either in long plaits fastened at the back of the head with a profusion of red wool and coloured threads, or comb it back off the forehead, tying it in a lump behind, and adorning it in a similar manner. Around the flat circular caps are strung large white shells like cowries, glass beads, and pieces of amber. Around their neck, both men and women wear amulets of mother o'pearl, pieces of amber, turquoises and other precious stones. Each man has hanging to his belt, a timber pouch and a brass instrument for striking fire, with many other non-descript implements. They spend six months of each year in Kulu on account of the severity of the winter season in Lahoul. The greater part of that time they pass in dancing and drinking. On their jubilees, they set off fireworks and make a tremendous noise, whilst the women dance. These exhibitions do not terminate until they are all too drunk to continue them. All the

mountaineers are fond of spirituous liquors especially of brandy, but do not often drink to excess. In their orgies, the women are ridiculously decked out, especially the aged dames. Many of the young damsels have beautiful eyes, of which they make the utmost use. Their characteristic costume, their long curls of hair, and felt caps stuck coquettishly on one side, and the peculiar buncho knot peeping out behind, to say nothing of the ornaments, produce a most ludicrous effect, whilst they shuffle and wriggle their bodies about in the dance. The men continue either quietly looking on or beat tom-toms and other instruments. It is a custom to add the names of adjacent towns, villages, or places of note, thus the place and town are spoken of as Shunjanpoo, Thia, the Bul Dhoon is called Sookeyt Mundi, also Kangra Bhawan, and Pallam Puttan, &c, are terms commonly used. The following elevations obtained from Capt. A. Cunningham are to be taken as approximations. They may be 100 feet either more or less than the truth —

Admanagar, ft	1,200	Hoshiarpur, ft	1,200
Pathankot	1,200	Kumleh-gulh	4,238
Noripoor	1,665	Nari Ghant	2,009
Kotla ..	1,370	Rajpoot ditto..	2,500
Kangra	2,647	Sekunder do ..	5,430
Joala Mukhi	1,805	Jamta ditto	5,632
Thia	2,470	Gogai pass	4,900
Mundi	2,637	Thia ditto	6,485
Sultanpoo	4,584		

Kohistan — Kaghan, is a narrow glen stretching upwards from the northernmost point of the Hazara district for a distance of nearly 90 miles, and separating maharajah Golib Sing's territory from the independent mountaineers. Adjoining Kaghan and reaching the Hussunzye country, separating the Hazara border from the Indus, and adjoining the Agriore fiefship in Hazara, is the country of some hill tribes named Kohistan and Swati, who originally came from the Swat valley.

The Paropamisar chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is a maze of mountains, and though it affords a habitation to the Emak and Hazara, it is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained — *Moorcroft's Travels in Journal Beng As Soc*, p 387, *Journal of the Asiatic Society of Bengal*, No ccc, April, p 408. See Kuvu, India, Affghan, Kaffir, Khyber, Koh, Kush, Kabul.

KOH-I-TAK, the Sulman range is finished by the Pahar, or hills of Koh-i-Tak; and to the north-west is the Koh-i-Kondi,

with a little snow upon its summit. The Kaysai mountain rises in front in a southern direction.

KOH-I-ZARD, see Khuzistan

KOH KIRANA, HIND. A hill just within the boundaries of the Jhunn district, yielding iron ore of good quality.

KOH-KOOT, a high and level island in lat $11^{\circ} 36'$ north, long and $102^{\circ} 34'$ east. It has a high conical hill on the south-west.

KOHL or Kohol, AR. Lamp-black, used by women for staining their eyelashes. It is collected by holding a knife over the flame of a lamp, and is applied with a glass, leaden, or wooden needle, called a mil, to the edges of the eyelids. This is the sulgo of the Roman ladies, the Persians have not yet tried it. The Arab and Indian women all use it. Women do not use snuff or antimony which men only apply to their eyes—*Burton's Sind Vol 1, p 276*

KOHLN SAURE, GER. Carbonic acid
KOHLENSAURE BITTERERDE, GER. Magnesia alba

KOHLENSAURES NATRON, Sodæ sesquicarbonas. Soda, the Nation of the Greeks.

KOHLENSAURES-ZINK OXID, GER. Calamine

KOHLU, HIND. of Simla. The pulse *Cajanus indicus* or *C. flavus*.

KOILU, also Anjale? TAY. Sulphuret of antimony.

KOHOMBA, SINGH. *Azadirachta indica*.

KOHOON, SINGH. *Clocus sativus* *Linn*.

KOHTAR, or Kohatar, a race on the Neilgherries who occupy many of the elevated parts of the mountains. They have no distinction of caste, and differ as much from the other tribes of the mountains as they do from all other natives of India. They cultivate a considerable quantity of the different kinds of millet and of the poppy, and sometimes a little barley. They are the only artisans of the hills, being goldsmiths, silversmiths, potters, shoemakers, &c, &c. They worship ideal gods of their own, which, however, they do not represent by any image. Many of their villages are very prettily situated, and generally on a hill, and every hill thus occupied is called kohatagiri, or, as more commonly pronounced, kotagiri. These people the Toda race call kuv,—then term for a mechanic. As this tribe kill and eat a great deal of beef, it was no doubt intended by their hindu neighbours that they should be called Gohatar, from the Sanscrit Go, a cow, and Hata, slaying, &c. They are in number about 2,000. Every Kohatar village has, belonging to it, a circle of Burgher hamlets or villages, from which they claim at periodical seasons the payment in kind of certain fees or dues, and

for which they in return furnish the Budiga or Burgher race with, or rather make for them (the latter supplying the material), then implements of woodcraft and husbandry. These fees are generally paid in a certain quantity of whatever grain the Budiga has cultivated, for each plough of land, besides incidental dues on marriages, &c. On one occasion, when many miles from one of the Kohatar villages, there was observed, within a couple of a short distance, a group of Kohatar, men, women and children, sitting round a fire from which the little smoke that was still rising first attracted attention. They had taken possession of a dead bullock, made their repast, cut it up and soddened the remainder which was suspended to each end of little poles. The Kohatar always attend the funerals and obsequies of the Toda, &c., receive from them the carcasses of the buffaloes that are offered in sacrifice, allowing from a half to a quarter of a rupee for some, and others they receive in return for the assistance they afford on these occasions or for services which may have been performed for the family of the deceased. If they cannot supply themselves with flesh by any of these means, they kill some of their own herd, or purchase for that purpose from the other tribes. The Kohatar burn their dead, collect the bones on the following day, and bury them in a hole, marking the spot where they have done so. This they do in order to the performance of the obsequies. On the night of the first Monday after the first new moon in the month of March, all the friends of the deceased assemble, and preceded by music, go to the place of burning. The Kohatar, in figure and habits, resemble the Chakiri or chuckler, and are workers in leather, iron, brass, silver, pottery and woods. They will not perform labourer's work, except in building. Their language is a corruption of the Cannese. They eat the flesh of animals, of whatever distemper they die, but, in 1825, this proved fatal to several men. Their stature is low, 4 or $4\frac{1}{2}$ feet, but they are stout and healthy. They eat opium. They live in villages all over the mads. Their numbers, in 1825, were 187 men, women 156, boys 75, girls 79 = 497, villages 5, houses 188. They never milk their cows. They are not polyandrous—*Dr Shortt, Harkness Neilgherry Hills, pp 30, 81*

KOHTUL is the Persian word for a pass or defile, Lukh is the Belooch term. It may be a contraction of Koh, mountain, and tel, a rising ground, a hill, a tumult, &c. But tel is by some regarded as Arabic, and the Buhari-Katia dictionary spells it Kutel. Yet, in a Persian translation of sult in Baber's Commentaries, composed by himself in the Moghul

language The spelling is two or three times Kotal — *Ouseley's Travels, Vol 1, p 268, Pottinger's Travels in Beloochistan and Sind, p 151*

KOHU, HIND *Olea europæa*

KOIA MARAM, TAM *Psidium pyrifolium*, also *P. pomiferum*, the white and red guava trees

KOIA PIPOLI, TEL *Salicornia indica*, Willd

KOIDA CHIKA, MALEAL Pine apple, the *Ananas sativus*, *Schult*

KOIKARA or Kykara, a race who make baskets The name may mean Kaikara, or handicraftmen

KOI-KOPAL, *te*, Gond Gopal, a settled race of Gond who are cow-keepers

KOIL, HIND The Indian cuckow, *Eudynamis orientalis*, see Kamen, Kool

KOIL, TAM A temple, thus Kahi koil, a temple of Kahi

KOILA-BHUTAL, a wandering Gond tribe, whose women are dancing girls

KOILASHA, SANS From kelas, to shine in water This is the Kailas of the Himalaya

KOILI AVARI, TAM *Canavalia obtusifolia*

KOILU, TEL *Salicornia bractiata*, Roxb

KOIR-PAH, the Malayala name of a tree which answers the purpose of small spars for native vessels it is said to be strong and durable for such purposes — *Edge, M and C*

KOIT, DUKH *Feroma elephantum*, *Corr*

KOITOR, a section of the Gond, including the Raj Gond, the Raghuwal, the Daduvi and Katulya The Koitor is the Gond par excellence and some suppose the term derived from the Persian 'Koh,' a hill

KOITABHAJIT, SANS. Jit, signifies victory

KOJAGARA-LAKSHMI, SANS From kah, who, and jagri, to awake

KOJAH, see Khajah, Khojah

KOJLA JAMUN, DUK *Calyptranthes caryophyllifolia*

KOK, HIND *Ficus caricoides*

KOKAI RANG, HIND Dull mauve colour

KOKALLA, see Inscriptions

KOKALLAK, HIND *Tribulus alatus*.

KOKAN, a small territory west of Kashgai, with capital of same name, the paternal kingdom of Baber It is ruled by an Uzbek khan or chief of the tribe of Yooz who claims a lineage from Baber It is famed for its silk The inhabitants wear skull caps The position of Kokan has been shifted in the most recent Russian maps from 41° 23' by 70° 30' to 40° 18' by 71° 1' The name is also written Kokand and Khokand In Balk and near Andkhui, the harvest is at the beginning of June, in the oasis countries in July, in

Kungiat and in the north of Khokand not till the beginning of August Of the rivers, in that central region, the Oxus is the most important, and the Zairafshan, Shahn-Sabz and Jaxartes follow, and Kokan an Uzbek chiefship, is situated on the Su or Jaxartes It possesses considerable celebrity in being looked on as the capital of Afrasiab, and is historically connected with the campaigns of Chengiz and Timur, but it is better known as the birth-place of Baber, from which he raised himself, first to the throne of Kabul, and ultimately to that of Hindustan The once fertile kingdom of Feighana has again taken its place among the nations of Toorkistan Kokan is not only the key of Toorkistan, it is on the high road to the Chinese settlements of Kashgai, Yarkand and Khoten, with which it carries on a very considerable traffic, and where the khan exercises much influence Also there is an open and regular communication from Yarkand to Cashmere and Ladak, so that, with an influence in Kokan, the ramifications of commerce become infinite, extending into Tartary, China proper, and even India Herat is valuable as an emporium further to the south and west Herat has been stated to be the entrepot of Persia, Toorkistan, Cabul and India Kokan will be found to be emporium of Tartary and China of Russia, and the northern frontiers of Hindustan If Russia and England abandon in the east the policy of friendly communication which they maintain in the west, and directly or indirectly urge the nations which intervene between the Indian borders to make war on each other, they will not be fulfilling their duties as civilized powers, nor can they derive any benefit from such a proceeding With irritating causes at work, Yarkand and Kokan must come into collision, and Kokan, backed up by Russia, would succumb to Yarkand, and Russian officers and Russian merchants will occupy the towns of Yarkand and Khoten Kokan and Yarkand intervene between Russia and Hindustan — *Papers, East India, Cabul and Affghanistan, pp 120, 136-31*

KOKAN BER, HIND Fruit of the wild ber, *Zizyphus vulgaris*, and *Z. nummularia*

KOKA PANDIT, author of a work, in Sanscrit verse, *De modis coeundi alius que rebus veneris* There is no book in eastern literature, except the Hitopadesa, which is to be found in such variety of languages In Persian, Hindustani and Panjabi, it is called Lazzat-un-Nissa in Arabic, the Maifat-un-Nayk in Sindhi, the Fairhat-el-Aslakin The original is in Sanscrit verse, and translations are to be found in the vernacular dialects of India, as the Mahatti, Telugu &c

KOKUN or Faghann, see Kolan, Kushi

KOL is the term applied to the aborigines
 of the hill country of Chota Nagpur, Mizu-
 pur and Rewah Europeans apply the term
 to the Dravidian Oraon, as well as to the
 others, but perhaps erroneously, and most of
 the tribes have other distinctive names In
 the south of the Chota Nagpur country, about
 Singhbhum, it is applied to the Lurka Kol
 The Kol of Chota Nagpur, are in two
 tribes, Mundah and Oraon These are occu-
 pying the same villages, cultivating the same
 fields, and their festivals and amusements are
 the same, but they are of entirely distinct
 origin and cannot intermarry without loss of
 caste The Mundah were the prior occupants
 The Kol, Lurka Kol, and the wilder Lurka
 Kol of the hills to the west of the Singhbhum
 district, speak nearly the same language as
 the Ho, Santal, Bhumi and Mundhu The
 Kol, the Kur of Ellichpur, the Korowih
 of Sargujah and Jaspur, the Mundah and
 Kheriah of Chota Nagpur, the Ho of
 Singhbhum, the Bhumi of Manbhum and
 Dhulbhum and the Santal of Manbhum,
 Singhbhum, Cuttack tributary mahals, Hazaribagh
 and the Santal Pergunnahs, are
 kindred peoples numbering several millions
 Amongst the Kol, man and wife sit toge-
 ther as is the custom with some Christian and
 Mahomedan races The Kol, the Mundah
 and Oraon tribes and all those cognate to the
 Mundah are passionately fond of dancing,
 which they commence in very early life and
 regard as an accomplishment They also
 sing well and have musical voices and a great
 variety of simple melodies Their dancing
 assumes a national character at their great
 periodical seasonal festivals and fairs called
 Jatra, at which the young men treat their
 partners with fanings The Kol have a belief
 in, and greatly dread, witches, and have killed
 many persons whom they believed to be so
 Chota Nagpur, properly Chuttia Nagpur,
 is the country on the eastern part of the ex-
 tensive plateau of Central India, on which the
 Koel, the Subumeka, the Damudah and other
 rivers have their sources It extends into
 Sargujah and forms what is called the Upa-

ghat or highland of Juspui, and it is connected by a continuous chain of hills with the Vindhya and Kymoi ranges from which flow the affluents of the Ganges, and with the highlands of Amerikantuk on which are the sources of the Nerbudda. The plateau is, on the average, about 3,000 feet above the level of the sea with an area of about 7,000 square miles. It is on all sides difficult of access, is a well wooded, undulating country, diversified by ranges of hills, and it has a genial climate. The population, in 1866, was estimated at about a million, and is formed of a number of non-Arian tribes who had fallen back to that refuge from the plains, more than half of them, however, being the race known to Europeans as Kol, the other races in Chota Nagpur and its adjoining tracts are, the Luika Kol, Ho, Bhum, Muudah and Sonfal. The Kol, in former times, possessed the whole of Chota Nagpur, which may now be said to be divided between them and the Dhangai or Uiaon, who came from Rorastghui. The chief men in most of the villages are still, however, of the old Mundah or Kol tribe, and they do not intermarry with the Dhangai. The greater part of Singhbhum is inhabited by Kol, and we find them numerous in Bamanghotty, and dispersed to the vicinities of Cuttack and Midnapore.

The *Luika Kol*, as they are termed, inhabit those extensive tracts, which go under the name of the Kolehan. Part of these wilds is situated in the Singhbhum district, and the inhabitants pay a nominal obedience to the maharajah of that province, but the greater proportion of this population is more under the influence of the rajah of Mokuibuij than of any of the other powerful chiefs in that part of the country. But even his orders are obeyed only where they are supposed to tend to the advantage of the Kol themselves. Upon the whole it may be said of this singular people that, living in a primeval and patriarchal manner under their Moonda and Manki, they have managed to preserve a sort of savage independence, making themselves dreaded and feared by their more powerful and civilized neighbours. The Kolehan with its wilds and jungles is divided into different peer, as they are termed, or pergunnahs. These peer are, generally speaking, not of any great extent, two or three moderate marches carry a traveller through each of them. There can be little doubt, and such is the tradition among the people themselves, that the Luika Kol came originally from Chota Nagpur, and are descendants of the old Moonda or Moondai of that district. They emigrated finding the romantic hills and valleys of Chota Nagpur too confined for their increasing numbers.

The same cast of countenance prevails in the two races, though, perhaps, tinged with a wilder and more fierce expression in the Luika Kol. The Uiaon, who inhabit great part of Chota Nagpur, regard the Kol as a tribe inferior to themselves, and do not intermarry with them. The villages in the Kolehan are ruled by Moonda and Manki as in Chota Nagpur. The former, the Moonda, is the proprietor of one village, while the latter holds six, eight, or twelve. These village potentates used frequently to wage fierce wars with one another, and bitter and long lasting feuds have often prevailed amongst them. There is this peculiarity in the Kol character, however, that serious and bloody as may be the domestic quarrels, no sooner are they threatened with hostilities from without, than all their animosities are laid aside and forgotten for a time. The villages are generally built on some elevated spot surrounded by trees, and, at some little distance from the principal entrance to the villages, the Kol standard or ensign, a pair of buffalo horns, is suspended in a conspicuous situation. The dress of both sexes is like, a strip of cloth brought round the loins and passed between the thighs forming their only covering, the women wear a profusion of coloured beads suspended from their necks, and have their ears pierced with a number of small brass rings. Their diet is of a very promiscuous nature, every thing almost that can be considered eatable being relished by them, and much of what we consider carrion is eagerly sought for. In this respect they do not differ from the Kol of Chota Nagpur. They are greatly addicted to drunkenness, the religion of the Luika Kol is nothing but a superstition of the grossest kind. The great divinity is the sun (suiuj), next to the sun ranks the moon (chandoo), and then the stars, which they believe to be the children of the latter. They uniformly, upon solemn and great occasions, invoke the sun, and by him many of these lawless men at times, swore allegiance to the late E I Company. Another form of oath used by them is that of swearing upon a small quantity of rice, a tiger's skin and claws, and the earth of the white ants' nests, besides the sun and moon, other inferior divinities are supposed to exist, to whom the Kol offer up sacrifices of various kinds. These spirits are supposed to inhabit the trees and topes in and around the village. The belief the Kol entertain of the power and influence of the Bhonga must be considerable, as they will on no account allow those trees to be denuded of their branches, and still less cut down. It is the universal custom in the various Kol villages that when a woman is

seized with the pangs of labour, she is immediately removed to a lonely hut, the door is shut upon her, offerings of various kinds are suspended near it to propitiate the Bhonga, and no one ventures near till all is over. The women, it may be observed, are not secluded or shut up. When a Kol youth has fixed his affection on a lass, generally the inhabitant of some neighbouring village, she is waylaid and carried off to his house by himself and his friends. So soon as information of this reaches the parents of the girl, they proceed to the village of the ravisher, not however, in general, with any hostile purpose. Interviews take place between the friends on either side, and at length matters are brought to a final settlement, the new husband paying to the father of his spouse a certain number of cows, goats, or buffaloes, according to his means, or the beauty and comeliness of his bride. After this a scene of feasting and intoxication generally follows, in which women and children as well as men participate. The Kol burn their dead, carefully collecting the bones and ashes and bury them with offerings of rice in or near their villages, placing perpendicular or horizontal slabs of stone over each particular grave. Those grave stones form a remarkable object, and strike the eye of every stranger on approaching a Kol village. The only weapons used by the Kol, whether in war or hunting, are the bow and arrow, and the tulwar or *rice*.

The Mundah Kol or Ho, comprise about two-thirds of the population of the five pergunnahs of Silli, Tamai, Baraudah, Rabey and Bundu, all others being recent settlers. But many of the Mundah Kol have been dispossessed of their ancestors' lands, by middlemen, brahmans, and rajputs. Mundah settlements are chiefly in the eastern and southern parts of Chota Nagpur. The Mundah and Sontal are amongst the ugliest of mankind, the Sontal being remarkable for good nature and ugliness. They are more like Hottentots than Negroes. The extreme features of the Mundah race have high cheek bones, small orbits often with an oblique setting, flat faces, without much beard or whisker, and in colour from brown to tawny yellow. Mundah features are flat and broad. The richer people of the Mundah, who aspire to be zemindars, wear the potta, reverence brahmans and worship Kahi, but the mass continue in their original faith. The great propitiatory sacrifices to the local deities are carousals, at which they eat, drink, sing, dance and make love, and the hindoos settled in the province propitiate the local deities. The Mundah country is arranged into Puiha or divisions, each consisting of twelve or more villages under a chief, and the chiefs

meet at times for consultation. Many of the Oraon and some of the Mundah clans or Kili, are called after animals, the cat, hawk, crow, heron, and the clans do not eat the animal whose name they bear. The Mundah and Ho dead are placed in a coffin along with all the clothes and ornaments used, and all the money the deceased had, and all burned. The larger bones are preserved till a large monumental stone can be obtained, and the bones are interred below it, the Ho near the houses, the Oraon separate from the village. They are taken to the tomb in a procession, with young girls with empty and partly broken pitchers, which they reverse from them to him to show that they are empty. The collection of these massive grave stones under the fine old tamarind trees is a remarkable feature in Kol villages. The stones are sometimes so large that the men of several villages are required to move one. The bones are put with some rice into a new earthen vessel, deposited into the hole prepared for them and covered with the big stone. The Mundah and Oraon races are fond of field sports, and all game, large and small, disappear from near them. They form great hunting parties. Fishing and cock-fighting are also resorted to. The Mundah and Ho have a shamanite religion. They have no worship of material idols, but Singbongu, the sun, is the supreme being, the creator and preserver, a beneficent deity, and they have secondary gods all invisible, and generally malevolent. Sacrifices to Singbongu are made of fowls, pigs, a white goat, the ram and buffalo. The Kol and Sontal dwell towards the north of the Gond and Kond in Central India, their languages contain Dravidian words, but they belong to a totally different family of languages. The Kol also inhabit the forest and mountain tracts of Benares, south Bihar and Chota Nagpur on the north of the Kond, in Ghondwanar, and border on the people in the Rajmahal hills, dwelling in the east at Sumbulpur, Simgur, Gangpur, Chota Nagpur, Ramguri and Mongu. The Kol were described by Lt. Tickell in 1840, in the Bengal Asiatic Society's Journal. One tribe called Oraon, was driven at an early period from the neighbourhood of the Ganges, and found the Mundah Kol tribe in possession of Chota Nagpur. The Mundah call themselves Ho, though more generally known as Kol. The Kol and Male-Oraon are physically Ultra-Indian more than Dravidian, and the occupation of the eastern Vindhya and hills on the opposite side of the Ganges valley, by Ultra-Indians, implies that the valley itself was at one time possessed by the same race,—the simplest conclusion is that the Kol were an extension of the ancient Ultra-Indo Dravidian popula-

tion of the lower Ganges and of the highlands on its eastern margin. The Kol, and Luika Kol and Sma, in Singbhum, north of the Gond, are regarded by all writers as of the prior Scythic stock.

The Luika Kol were subdued in 1821, and an agreement was made with them by which they bound themselves to be subject to the British government, and to pay a fixed tribute to their chiefs. In 1857, a large number of the Lurka Kol espoused the cause of the rajah of Porahat, a rajput chieftain near the Kolehau, but on the restoration of order they reverted to peaceful pursuits. The estate of the rajah of Singbhum, afterwards styled the rajah of Porahat, was then confiscated for rebellion. The total revenue from the district is about Rupees 45,000. The expenditure including a police battalion, amounts to about Rupees 30,000. Kol arms are the bow, a piece of bamboo with bamboo string, the arrow barbed and battle axe. The Kol intermixed with the Gond on the Sumbulpur borders, are said to be called Kuki. In British India and on its borders are four distinct branches of the family of languages spoken by members of the Turanian race. In the north are the Himalayan tribes, with their dialects, occupying from the Kanawars on the Sutlej to the Boti of Bhutan in the extreme east. Then there are the Lohitic class of languages, comprising with the Burmese and others of the Malay Peninsula the dialects of the Naga tribes and of the Miku in Assam, and of the Bodo, Kachari, Kuki and Gajo in Eastern Bengal. Nearly related to this class is the Kol or Munda family of languages, including the Kol, Southal and Bhum of Sinlibhum and Western Bengal and the Mundala of Chota Nagpur, the Kui or Muasi and the Korku in Hushan-gabad, and westward in the forests of the Tapti and Nerbudda until they come in contact with the Bhil of the Vindhya hills and the Nahal of the Kandesh belong to this family, indeed Mr. Hislop held that the word Kui is identical with Kol.

The fourth branch is Tamulic or Dravidian, to which belong the Brahui of Baluchistan, the Gondi, the Tuluva of Kauada, the Kanata of the Southern Mahatta country, the Todava of the Neilgherries, the Malayalam of Travancore, the Tamul and the Telugu.

The Kui and the Southal are closely related, and are separated from the Dravidian. The Kur or Muasi and the Korku or Kurku, to the north-west and west of the Mahadeva hills, are, in language at least, quite distinct from the Gond tribes.

Mr Hodgson is of opinion that the Tamulian, Tibetan, Indo-Chinese, Tangus, Chinese,

Mongol and Turk are so many branches of the Turanian family, and he regards the aborigines of British India, as northmen of the Scythic stem, but he remains undecided whether they owe their Scythic physiognomy to the Tangus, the Mongol or the Turk branch of the Tatars or Scythians, and whether they immigrated from beyond the Himalaya at one period and at one point, or at several periods and at as many points. All writers are of opinion that when the Aryans entered India, they found the country occupied by prior Scythic races, to whom their writers apply such contemptuous expressions, as Dasya, M'blecha &c. These prior races seem to have been driven largely out of northern India into and through the Vindhyan mountains into the Peninsula of India and Ceylon, where their idiom, the Tamul, Telugu, Malayalam and Kannatta are sister dialects of one speech, and Dr. Pritchard concurs in opinion with Professor Rask who regards the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others, as also of the Tartar stock, and mentions that some curious analogies have been observed between the Tamulian and other dialects of the peninsula and the languages of Australia. Mr. Logan, however, who has had great opportunities of contrasting and comparing the Dravidians from various parts of India, inclines to call them South Indian. He remarks that, physically, the population of Southern India is one of the most variable and mixed, which any ethnic province displays. A glance at a considerable number of Kling (Telugu) and Tamulic of different castes and occupations, shows that the varieties when compared with those of similar assemblages of men of other races, such as Europeans, Ultra-Indians or Indonesians (including negroes in the last two cases) are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Aryan, some are Semitic, others Australian, some remind us of Egyptians, while others again have Malaya, Polynesian and even Simang and Papuan features. This varied character of the races of the south of the peninsula may be seen daily in Madras, to which all the races from the south of India resort.

The Ho differs from the northern languages not only in its greater fluency and agglutinative and inchoate flexional tendency, but in its dissyllabic character, its profusion of dual and relative forms of the pronouns, and in the position of the qualitative before the substantive.

Three lists of words were obtained by Captain Houghton from Chyebassa in Central India, and two by Colonel Ouseley from Chota Nagpore, all of which Mr. Hodg-

son regarded as dialects of the great Kol language, and by means of the Uiaon speech he further traced, without difficulty, the connection of the language of the Kol with that of the hill men of the Rajmahal and Bhagalpur ranges. He considers that between those several Kol tongues and that of the Gond of the Vindhya there are obvious links, and Mr.

Elliot showed that much resemblance both in vocables and structure existed between that Gond language and the cultivated tongues of the Dekhan. The Sontal call the Kol, Ho lu-Ka. Marang Booro is a god of the Kol, of the Ho and Uiaon tribes, the Sontal, Bloomy and Munda. Booro means a mountain, and every mountain has its spirit.

From the geographical distribution of the Kol and Dravidian languages, Mr. Hislop concludes that while the stream of Dravidian population, as evidenced by the Biahui in Baluchistan, entered India by the north-west, that of the Kol family seems to have found admission by the north-east and, as the one flowed south towards Cape Kumari, and the other in the same direction towards Cape Romania, a part of each appears to have met and crossed in Central India. This hypothesis rests on the presence of the Biahui where they are, a fact which is not inconsistent, however, with the supposition that the Dravidian tribes may also have entered India from the north-east or even across the Himalaya, as the Kanawar, Newai, Chepang, and other tribes have done, while the Kol tribes were an offshoot from a later horde, the main body of which entered the eastern Peninsula. The Biahui may have been driven westward

by the invading Aiya from the upper Indus. To the early Aiya the prior tribes were known as Dasi, who Dr. J. Wilson tells us, were not altogether barbarians, for they had distinctive cities and other establishments of at least a partial civilization. Then, as now they were darker than the Arya and, according to Dr. Wilson, the more marked Turanians in Gujerat and other provinces are still denominated the Kali Praya (corrupted into Parej) or black population. In former times the Kol or Col possessed the whole of Chota Nagpur, which may now be said to be divided between them and the Dhangai or Uiaon, who came from Rotasghui. The chief men in most of the villages are still however of the Munda or Kol tribe, and they do not intermarry with the Dhangai. The greater part of Singhbhum is inhabited by Kol, and we find them numerous in Bamanghoty, and dispersed to the vicinities of Cuttack and

Midnapore The Luika Kol, as they are termed, inhabit those extensive tracts as yet but little known, which go under the name of the Kolehan — *Balfour in Journal of Beng As Soc*, 1844, *Id*, in *Jameson's Edinburgh Journal*, 1843, *Dr Voysey's Journal*, *Campbell*, pp 27-36, *Dalton*, pp 150-4, 154-63, 158-185, *Journal of the R A S*, Vol xviii of 1861, pp 370 to 375, *Mason, Burmah*, pp 131-2, *Atchison, Treaties*, &c, p 170, *Mr Logan, in Journ Ind Archip*, *Mr Hyslop, in Journ. KOLADYN, the chief river in Arakan, along the banks of which are several tribes professing a creed partially buddhist and partially pagan The Mu on the Koladyn river in Arakan do not exceed 2,800 souls The races dwelling in the valley of the Koladyn and its affluents are the Kuki, the Mu, the Sak, the Nu Sak, the Ka-mi, the Ku-mi, the Ra-Khyen, the Kin-mi, Shenda, and the Prou-ka-mi, all of them professing a creed partially buddhist and partially pagan The more eastern tribes, such as the Lung-kha (perhaps the Lunkta, a branch of the Kuki) of the Upper Koladan, and the Heuma or Shindu, and the Khou or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Kuki, Kumi, &c The Lung-kha are said to be composed of an offshoot of the Heuma of the Shindu (Shentu, Tseindu or Shiamdu) and two tribes called Lung-Khe and Bowng-jwe which it subdued Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladyn, descend from masses of high hills about lat 21° 50' N, inhabited by the Kun

The Bom-zu or Bun-zu (Bom-du) of the Rakhoing, dwell north of the Koladan, inhabiting chiefly the upper basin of the Kuimfuli or eastern branch of the Chittagong river To the north of the Bom-zu or Bun-zu (Bom-du), are closely allied tribes termed collectively Lung-kta, Kung-ye, or Ku-ki, who occupy the highlands of Tipperah and extend S E towards the head of the Koladan Both the Bun-zu and Ku-ki, appear like the

Ku-mi, to belong to the Burman family The Ku-ki represents its most archaic and barbarous condition The tribes that have been exposed on the sea board of Arakan and in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali and more distant commercial nations, have attained a comparatively high civilization The Sing-pho, although much behind the Burmans, are greatly in advance of the Ku-ki, and the Burmese seem at a very ancient period, when their condition was similar to that of the Kuki and perhaps in many respects more barbarous, to have spread themselves from the upper Irawadi to the south and west as far as the highlands of Tipperah on the one side, and Pegu on the other Wherever the stock from which they have been derived was originally located, they probably first appeared on the Ultra Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi of that era The upper Irawadi was probably then occupied by the ruder and inland tribes of the Mon-Anam alliance See Burmah, India, Kumi, Khyen

KOLAM, or Kolamb, a Gond tribe, along the Kandi Konda or Pindi hills, on the south of the Waida and along the table land stretching east and north of Mungudh and thence south to Dantanpilly, running parallel to the right bank of the Pianhita The Kolam and Kuiku hill tribes bring wood and forest fruits for sale The Kolam race are found in the Oomaoti, Woon and Maiker districts as a wild race They were formerly predatory, occupying the Mailghat and southern skirts of the Viudyha hills, along with the Andh, Gond and Kuiku These four resemble each other in appearance, but each speaks a different language, and in their features they are distinct from the villagers There are 1,800 Kolam in Oomaoti

KOLI, TAM Fowls

KOLI, the name given to the lower class of cultivators in the Simla hills

KOLI, on all the western side of the nizam of Hyderabad's territories, also to the N W and S W in British territories, are numerous clans of the Koli race. In the autumn of 1867, a small body of Koli settled even at the village of Kulloor about 9 miles south of Honnabad. They erected small huts for themselves outside the village, the men engaged themselves in mat-making from the leaves of the date tree, and the women in disposing of these and in begging. They were well made men, darkened from exposure, but very poor. They called their tribe Haravin or Helavin, but asserted that they were Kol, Kalgun and Ganga waki. The villagers stated that they were honest. But they are alleged to engage in dacoity and thieving. The Koli, according to Captain Mackintosh, are to be found on the west in every part of Guzerat, constituting a large part of the agricultural population, in several parts of that province. They are numerous in Attaveesy and there are many settlers in the northern Konkan. In the hilly tract of country lying between Moosa, S W of Poona, and the hill fort of Timbuck, the source of the river Godavery, the inhabitants are chiefly Koli, and a few are scattered over the districts of Kandesh, Ahmednuggur, Poona and Sholapore, and along the Balaghat on the western frontier of the Hyderabad territory. They seem to have early occupied Guzerat and the Attaveesy, and part of the latter country is still called Kolwan. They are arranged into many separate tribes, but all of them retain the appellation of Koli. The Raj, Salesi, Tonki, Dhoni and Dunggali Koli reside in the Attaveesy, Wun, Dandori and Nassik districts, and worship the hindoo deities Khandoba, Bhann and Bhawan. A few Raj Koli are settled in the Konkan and Jowan. They are the same people, an offshoot of the Mahadeo Koli, and said to have been expelled for some offence. They are farmers and labourers, but the Dhour are the lowest in

civilization, are the greatest drunkards and eat the flesh of animals which have died a natural death. They are ruled by chiefs termed naik. The Koli have, in some instances, attached themselves to the Bhil, and taken the name of that race. The Mullai or Panbunni or Choomli Koli, is respectable. He is employed in every Dekhan and Kandesh village as a member of the third division of the Balottah and supplies water to travellers, wearing on his head the choomli or twisted cloth, hence the name, on which to rest the water pot. This Koli is also found in the Hyderabad Balaghat, extending eastward to Khanbai, Indore and Bodin, between the Godavery and Hyderabad, also near Naldurg, and down the banks of the Bhumah and Kistnah even to Alpur near Kunool.

The *Ahu Koli* of Kandesh reside along the banks of the Guna and Tapti rivers and are employed as watchmen.

The *Murvy Koli* is one of the Balotta in every village in the northern Konkan, and, in Bombay families, they are employed as palanquin bearers. Some Koli are settled as soldiery in Angulali Kolaba, and at Bombay and Kolaba, in 1837 were 1,000 families and 500 to 600 families at Bassein, employing themselves as fishermen and seamen. At their meetings, whether for congratulation or condolence, they consume large quantities of spirits. Many are wealthy.

Mettah Koli, who reside in Bombay, are fishermen and seamen, and many have wealth.

In Bombay, Tannah, Bhewndi, Kallian, Bassein, Daman, &c, are a great number of christian Koli, said to have been of the Sone section and to have been forcibly converted by the Portuguese, but, terrified by the cholera in 1820-21, a portion reverted to paganism.

Chancky Koli are farmers and labourers, settled in Bombay, who came from Junaghar in Kattiwar.

In Guzerat, the Koli are of three sections, the most numerous are the Tullabdah, then the Puttunwaria, the Kahiez, the Dhandur and Bhabina. They are in the Baroda district, north to Khyallu and Massanah in the Mahi Kanta, and form a large portion of the population. In 1837, in the Kham district alone, they were 70,000. They are labourers and watchmen, and a few under the name of Selottah, form escorts of treasure.

The *Mahadeo Koli* reside in the valleys of the Syhadri range, extending from Moosa, S W to Poona, northwards to Timbuk, the source of the Godavery river, between lat 18° 15' and 20° N and long 73½ and 74° E. These small valleys are known as Mawil, Khoiah, Nahir and Dang, &c, valleys, glens, straths and wilds. They are classed into 24

Kula or clans, each of which has in my subdivisions. Then numbers in 1837, were estimated at about 50,000 souls. The members of the same Kula, do not intermarry. With the exception of the cow and village hog, the Koli eat all other animals. The women are generally slender and well formed with a pleasing expression of features and some are very pretty. They are elastic and have large families. The Koli are fond of ehains and amulets. Colonel Tod describes a lofty three peaked mountain, on which is a temple dedicated to Aya Matra, also called Isani, the tutelary divinity of the Koli. This, and the effigy of the horse, are the only objects of adoration among this aboriginal race. This was the first time Tod had seen a personification of Mother Earth, for such is Isani, from Isan, 'goddess,' and Aana, 'earth,' the universal nurse mother (ayamata). Whether the worship of the horse be typical of the sun, "the swiftest of created representing the swiftest of uncreated objects" he says he does not know, but in this they resemble the other forest tribes, the Bhil and Suya. The Koli are not so numerous now as they were in the early part of the 19th century, and this is attributed to the internal commotions which ravaged them since that period. They are now spread over various parts of Hindustan, and owing to the opening of the "Immigration Trade" a few years back, between India and the Afghans, a great number of them migrated thither to better their circumstances. Several tribes of Koli are met with, each having a different name, which is generally descriptive of its vocation, hence we have the 'Tonkary Koli,' so termed, from the occupation they follow of cutting down bamboos—a large bamboo being called tonkary. The Douglis Koli so called owing to their residing on hills,—the term for a hill being Dunga, &c. &c.

The fishermen settled along the coast from Gheriah to the north, near Suvat, and at Colaba, in Bombay, are Koli of the Some tribe, a few of them, notwithstanding, enter on board of vessels, as mariners, but the vessel must be manned by natives, the Some fearing to lose caste, which would take place did they sail with Europeans. The chief Patel of this tribe resides at Angira, he is looked on as a legislator, being endowed with power to adjust the affairs of the Some Koli, settle their disputes &c. The women of the Some Koli wear cholo, or jackets and have a number of glass bangles on their left hand, they are frequently seen in Bombay and, they are frequently in fishing and importing fish into the fort and outside market when they marry, the ornaments which were intended to adorn their right wrists are consecrated, and thrown into the sea, as an offering to the deity who presides over that element, and an invocation to defend her husband from the dangers of the ocean. Not a caste meeting of the Some Koli can take place without large portions of mawa flower being imbibed, and they frequently give any quantity of fish for half a tumbler of raw brandy. The chief tribes of Koli are the Ray Koli, Solesy Koli, Tonkary Koli, the Dhour Koli, Dunga Koli, the Bhil Koli, Mullari Koli, the Aheer Koli, Muri Koli, the Some Koli, and a few others. The Mullari Koli are looked on as the most respectable tribe, and the Dhour the most degraded. The latter do not scruple to eat the flesh of animals that have died natural deaths. In Bombay island, as well as in Bassem, Salsette, Tanna, &c, are christian Koli who formerly belonged to the Some, but were converted to the christian faith, by the Portuguese during the time the latter had possession of Bombay. These Koli are cultivators, toddy-drawers, &c, and a great many of them sell game, which they snare and import into Bombay. They are generally habited in a coarse jacket, which extends down to their back, and a small skull cap, cut in front, in the shape of a cone, with a jagged to hide their persons. The Attaveesy is a district in the west of India, largely occupied by Koli, and part of Attaveesy is called Koliwan.

The Koli, in the southern Malabar counties, arrange themselves into several sections. The Koli inhabiting the hills of the Sydy range, from the fort of Timbuk to Bherimashunkar, are cultivators, but at the same time were enterprising and determined robbers as also were the Koli in the Attaveesy. The village Koli supplies the inhabitants and travellers with water. The boatmen and fishermen on the Bombay coast are Koli, and many of the Susee Koli are seamen. Several of the Arabian races of India, The Koli in Betal is a water-carrier.

Several of the Arabian races of India, the Dhangar, Dher, Mang, Koli and Almur-wa and occasionally even the higher hindoo castes, under various vows, devote their gifts to their gods. The deity to whom the girl is more frequently vowed, is some incarnation of Siva and his consorts. Amongst the Athatti people, on the western side of India Kandoba, is the usual Siva avatar, to whom the girl is devoted and his chief shines as at Jyoti, Kharpur near Bedei, and it Alligum? The ordinary people believe that from time to time, the shadow of the god comes on the devotee, (deo hi chara ti ang-pai)—and possesses the devo-

tee's person (mulh ki-ang ko bhāi dcta) These devotees are called Mulh, in Mahatta, Jogm or Jogmdam in Canarese, and Basava in Telugu. They, at times, affect to be or are possessed, during which they rock the body, and people then make offerings to them as to an oracle or soothsayer, laying money at their feet, and await the possession to hear a decision enunciated from them.

The female deity to whom those near the Bhima river are devoted is Yellamah. The Bhooi-Kohi race, devote their mulh to Mata. Boys also are devoted, and styled Waghia, from 'wag' a tiger. Near Oomiaoti it is to Amba and to Kandoba, that the Mulh and the Waghia are devoted. The Waghi does not associate with the Mulh. At Oomiaoti, the people say that Kandoba particularly moves on Sunday and selects a clean tree (clean mulh) whose body he fills.

Dionysius (Peregr. 1148) mentions the Κωλι, and Ibn Khuradad (ob. A. D. 912) alludes to the Kol as north of Malabar. The ferry-men on the rivers in the peninsula are of the Kohi race, stalwart men. The Kili-Kati or Maddakpore race, are also Kabi-gia or ferry men. The Kohi are the labourers and lower cultivators in Guzerat. The Oigana and Dher are outcasts of Guzerat — *Elliot's supplemental Gloss*, Mr Campbell, p. 125. *Captain Mackintosh in Madras Lit Soc Journ*, *Tod's Travels*, p. 137.

KOLINDU MANIL? TAM. Glass.

KOLINJI PALAM, TAM. Properly Konji Palam, *Citrus aurantium*, the orange.

KOLI NIL, MALLAL. *Tephrosia pumila*, *Pers*.

KOLINJI SEED, ANGLO-HIND. *Nigella* seed.

KOLITA, a race in the west of Bengal and in Assam, good-looking and considered to be high caste hindoos. The Biboi, Jubai and Kulta or Koha, are populations to the north and east of the Aboi and Mishmi localities, on the drainage of the Brahmaputra. In the end of 1861 the Meyong Aboi attacked and plundered a village in the British territory, but the tribe expressed a desire to renew friendly relations, and begged that their offences might be overlooked. On the 5th November 1862, an agreement was made with them binding them to respect British territory, and the same engagement was subscribed on the 16th January 1863 by the Kelong Aboi. On the 8th November 1862, a similar engagement was concluded with the Aboi of the Dihong-Dibang duai. The Aboi Mni language belongs to the old Assam alliance, but it has been greatly modified by Tibetan. It has a

strong ideologic resemblance to the Dhimal, Bodo, Garo and Naga, but with some specific Tibetan traits — *Journal of the Indian Archipelago*, Nos. IV and V, April and May 1853, p. 190, *Treaties, Engagements and Surrenders*, Vol. VII, p. 343, *Indian Annals*, *Latham's Descriptive Ethnology*, Campbell, p. 54.

KOLIUNG, MONGOL. *Gossypium indicum*, *Lam*.

KOLLA KORAWA, see Korawa.

KOLLAN, TAM, MAL. A blacksmith, also in Malayala, a tanner, a worker in leather, a turner in wood.

KOLLAR or Collier are a tribe in the Tondiman country, in the Vasanga district, in the eighteen pahlams or districts, and throughout the Madura district. Until the nineteenth century they were so predatory that in the south of the Peninsula of India, Collier became the designation of a thief and their name is really derived from "Kallara," thieves, plunderers. In ancient times they seem to have inhabited the woods from Trichinopoly to Cape Comorin. Orme, writing of them, describes them in the middle of the 18th century as expert thieves and plunderers, and the Jesuit, Father Martin, says they were very cruel. Pennant writing of them in the 18th century says the adjacent countries are covered with thick forests and little cultivated by reason of the savage inhabitants, the Polygar and Collierie, who may be truly styled sylvestres homines, they are predatory, and in their government, as also that of the Polygars, feudal. They are thirty or forty thousand in number. Their country is hilly, they generally sided with mahomedans and the British in the wars against the French in the times of Clive and Dupleix. They have a first and second marriage, like the Maravai of Ramnad. The titular surname of all Kollari is Ambalakaren. Calicut was the stronghold of the lord paramount, the rajah of Tondaimandalam, the country of the Tondiman, which was an ancient division of the peninsula of India, of the part now occupied by the Arcot and Chingleput collectorates. H. H. the rajah Tondiman, of Poodocottah, is now a petty chief, and his country is a small tract near Trichinopoly — *Pennant's Hindustan*, Vol. II, p. 11, *Orme's Hindustan*, *Wilson*.

KOLLATI. The Dumai or Kollati army, called by themselves Bhatu, are wandering acrobats, and their women are common.

KOLLU, TAM. *Dolichos uniflorus*, gram.

KOLWAN, the hills east of Guzerat

KOMADU, SINGH Cucurbita citrullus, *Linn*

KOMAL, HING Piangos pabalania

KOMAMAT, see Kenissat-ul-kiamat

KOMAN Klaproth thinks that the word Turkoman is derived from Turk and Komani, and given to that part of the Koman nation which remained on the east of the Caspian Sea, under the domination of the Turk of the Altai, while another part, which was independent, came and established itself in the vast plains to the westward of that sea, and to the north of the sea of Azof, and afterwards pushed forwards into Hungary — *Note by M Klaproth, in Voyage de Mavriaviev, p 394, quoted by Ferriar*

KOMAR, a chief, a prince, a first-born, hence also Komari, a virgin, from which, according to a legend is derived the name of Cape Comorin Komari is also a term given to all forts until they stand an assault

KOMAR The law of primogeniture prevails in all Rajput sovereignties, and has rarely been set aside The inconclusive dicta of Menu, on this as on many other points, are never appealed to by the Rajputs of modern days Custom and precedent fix the right of succession, whether to the gadi of the state, or to a fief, in the eldest son, who is styled Raj-

komai, or Pat-komai, or simply Komai-ji, 'the prince,' while his brothers have their proper names affixed, as komai Jowan Sing, 'prince Jowan' Seniority is, in fact, a distinction pervading all ranks of Rajput life, whether in royal families or those of chieftains, all have their Pat-komai, and Pat-rani, or 'head child,' and 'head queen' The privileges of the Pat-rani are very considerable In minorities, she is the guardian, by custom as well as nature, of her child, and in Mewar (the oldest sovereignty in India), she is publicly enthroned with the rana. Seniority in marriage bestows the title of Pat-rani, but so soon as an heir is given to the state, the queen-mother assumes this title, or that of Mahi-ji, simply 'the mother' In the duties of guardian, she is assisted by the chiefs of certain families, who with certain officers of the household enjoy this as an established hereditary distinction On the demise of a prince without lawful issue of his body, or that of near kindred, brothers or cousins, there are certain families in every principality (1a) of Rajwara, in whom is vested the right of presumptive heirs to the gadi In order to restrict the circle of claimants, laws have been established in every state limiting this right to the issue of a certain family in each principality And in Jeypoor, in the branch Rajawut (according to seniority), of the stock of raja Maun, there is a distinction between those prior, and those posterior, to raja Madhu Sing, the former are styled simply Rajawut or occasionally conjoined, Mansingote, the other Madhami The Rajawut constitute a numerous féage, of which the Jhulaye house takes the lead, and in which, provided there are no mental or physical disabilities, the right of furnishing heirs to the gadi of Jeypoor is a long-established, uncontested, and inalienable privilege — *Tod's Rajasthan, Vol 11, p 381*

KOMARAM, MAIEAR A tribe of barbers who shave the lower classes

KOMARASAMY, a hill south of Ramanmalai hill, 30 miles west of Bellary, overlooking the valley of Sundoor

KOMARPAL, a sovereign of Guzerat

The astrologers having foretold that he would have a son born in Mula Nachutia, who would cause his father's death, the lad was sent as an offering to the shrine of Bageswara Mata, by whom he was not only preserved from destruction, but she herself, in the form of a tigress (bag), suckled the young Solankhi, whence his issue, which spread over the country, obtained the distinctive name of Bagela. The princes of Baghelcund are of this race, and there are many petty chieftainships of this tribe in Guzerat, as Lunawaria, Mandvie, Maheia, Godia, Dubboye, &c. Komarpal was born in S 1145, and in the words of the Charitra, "in S 1222 (A D 1166) Komarpal became a ghost. He left this world, poisoned by his successor, Ajipal." It was during the reign of Komarpal that the celebrated Arabian geographer, El-Edrisi, visited the kingdom of the Bahhara, and from his work Bayer and D'Anville gleaned much information — *Tod's Travels*, pp 184-191.

KOMARSAMI, 15° 1', 76° 35', in Mysore, a pagoda west of Hniahall, a peak near the pagoda, is 3,400 feet above the level of the sea — *Cullen*

KOMATI, claim to be pure Vesya, are occupied as traders and in other peaceful avocations. The term is applied in the west of India to shop-keepers, and petty dealers and clerks, who claim to be the pure Vaisya. In Madras they are called Chettyar or Chetty, in western India, Seth, the latter a term also applied to Parsi and mahomedan tradesmen.

KOMSALA, also Komsallar, an artificer in metals, from Kansa, a metal. In British India there are, amongst the hindoos, five artificer races (1) The Gold and Silversmith, (2) The Brazier, (3) Blacksmith, (4) Carpenter, and (5) Stone-mason or stone-cutter. These worship the hindoo gods, but they do not reverence brahmins, and their marriage and funeral customs differ from those of the brahmins. The goldsmiths regard it as a disgrace to have any of their daughters growing up, without being married. See Hindoo, India

KONCHIKARI, HIND Mucuna pruriata

KOND, Khond, Kuud, or more properly the Ku, is the language of a people who are commonly called Kond or Khond but who designate themselves Ku. They dwell in the country surrounding the Urya in Sambhulpur, and to the south they inhabit the upper parts of Gondwana, Gumsui and the hilly ranges of Orissa, and practice the horrid rites of offering children and young people in sacrifice. Kimerdy is peopled by Khond, who, during the past thirty years have been repeatedly in rebellion. The hilly tracts of India from Moorshedabad down to Ganjam, and southwards on the skirts and in the valleys of the mountains as far as Cape Comorin, are peopled by hundreds of small tribes, who form amongst themselves independent nations, who have not yet felt the effects of civilization and—as with the Southali,—the Samiah and the Khond occasionally rise in open rebellion against the British power. It became known in 1833, that the Khond race were addicted to the meriah, or sacrifice of human beings,—to the earth-goddess, and, ever since then, the British government have made continuous efforts to suppress this rite. Since 1857, the Kond of Kimerdy have been suiging up, from time to time, the true reasons of which are not known, though those alleged are then hopes of renewing the meriah. Kond savages occupy the eastern parts of the highlands between the Godavery and the Mahanaddi. Those near Berhampoor average in height 5 ft 5½ in, and in weight 8 stone, with well-developed muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek bones, slight, projecting lower jaw, white and regular teeth with oval faces, as if of a mixed Caucasian and Mongolian origin. Their ordinary food consists of the wild farinaceous products of the hills. They are social, but easily excited, and more truthful than natives of the plains. Animal food and palm wine are only used on festive occasions. The deities of the Khond are the same as those of the S. E. Gond. Pen and Pennoo are common to Khond, and Gond. Dula deo was a bridegroom who perished in the marriage procession and has received divine honours.

The Khond, Kuud or Ku according to Dr Caldwell, are a primitive race who are supposed to be allied to the Gond. The two people by whom the Gond and Ku languages are spoken are supposed to amount to 500,000

souls. Dr Caldwell estimates the proportionate numbers of the several races by whom the Dravidian languages and dialects mentioned above, are spoken, to be as follows

Tamil	10,000,000	Tuda	} 500,000
Telugu	14,000,000	Kota	
Canarese	5,900,000	Gond	
Malayalam	2,500,000	Ku	
Tulu	150,000	Total	32,150,000

About 20,000,000 of these are British subjects, and the remainder are under the native states of Hyderabad, Travancore and Cochin. In this enumeration, there has not been included the idioms of the Ramusi, the Koriawar, the Lombadi, the Vedai, the Mala-Aiasar, and various other wandering predatory or forest tribes. The Lombadi speak a dialect of the Hindi tongue. The Ramusi and the majority of the Koriawar, a patois of the Telugu. The tribes inhabiting the hills and forests speak corrupted dialects of the languages of the contiguous plains. The Mala-Aiasar, 'Hill Kings' called in Malayalam Mala-Aiasari, the hill tribes inhabiting the Southern Ghauts, speak corrupt Malayalam in the northern part of the range, where the Malayalam is the prevailing language, and corrupt Tamil in the southern, in the vicinity of Tamil-speaking districts. From the mountainous tracts known as Khondistan, and the valley of Chokapaud, revenue is derived. The term Gond, seems identical with Khond, and the latter has been supposed to be derived from the hindoo word Kond or Konda, a hill, indicative that they were regarded as a hill people. According to Professor Wilson, Kond is derived from the hindi word Kodo plural Kollu and Kondin.

The Sowrah, Sow or Sam, identical with Samia is a term applied to populations occupying the fastnesses of the Eastern Ghauts, along with the Kond and Kol. The Sowrah are wholly within Telugana, and extend from the Godavery to the southern frontier of the Khond. A large district and dependency of Bustar, in Central India, is surrounded by the Tiling in the south, Khond, and Maru Gond on the east, and hindoos to the north.

The Kond dwell in the country surrounding the Urya in Sambhulpur and to the south. They inhabit the upper parts of Gondwana, Gumsui and the hilly ranges of Orissa. Kimerdy is peopled by Khond, who, during the past thirty years have been repeatedly in rebellion. The Kond savages who occupy the eastern parts of the highlands between the Godavery and Mahanadi are notorious for their human sacrifices. Those near Berhampoor average in height 5 feet 5½ in and in weight 8 stone, with well-de-

veloped muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek bones, slight projecting lower jaw, white and regular teeth with oval faces, as if of a mixed Caucasian and Mongolian origin. Their ordinary food consists of the wild farinaceous products of the hills. They are social, but easily excited, and more truthful than natives of the plains. Animal food and palm wine are only used on festive occasions. The deities of the Khond are the same as those of the S. E. Gond, Pen and Pennoo are common to Khond and Gond. Dula deo was a bridegroom who perished in the marriage procession and received divine honours. The Kond language was reduced to writing by Captain J. P. Fyfe of the Madras N. I. The Khond language of Gumsui appears to be merely a dialect of the Gond. The Khond, if not identical, probably agrees with it more than with Kol, and the basis of the latter is Dravidian.

The Khond, says General Campbell, regarded it as degrading to bestow their daughters in marriage on men of their own tribe, and consider it more manly to seek their wives in a distant country. Major McPherson also tells us that they consider marriage between people of the same tribe as wicked and punishable with death. The Kalmuck, according to De Hell, are divided into hordes and no man can marry a woman of the same horde. The bride, says Beigman, is always chosen from another stock, among the Dubet, for instance from the Torgot stock and among the Torgot from the Dubet stock. The officers whom the Government of India and the Madras Government employed to suppress the Meriah sacrifices of the Kond races were Captain Millar, of the 43rd Regt. M. N. I. in 1836, Mr. Stevenson, Mr. Russell, Madras Civil Service, Asst. Surgeon Bannerman, Madras Army, Captain Campbell in 1841, Captain Macpherson in 1844. It was in 1836-7, during military operations in Upper and Lower Gumsui, that the cruel rite of immolating human beings was first brought to light among the neighbouring hill tribes. Captain Millar of the 43rd Regiment M. N. I., succeeded in rescuing twelve victims. Previous to the year 1837, Mr. Stevenson had succeeded in rescuing many victims, and the information he obtained regarding the Meriah sacrifice, was afterwards embodied by Mr. Russell. Asst. Surgeon Bannerman of the Madras Army did much good service in the cause and offered many most valuable suggestions relative to the mode of legal procedure in the case of the Panwa

detected in kidnapping and selling children for sacrifice. Lieut. Hill acquired extensive information regarding the Khond race and their country. Captain McPherson in 1844, found the Khond in precisely the same state of mind, with reference to the sacrifice, as when Captain Campbell left them in 1841. Before the end of 1841, Captain Campbell had put an end—as far as an end has ever been put to the public performance of the Meriah among the Khond of Gumsui, though the desire to perform it was still strong in their minds.

An insurrection in 1858 in the Khond districts was however neither aided nor led by Khond, the principal actor in the affair was a man named Danda Sina, of Gaibah Goomah, village occupied by the Sowiah race, savages armed with bows and arrows and battle axes, who occupy the hilly tract which extends from Purla Kimedya to Berhampore (Gaujam). It is bounded on the east by the narrow belt which separates the hill tracts from the sea, and on the west by the Khond clans of Chinnu Kimedya and Jeypore. The Sowiah are believed to be prior occupants, but in habits and barbarism they bear a strong resemblance to the Khond.

Danda Sina had sometime before been convicted by the authorities of Gaujam, on a charge of dacoity, but he contrived to escape, and flying to his own village, he collected a large body of his clansmen, and with 10,000 followers attacked the manager of Purla Kimedya. Seven peons were killed upon the spot, and though the manager escaped, the whole country were immediately in a state of excitement. The Sowiah had previously been irritated by the execution of two of their number for murdering the headman of a village, and had openly threatened vengeance for their deaths. An old device also was employed to stimulate them to action, and give additional coherence to the movement. As in the Sonthal rebellion, an avatar descended, though he was not, as with Sonthal, in the shape either of a cart wheel or of a piece of paper. The Sowiah appear to be advanced beyond that point in theology, and their idol is a little brazen image. But in all other respects the device was identical with that employed among the Sonthal. The avatar issued commands, the active leader was sole interpreter of them, and the commands authorised armed resistance to regular authority. The Sowiah country is one of the most difficult in the world, a hilly tract covered with a jungle as deadly to sepoys as the lowest swamp in the Sonthal Pergunnahs. The Kond, Bhil, Santal, Mair, Kol, Bengi, Dom, Bhut, are in all about 20,000,000—*The Khond Agency*,

KONKAN or Concan, a narrow strip of land on the western coast of the Peninsula of India lying between the western ghauts and the sea coast The low land in the Concan and Guzerat is traversed by many rivers and smaller streams running to the sea, and is indented by numerous creeks and channels of the ocean The cold weather is clear and bracing, but the hot season of April and May is succeeded by the deluging rains of the south-west monsoon, when 150 inches fall from June to September, and render much of the already

humid lands, impassable swamps, the atmosphere is then very damp, and the sensation experienced is similar to that in Calcutta at the same period of the year. The Concan districts extend from Goa to Daman, or very nearly to the Tapti river. Like Malabar, which it greatly resembles in general aspect, it is comprised between the western ocean and the ghauts, and consists of a narrow belt near the sea with salt water inlets, and a succession of mountain spurs. In the northern parts of the Bombay Presidency, the chain separating the Concan from the Dekhan is called the northern ghauts, or Syhadri mountains, a term which may conveniently be extended to their whole length. Throughout the Concan, the Syhadri form a continuous chain of hills, interrupted, however, by deep depressions. Their summits rise to the height of 4,000 to 5,000 feet, but the mean elevation is very much less. The station of Mahabaleshwar is 4,700 feet. In the latitude of Daman $20\frac{1}{2}^{\circ}$ N the chain begins to sink abruptly into the Tapti valley, and changes its course, or sends off a spur of considerable elevation in an easterly direction, as the Chandor hills. At Mahabaleshwar, the rain-fall amounts to 248 inches annually. In the southern Concan, especially in the Savant Wari district, the rains are as heavy as in Canara. At Bombay, the rains last from June till the end of September, and the fall is only 80 inches, which is considerably less than any point further south on the coast. At Tannah, however, the average fall is more than 100 inches. In the Bombay Presidency, the provinces of Aurungabad and Beejapore, are arranged into two portions termed the Poona and the southern districts, the latter with its head-quarters at Belgaum, but to each of these two divisions there is likewise allotted the command of the immediately adjoining portions of the level land of the Concan. The Belgaum division of the army, in the province of Beejapore, is from 2,500 to 3,000 feet above the level of the sea, but has had soldiers on the sea shore at Kolapoor, Sawantwari, Malwah, Vingola and Rutnagherry. The Poona division is similar to that of Belgaum in the distribution of its force, of the soldiers in the command nearly the whole of them are in the provinces of Aurungabad from 1,700 to 2,300 feet above the level of the sea. In the table-lands, above the ghauts, the climate is more dry, and the rains and temperature moderate, the range of the thermometer being from 55° to 92° , and the troops, European and native, in the Poona division particularly, enjoyed comparatively good health. Konkana is an ancient name of the country between Devagiri and Sidasegiri, hence, perhaps, the

modern Konkani. The mixed Konkani tongue, appears to be only Marathi with a large infusion of Tulu and Canurese words, the former derived from the indigenous inhabitants of Tuluva of Canara, the latter, from the long subjection of this part of the Konkani to Canurese dynasties above the ghauts. Mr H. Mogling however mentions that the Konkani-speaking brahmins of Mangalore, consider it quite distinct from, though cognate with, Marathi. Its limits extend from Goa below the ghauts, to a village north of Upi. From this part of the coast, in northern Canara, a diagonal line running in a north-eastern direction towards Bedar, marks the boundary between Marathi and Canurese, of the latter at least above the ghauts. — *Flora Indica* by Drs J. D. Hooker, M.D. and T. Thomson, M.D. See India, Kol, Rutnagherry, Jam.

KONKI or Embudi chetta, *Pisonia villosa*, *Pou*, *P. aculeata*, *R*, n, 217, *W. L.*, 1763-4. Konki is a hook, referring to the thorns which are aculeate backwards and very prehensile.

KOO or Ku, race who occupy the mountainous country near the sources of the Lemroo river and its principal feeder the Peng Kheong, within the 22nd parallel of north latitude, westward of the Yomadong range, they have never paid any revenue, and it is only after entering the hills for 8 or 10 days that the first villages of these wild people are met with. The approximate number of houses

is 2,897, and allowing 5 persons for each house, the number of inhabitants may be estimated at about 14,485 Those living on the Peng Kheong have intercourse with the neighbouring Ku-mi of the Koladya circle, from whom they differ but little in their habits — *J H O'Donel, Esq, in Vol XXXI of 1864 of B A S Jour*

KOOFFA, a round wicker basket, towed astern of each boat for the purpose of communicating with the shore, these are covered with naphtha, and are in use on the Tigris, Euphrates and the Diala Their shape and construction belong to the most remote ages, being mentioned by Herodotus — *Magnon's Travels, p 55*

KOOFEE, or Cufra, the name of a town

KOOHRYA and Peija, see Bertha

KOOHU, a river near Raesien in Bhupal

KOOJA, SANS From koo, the earth, and jan, to be produced

KOOKA, a sect of reformers of the Sikh religion They care little about the body after death They hold that after the soul has left the body, the remains require no more attention and may be put out of sight in any way convenient They feast, give sweetmeats, and read the Granth incessantly, when one of their sect is about to die, and after he is dead they read the Granth day and night, relieving each other at the task, for thirteen days, after which they give a feast Bishon Singh a fanatic leader, was executed

in 1872, but his Granth, which was to be sent to the gooroo was left in the Kooka temple in Lahore, and read by the men of his sect, who performed his obsequies His ashes were given up on condition that there should be no demonstration by the relatives, and they were committed to the Ravee by his son, who took the remaining bones to Haidwar, according to Hindoo, and not Kooka, fashion — *Indian Public Opinion*

KOOKEE, a mountain race in northern Cachar, south of the Assam valley, dwelling at elevations of 4,000 and 5,000 feet above the sea, in lat 25° 20' N, and long 92° 40' E A race of the same name dwell 60 miles further south in the north of the Tipperah rajah's territory their name is written also Ku-ki To the north of the Bom-zu or Bun-zu or Bomdu, are closely allied tribes termed, collectively, Lungkta, Kungye, or Kuki, who occupy the highlands of Tipperah and extend south-east towards the head of the Koladya Both the Bun-zu and Kuki appear like the Kumi, to belong to the Burman family The Kuki represent its most archaic and barbarous condition The tribes that have been exposed on the sea board of Arakan or in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali and more distant commercial nations, have attained a comparatively high civilization The Singpho although much behind the Burmans, are greatly in advance of the Kuki, and the Burmese seem at a very ancient period, when their condition was similar to that of the Kuki and perhaps, in many respects more barbarous, to have spread themselves from the upper Irawadi to the south and west as far as the highlands of Tipperah on the one side, and Pegu on the other Wherever the stock from which they have been derived was originally located, they probably first appeared on the Ultra-Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi, of that era The upper Irawadi was probably then occupied by the rude and inland tribes of the Mon-Anam alliance The Loo Chai clan of Kuki, on the frontier of Sylhet and Cachar, in January 1868 attacked Monier Khul, 25 miles east of Silchar and sacked it The Kooki of Chittagong have no idea of hell or heaven, or of any punishment for evil deeds, or rewards for good actions Similarly according to Bailey, the Veddah of Ceylon have no idea of a future state of rewards and punishments In a slight notice of the Grammar of the Kooki language, by Lieutenant R Stewart, 22nd Regiment B N I, he says that the people to whom the term

Kooki is given by the inhabitants of the eastern frontier of Bengal, occupy, together with other tribes, the hilly tracts lying to the north, south and east of Cachar and Manipoor they are divided into numerous clans, each under a petty hereditary chief or rajah. The appellation of Kooki is unknown among themselves, and they have no title embracing their whole race, but they call one another by the names of their different clans. They all speak the same language, with very slight modification in the dialects, and it is called among them Thadou Pao, from the name of one of their principal clans — *Jour Beng As Soc, No 3 of 1858, Lubbock's Origin of Civil, p 268*

KOOKEE-KHEYL, an Affghan Kheil or tribe near the Khyber pass

KOOKOOL, TAM. Commiphora madagascariensis, Linn

KOOL, TAM A kind of gnel, made of various grains

KOOLA-DEVATA, SANS From kula, race, and devata, a god. In hinduism, the deity worshipped by the family

KOOLAHEE, or Koolay, a river near Kntowah in Goalparah, in Lower Assam.

KOOLAN, see Gorkhar

KOOLAR, a river near Buirumpooree in Nagpore

KOOLAR, a river near Raee in Bhopal
KOOLEE BENGAN, HIND, or Koolibegoon, Solanum longum Cylindrical egg-plant — *Riddell* See Binjal

KOOLGACHII, BENG Jujube, Zizyphus jujuba

KOOLI, HIND Sterculia urens

KOOLIE, or Coolie, a term in use amongst the British in India, and amongst the Tamil races to designate a labouring man, also a labourer's hire, or wage of any kind. A Kooli bandy or Kooli gari means a hired carriage

KOOLI, TURK, a "slave," Nadi means "wonderful," and is used as an epithet to

describe the Almighty. The name of Nadi shah therefore signified "the slave of the wonderful, or of God." When he was promoted by the favour of shah Tamasp to the dignity of a khan, he took the name of that monarch and was called Tamasp Kooli khan, but, on reaching the throne, he styled himself Nadi shah, resuming his original name of Nadi — *Malcolm's History of Persia, Vol II, p 46*

KOOLIMITAN? Oenimum hirsutum

KOOLIN, a race or tribe of brahmins in Bengal, who are considered to be of pure and high descent. They take the suffix honorific names of Mookerji, Chatterji, Banerji, Gangooly. The hindoos of Calcutta styled Ghose, Bose, Dutt, and Mitra, are sudra tribes who accompanied the Koolin brahmins into Bengal. See Brahmin, Coolin, Hindoo, Kulin, Marriage, Polygamy

KOOLINA, SANS From kula, a race

KOOLK, in Khorassan, a fine goat's wool, goat's hair enters extensively into the coarse woollen manufactures of Khorassan, beneath the coarse external hair of these animals a down called "Koolk," is obtained, little inferior to the fine wool of Thinet, and from which various articles of clothing are made — *Fraser's Journey into Khorassan, p 390* See Koolk

KOOLMARA, CAN Calysaceon angustifolia

KOOLOO There are some very singular domestic institutions prevalent in Ladak, regarding marriage, not at all unlike those of Kooloo. The principal difference is, that in the former, mutual consent is requisite, where there are several brothers about to take one wife amongst them, and all the offspring are looked upon as the property of the eldest. As soon as the first is of marriageable age, he is provided with a wife, and Mrs Hervey was informed that the entire property of his parents descends at once to him, he being from that time charged with their maintenance. One or more of the younger sons of a family is always made a Lama, or priest — *Mrs Hervey's Adventures of a Lady in Tartary, Vol I, p 193* See India, Kohistan, Kulu

KOOLOO or Koolpee, MAHR A narrow

KOOLSOOM, the name of Hosein's sister. Koolsoom Bi is a familiar name of the women of the mahomedans in the south of India

KOONTTEE, river of Burdwan
KOONT'IA, SANS A groan, from koont'h, to groan

KOONTI, the mother of the Pundit brothers, see *Mithibhatra*, Pundit, Polyandry

KOOPOOKONDA, a stone resembling the Ayi stone, or Snake stone, occurs at Koopookonda, 8 miles west of Vinacondah in Guntur. Good substitutes for Turkey stone, occur at Cuddapah, Woottimetta, Chellimacoor and Humpasani, and varieties of green and gray granular felspar at Serungapatam, Nellore, and on the banks of the Godavari. The latter are well-suited for putting a fine edge on razors and gravers.

KOOPPI, HIND *Aclypha indica*, *Zinn*

KOOR, an extinct hindoo practice for extorting a debt, it was called erecting a 'koor,' meaning a circular pile of wood which was prepared ready for conflagration. Upon this, sometimes a cow, and sometimes an old woman was placed by the constructors of the pile, and the whole was consumed together. The object of this practice was to extort payment of a debt or to intimidate the officers of government, or others, from importunate demands, as the effect of the sacrifice was supposed to involve in great sin the person whose conduct forced the constructor of the koor to this expedient—*Mrs Elwood, Cole Myth Hind*, p 148

KOORCHEE WANLOO or Coorecheewanloo, a race of basket-weavers, also makers of house mats of palm leaves

KOORCHI? *Wrightia indyisensis*

KOORDISTAN, see Kurd, Kurdistan
Kelat, Kellek

KOORHAREE, a river near Bundal in Sumbulpore

KOORI, MAHR A drill

KOORIA MOORIA, a group of islands, in lat 17° 27', long 55° 36'

KOORINEE, a river near Bunkhere in Hoshungabad

KOORINJA, the *Tylophora asthmatica*, a plant of the order *Asclepidaceae*, which yields a strong, white, silky fibre, resembling flax

KOORKOO, a race occupying, along with other races, the hills and forests about the Vindhya and Satpura ranges of mountains. There are about 4,000 of them in Woon and Oomiroti. Along with the Andh, Gond and Kolamb, they occupy the Malghaut and the southern skirts of its hills. They resemble

each other in appearance though they each speak a different tongue, and in their features they differ from the villagers. In the Central Provinces, the Gond inhabit the tract of hill country between Ummunkuntuk, the source of the Nerbudda on the east, and Mukye, an independent Gond state in the Hoshungabad district on the west. The Koorkoo have their head-quarters on and around the Nerbudda hills, and extend westward through Butool and Hoshungabad as far as Burhanpore and Asscighat. The Bhoomeah are intermixed with the Gond from Sehetaikere in the west to Ummunkuntuk in the east. They have a few villages in Seonce, north-east of Ummunkuntuk. Along the banks of the Chota Mahamuddy and Seonce rivers are found the Kol, and south-east through Sumbulpore are the tribes of Oriah. The Koorkoo are said to be a distinct race from the Gond, the latter worship the "lingam" and their language is distinct. The Gond eat cow's flesh at most of their festivals, whilst the Koorkoo hold such a practice in abomination. There are other points also of difference. Some of the Koorkoo hold purwanahs from the Mogol emperors, in which they are styled Rajpoots. The Gond are known among themselves from the number of gods they worship, and in their marriage customs the young men of the Gond often serve for a wife for periods varying from four to ten years. Seven years is a common period. This custom is called *humpna*, during the period of service the father of the girl is bound to feed the youth and to treat him as one of the family. He also presents him with clothing every year, the youth meanwhile giving his services to the father. The Gond marriages and funerals are chiefly drunken orgies, a cow is invariably sacrificed and eaten. After the birth of a child the Gond woman is unclean for five days, at the purification there is a feast when all get drunk, the mother is then allowed to join the family. There is a class of outcasts among the Gond who are said to worship the excrement of swine, they are called *Dooigam*. The Bhoomeah are dreaded all over the province as necromancers, and on account of this, servants from the north-west are afraid to go towards the Raepore districts, they believe the women to be witches, and to live on human flesh, the natives in the jungly tracts of the provinces are particularly subject to diseases of the liver and spleen. From those affections children pine away and die without showing any external marks of disease. Their death is then attributed to witchcraft, and any querulous old woman, who has been in the habit of mumbling at sights and ill-treatment in the neighbourhood, is immediately

set down as the cause. Men who practise medicine are very commonly supposed to be at the same time wizards, they seek to inspire confidence in their prescriptions by repeated prayers and incantations over the patient or over the medicine they give him, and make him believe they derive aid from supernatural power, the patient of course concludes that those who can command the power to cure, can, if they wish, command them to destroy also. In former years, as shown among the record of the Judge's Court of the Saugor and Nerbudda territories, many instances occurred of medical practitioners having been put to death for not curing young people for whom they were required to prescribe. There is one case in particular, showing how the father stood over the "doctor" with a drawn sword by the side of his child's bed, and cut him down and killed him the moment the child died, as he had sworn to do when he had found the patient sinking under his prescriptions — *A visit to the strongholds of Manukghur and Gooraghur in the Simbulpore District, by Captain F G Stewart, Deputy Inspi - Genl of Police*

KOORMENAAD Gold exists more or less abundantly in the whole of the country on the western side of the western ghats in every stream which takes its rise from the Koondah, Neilgherry, and Wynaad mountains, and in the sands of the sea-shore along the whole of South Malabar. It is throughout in the form of minute grains. The principal washings are in the Elnaad, Wyniad, Neddinganaad, Koorimenaad, Cahent, and Sheinaad taluqs.

KOORNAH Apamea, daughter of Atabazus, the Persian, was married to Seleucus, who gave her name to three towns and Koorinah, one of these three Apamea, was built by Seleucus in honour of his first wife. It is situated at the point of a triangle, formed by the confluence of the rivers Euphrates and Tigris, and although now dwindled into a petty town, it was formerly a place of consequence. It is situated on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. At this spot some oriental traditions have fixed the Garden of Eden. The junction of the Tigris and Euphrates occurs at this town which is prettily situated upon a point of land well-wooded, and admirably calculated for a fort. Koorinah itself is an insignificant village, but remarkable for its important and picturesque situation. It commands the mouths of both the Tigris and Euphrates, and looks directly down the "Shat-el-Arab," or river of the Arab. Suab, a station with a fort of the same name, is opposite to Koorinah, on the eastern bank of the

Euphrates, and near Sahal. After the junction of the two magnificent streams, which for some distance are clearly discernible from each other (the waters of the Euphrates being much the clearest), a striking change takes place in the character of the scenery. On entering the Tigris, from the south, the belt of date trees almost immediately terminates, patches of cultivation show themselves more frequently, and the country (though still a dead level) has a fertile and less desert look. About one hundred miles above Koorinah, on the right bank of the river, stands the tomb of the prophet-scribe Ezra, a pretty mosque of tessellated brickwork, surmounted by a green cupola — *Townsend's Outham and Havelock, p 308, Malcolm's History of Persia, Vol II, p 141, Skinner's Overland Journey, Vol II, p 266, Mignan's Travels, p 290*. See Koorinah.

KOORNAS, ARAB Allum porium, *W*
KOORNISII, AR, HIND, PLRS A humble form of salutation

KOOROOT When well-made this is excellent, though unknown in Europe. In Persia it is called Kesht, and is thus prepared. Some butter-milk is boiled in a very large saucepan, by which means the watery particles escape in the form of steam, and the solid ones are deposited at the bottom of the vessel, when sufficiently thickened, the mass is divided and made into little balls about the size of a pigeon's egg, which are dried in the sun and will keep for years. When required, these balls of concentrated butter are continuously stirred in hot water, and in a metal dish, till completely dissolved, the epicures add a quarter of a pound of fresh butter, which gives the sauce an exquisite flavour. It is poured over the bread, maize, or meat which it is intended to season — *Perrier's Journeys, p 279*

KOORPA, see Kunawer

KOOTHOO-KUNDEN-KUTHREE, Solanum indicum

KOOTUB MINAR This column stately

in its structure and gigantic in its dimensions, is a great feature of attraction at Delhi, and arrests the eye of the traveller from afar It towers mysteriously over every thing around, and from a distance its conical point seems to pierce the sky It is from 225 to about 250 feet high, has 378 steps, and the diameter at the base is about 50 or 55 feet It is reputed to be 700 years old, and is in excellent order. About A D 1830, it suffered a little from an earthquake, but under the directions of the British government a part of the resources of the state were devoted to the restoration of this emblem of antiquity and it now stands in just as great perfection as ever It throws out three ranges of encumb balconies at different heights and is surmounted by a cupola preceded by a brass railing, an evidently modern improvement made when the edifice was repaired under European superintendence This colossal piece of architecture is a polygon, fluted cylindrically as well as angularly in alternate order, and wreaths of Arabic inscriptions entwine its massy circumference, the letters being displayed in high relief of about a foot or more in length The material of the building is a kind of red sand-stone, but a portion of the upper part is composed of white marble It is yet a point at issue whether this singular and stately column owes its origin to the hindoo or mahomedan It wears a perfect semblance to the mahomedan style of architecture, but the old dilapidated and crumbling hindoo ruins in its immediate vicinity raise strong doubts on the subject, added to which, there is a peculiar column of bell metal which stands close by it, with an inscription of some buddhist or hindoo character, bearing the impression of a cannon ball fired at it, some say by Amungzebe, and others by the Jants in one of their early expeditions into Delhi—*Tour of India by French*, p 20 See Inscriptions Kutub-minar

Kapi,	SANS		

An ape, a monkey The various kinds of ape seem to have been made known to the Hebrews, Greeks and Romans by specimens brought from Africa and India, those of the Hebrews probably from India, the Hebrew name Koph being almost the same as the Sanscrit Kapi

KOPHEN, a valley in the Kohistan of Cabul The Kophen River is mentioned in the Vendidad under the name of Kubha The Kophones river, named in Alexander's marches is supposed to be the river of Cabul The history of the country of the Kophones river, i e, Bactria, Aria and Kabul, as shown by their coins is as under

Many of the coins have bilingual inscriptions, the one Greek on the obverse, some of excellent workmanship often of very barbarous forms, the other on the reverse in that called Arian, Arianian, Bactrian and Kabulan According to Lassen, James Prinsep, Professor Wilson and others, this language is said to be Sanscrit It is written from right to left

The first Theodotus or Diodotus, B C 256, reigned about the same time as Asaces I

Theodotus II, B C 240, is said to have reigned in the Kabul valley

Euthydemus, B C 220, reigned in the time of the expedition of Antiochus the Great, and was defeated in battle near Merv by the united Syrian and Parthian armies He then urged Antiochus to receive him in alliance and so extend the Greek influence to the Indus A peace was concluded, and Euthydemus led the Syrian army through Bactria, i e, by the route north of the mountains to the Kabul valley and across the Indus in B C 206 There, Antiochus made peace with Sophaganeus (Asoka), which that sovereign recorded by edicts on rocks and pillars in various parts of India, in characters exactly resembling those on the coins of Agathocles In B C 205, Antiochus returned by way of Ariachotia The translation of the edicts of Asoka, is in the Asiatic Society's Journal for 1838, and that on the Guna rock names Antiochus (Antiochia Yona Raja)

Agathocles, B C 190, coined with Greek and Sanscrit, is supposed by Lassen to have ruled Kabulistan to the Indus, and M^r H T Prinsep supposes him to have been the Go-

vernoi left by Antiochus in Kabul, after his treaty with Asoka

Pantaleon, B C 195, coined in Greek and Sanscrit

Eukratides, B C 178, (Prinsep, B C 181, Bayel, Wilson, B C 165, Visconti B C, Lassen 175) He seems to have made an expedition to India in 165 B C, and on his return from it, to have been murdered by his son Numerous of his coins have been found in Bactria and Affghaistan, and M^r H T Prinsep considers that he ruled originally in Bactria, subsequently made conquests in and south of Parapamisus in Kabul and, first of all the Greeks, coined in the bilingual Arian inscription The first use of two languages, however, is also ascribed to Agathocles, who used Greek and Sanscrit while Eukratides used Greek and Arian Eukratides was, certainly, amongst the earliest of the Greek kings of Bactria, Kabul and Aria, who adopted bilingual inscriptions on his coins, and his so doing is supposed consequent on his conquest of the Parapamisus, after assumption of the title of Great King On his death, his wide dominion is supposed to have been broken into several independent kingdoms

Helioles, B C 155, the partner of Eukratides, used bilingual inscriptions on coins in pure Greek and Arian His rule though short, extended over Bactria and the Parapamisus

Antimachus, B C 150, coined with Greek and Arian See Bactria, Semnamis, Kabul

KORAN, the religious book of the mahomedans, who call it Al-Koran also Kur'an-i-Sharif It is generally diffused amongst the people of this religion in Arabic, but it is also translated into English, Latin, German, Italian, French, Spanish, Turkish, Persian, Hindustani, Tamil, Burmese and Malay, though the more strict mahomedans reject translations It has numerous commentators, amongst whom

are Al-Baidawi The Koran inculcates the existence of one true God and obedience to his laws, and to this religion they give the name of "Islam," and its followers mussulmin It contains doctrines and positive precepts as to faith and religious duties and institutions in civil affairs It commands certain months to be kept sacred and sets apart Fridays for the especial service of God It is arranged into 144 chapters distinguished by their subjects, the first of which is called the preface, or Al-Fatihah, which is a prayer, and is much venerated by all mahomedans, who often repeat it in their private and public devotions, as christians do the Lord's prayer, its words are, "Praise be to God, the Lord of all creatures, the most merciful, the king of the day of judgment Thee do we worship and of thee do we beg assistance Direct us in the right way, in the way of those to whom thou hast been gracious, not of those against whom thou art incensed, nor of those who go astray." The Koran recognises men, genii, and angels, heaven and hell, and an intermediate spot and two gardens where beauteous damsels shall await the good. The Arabic Koran is generally in use, but so little are mahomedans acquainted with its language, that in Madras, with 70,000 of this religion, it is supposed that only four or five can read to understand the Arabic Koran Of all the mahomedan rulers in India, only one of any power, now remaining, is the nizam subahdar of Hyderabad in the Deccan The Koran does not contain words known as the mahomedan creed The Koran has been translated into most tongues in India, but the Arabic is deemed the more sacred language, although so very small a number of them can read that tongue so as to understand it The idea of a heavenly place enunciated in the Koran is the grossest that any race has ever promulgated or given credence to The wild hunter tribes of America have sublime notions of a future life, Hebrews were in conflict as to the immortality of the soul, buddhists believe in absorption or annihilation as a release from all the troubles and trials of a mundane existence, christians believe that the future will be a spiritual life, but the doctrines taught in the Koran as to the occupations in heaven are wholly confined to that book and its believers. For, there, the Koran says, (Ch IV, pp 393-94,) "They shall repose on couches, the linings whereof shall be of thick silk, interwoven with gold and the fruit of the two gardens shall be near at hand to gather Which, therefore, of your Lord's benefits will ye ungratefully deny? Therein shall receive them beautiful damsels, restraining their eyes from beholding any besides their spouses whom no man shall have

deflowered before them, neither any genius, (which, therefore, of your Lord's benefits will ye be ungrateful?) having complexions like rubies and pearls *** And besides these, there shall be two other gardens *** of a dark-green In each of them shall be two fountains pouring forth plenty of water. ** In each of them shall be fruits and palm trees and pomegranates ** Therein shall be agreeable and beauteous damsels ** having fine black eyes, and kept in pavilions from public view ** whom no man shall have deflowered before their destined spouses, nor any genius ** Therein shall they delight themselves, lying on green cushions and beautiful carpets" Nevertheless, Mahomed was a monotheist and an iconoclast, and when about to die, before the final struggle, lifting up his voice he exclaimed, "May God be far from those who make the tombs of his servants places of prayers" The very last words he was heard to utter as he expired, as if in answer to an unseen visitor, were, "In the company of the blest on high" The mahomedan when about to die, has his spirit calmed by the "Yasin" chapter of the Koran being read to him, and the body is either washed (ghussal) at his own house, or taken within a few hours to a ghussulkhana, specially built for the purpose near the cemetery, and where men or women-washers perform the duty and then put on burial clothes and apply camphor and antimony The body is conveyed in a box with much solemnity, with wreathes of flowers and perfume laid over the covering the coffin is carried on men's shoulders, and from time to time is heard the Ty-eb part of the mahomedan creed, "There is no deity but God, and Mahomed is the prophet of God," and on reaching the grave, funeral service is read, consisting of the four portions of their creed (takbir) and a blessing (dua), asked which all present, repeat After the Fatiha, the body is lifted from the coffin and gently lowered into the grave, laid with the head to the north and feet to the south, and turned on its side with the face towards Mecca Each person then takes a little earth, and repeating the words in chap cxii of the Koran, "we created you of earth and we return you to earth, and we shall rise you out of the earth on the day of resurrection," he puts the earth gently into the grave The body is then protected with wood and covered in The Fatiha is again repeated, and again at the door of the cemetery and at this juncture, two angels, Moonkir and Nikir approach the dead, make him sit up and inquire who his God and prophet are and what his religion is If he had been a good man, his answers are satisfactory and odours from paradise are diffused

around the departed But, if bad, he is bewildered and the angels torture him. They believe that the dead continue in a conscious state, and dogs and horses or other polluting animals are not allowed within the cemetery, women, also do not enter lest the repose of the dead be disturbed. Mahomedans do not speak of a person as dead, they say he has passed away, has taken his departure, and the living all believe in and hope for resurrection in a future state "They who believe and do that which is right, shall enjoy blessedness, and partake of a happy resurrection ** Paradise ** is watered by rivers, its food is perpetual and its shade also, this shall be the reward of those who fear God, (Koran, ch xiii)" Therein are rivers of uncorruptible water, the rivers of milk, the taste whereof changeth not, and rivers of wine pleasant unto those who drink, and rivers of clarified honey and therein shall they have plenty of all kinds of fruits, and pardon from their lord (Ch xlvii) There shall be gardens with shady trees, with fountains flowing, couches of silk interwoven with gold, beauteous damsels with black eyes lying on green cushions and beautiful carpets, fruits, palm trees and pomegranates (Ch lv) The christian doctrine that man, in all that he can do of good, is still without merit, is not shared in by the mahomedan, the buddhist or the hindoo sects, who all consider that a personal merit is gained by their good-doing, and a mahomedan passing the funeral of a mahomedan, turns with it a short way and lends his shoulder to convey the body to the grave, to bring a merit on himself The Koran was orally delivered by Mahomed, but was collected by the khalif Ooman The Koran recognizes, though it travestises, the christian views of the resurrection from the dead and the life to come But the histories and legends, precepts and ceremonial of the Old Testament and traditions of the Rabbi are largely adopted in it The commentaries on it are called Maltika The commentator, Hanifi, was born at Kufa A H 80, died at Baghdad, in prison, A H 150, nearly 70 years old Shafi, born at Ghaza, in Palestine, A H 150, died in Egypt A H 204, nearly 50 years old Han-Balli, born A H 164 at Baghdad, died there, A H 241, nearly 70 years old Maliki, born at Medina, A H 95, died there, A H 179, nearly 84 years of age Mahomedan school-boys are instructed, almost when in their infancy, to intone the Koran The Koran is utterly inadequate to provide for the legislative wants of the remote lands and times, which it accidentally reached, and throughout Islam, the Rasm or ancient practice of the country is held

sacred by the people, always when not in direct opposition to revelation, sometimes even when it is so. The law of the Koran does not necessarily settle a disputed point between mahomedans, and it is by no means an easy operation to adjust the balance between the good sense of the ancient practice and the discrepant decrees of the inspired volume. The Koran says that a man of the name of Dujjal will appear at Isfahan, who will arrogate to himself the attributes of the Supreme Being, and establish a sect of his own. The Koran is also understood to say that Mehdy is the twelfth Imam or regular successor of Mahomed, who is yet to come, and for whose coming the mahomedans are still looking out with anxious expectation—*Hamilton's Sinai, Hedjaz, London, p 99, Richard F Burton's Sindh, p 413, Duff's Indian Rebellion, p 179, Sale's Koran, Wilson*. KORAT, a small district between Siam and Kambodia. See Kraen

KORAWA, a broken nation scattered throughout the south of India, in the peninsula, their sub-divisions are (1) the Bajanti called Gaon Korawa, or Sonai Kolawun, (2) Tiling Korawa or Kasbi Korawa or Koonchee Korawa, (3) Kolla Korawa, and (4) Soli Korawa, a race of the southern Malabatta country. The Yeikal Korawa or Koonchee Kooee, are a race of wanderers of whose original country they themselves retain no knowledge in their traditions. They are darker than the usual tinge of hindoos around them. In their own communities they style themselves 'Yeikal,' and the same appellation they give to the language in which they hold communication with each other. Their ostensible occupation is bud-snaring. They seem to have been converted to the brahamical faith, and are now of the vaishnavite sect. With the exception of the cow, almost all animals are used by them as food. Their dead are burned. A wild tribe called Korawar, dwell near the Pakhal lake and the Godavery. The race are in Canarese called Kora-varana, Koiar-a-ravanu, or Koiavanu, and are there in three branches, Kalla-koiamar, who are professed thieves; Walaga-koiamar, who are musicians, and Hakki-koiamar, who are a migratory race, and subsist by making baskets, catehing birds, &c. In Mysore the Korawai

are hill and forest tribes, and have a dialect of their own.

In the south, the Yeikal are recognized as Koraver, and are sometimes from their roving habits, termed wandering gypsies. They eat game and flesh meat of all kinds, in which they are by no means nice, the jungle herbs, roots, and fruits, also, furnish them with food. The majority of them pretend to fortune-telling, to which practice both men and women are addicted. They also take to basket, mat, and wooden comb making—for the former two, they use the mid-ribs and leaves of the date palm—and occasionally work as coolies, sometimes wealthy men of the tribe settle down in places, engage in cultivation, and hold land in puttah like other ryots. There appear to be many sub-divisions among them, which chiefly consist in the variety of their occupations. Most of them confine themselves to particular ones, such as firewood-sellers, salt sellers, basket-makers, and coolies, &c. There is nothing very remarkable in their physical conformation, they are usually dark-coloured, average a very dark-brown. In physique and intelligence they are superior to the Ynadi, and inferior to the other low caste hindoos, who are supposed to be more civilized. Their bodies are usually very filthy, and, as a rule, they wear no clothing, except a small piece of cloth. As a race, they are low in the scale of civilization, and, while they pretend to a show of industry during the day, there is no doubt, from the large proportion they form as inmates of jails, that their habits at night are decidedly of a predatory nature. They form bands of dacoits and thieves, and prefer living by theft than by honest industry. The crimes they are addicted to are dacoity, highway robbery and robbery. They are said to be the most troublesome of any of the wanderers. The men are of a spare, light make, and possess a hardy constitution, they tie their hair in a knot over the forehead—forehead low, eyes small, nose comparatively short, and their general appearance indicates more of cunning than intelligence. Their huts comprise mats set upon three sticks, and, when on the move, these they roll up, and place on the backs of their donkeys, and are thus easily transported from place to place. They rear pigs, and are extremely partial to their flesh, they also keep poultry and dogs. Their pack animals consist chiefly of donkeys, occasionally some of them have a few horned cattle, and perhaps a few goats also. The same wandering, erratic, and lawless habits seem to prevail among this tribe wherever met with in any part of the Presidency. A similar tribe under the name of Oopoo-koraver is described by Dr Bilderbeck as

found in South Arcot. Then language seems to be a medley of Tamil and Telugu. They have rude ideas of religion, and will worship any hindoo deity. Then old men are the priests of their community. Most of them have some household god, which they carry about with them in their constant travels. Polygamy prevails among them, and the number of their wives is according to the means of the husband, the marriage string is always tied round the neck of the wife. Marriages are only contracted between adults. The ceremony is usually conducted on a Sunday, preceded by a poojah on the Saturday. Rice mixed with turmeric is bound on the heads of the married couple, and when the marriage string is tied the ceremony is complete. Marriages within certain degrees of relationship are not allowed, and widow re-marriages not permitted, they may occasionally live in concubinage. A custom prevails among them, by which the first two daughters of a family may be claimed by the maternal uncle as wives for his sons. The value of a wife is fixed at 20 Pagodas. The maternal uncle's right to the two first daughters is valued at 8 out of 20 Pagodas, and is carried out thus—If he urge his preferential claim, and marry his own sons to his nieces, he pays for each only 12 Pagodas, and, similarly, if he, from not having sons, or any other cause, forego his claim, he receives 8 Pagodas of the 20 paid to the girl's parents by anybody else who may marry them. The value of a wife differs in different places; in some places they are very much less, and in others again only nominal. There is a kind of clanship among these people. Each gang or community comprises many distinct families each having their own family names, and, like the hindoos they form undivided families. Brown and Campbell define the word Yerikalavaudla. Wilson defines Kulaver, Yeraver and Kinaver, &c.—*Dr. Shortt, Mathias Journ. Literat. and Science, Vol. XVII, Jan. to June 1851, p. 4, by Asst. Surg. (now Inspector-Genl.) Edward Balfour, Madras Army, Wilson's Glossary*.

KORDULLA, or Kuidora? a string tied round the waist, to which a lungoti is fastened. (Dori is a string).

KORE, TAM. *Cyperus hexastachyus, Bottle*.

KOREA, is a large peninsula of Asia, formed on one side by the Yellow Sea, and on the other by the sea of Japan. It is situated immediately to the east of China, and its length may be estimated at 400 miles, by 150 in average breadth. A great part of what was formerly supposed to be its western coast was found by Captains Hall and Maxwell to consist of an immense archipelago of small islands, which have since been sub-divided into several groups, and are known as Amheist's islands, the Korean, and Hall's Archipelago. The largest of these is the island of Quelpaert, called by the natives Musa, in the centre of which there is a mountain peak about 6,000 feet above the level of the sea. Though rocky and bare, these groups are for the most part inhabited. The peninsula itself is divided from the Japanese island of Kiusiu by the Straits of Korea, and by a high mountain range called the Shauahn or Champeshan, from the country of the Mantchoo. It embraces an area of about 95,000 miles, with a population of about eight millions. The interior of the country is rugged and mountainous, being intersected by a lofty branch of the northern range, which in turn sends off numerous offshoots to the sea. The principal valleys lie towards the western and southern coasts, and these districts alone enjoy a temperate climate. The eastern coast is bleak and precipitous, while the northern frontier is cold and desolate, and thus subverts the purposes of despotism by cutting off all friendly communication with the mainland. The principal products of the country comprise wheat, millet, rice, gunseug, tobacco, silk, cotton and hemp. The three last are exported both in the raw and manufactured state. Timber and cattle are plentifully supplied from the forests and pasture grounds, as well as furs from the northern jungles. Its mineral wealth is said to include gold, silver, iron, rock-salt and coal, and from the tribute sent to the emperor of China—consisting both of bullion and manufactured articles—the precious metals seem to be wrought to a considerable extent. The Koreans resemble the Japanese and Chinese in dress, habits and religion, but are said to be as inferior to either of these in mental vigour as they are superior in strength and stature. Their mode of writing is alphabetic, and they are said to possess an extensive literature, but as all ingress into the country is denied to Europeans and all egress to natives, little is known of these particulars. They keep up considerable commercial inter-

course with China and Japan, whence they import pepper, aromatic woods, alum, and goods of Dutch manufacture, but most of the trade is managed by a circuitous overland route, and, being discouraged by the government, is carried on with secrecy and at considerable risk. The kingdom of Korea, although tributary to China, is governed at will by its own king—the Chinese emperor doing little more than formally ratifying his decrees. It is divided into eight provinces, and contains, according to Chinese accounts, 161 towns. Korea, is called by the Chinese Kao-h. Although under the same degree of latitude as Italy, the climate of Korea is very cold. The Koreans have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard, they are strongly made, their skin varies from tawny or yellow to brown, wheat or straw colour and reddish yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is buddhist. Their alphabet and language differ from the Chinese. The Manchus call the Korean race Solgo. There exists probably two populations intermixed. The people use rice, barley meal, flour of millet. The Koreans were driven out of east Tartary into the peninsula which they now occupy. They have since been conquered by the Japanese. Their country was subsequently invaded by the Mongol, on which occasion the Shogun Yoritomo defeated Kaban khan. From this province of Japan sailed, by way of Iki and Tsushima island, the two expeditions of Japanese catholics who, between 1590 and 1610, were banished, upon a crusade against Korea, and through Korea, China. The then emperor, Taikosama, took this means, thinking, if his 150,000 catholics perished, he would be rid of a faction dangerous to his supremacy, should they succeed, he would push them forward to conquer China. The Japanese expedition in three months fought their way to the Ping Yang river, in other words, gained two-thirds the length of the kingdom. But then, abandoned by Taikosama to their fate, they were driven by winter, cold and snow, and by the Chinese troops who came to the aid of Korea with matchlocks, of which the latter then knew not the use, to relinquish step by step the ground they had so rapidly won. The Japanese account (see Klaproth's *Glance at Three Kingdoms*) aptly quotes "after the rain the earth becomes hard." The wars with the Japanese cultivated among the Koreans a warlike spirit which has prompted the exclusive policy that has thus far succeeded so well. It is said that overtures were made to the Korean authorities by the Russian frontier about

the middle of the nineteenth century, for commercial intercourse across the frontier. Admiral Roze, with six French vessels of war, after two months' stay about the mouth of the Han river, leading to the Korean capital Seoul, retired, having accomplished a rather detailed reconnaissance.

Klaproth thus enumerates Korean productions in the middle of the eighteenth century. White cloth from the fibre of *Urtica japonica*, embroidered taffetas, cotton cloth, mats, rice, deer and wolf skins, swords, gold, silver, iron, rock crystal, salt, oil, inks, fans and a yellow varnish which resembles gilding when used. Besides these, small horses, fowls with tails 5 feet long, honey, fox and panther skins, fish, oysters, seaweed, sulphur, ginseng and other medical roots. Report speaks highly of the capacities and qualities of the Koreans, and represents them as a brave people,—excellent friends, but dangerous foes. China is at present the only country trading with Korea, and even her intercourse at the three trading places is barred and restricted by absurd regulations.—*Adams, Nagasaki, 12th May 1871 N C Daily News, Overland China Mail, Latham, Encyclopædia Britannica, Hue's Christianity, Vol II, p 354*

KOREAH, HIND A wild grain, a species of *Panicum*, from Deir Ghazi Khan.

KOREANS, see Korea, Solgo.

KOREE, the name given to the eastern branch of the Indus. It is also known as Sunkra (narrow) and, further up, as the Phian.

KOREH, HEB Crystal. The crystal alluded to in Genesis xxxi, 40, is ice, and in Job vi, 16, is frost. and the Hind, Pers word Balur, seems to be applied indifferently to ice, crystal and rock crystal.

KOREN, MALLAL *Cyperus juncifolius*.

KORENG, a rude tribe near the source of the Irawadi.

KORESH, an Arab tribe in the Hijaz. They were the descendants of the mixed Arabs, al-Arab-ul-Mostareba, lineal descendants of Ishmael. This was the Arab tribe to which Mahomed belonged. The Korashi have, in Sind, many tribal names. They are cultivators, kasi and scribes, and originally came from Syria, Iran and Irak, and claim descent from Ali, Abas, Abubakar, Umar and Usman styling themselves Alvi from Ali, Abasi from Abas, Sidiki from Abubakar, Farooki from Umar, Usmani from Usman. See Adnan, Joktan, Iran.

KOREYALA, HIND The hen bird of *Eudynamis orientalis*, Linn, the Koel.

KORI, TAM. *Cyperus hexastachyus*, *Rottler*.

KORI, kôli, or weaver, and the Tel or oilmen of northern India take a low place amongst the hindoo castes. All the weaver caste throughout Hindoostan are stated by Colonel Tod to be Kôli. They call themselves Julai, but are sometimes styled Kôli. The Kôli of the Simla hills are merely inferior castes living amongst the other populations — *Tod*

KORI, HIND In the lower part of Kaghan valley, *Queicus ilex*

KORIA, HIND A wild grain

KORIANDEER SAAMAN, GER. Coriander seed

KORI GADDI, TEL A kind of grass

KORI KIRE, TAM *Portulaca oleracea*, *Linn*

KORIMIDI or Gohimidi, TEL Coix barbata, *Roxb*

KORIMI PALA or Korimi pala, TLL *Ixora parviflora*, *Vahl*

KORINAR, see Kattyawar, India

KORINCHI, the people of this name in Sumatra, border on Menaugkabau. Their alphabet has 29 characters and consists of horizontal or slightly raised scratchings. See India

KORENDAM, TrL *Acaena intsia*, *Willd*

KORINDA, TrL *Mimosa intsia*, *Roxb* n, 565

KORINGI MARAM, or Horingi-maiam, TAM The soap-nut tree, grows to about eighteen inches in diameter, and twenty feet long. It is used by the carpenters for many purposes. The sort named Horingi Tanga Maiam, the jungle or wild soap-tree, has the apple very inferior in size and quality to the former, and the tree nothing more than jungle or underwood. The soap-apples are gathered and sold in the bazaar at all seasons of the year — *Edye, M and C*

KORINKA, Rus Currants

KORINTHEN, GER Currants

KORIN TOWARE, TAM *Dalbergia latifolia*, *W & A*, *Roxb*

KORION, GER *Coriandrum sativum*, *Linn* Coriander seed

KORITI CHETTU, or Goriti chettu *Plecospermum spinosum*, *Tric*, *W* Ic 1963, *Batis spin*, *R* iii, 762

KORIVE, TEL *Sapindus tetraphyllus*, also *Molinda canescens*

KORIVI PALA, or Korimi pala, TEL *Ixora parviflora*, *Vahl*. This is properly the name of the *Ixora* used over the whole of southern India for fire-sticks. The cognate names in Tamil, Koirankatte, and in Chinese, Gouvi, are nearly the same

KORJASHTAM, or Bhavanji chettu *Psoralea coriifolia*, *L*

KORK, also Kurk, also Vlothout, DUR

Korkowoe and Derewo, Rus, Koik, GER Cork

KORKUR, or Koiku, a hill tribe dwelling to the N W, and west of the Mahadeva hills, speaking a language quite distinct from the Gond. They belong to the Kol or Munda family

KORKURA, see Keikook

KORKHOROS? *Cochlosorus olitorius*

KORLA, or Kora, a lash of one tail Kora-kora-maiam, to flog

KORN, DAN, GER Coin

KORNA NIBU, BENG, HIND Citrus limonum, limes, *Russ* C medica

KORNA-GANDU, CAN Hyana

KORNEGALLE, or Kurunai-galla, was the capital of the sovereigns of Ceylon from about 1319 till some year after 1347. During this period, the dynasty was in extreme depression, and little is recorded except the names of the kings Bhuwaneka Bahu II, Pandita Piakrama Bahu IV, Wanny Bhuwaneka Bahu III, Wijayabahu, V — *Yule, Cathay*, ii, p 423

KORN GETREIDE, GER Coin

KORNU-NEBOO, BENG Lemon, Citrus limonum

KORNUTTEE, a river near Cherapoon-gie

KORO, see Holothuridae

KORO-MONGA, TEL *Averrhoa carambola*, *Linn*

KOROO of Surat? and Assam? Neilgherry nettle

KOROS. Alexander Csoma de Koros, also written Csoma Korozi, spent much time in one of the convents of the Lamas near Ladak, he made researches into the origin of the Hungarian language and of the Hun. This extraordinary man set out in 1826, for this purpose, from Paris, and went via Constantinople to Persia, in the disguise of a dervish. On his arrival at Teheran, he received the kind hospitality of Sir Henry Willock. Thence he went to Bokhara, Lahore and Calcutta. He wrote the only dictionary of the Tibetan language, extant, and then died. He was a Hungarian, travelled in many parts of Asia between 1820 and 1830 and resided for several years at Kanum in Tibet, where he translated from the Tibetan language, a Cyclopædia of Tibetan knowledge. An account of his traveller and scholar, furnished by himself to the political agent at Sabathu, in January 1825, has been published in the Journal of the Royal Asiatic Society. Alexander Csoma Korozi afterwards proceeded to Calcutta, and continued to reside there, engaged in communicating to the public, under the patronage of the Bengal government and the Asia-

the Society of Calcutta, the result of his acquaintance with the language and literature of Tibet, of which he was the first European who has attained a critical knowledge. In the beginning of 1834 he published at Calcutta, a Tibetan and English dictionary, and at the end of the same year a grammar of the Tibetan language. Before the appearance of these useful publications he had communicated to the Asiatic Society of Bengal, notices of the contents of the two great collections in which the principal works of the literature and religion of Tibet are comprehended, the *Kah-gyur*, a collection of one hundred large volumes, and the *Stan-gyur* of two hundred and twenty-five. Of the former he also prepared a detailed analysis, part of which is printed in the twentieth volume of the *Asiatic Researches*. A summary account of both these works, compiled from his information, is printed in the *Calcutta Gleanings of Science*, Vol. III, and an abridgment of his analytical view of the whole of the *Kah-gyur*, in the first volume of the *Journal of the Asiatic Society of Bengal*. He also furnished to the same periodical several interesting papers on subjects connected with Tibetan literature and the religion of Buddha in that country. He illustrated extensively the buddhism of Tibet — *Dr Wolff's Bokhara*, Vol. II, p. 49, *Moorcroft's Travels*, Vol. I, p. 338, *Hardy's Eastern Monachism*, pp. 152, 158, 438, *Journ Royal As Soc*, *Journ Beng As Soc*; *Gleanings of Science*, Vol. III.

KORU TOWLRE ? TAM ? *Dalbergia latifolia*, *Rorb*.

KORWA, TAM A fish of the Madras coast, the bladder of which furnishes a glass.

KORYGAUM, a small walled town on the left bank of the Bheema river, about 35 miles N W from Poona. It was the scene of a desperate defence made by a small part of a regiment of the Madras Native Infantry and a small detachment of Madras Artillery, against about four thousand of the elite of the Peshwa's army, the entire army of about 80,000 men lying encamped on the other side of the river. Almost all the Europeans perished, except Captain Staunton and Asst Surgeon Wyllie of the Madras Army. See *Statistics of Battles*.

KOS, SINGH *Artocarpus integrifolia*, Linn.

KOS or Cos, a measure of length. The Kos of India greatly varies in length. One Kos is about 13,000 feet, or 2 miles, 5 furlongs, 153 yards. The mahomedans having introduced the itinary measures of their various native countries, there are a great variety of such measures to which the hindoo term Kos is indiscriminately applied. The mahomedan kos may be taken at 35 to a degree — *Ed Baron Hugel's Travels in Kashmir and the Panjab*, p. 93. See *Cos*.

KOSA, see *Kosi* or *Chozru*.

KOSAIL, an Affghan tribe who extend from the Bozdai southern border to a point somewhat below the latitude of Delna Ghazee Khan, a distance of 300 miles. The tribe dwells partly in the hills and partly in the plains and can muster about 1,200 fighting-men. They are at enmity with the Bozdai above them and the Lugharee below them, but are on good terms with the Khutianee, who are situated behind them. In 1848 the Lugharee sided with the officials of the rebel Moolraj, but the Kosah rose on the side of the government, under their chief, Koraik Khan, and his son Gholam Hyder. Koraik Khan and his son then joined Major Edwarde's irregular force in the Multan province with a contingent of 400 horse. Koraik Khan was confirmed in the possession of a jagheer of Rupees 1,000 per annum for his own life and for that of

his son, he himself was granted a life-pension of Rupees 1,000, and a garden at the native place of the family was confirmed rent-free in perpetuity. The chief always remained loyal. His tribe on the whole, behaved fairly, some of them, however, occasionally joined in forays made by other tribes, cause for dissatisfaction has however arisen from plunder having been conveyed through the Kosah passes into the hills by other tribes.

KOSALA, an ancient Aryan kingdom, lying between the Gogra and Ganges. Its rulers claimed to be descended from the sun, which again spring from Kasyapa, the grandson of Brahma. Bharata, its ruler, claimed to be descended from the moon — *Hardy's Eastern Monachism*, p 438. See Koshula. Sakya Muni.

KOSAMBILIWAIL, SANS. Cowhage

KOSARU CHETTU, TEL

KOSHTAMU, or Bomma kachchika, SANS, TEL. *Costus speciosus*, *Sm*

KOSHTI, a weaver race, of whom in Bihar there are 12,352. This caste occupy themselves in spinning and weaving, in the manufacture of undyed cloths and silks, and of silk thread for necklaces.

KOSHU, HIND. *Mentha incana*

KOSHULA, the first kingdom in India of the Soorya race, corresponded with the kingdom, now the province of Oudh, also written Kosala, Koshula, Koshulya. In the ancient

story of the Ramayana we are made acquainted with the distant maritime wars which the princes of India carried on. Even supposing Ravana's abode to be the insular Ceylon, he must have been a very powerful prince to have equipped an armament sufficiently numerous to carry off from the remote kingdom of Koshula, the wife of the great king of the Soorya race. It is most improbable that a petty king of Ceylon could wage equal war with a potentate who held the chief dominion of India, whose father, Desa-at'ha, drove the victorious car (rat'ha) over every region (desa), and whose intercourse with the countries beyond the Brahmaputra is distinctly to be traced in the Ramayana — *Tod's Rajasthan*, Vol I, p 586.

KOSI, see Sal

KOSI or Chozai, according to Dr Moore, were the lords of Central Asia from the 6th up to the 10th century, and came from the borders of the Caspian and were known to the Greeks and Arabians as Kosa, that is, Kush. See Kush, Hindoo Kush.

KO-SI-CHIANG, a harbour, 78 miles from the mouth of Bangkok river, formed in lat 13° 12' N, long 100° 55' E by a group of seven or eight small islands. The harbour is sheltered from every side but the north.

KOSOPULLA, SANS. *Dolichos cultus*

KOSRA, *Panicum italicum*

KOSSÆI. In the gradual diffusion of mankind, the western provinces of Iran appear to have fallen to the share of the Arameans and Elamites, while the mass of the Kossæi, Arians, Mairi and other tribes, composing the earliest inhabitants, moved more eastward, leaving some of their numbers in the mountainous districts, to mix with or become subject to the new comers. The Shemitic people and language having thus become dominant instead of the Cushite, the ethnography of the former rather than that of the latter, becomes an important consideration. From this primitive language, or rather from one of its cognates (as the Hamyaritic may possibly prove to have been) two distinct branches were derived, the original Arabic, with the Musnad, Koresh, and other dialects of that tongue, being one of these, and the Aramaic the other. The latter had two grand subdivisions, from one of which, known as the Western Aramaic were derived the Amharic, Syriac, Hebrew, &c, and from the other or Eastern Aramaic, came the Assyrian, Babylonian, and Chaldean tongues. From its monosyllabic construction, the eastern seems to be more ancient than the Western Aramaic, and it appears likewise to be the root of the Zend, Pehlevi, Sanskrit, and other dialects in use throughout a portion of the territory

along which it had spread eastward. Whether the first of these languages was once in general use, or was merely the sacred language of Iran, the affinity of all of them is such as to imply a common origin. Pehlevi was the court language in the time of the Sassanian monarchs, and, according to some authorities as far back as that of Cyrus it contains many words which belong to the Chaldean and Syriac tongues, and Sir William Jones was of opinion that one of these must have been its root but it is now generally presumed that the root of the Pehlevi is the Aramaic itself. The cognates of the latter spread westward and eastward, and one of them, the Chaldee, can scarcely be distinguished from the parent root. Another, the Parsi, being a softer language than the Pehlevi, became general in Persistan, and gave rise to the Dari, or modern Persian. The Pehlevi, however, is still partially used in their sacred writings, in Shirwan, and also by some of the Gabr race of the eastern provinces, as well as by a numerous section of the natives of India, but among the Parsees it is largely intermixed with the Hindustani and other Native dialects, which are less or more connected with the Sanskrit. The affinity of the latter to the Parsi is so great that a learned philologist has pronounced it to be one of its derivatives. The number of words which are identical among the different dialects of Iran and Turan, and some portion of the territory more eastward, goes far to show that at a period anterior to anything like connected history there must have been some common language, and this was probably the Aramaic. See India.

KOSSAH The Sehrai, Kossah, Chanda, and Sudani, are tribes of the Rajputanah desert. The Sehrai is the most numerous of the mahomedan tribes of the desert, said to be hindu in origin, and descendants of the ancient dynasty of Aioie, but whether his descent is derived from the dynasty of Schiris (written Sahn by Pottuger,) or from the Arabic word sahra, 'a desert,' of which he is the terror, is doubtful. The Kossah or Khossa, &c, are branches of the Sehrai, and their habits are the same. They reduced their mode of rapine to a system, and established kooni, or black-mail, consisting of one rupee and five dunn of grain for every plough, exacted even from the hamlets of the shepherds throughout the thul. Their bands were chiefly mounted on camels, though some were on horseback, their arms were the shail or sang, (lances of bamboo or iron,) the sword and shield, and but few fire-arms. Their depredations used to be extended a hundred coss around, even into Jodpoo and

Daodpotin, but they eschewed coming in contact with the Rajpoot, who says of a Sehrai, "he is sure to be asleep when the hattle mkanin beats." Their chief abode is in the southern portion of the desert, and about Noakote, Mittie, as far as Bulhar. Many of them used to find service at Oodipoo, Jodpoo and Sooe-Bah, but they are cowardly and faithless — *Tod's Rajasthan*.

KOSSAK The people of Little Kabarda, are said to have been a colony from Great Kabarda, driven thence from their natural possessions by the more powerful tribes. Circassia might, in former times, have provided itself in the same way. There are, also, numerous Taitai tribes which extend themselves southward over the lower hills and flat lands, which reach from the foot of the mountains to the Kuban, and then possess the banks of that river westward, till it terminates at the Black Sea. It is from amongst this wild people, and the Kabarda people bordering on the Malku and Konmu rivers, that Russia formed its corps of Cossacks, known by the general name of Cossacks of the line of the Caucasus — *Tod's Rajasthan*, *Porter's Travels*, Vol 1, p 51. See Cossack, Kasak.

KOSSANG, MALAY The fourth part of the mace — *Simmond's Dictionary*.

KOSSAYE, URIA ? A tree of Ganyam and Gumsu, extreme height 22 feet, circumference 1 foot, height from the ground to the intersection of the first branch, 7 feet. Useless except for firewood — *Capt Macdonald*.

KOSSE, HIND Allium sp.

KOSSEIR or Cossen, a sea-port of the Red Sea, has a population of 5,000.

KOSSEI, an ancient tribe who occupied the mountainous country east of the Tigris. That country was the abode of the Seythians under Nimrod, and Nimrod spring from them — *Bunsen*. See Kossai.

KOSSYE, a river near Kunickpoo in Midnapoor.

KOST, ARAB *Costus speciosus*, *Smith*.

KOSTI, RUS Dice.

KOSTI or Kusti or Custee, the sacred thread or cord of the Parsees. It is to this which Moore, in his Lalla Rookh, alludes, when he makes Hafiz declare himself a fire-worshipper,

"Hold! hold! thy words are death"
The stranger cried, as wide he flung
His mantle back, and show'd, beneath,
The Gebr belt that round him hung

The Kosti is terminated by two small tails at each end, denoting the four seasons, three knots on each tail represent in the aggregate the twelve months of the year. The cord is twisted, of 72 threads, such being the number according to Parsee interpretation, of the

known kingdoms of the world at the time of Hushang. It seems to be also called Kushi. Every Parsee lad, arriving at a certain age must assume it—*Baron C. A. De Bode's Travels in Luistan and Arabistan*, p. 113. *Silvestre de Sacy's Memoire sur diverses Antiquites de la Perse*, p. 184. *Moore's Lalla Rookh*; *The Persis*.

KOSTUM, also Putehuck, TAV ? Costus speciosus, Putehuck.

KOSTUS, GREEK. Ancklindm costus, *Falconar*.

KOSU, see Kyan.

KOSUNDRA, HIND. Bnuhman parviflora.

KOT, HIND. A fort, hence Sabzul Kot in Bahawalpore. Kot Dafidm, a cavalry non-commissioned native officer. Fined Kot consists of Fined Kot proper, and Kot-kupoori, it is S. W. of Ferozpur, and borders to the S. E. on Puttalm. It has an area of 643 square miles, and a population of 51,000 souls with a revenue of Rs. 75,000.

KOT, HIND. Ancklindm costus, also Plectranthus rugosus.

KOTA, NER. Turpentine.

KOTABOO, see Kih-kuti.

KOTADI, TEL. Terminalia sp. ? Tadi is a Telugu word, and the prefix Ko is an ancient Telugu word for "great."

KOTA-DIMBOOLA-GASS, SINGH. Co-vellia oppositifolia, *Gaspar*.

KOTAGHERRY, on the Neilgherries, is situate twelve miles east of Coonoor and about 500 feet greater in elevation, twelve miles due north of Metapollim and 6,500 feet above sea level, or rather from the Bowm river. This station is much drier than either Coonoor or Ooty, and although not so cold as the latter, during the summer months, the thermometer never rises above 74°, Kotagherry is then like an English summer, and far more pleasant than Switzerland. This is also the emporium for all fruit on the Neilgherries. In a sanitary point of view, it is the healthiest of all three. Invalids who cannot stand the cold of Ooty and the damp of Coonoor, fly here for comfort and restoration to health. The Kotagherry Ghaut begins about a mile and a half north from Metapollim, is about twelve miles in length and is accessible by horse, palkee or "winnchee," but should the traveller prefer the Coonoor ghaut, he will have to make a detour of about thirty-seven miles, that is, from Metapollim to Coonoor in a westerly direction twenty-seven miles, and from Coonoor to Kotagherry easterly ten miles. At Kotagherry the supply of all grain is scanty and rather high in price, only from 4½ to 6 measures of rice of the ordinary kind per Rupee and of horse gram from ten to fifteen measures,

eggs and fowl are cheap. Mutton, from two to four annas per pound. House accommodation is scarce. A person on 200 or 300 rupees a month could live with the greatest comfort and have enough to spare at the end. The Budagn, Kohatar and Toda races are residing there. See Ten, Dhavidan, Kohtai, Knumbar.

KOTAH is built on the right bank of the river Chumbul. It was captured by General Roberts on the 30th March 1858. The principality of Kotah was formed about the beginning of the 17th century by the chief of Boonder, who was forced by the mahimna of Oudeypore to cede half his territory to his younger brother. Like all the other Rappoot states, Kotah had been despoiled by the Mahattas, and was under obligations, which it was too poor to fulfil, to pay tribute to each of the three great Mahatta families of Malwa, the Puar, Sindia, and Holkar, as well as to the Peshwa. Kotah was then saved from absolute ruin by the intents of its minister, raj rana Zalim Sing, into whose hand maharao Omeid Sing surrendered all power. In the course of forty-five years he raised the Kotah state to be one of the most powerful and flourishing in Rappootana. He was one of the first of the Rappoot chiefs to co-operate with the British government for the suppression of the Pindars in 1817. Zalim Sing died in 1824, and his son Mudho Sing succeeded him. In 1828, Kishore Sing, the Maha Rao, was succeeded by his nephew Ram Sing. In 1834 disputes between Ram Sing and his minister Mudden Sing, the son and successor of Madho Sing, broke out. There was danger of a popular rising for the expulsion of the minister, and it was therefore resolved with the consent of the chief of Kotah to dismember the state and to create the new principality of Jhallawm as a separate provision for the descendants of Zalim Sing. Seventeen pargannas, yielding a revenue of twelve lakhs of rupees, were made over to Muddun Sing. The Kotah contingent is now represented by the Deolee Irregular Force. The troops which the Maha Rao is allowed to entertain are limited to 15,000 men of all descriptions, the State revenue from all sources is about rupees 25,00,000, the area of Kotah is about 5,000 square miles, and the population 433,000. The tribute payable to the British government is rupees 1,84,720 in addition to the two lakhs of rupees for the Deolee Irregular Force. The Maha Rao has been guaranteed the right of adoption. In 1817 Jawut Doojun Sing was guaranteed in the possession of the village of Seedia which had been held by his family in jaghne from time immemorial.

and in place of a horse which the Rawnt was required annually to present to the Maha Rao, it was stipulated that he should pay a yearly tribute of rupees 100. Placed in the very heart of India, Kotah was for years the centre, around which revolved the desultory mimics, or ambulant governments, and its wealth could not fail to attract the cupidity of these vagabond powers. The early history of the Huta race of Kotah belongs to Boondi, of which they were a junior branch. The separation took place when Shah Jehan was emperor of India, who bestowed Kotah and its dependencies on Madhu Sing, the second son of Rao Ruttun, for his distinguished gallantry in the battle of Baorhanpore. Madhu Sing was born in S 1621, (A D 1565). At the early age of fourteen, he displayed that daring intrepidity which gave him the title of raja, and Kotah with its three hundred and sixty townships (then the chief fief of Boondi, and yielding two lakhs of rent), independent of his father. The conquest of this tract had been made from the Koteah Bhils of the Oojla, the 'unmixed' or aboriginal race. From these the Rajpoot will eat, and all classes will drink water at their hands. Kotah was at that time but a series of hamlets, the abode of the Bhil raja, being the ancient fortress of Ekalgumh, five coss south of Kotah. But when Madhu Sing was enfeoffed by the king, Kotah had already attained extensive limits. To the south it was bounded by Gngrown and Ghatoli, then held by the Kheechi, on the east, by Mangrole and Nalugumh, the first belonging to the Goi, the last to a Rihore Rajpoot, who had apostatized to save his land, and was now a nawab, to the north, it extended as far as Sooltanpote, on the Chumbul, across which was the small domain of Nandta. In this space were contained three hundred and sixty townships, and a rich soil fertilized by numerous large streams. The soil of Kotah is a rich tenacious mould, resembling the best parts of lower Malwa. Each plough or team is equal to the culture of one hundred bheega, consequently 4,000 ploughs will cultivate 400,000 during each harvest, and for both 800,000, nearly 300,000 English acres. The soil is deemed poor which does not yield seven to ten mounds of wheat per bheega, and five to seven of millet and Indian corn. The Chohan Rajpoot sent forth twenty-four branches, of whom the most celebrated are the families of Boondi and Kotah, in the divisions termed Haravati. They have well maintained the Chohan reputation for valour. Six brothers fought in one field, in support of Shah Jehan against his son Aurung-

zebe, and but one survived his wounds. The Kheechi of Gngrown and Ragoogumh, the Deori of Suoh, the Sonagumia of Jhalore, the Chohan of Soor Bah and Sanchore, and the Puvutchi of Puvagumh, have all immortalized themselves by the most heroic and devoted deeds. Most of these families yet exist, brave as in the days of Pirthwaja. Many chiefs of the Chohan race abandoned their faith to preserve their lands, the Kaimkham, the Suwani, the Lowani, the Kunwani and the Badwani chiefly residing in Shekaruti, are the most conspicuous. No less than twelve petty princes thus deserted their faith which, however, is not contrary to the Rajpoot creed, for even Munn says, they may put with wife to preserve their land. Kesu Das, nephew of Pirthwaja, was the first who set this example. The twenty-four Sachas of the Chohans are the Chohan, Hurn, Kheechi, Sonagumh, Deori, Puhri, Sanchora, Goelwal, Bhadori, Numbhan, Mulani, Poorba, Soora, Muddachhi, Sukrachhi, Bhoorachhi, Balachhi, Tassarah, Chachmah, Korihi, Chundhi, Nacoompa, Bhuvur, and Bankut — *Tod's Rajasthan, Vol. 1, p. 96, Vol. 11, pp. 505, 511, 542, 547, Atcheson's Treaties, Engagements and Sunnuds, Vol. 1, p. 71*

KOTAH, a village on a plain, on the left bank of the Panchetah river, twelve miles above its junction with the Godavery, in latitude 18° 51' N., and longitude 80° 2' E. Ferruginous sandstone is well-developed at the Mulrdeva hills, in the north of the province of Nagpore, in the vicinity of the city itself, and at Kota on the Panchita, in the dominions of the Nizam — *Carter's Geological Papers on Western India, p. 303*

KOTAJ, Hind. *Celastrus paniculata*

KOTAN, the people speak Tinkri. See Kara-Koram, Ladak

KOTAR, a weight of 15½ lbs — *Simmond's Diet*

KOTAR, a tribe of the Neilgherries which ranks next to the Toila in priority of occupation of the hills. They have no caste, and as a body, are the most industrious of the hill tribes, giving much of their time and attention to agriculture and handicraft, &c. When not required at agricultural operations they employ themselves as carpenters, smiths, basket-makers, in making and repairing their ploughs,

bill-hooks, hoes, &c They also employ themselves as carriers, and are highly esteemed in the plains for the excellent leather they make They perform all the menial offices required by the Toda and Badaga, supplying them with barbers, washmen, &c They acknowledge the Toda as lords of the soil, and accordingly pay the tribute demanded by them as "Goodoo." At the same time they exact from each hamlet of the Badaga within a certain distance of their own village, certain annual fees, which they receive in kind for services rendered as handicraftsmen, &c, in addition to that of ceremonial or festive occasions for menial services performed As cultivators of the soil, they only produce as much as will satisfy their own requirements, and any surplus they may obtain is bartered for iron and other produce of the plains In confirmation of their having followed the Toda as settlers on these hills, they hold the best lands, and have the privilege of selecting the best whenever they wish to extend their holdings They are well-made and of tolerable height, rather good-featured and light-skinned, having a copper colour, and some of them are the fairest-skinned among the hill tribes They have well-formed heads, covered with long black hair, grown long and let loose, or tied up carelessly at the back of the head An average of 25 men gives the following measurements, &c —

Age, 27 68 years	Length of arms, 80
Height, 62 61 inches	Hands, 7
Circumference of head,	Breadth of hands, 3 25
20 95	Length of feet 10
Neck, 11 95	Breadth of feet, 3 50
Chest, 30 68	inches
Arms, 8 76	Weight, (avoirdupois)
Thighs, 15 52	105 20 lbs

They have a slightly elongated face with sharply defined features, the forehead narrow but prominent, and occasionally protuberant, ears, flat and lying close to the skull The growth of the hair from the verge of scalp to eyebrows, $2\frac{1}{2}$ inches distant, eyes, dark-brown, of moderate size and deep set, varying in colour from Nos 1 to 5, in Paul Brocas' tables, eyebrows, dark and bushy, with a tendency to approach, frequently united to each other, nose, as a rule, smaller and more simply defined than in the Toda, ridged and slightly rounded, and pointed at the extremity, two inches in length, alae of nostrils expanded, measuring $1\frac{1}{4}$ inches in breadth, mouth of moderate size and well-formed, teeth, well-grown and regular lips, of fair size and well-compressed, chin, well-set and small Altogether they may be pronounced tolerably good-looking, and the general aspect of the countenance indicating energy and decision The women are of moderate height, of fair

build of body, and not nearly so good-looking as the men An average of 25 women gives the following results —

Age, 32 44 years	Length of arms, 25 62
Circumference of head,	Length of hands, 6 50
20 36 inches	Breadth of hands, 3
Height, 57 98	Length of legs, 35
Circumference of neck,	Length of feet, 9 25
10 70	Breadth of feet, 2 25
Chest, 29 30	Weight, (avoirdupois)
Arms, 8 20	96 24 lbs
Thighs, 14 63	

Most of them have prominent foreheads, with more of a snub nose, and a somewhat vacant expression about their features They are rather timid when approached, frequently running into their huts and shutting themselves up They seem to enjoy robust health, and have large families Their arms are tattooed, having nine streaks, with four dots on each arm and four circular marks on each forearm The women assist the men at their work in the fields, and make baskets, chatties and pots, &c There are some seven villages altogether six of these are located on the hills, and the seventh is at Goodaloo They form large communities, each village containing from 30 to 60 or more huts, of tolerable size, built of mud walls, and covered with the usual thatch grass, somewhat after the style of native huts in the plains, but in some villages the arrangement of the dwellings is far from neat The floors are well-raised from 2 to 3 feet above the soil, with eaves or a short verandah in front, and a pial or seat on either side of the door, under the eaves, on which the people squat themselves when idle The doors of their huts, measures 46 by 26 inches. The station of Kotaghenry takes its name from the Kotar villages in its vicinity The Kotar, as a body, are dirty All the dead cattle and carrion in the vicinity, of every kind, find acceptance among them as food The whole Kotar population of the seven villages is supposed to count a little above a thousand souls Some rude image of wood or stone, a rock or tree in a secluded locality, form their objects of worship, and to these sacrificial offerings are made, but the recognized place of worship at each village consists of a large square piece of ground, walled round with loose stones, three feet high, and containing in its centre two pent-shaped sheds of thatch open before and behind, and on the posts that support them some rude circles and other figures are drawn No image of any sort is visible here, and these buildings, which are a little apart, are supposed to be dedicated to Siva and his wife They have crude and indistinct ideas of these deities They hold an annual feast in honor of their gods, which

comprises a continuous course of debauchery and licentiousness, extending over two or three days. On these occasions they clothe and ornament themselves in their best, and make as grand a show as they can, and to witness which the other tribes are invited. Perhaps this is the only occasion, if at all, that they have recourse to water for the purposes of ablution. Much indecent dancing takes place on these occasions between the men and women, and frequently the spirit of their deity is supposed to descend on some of them, when their frantic deeds seem to form but a branch of demonology. Their marriage rite is simple, and has much in conformity with that of the Pannh of the plains. As a rule, they marry and live with one wife, and have a number of children. The Kotar possess a small breed of cows, but have no buffaloes. It is believed that the Toda will object to their having buffaloes on account of their uncleanly habits, consequently they make no effort to procure them. They never, as a rule, milk their cattle, but leave it all to the calves.

The Kotar keep up an annual feast in memory of their dead, when a few cattle are slain on a rude kind of altar constructed for the purpose, on it a portion of the flesh of the animal is laid, with a little of each of the different kinds of grain they cultivate, and all is consumed as a burnt offering to their gods, in memory of their dead relatives and friends. During this ceremony, the young men and maidens dance around the altar together. Whilst the younger members are thus engaged, the elders busy themselves in preparing a grand repast for their friends, whom they invite from the adjacent villages on the occasion of this annual festival. More cattle are now slain, and the flesh mixed with small portions of every kind of grain grown in their fields, a great fire is raised, and the scene becomes one of confused riot and mirth, with blowing of the kollera horn, mingled with yells and shrieks and beating of tom-toms, the confusion continuing from morning till night.

The Kotar language is a very old and rude dialect of Canarese, having the same Tamil roots, but differently pronounced, without the guttural or pectoral expression of the Toda. They are believed to be descended from some of the low caste tribes of the plains, who, in former times sought refuge on these hills from persecution practised on them by the invaders of India, they were the first among the other tribes who followed the Toda. They are not held in much estimation by the other hill tribes or European colonists, in consequence of their partiality

to carnion in which respect they resemble the Pannh of the plains, who eat not only animals killed for food, but also such as die naturally. Oxen and buffaloes which perish from old age or disease belong to them of right, and they carry home and greedily devour the tainted carnion which they find on the highways and on the fields. In cases of sickness they make use of such roots and herbs as their old women commend. The sick are carefully attended to, but in some of the villages, as Kotaghenry and Goodaloor, they resort largely to European medical treatment.

The Kotar are industrious, and possess an extensive knowledge of handicraft. Rude as their work may be, there is scarcely a useful implement connected with the mechanical arts, trade, agriculture, or husbandry, that they are not conversant with, and had they only received the encouragement and patronage bestowed by Europeans on the nomade Toda, they might have advanced in the several arts they practise and might have got rid of some of their filthy habits.

Like the Pannh of the plains, the Kotar are addicted to drinking, and, in the absence of liquor, resort to opium-eating. There can be no doubt, that, like the Toda, these people also belong to the great Dravidian family who were driven to these mountain tops by conquest and persecution.

Every Kotar village has belonging to it a circle of Budaga hamlets or villages, from which they claim at periodical seasons the payment in kind of certain fees or dues, and for which they in return furnish the Budaga with, or rather make for them (the latter supplying the material), their implements of woodcraft and husbandry. These fees are generally paid in a certain quantity of whatever grain the Budaga has cultivated, for each plough of land, besides incidental dues on marriages, &c. The Kotar always attend the funerals and obsequies of the Toda, &c., receive from them the carcasses of the buffaloes that are offered in sacrifice, allowing from a half to a quarter of a rupee for some, and others they receive in return for the assistance they afford on these occasions or for services which may have been performed for the family of the deceased. If they cannot supply themselves with flesh by any of these means, they kill some of their own herd, or purchase for that purpose from the other tribes. The Kotar burn their dead, collect the bones on the following day, and bury them in a hole, marking the spot where they have done so. This they do in order to the performance of the obsequies. On the night of the first Monday after the first new

moon in the month of March, all the friends of the deceased assemble and preceded by music, go to the place of burning—*Abbe Dubois, Harkness' Neilgherry Hills, p 31, Dr Shortt, in Proceedings of Madras Government*

KOTAUR, or Kottara, the Kottara of the Greeks, the principal town in south Travancore, and now, as then, distinguished for its commerce

KOT-AVERE, TAM *Cyamopsis psoraleoides, DC*

KO-TEOU, or adoration, as the Chinese word expresses it, consists in nine solemn prostrations of the body, the forehead striking the floor each time. It is difficult to imagine an exterior mark of more profound humility and submission, or which implies a more intimate consciousness of the omnipotence of that being towards whom it is made—*Macartney's Embassy, Vol II, p 129*

KOTEREE, or Kotesuee, a river near Sanganeer in Oodeypoor

KO-THAH-BYU, see India

KOTHEELA, HIND *Triagacanth*

KOPHI, BENG, KARN, HIND A spacious house, a banking office, a mercantile firm

KOTHI, TEL Ape

KOTHMEER, the coriander plant

KOT-WAL, a mahurium findee

KOTHUL, see Khyber, Kolitul

KOTHUR, see Kotai, Koiambai

KOTIGA or Kotigai, KARN A stone-cutter

KOTI GORU, or Chui koti goru, TRI *Petrolobium lacerans, R Br Lit "monkey's nail"*

KOTIKA, TRI *Nymphaea edulis, DC*

KOTI-KALANGU, TAM *Aponogeton monostachyon, Wilde*

KOTILA HIND A tribe in Guzerat

KOTILA, see Kohistan

KOTIMIRI also Dhanyalu TRI *Coriandrum sativum, Linn Coriander seed*

KOTIKI, or Bapana mushti, TEL *Ola scandens, R*

KOTI VANNE KRANUGA, TEL a species of *Guilandina* or *Mucuna*. The word means "monkey-coloured Pongamia". The Sans syn Markati, *W*, 645, has reference in its primary sense to the same animal, but also signifies "a var of grey Bonduc" and a "*Mucuna*"

KOT KANGRA, a fortress in the east of the Panjab, surrounded by the river Beas on three sides. See Kangra

KOT-KARVA, MAL EAL *Cinnamomum iners, Rem*

KOTLI, HIND A coal locality in Jammu territory

KOTMAALE, in Ceylon, near Rambodde,

on the road to Nawera Elia, is a lovely valley, through which meanders a flowing stream. The natives believe that whatever woman bathes in this river, within three months after she becomes a wife, will be blessed with a numerous, beautiful and fortunate family

KOTOO, — *Michelia champaca*

KOTRI, in Sind, a town opposite the city of Hyderabad, *Burnes*

KOTSJELLITI PULLU, MAL EAL *Xyris indica, Linn*

KOTTAGAR, KARN A division of the Hallaya or seivile tribe

KOTTAN ELLE, TAM Leaves *Cassya filiformis, Linn, Roxb, Rheede*

KOTTAM, MAL EAL, TAM *Pogostemon patchouli, Pellet*

KOTTAMALLI, TAM, TRI *Coriandrum sativum Coriander seed*

KOTTAMBA SINGH *Amygdalus communis Almond*

KOTTAN ELE, TAM Leaves of *Cassya filiformis*

KOTTANJI KARANDEI, TAM *Sphaeranthus indicus, Burm*

KOTTARA, see Kotari

KOTIA-VERI KAI, TAM *Dolichos fabaformis*

KOTTE-WOKAL, KARN An agricultural tribe of a lower caste than pure Sudias

KOTTIKA or Gottigadda and Namma dampa, *Spathium chinense, Linn Aponogeton monostachyon, R*

KOTTI KILANGU, TAM *Aponogeton monostachyon*

KOTTIMBIRI, CAN *Coriander seed*

KOTTINAGA MARAM, TAM *Eugenia jambolana, Lam, Roxb*

KOTU, HIND *Fagopyrum esculentum*

KOTU of Sind, Gandibuti of Beas

KOTULPUR a town in the Burdwan district of Bengal

KOTWAL, HIND A military superintendent of police Kotwali—his office.

KOTTANG-KARUNDEI, TAM *Sphaeranthus hirtus*

KOU, an ancient Chinese measure about $17\frac{1}{2}$ gallons—*Simmond's Dictionary*

KOUBADIAN, a town on the N bank of the Oxus, producing good silk. See Baljavar

KOU-CHU, CHIN The Chinese obtain from a tree, which they call Kouchu, a fluid resembling milk, which they use in gilding with leaf-gold, this liquid is smeared over the surface of the article to be gilded, in the several forms which the device is intended to represent, the leaf-gold is then applied, which immediately becomes firmly cemented

KOUEN-LUN The great mountain chain which separates the Indus and its tributaries from the Yaikand plain, is continued to the

westward, under the name of the Hindu Kush. This chain, which has a westerly direction with some southing, separates the basin of the Oxus on the north from that of the Kabul river, a tributary of the Indus, and from the Helmand, a river which runs towards the south-west, and is lost in the desert of Schistan, not reaching the sea. The elevation of the chain diminishes rapidly to the westward, but few accurate determinations of its height are known. The Kalu pass, near Bamian, is 12,500 feet, and the peak of Koh-i-Baba, which rises close to it, is 17,000 feet above the level of the sea. The Eiak or Liak pass is 12,900 feet. From the neighbourhood of the peak of Koh-i-Baba a meridional chain runs nearly due south to the Indian ocean, forming the water-shed between the Indus on the east and the Helmand on the west. The axis of this chain passes close to Ghazni, elevated 7,726 feet, and to Quetta, 5,540 feet. It lies probably to the westward of Kelat, but on maps are not sufficiently accurate to make its course in that direction obvious. At its point of origin this chain is more than 13,000 feet in height where it is called the Sated-Koh, or White Mountain, it is 14,000. Near Ghazni it is from 9,000 to 10,000 feet high, and near Quetta its elevation is nearly as great, for the peak of Chah'l Tan rises to 10,500 feet. Its eastern ramifications are high ridges which dip abruptly into the valley of the Indus, one peak, near Dera Ismael Khan, called Takht-i-Sulman, attains a height of 11,000 feet, and the range south of the Kabul river rises still higher.

The Bulut Tagh according to Captain H. Stachey, is that part of the Kouenlun chain, which is east of Samarcand and south of Khokand. Bulut-Tagh means the cloud mountain, but the Kouen-lun chain is also called the Belur Tagh which, according to Cunningham, is synonymous with Balti mountains. Other names for the chain are Mustagh, Karakoram, Hindu-Kush, and Tsunglung or Onion Mountains from the prevalence on it of a species of *Alhum*. It is the Tian shang or celestial mountain of the Chinese. Its continuation forms the Pamir range, west of Yarkand. The Kouenlun chain is not less elevated than the Himalaya, and is covered throughout a great part of its length with perpetual snow. Its axis has not been crossed by any traveller, but has been reached by Dr Thomson who visited the Korakoram pass, elevated 18,300 feet. In Western Tibet, the axis of the chain is in general distant about 150 miles from the Himalaya, and the country between the two consists of a complication of ranges of lofty and rugged mountains separated from one another by stoney valleys, which at

the higher parts of the courses of the rivers expand at intervals into alluvial plains. The vast climatic change which took place in the northern countries is attributed in the Bible to the action of water. In the other, the sudden freezing up of rivers is the cause assigned. Both may have resulted from the same cause, the upheaving of the land by volcanic action, elevating portions and depressing into basins, such as the Caspian sea. Ten months of winter is now the climate of western Tibet, Pamer and Belur, at the present day, and corresponds with that of the Altai country, and the district east of the Kouenlun, the Paradise of the Chinese. The country at the sources of the Oxus and Jaxartes, therefore, is supposed to be the most eastern and most northern point whence the Aryans came. Wherever the Indians may have fixed the Uttarakuru, the dwelling place of their northern ancestors, we cannot venture to place the primeval seats of the Aryans anywhere but on the slopes of the Belur Tagh, in the highland of Pamer, between the 40° and 37° of north latitude, and 86° and 90° of longitude. On this western slope of the Belur Tag and the Mustagh (the Tian-Shang or Celestial Mountain of the Chinese) the Hmo-beezanti (Albordsh) is likewise to be looked for, which is invoked in the Zendavista, is the principal mountain and the primeval source of the waters. At the present day, the old indigenous inhabitants of that district, and generally those of Khasgai, Yarkand, Khoten, Tui-fau, and the adjacent highlands, are Tajik who speak Persian, and who are all agriculturists. The Turkoman occupants either came after them and settled at a later period, or else they are aborigines whom the Aryans found there, but its slopes are the primeval land of the Aryans—*Hooker & Thomson's Flora Indica*, Ch. Bunsen, III, 460. See Arian, Cush, Kaffi.

KOUK, BENG Stemless date tree, *Phoenix acaulis*

KOUK-KO, BURM A Tavoy wood, employed for bottoms of boats

KOU-KOU ? also K'u-shih-pa-tau, CHIN Is the St Ignatius bean, the seeds of *Strychnos sancti Ignatii*, the *Ignatia amara* of some authors. It enjoys a high reputation in the Chinese Materia Medica. It is bitter, and believed to be a good vermifuge, but is dangerous from the quantity of strychnine it contains—*Dr Smith's Chinese Materia Medica*, p 116, *Simmond's Dict*

KOU-KOUO, a plant originally from the Philippine Islands, its fruits are of an ashy brown colour, extremely hard and bitter by steeping it in cold water it then forms an

excellent application for wounds and contusions, and the water, taken inwardly, cools the blood and allays inflammation. This fruit plays an important part in Chinese medicine, and is sold by all druggists; it is also used, with great success, to treat the internal maladies of oxen and horses. This is perhaps the seed *Lusung-kwo*, from a species of pine — *Smith's Chin Mat Med*, *Huc's Recollections of Journey*, p. 97.

KOULACHARI, SANS. From kula, a race, and chari, to act.

KOULKA, a little river leading into the Baikal lake. In the mountains at its source, Lapis lazuli is found — *Atkinson*.

KOULMIDVI, also Koulmidie, SINGH. Calamauder wood.

KOUMA, see Kabada.

KOUMOODIE, SANS. Brightness, from koonooda, a species of nymphæa.

KOUMI, AR, PERS., HIND. A tribe, a race.

KOUNG-KOUAN, CHIN. Communal palaces, are, in China, found from stage to stage all along the road, and reserved for the use of the great mandarins, when travelling on public service. Ordinary travellers are rigidly excluded from them. A Chinese family has the office of maintaining each of them in good order, and of making the necessary arrangements when a mandarin is about to occupy it. The expenses are paid by the Governor of the town, and he appoints the domestics for the service of the palace. The Koug-Kouan of the province of Sse-tchouen are particularly renowned for their magnificence, and they were completely renewed under the administration of Ki-chan, who was governor of the province for several years — *Huc, Chinese Empire*, Vol. 1, p. 23.

KOUNG MOO, BURM. A tree of maximum girth 5 cubits, maximum length 30 feet. Scarce, but found near Moulmein, Tavoy and Meigui, on the sea coast and on the banks of rivers. When seasoned it floats in water. It is not a good wood, being perishable and liable to rot readily — *Capt. Dance*.

KOUNG-TOUNG, see India.

KOUNLA, HIND. Citrus aurantium.

KOUREN. The principal Lama Serai of all Mongolia is that of the Great Kouren (Ourga Kouren, of Timkouski). It is situated in the country of the Kalkas, on the banks of the Toulai river, and stands on the edge of the great forest that stretches northwards into Siberia. To the south, lies the desert of a month's journey. It stands, however, in a pleasant valley, amid mountains near the source of the Toulai, which river falls into the great Baikal lake. There are 30,000 Lama, under several heads at Ourga, then

chief is the Geesoo Tamba, a regenerated Boodh of great sanctity. There has, of course, risen a large city and mart of commerce in the immediate vicinity of the convent, and it is the head-quarters of Mougohai, having been the capital of the princes of the family of Junggeez Khan, before their conquest of China. Tea bricks are here the measures of value, an ounce of silver representing five tea-bricks.

KOUPOOEE, occupy the hills between Cachai and the valley of Munnipore, in their whole breadth, a direct distance of about forty miles, and from 25° north latitude, they formerly extended over nearly an equal distance to the south. The whole of this tract was formerly thickly studded with villages, some of them of considerable size, and Songboo tradition gives, as the place of their origin, the mountain towards the south of the valley named Thungeching. They comprise two tribes, the Songboo and Pooeei-on. They and all the other races of hill people congregate in communities, composed usually of families connected with one another by blood-ties. The superior elevations being the most healthy, their villages are usually to be found in them. Before the subjugation of the Songboo to Munnipore, almost every village was at war with its neighbor. On their subjugation this warfare was put a stop to, but the remembrance of their feuds remains and they would break out afresh to-morrow were the restraining hand of Munnipore withdrawn. But though Munnipore has been able to exert so much influence amongst the Koupooee as to prevent feuds being openly carried on, a state of active feud appears to be the one natural to all the tribes from Cape Negrais to as far north as we have any knowledge. The Koupooee are much attached to their villages, which are permanent. The village and its immediate precincts form their grave-yard, and when, for a time, from whatever cause, they have been obliged to desert their village, they more often express their wish to return to it as being the grave of their ancestors than to it as being their own birth place. Their attachment then to their village is created quite as much by its holding the tombs of their ancestors as by its being the place of their birth. The mountain land around the Koupooee village, within certain fixed bonds, is usually the property of the village. Thus they cultivate with rice in elevations suited to it, and with other crops in situations unfitted for that species of grain. The spot cultivated this year, is not again cultivated for the next ten years, it having been found that that space of time is required for the formation of a cultivable soil by the decay of the vegetable matter that again springs upon it. Every village has three

hereditary officers, namely, Kool-lak-pa, Loop-lak-pa and Lumpoo, and officers besides these are elected. If the hereditary chief or Kool-lak-pa be a man of wealth, he will be also a man of influence. The Koupoee are subdivided into families Koomul, Looang, Angom and Ning-thau-ja. A member of any of these families may marry a member of any other, but intermarriage of members of the same family is strictly prohibited. Though not attended to with the same strictness, this prohibition, in regard to marriage, and this distinction of families under the same designations, exists amongst the Munnipore race. All the hill people are duty, but amongst them the Koupoee is comparatively clean, he frequently bathes, though he does not devote much time to the purification of his skin. He is omnivorous, and of course without prejudices of caste, but one species of food he never touches, milk, to him is an abomination. In appearance, manners and customs there is no essential difference between the two divisions of the Koupoee, the Songboo and Poeei-on, but though so much alike in these respects, between their languages there is so great a difference, that when they wish to communicate with one another they have to resort to the language of Munnipore. The Poeei-on do not appear at any time to have been numerous, and they are at present confined to a few villages situated in the north-eastern corner of the space before indicated as the region of the Koupoee tribe.

Quoreng—Next to these is the Quoreng tribe, having a language distinct from those of the Songboo and Poeei-on, but with a great similarity in all other respects. They inhabit all the hills north of the Koupoee, between the high range that skirts the valley of Munnipore and the Burak, as far as the Angamee tribe, from whose aggression they have suffered much. From these aggressions and their own feuds, they have much decreased in number, but are still a very considerable tribe, possessed of much energy which develops itself in trade with the Angamee and the British frontier district.

The Khong-jai or Ku-ki, until lately, occupied the hills to the south of the Koupoee whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Looser, and other tribes, better armed than they were, and of the same gens as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khongjai themselves, and the Khong-jai are now scattered around the valley of Munnipore, and thence

through the hills to north and south Cachar. Thus they broke into distinct tribes. Although occupants of the hills to the south of the valley of Munnipore their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the north. The salique law rigorously prevails amongst the Khongjai, but the influence of women is great amongst them—*Prinsep's Tibet, Tartary and Mongolia*, p. 46, *McCulloch's Records, G I F D*, pp. 42-59.

KOUSHAN, a pass in the Hindoo-Kooshi. It is the most frequented east of Bamern, in lat. $35^{\circ} 37'$, long. $68^{\circ} 55'$. It has three entrances, leads over the principal shoulder of the Hindoo-Kooshi peak, is impassable for wheeled carriages, about 40 miles long, narrow, and its crest is 15,000 feet above the sea. The road rocky, uneven, descent is 200 feet per mile. Three entrances.

KOUTCHE. This town contains between 5,000 and 6,000 inhabitants, besides the Chinese garrison. To the north of the place is the Monssooi-Dabun (or pass) on the route to Kulja, and the great volcano Pe-shan is on the east. Iron and copper are abundant in this region, and the latter mineral is worked. Sulphur and saltpetre are also found, and chloride of ammonium. Some fine specimens of this were obtained in a large cavern near the Monssooi-Dabun. To the south of Koutche a considerable quantity of rhubarb is produced, it is taken by the caravans to Maimatchin on the Siberian frontier—*The Upper and Lower Amoor*, pp. 355-6.

KOUTA, MAHR. *Felonia elephantum*.

KOUTI, MAHR. *Hydnorinus mebrinus*.

KOU-TOUK-TON, in Mongol and Gosses (Geesoo) in Tibetan, M. Thukowski says, is the name of the highest class of the priests of Buddha, the one resident at Ooiga is called by the Mongols, Gheghen Koutonkton. The Ooiga high priest seems also to be called Geeso-Tamba, a re-generated Buddha of great sanctity. There are 30,000 Lamas under several heads at Ooiga—*Prinsep's Tibet, Tartary and Mongolia*, p. 51. See Komen, Koutonkton, Lama.

KOUTOOKA-SARVASWA, SANS. From koutooka, play, and sarvaswa, a person's all.

KOUYUNJIK, so called by the Turks, and Aimushah by the Arabs, are mounds long believed to be the remains of Nineveh. These ruins include the great mounds of Kouyunjik and Nabbi Yunus. But Mr. Layard found amongst the rubbish only a few fragments of pottery—*Layard's Nineveh*, Vol. 1, p. 4.

KOUZ-KOUZ, AFRICAN? *Holcus spicatus*.

KOVA, TAM Kovel, MALEAL *Coccinia indica*, *W & A*

KOVIDARA ? *Bauhinia variegata*

KOVIL, MALEAL A Kshatriya, also a class of the Nair race

KOVIL, TAM *Acacia frondosa*

KOVILE CHETTU, TEL *Ixora undulata*, *R*, 1, 385, *W & A* 1310, *Ic* 708

KOVLAR, a river in Kamptec

KOVVILIPUVVU, TEL A wild creeper

KOVVAI, Koval, TAM *Coccinia indica*

KOWA, HIND A crow, also *Garcinia cowa*

KOWA DOL The hills called Barabui, are isolated rocks of sienitic granite rising abruptly from the plain about 15 miles north of the city of Gyah, by the left bank of the Phulgo or Mahanudda, the cluster is remarkable for its picturesque appearance, and for the noble masses of rock piled, as it were, one above another, with hardly any soil, consequently little vegetation, and rising to various heights, from 100 to 300 or 400 feet. Although Barabui is that by which the cluster is commonly known, each hill has a name of its own. The highest being called "Barabui," also "Sidheswur," from a temple to Mahadeva that once crowned its heights. The next in height is the "Kowa Dol," which is detached from the rest by near a mile to the south-west. A third is called "Nag-arjun," and is the easternmost of the great cluster. A fourth, and the smallest, called "Duhawut," is at the northern extremity, others also have names, but the above alone contain objects of notice. The Kowa Dol is an almost entirely bare rock having nearly a perpendicular scarp on its northern face, and sloping at an angle of 45°, more or less, on the opposite or southern side east and west, it is disjointed and inaccessible, huge stratified masses are piled one over the other, decreasing in length at each end, the whole is surmounted by single blocks like pillars, the centric one of which towers above the rest and is conical. It is said that formerly there was a huge block balanced on the top of this cone, which from its being moved by birds alighting on it, obtained the name of "Kowa Dol", or crow-moved, or the crow-swing, about the middle of the eighteenth century, this rocking stone fell down, to where it may still be seen. This hill seems to have been surrounded by a large town, there is an artificial mound continuous round the north and east faces, filled with broken pottery, bricks and blocks of hewn stone, there are two names given, "Saram" and "Summunpooi," on the portion called by the latter name there is an extensive mahomedan cemetery, there are none but paltry monuments with fragments of

some ancient Buddhist temples built into them. The caves of Barabui differ from all other works of the kind known to us. These caves or chambers are, with one exception, entirely devoid of sculpture or ornament of any kind. They are in all seven in number; four in one hill, three in another, but the name "Satguba," commonly understood to mean "seven chambers" is applied to two only.

KOWEIT, a compact town of about 15,000 inhabitants, built on a promontory of loose sand-stone covered with sand, vessels of 50 or 60 tons bear the produce of countries at the northern end of the Persian gulf from Bizea, Dillum, Ghonawah, Bunder Reegh, and the smaller seaport towns round to Koweit for trans-shipment to bugalows, for conveyance to Bombay. In the same way goods from India are brought here in large bugalows and distributed amongst smaller ones for conveyance to those smaller ports. Teak is imported and used for ship-building, and a large number of horses, the best exported from Arabia, are sent from Koweit to Bombay. The Bedoun inhabitants of the desert are allowed to enter Koweit, on depositing their arms at the gate, and it was a custom to feed, not only all who enter, but the poor of the place besides. The Bedoun assemble daily in a place outside the gate, and with them there is a good sprinkling of the Slubba. The Arabs generally come mounted on camels, bringing ghee and tuffles with donkeys bearing brushwood and camel's dung. Sometimes when laid up, the Arab will bring in his horse for sale, but good ones are seldom got in that way.

KRAAL is the enclosure into which, when fresh elephants are required in Ceylon, a herd of wild ones is driven. The kraal is made in some spot convenient to the districts in which the elephants are supposed to be. The moodlees or headmen of these districts are required to find a certain number of coolies as beaters. These are formed into a cordon, surrounding the elephant district. The circle is gradually contracted, the coolies advancing slowly by day, beating the jungle as they go, and lighting watch-fires by night. The elephants are thus driven towards the kraal, into which they are eventually enticed by decoying elephants placed there for the purpose. Once within the enclosure strong ropes are skilfully passed round their legs, and then fastened to the largest trees. There the elephant remains until he is subdued and partially tamed, by hunger and fatigue, after which he is gradually liberated and his education commences. Cordner gives graphic descriptions of the grand kraals he witnessed at the beginning of the nineteenth century near Tangalle and Negombo, where scores of elephants were enclosed in parks of labyrinthine passages, many of them being drowned in "the water snare." The parallelogram on one occasion was about 240 feet on each side, so that the area was 6,400 square yards. The wings were not more than 200 feet in length. The engraving in Tennent's Work (page 340, 2nd Vol, 5th Edition) gives an excellent idea of a Kandian kraal, its form and

the principles on which it is constructed. Vacant spaces are left for two elephants to stand at each corner, which it is understood will rush forward towards the entrance, the moment the elephants enter the enclosure, and cover with their protection the men employed in putting up the barricades. Cross rear lines are drawn through the jungle, when the beaters are satisfied that the elephants are in front, and as the drive nears the kraal the cordon of beaters is drawn closer and closer until at last it closes in on the elephants and they have no choice but to break through the line or enter the kraal. Many of them do break through the line. On one occasion an elephant broke through the kraal, fairly raising up a portion of the palisades, cross beams, jungle vines and all, with his tusks, and, scattering the watchers to right and left, rushed up to the palisade, seized a peeled wand pointed at him by a Koriale and broke it over the man's arm and head, inflicting several bruises. But this animal was manfully resisted and turned back — *Frere's Antipodes*, p 185

KRANG, SIAM *Coccus lacca* Lac.

KRANGANORE, is twenty-five miles south of Panani and is the northern frontier of the rajahship of Travancore. This city was distinguished by its having been the residence of a republic of Jews, part of the tribe of Manasseh, who had been carried into captivity by Nebuchadnezzar, who sent numbers of them to this distant place. Their history says that they amounted to twenty thousand, and that they were three years in travelling to this place, from the time of their setting out from Babylon — *Pennant's Hindustan*, Vol 1, p 162

KRANJANG, MALAY Basket

KRANI, Kani, or Ciani, an English copyist or clerk in a public office, of mixed European and Native descent. The origin of the name has been disputed, and is, it is believed, utterly unknown. It may probably be a corruption of some Portuguese word, or it may be a mispronunciation of Carana, by which the Kayet'h (Cayast'ha), or writing tribe, is designated in Bengal, and as most native writers in public offices are of the Carana caste, it is not unlikely that by merely extending its signification, the same word has been used to designate English writers. The word from being utterly harmless in its application, has begun of late years to be considered decidedly dyslogistic (to use an expressive word coined by Bentham), and is consequently avoided by all officials of good feeling, for fear of giving offence. In India, Kayet'hs are now even called Khwaja, though that word is in common use for other classes. In mahomedan countries, west of India, however, the term is still applied to writers and teachers. Dr Shaw says of the Moors in Barbary, "The Hojas suspend their ink-horns in their girdles," pp 227), and Lady Montagu says, "The monastery is now belonging to a Hoja, or school master" — *Letters*, p 176, *Elliot's Supplement*

KRATOON, JAV A palace, a castle

KRAW In the year 1858, Mr Edward O'Reilly, drew the attention of the public to the importance of a route across the Isthmus of Krau from the Pakchang river, which marks the British boundary in the Malay peninsula, at the Meigu Archipelago, to the opposite gulf of Siam, as preferable to the usual circuitous passage *via* the Straits of Malacca. The Isthmus of Krau, separates the Bay of Bengal from the gulf of Siam. The present route to China from the Bay of Bengal is by the Straits of Malacca, and down south round the Malay peninsula, along a rocky coast, and among numerous islands and dangerous rocks. Sailing vessels bound to the eastward find this a very long route, and to the duration in the voyage of a steamer, it adds at least a period of six days. A canal might be dug of thirty miles, to connect the eastern and western portions of the Pakchang river, the boundary line separating Siam from British Burmah at its southern limit. At the western side of the peninsula, the river is deep enough for vessels drawing twenty feet of water and upwards. On the east it is navigable for some miles for large vessels. The intermediate distance of about thirty miles is therefore said to be the only difficulty which exists. India and China are thus separated by a narrow neck of land, which can easily be opened. The Pakchang river is navigable for steamers drawing 6 fathoms of water for 15 miles from the sea, and the highest ground on the Isthmus is not more than 75 feet above the sea level. The distance saved by the adoption of the proposed new route would be nearly 500 miles, and the saving in time, including stoppages for coaling, &c, would be four days, while the saving in cost would be enormous.

KRIMEA The great Turanian or Tartar family of languages is spoken by all the tribes from the Himalaya to Okotsk and to Lapland, and includes the Hungarian, Kimean, and Turkish In India, there are three or four distinct branches of this family of languages, and consequently of the Turanian race—in the north are the Himalayan dialects and tribes, from Upper and Lower Kanawai on the Sutley to the Butani of the extreme east, then we have the Lohitic class, comprising, with the Burmese and others of the eastern peninsula, the dialects of the Naga and Miki tribes in Assam, and of the Boda, Kachari, Kuki and Gaiu in eastern Bengal Nearly related to this class is the Kol or Munda family, including the Kol, Sonthal and Bhumi of Singbhum and western Bengal, and the Mundala of Chota Nagpur The fourth class is the Tamulic or Dravidian, to which belong the Biahui of Baluchistan, the Gondi, the Tuluva of Kanara, the Karnata of the S Mahratta country, the Toda of the Nilguis, the Malayalam of Travankur, the Tamil and Telugu The Kui or Muasi, and the Koiku in Hushangabad, and westward in the forests on the Tapti and Naimada, until they come in contact with the Bhil of the Vindhya hills, and the Nahal of Khandesh belong to this Kol family, indeed Mr Hislop held that the word Kui is identical with Kol—*De Guignes; Sir W. KRIS, MALAY The abbreviation of *Karis*, a dagger or poniard, the universal weapon of all the civilised inhabitants of the Archipelago It is of a hundred different forms, short or long, with a straight or serpentine blade, and with every variety in the shape and ornament of the hilt and scabbard Men of all ranks, from the peasant to the prince, wear this weapon, and those of rank when full dressed, two or even four In Java, even women of rank sometimes wear a small one The word is probably Malay, but is now of general adoption through the Archipelago The Javaese have three native names for it besides the Malay one, and it is found represented on several of the ancient temples of

Java The *Kris* has even reached the Philippine islands, for there is no doubt but that it is the same word of the Tagala and Bisaya languages which the Spaniards write *cali*, and translate "sword" This dagger is in use in all the Indian islands though ill-suited as a weapon of war The Javanese ascribe its invention to Inakari Pati, king of Janggolo, in the beginning of the fourteenth century of our era Constant use of it gives a facility in handling it Those of the Eastern Archipelago, get then names according to their form or uses, thus, *Kris Panjang* (long) *K Sepucal* (straight), *K Chinankas* *K Toomboo Ladah*, *K Bladohe* *K Bادهه* The *Kris* is used for all purposes, in Bali even to kill the wife who wishes to be burned with her husband It is always a near relation who gives the first wound with the *Kris*, but never father or son Sometimes dreadful spectacles occur In one instance a woman had received eight *Kris* stabs and was yet quite sensible At last she screamed out, driven by the dreadful pain, 'cruel wretches, are you not able to give me a stab that will kill me' A guest who stood behind her, on this, pierced her through and through with his *kris*—*Crawford's Dict, p 202, Ind Arch, Vol 1*

KRISH, HIND *Dioscorea deltoidea* See *Kriss*

KRISHANOO, BENG *Plumbago zeylanica*

KRISHNA, a prince of the Yadu race, who, during his lifetime, was deified and invested with the honours of Vishnu, under the title of *Crishna*, or *Shama* (denoting his dark complexion), but more familiarly known as *Kanya* Who his parents were, is doubtful *Vasudeva*, a chief of the *Yadava*, and *Devaki*, a damsel of the royal family of the *Bhoja*, reigning at *Mathura*, are claimed, and *Nanda* and *Yasoda*, cowherds dwelling at *Gokula*, are indicated as his apparent parents The account given of *Krishna*, by Mr Elphinstone, is that he was born of the royal family of *Mattia*, on the *Jamna*, but brought up by a herdsmen in the neighbourhood, who concealed him from a tyrant who sought his life The story generally believed by the Hindoos is partly historical and, in part, fable It is to the effect that *Krishna* was born in *Mathura*, and was the son of *Vasudeva* (giver of wealth) and *Devaki*, sister to *Kansa*, the king of that country At the time of the nuptials of his father and mother, it was predicted to *Kansa* that the eighth child of *Devaki* would deprive him of his life and crown, and become the sovereign of *Mathura* in his stead The king, in consequence, commanded that *Devaki* should be closely confined, and that whenever she was delivered of a child, it should be

brought to him immediately to be put to death. The princess gave birth to five sons and one daughter, who were thus, by the directions of her brother, destroyed as soon as they were born. When she became pregnant the seventh time, a voice from heaven commanded that the fire of her womb should be conveyed into that of another female named Rohini who gave birth to the third Rama, called Bala Rama, Krishna's elder brother and when the period of her delivery the eighth time arrived, the tyrant gave orders for a stricter watch to be placed over her than had been before observed. The guards placed by Kansa over his pregnant sister, having failed in their vigilance, Kansa enraged, ordered all newborn infants to be slain. But Krishna escaped his various snares, one of which was sending a woman named Patni, with a poisoned nipple to nurse him. In a miraculous escape of the infant over the Yamuna (Jumna) he is represented as conveyed by his father, and protected by Sesha or immortality. He was fostered by an honest herdsman, named Ananda or Happy, and his amiable wife Yasoda, or the giver of honour, and passed the gay hours of youth, dancing, sporting and piping among a multitude of young Gopa, or cow-herds, and Gopia or milk-maids, from whom he selected nine as favorites. This is the period which has made most impression on the hindoos, who are never tired of celebrating Krishna's frolics and exploits as a child—his stealing milk, and his destroying serpents, and among them is an extensive sect which worship him under his infant form, as the supreme creator and ruler of the universe. Krishna excites enthusiasm, especially among his female worshippers. He spent his youth among the gopi, or milk-maids, dancing, sporting, and playing on the pipe, and captivated the hearts, not only of his mortal companions but of the princesses of Hindustan, who had witnessed his beauty. In Brindaban, where he tended cattle, stole milk, played upon the pipe, and danced and sported with milkmaids, the scenes of his gay amours are now reckoned as objects of the highest veneration. The cradle of Krishna is preserved among the treasures of Nandagaon, and the dunny is shown from which he used to steal milk and butter in his infancy. His subsequent life was chequered, he recovered his inheritance, but, being pressed by foreign enemies, he removed his residence to Dwarka, in Guzerat. He afterwards appeared as an ally of the family of the Pandu in their war with their relations the Kuru, for the sovereignty of Hastinapur. This war forms the subject of the great hindoo heroic poem, the "Mahabharat," of which Krishna is, in fact,

the hero. It ended in the dearly-bought success of the Pandu, and in the return of Krishna to Guzerat. His end was unfortunate for he was soon involved in civil discord, and at last was slain by the arrow of a hunter, who shot at him by mistake, in a thicket. Besides taking a place in the story of the Mahabharata, Krishna appears in the other great epic of the hindoos, the Ramayana of Valmiki, in which he is represented as the eighth incarnation of Vishnu. The war celebrated in the "Maha Bharat" was a contest between the lines of Pandu and of Kuru (two branches of the reigning family) for the territory of Hastinapur (probably a place on the Ganges, north-east of Delhi, which still bears the ancient name). The family itself is of the lunar race: but, in the story, the contending parties are supported by numerous allies, and from some very remote quarters. Krishna, an ally of the Pandu, though born on the Jamna, had founded a principality in Guzerat among the allies on each side also, were chiefs from the Indus, and from Kalinga in the Dekhan, some, even, belonged to nations beyond the Indus, and amongst them the Yavana, a name which most orientalists consider to apply, in all early works, to the Greeks. The Pandu were victorious but paid so dear for their success, that the survivors, broken-hearted with the loss of their friends, abandoned the world and perished among the snows of the Himalaya, and Krishna, their great ally, fell in the midst of civil wars in his own country. Some hindoo legends relate that his sons were obliged to retire beyond the Indus, and as those Rajputs who have come from that quarter in modern times to Sind and Kuch are of his tribe of Yadu, the narrative seems more deserving of credit than at first sight might appear. The more authentic account, however (that of the "Mahabharata" itself), describes them as finally returning to the neighbourhood of the Jumna. The date of the war described in the Mahabharata was probably in the fourteenth century before Christ. Once he entered the region of the Saurashtra in Guzerat, as a conqueror, as he had before been compelled to seek shelter there, in defeat, on his flight from the king of Chedi, which obtained him the unenviable epithet of Rinchor, or flee from the battle field, though hindoos now appear to consider Rinchor a complimentary title, as under this designation they worship him in crowds. But he last visited this land in company with a few of his kinsmen, the remnant of that tremendous civil conflict which desolated India, to pass the remainder of their days in this insulated nook, in sorrow and repentance for the blood their ambition had shed, though in defence of their

nights. Thus, wandering from one tent, or place of pilgrimage, to another, he with his friends, Arjuna, Yudhishtira, the abdicated paramount sovereign of India, and Baldeo, approached the sacred soil around the shrine of Somnathi. Having performed his ablutions in the holy Triveni, Kanya took shelter from the noontide heat under an umbrageous Peepul, and while he slept, a forester Bhil, says the legend, mistaking the padma or lotus-like mark on the sole of his feet, for the eyes of a deer, sped an arrow to the mark. When his kinsmen returned, they found that life was extinct. For a long time, Baldeo would not part from the corpse, but, at length, they gave it sepulture at the point of junction of three streams. A Peepul sapling, averred to be a scion of the original tree, marks the spot where the hindoo Apollo expired, and a flight of steps now conducts to the bed of the golden Hunanya, for the pilgrim to lustrate himself. This place of purification bears the name of Swargadwara or door of bliss, and contends with that of Devapattun for superior efficacy in absolving from sin.

During the discussions prior to the battle described in the Mahabharata, Krishna, who was related both to the Kuru and the Pandu, tried to bring about a reconciliation, and he seems to have continued his efforts to restore peace throughout the eighteen days of the conflict, but he did not personally engage in the fight, and the only part of his career in which he is shown as personally brave is related in the legend describing his foreign entry into Mathura, by breaking the bow of Siva, and raising a civil commotion in which his enemy, King Kansa, was killed. His great efforts in life were directed to reform the existing religion and to oppose the worship of Siva, then rising into considerable importance. The two gods, Indra and Agni, rain and fire, were the chief deities worshipped by the Vedic Aryans. Indra was the sovereign of the gods, the most powerful of the Vedic deities, the god of the firmament, the hailer of the thunderbolt, who smote the rain-cloud, and brought down waters, who delighted in the Soma juice, in eating and drinking wine, and in war. In Krishna's time, Vishnu and Indra seem to have been sharing the devotion of the Aryans as then great objects of worship, but Vishnu had many worshippers and was rising into importance. This seems proved by the circumstance that Kansa, king of Mathura, angry at the failure of his efforts to destroy the infant Krishna, slaughtered all the worshippers of Vishnu and all the male children and subsequently, when Krishna had induced the Yadava to discontinue the worship of Indra and transfer their devotions to the

mountain Govardhana, Indra is fabled to have caused a deluge of rain to fall, Krishna seems therefore to have thrown his influence against Indra and Siva. Amongst the earliest dissenters from Indra were the Yadu race under Krishna's influence. The reasons leading him to this are not known, but the Mahabharata make him say to Narada, his father, Why worship Indra as the supreme god? O father! we are Vanya and our cattle live upon the pastures, let us therefore cease to worship Indra, and pay our devotions to the mountain Govardhana. Up to that time it was to the heaven of Indra that the good who died proceeded. At the gate of the town of Mathura, called the gate of the bow, the bow of Siva was kept under the care of wardens. Krishna entered by that gate to take part in the festival which King Kansa held, on the occasion of a great sacrifice to Siva. As he entered the gate of the bow, he took and broke it, slaying the wardens. A popular commotion followed, during which the troops of King Kansa and Kansa himself, were slain. Krishna seems equally to have opposed the religion of the Takshac or Naga or Snake races who followed buddhism according to the legend. It was in Bate or Bert or Pnates' isle that Krishna or Kanya, acted the part of the Pythian Apollo, and redeemed the sacred books, slaying his Hydra foe, the Takshac, who had pilloined and concealed them in one of those gigantic shells whence the island has its name. This history of Kanya, or Krishna assuming the form of Vishnu is allegorical. Kanya, as Vishnu, resembles the sun-god of the Egyptians in name as well as symbols. Kan was one name of the sun in Egypt and his eagle head is a well-known type. The races who supported the religion of Krishna are typified under his emblem Garuda, or the eagle, while their adversary, the buddhist, is figured by the Takshac, Naga, or serpent, a denomination given to the races of northern origin, which at various periods overran India, and of which were Takshiles (the friend of Alexander,) the site of whose capital is still preserved in the Memoirs of Baber, and the still more famed Takshac Sahasrana, the foe of Vicrama. In the legend of the Yadu prince, Krishna, (himself a seceder from the faith of Buddha-Vicrama to that of Vishnu, if not its founder) receiving the sacred volumes from his Hydra-foe at this remote point of hinduism, as well as his first combat with him on the Jumna, we have but the continuance of the same sectarian warfare, in which Krishna was, in this instance, successful, driving them before him both in the north of India and here but his title of Rinchor had been given on his defeat by Jarasmdha, the

king of Magadha, of heretical faith. The Yadu race was one of the chief of the races of India or Chandra. The men followed the Buddha, or Jaina faith, in fact, Nemnath, or familiarly, Nemi (from his dark colour called Arishta Nemi), was of the Yadu race, not only the contemporary but the very near kinsman of Krishna, they being the sons of Basdeo and Samadin, the elder and younger of ten brothers. Colonel Tod supposes the Yadu, to have been all originally buddhists, and of Indo-Getic origin, as their habits of polyandry alone would almost demonstrate, and as the best informed of the Jains assure us that Nemnath, the twenty-second Buddha, was not only a Yadu, but the near kinsman of Krishna. He regards the Yadu, to be the Yute, or ancient Gete of the Jaxartes, amongst whom, according to professor Neumaun from Chinese authorities, one of the shamanic sages sprung, eight hundred years before Christ. Both Nem-nath and Sham-nath have the same personal epithets, derived from their dark complexions, the first being familiarly called Arishta Nemi, 'the black Nemi,' the other Sham and Krishna, both also meaning 'dark-coloured,' and when this is not only confirmed by tradition, but the shine of Buddha is yet preserved within that of Krishna at Dwarka, we have no reason to question that his faith, prior to his own deification, was that of Buddha. The allegory of Krishna's eagle pursuing the serpent Buddha, and recovering the books of science and religion with which he fled, is an historical fact disguised—namely, that of Krishna incorporating the doctrines of Buddha with his own after the expulsion of the sect from India. The Gulf of Kutch, the point where the serpent or Takshac race attempted to escape, has been from time immemorial to the present day the entrepôt for the commerce of Sofala, the Red Sea, Egypt, and Arabia. There, Buddha Trivikram or Mercury, has been and is yet invoked by the Indian mariners, especially the pirates of Dwarka, and whether Buddha or Mercury came from, or escaped to the Nile? whether Buddha Trivikrama be the Hermes of Egypt to whom the "four books of science," like the four Vedas of the hindoos, were sacred? the statues of Nemi, the representative of Buddha, exactly resemble in feature the bust of young Memnon, the buddhists appeared in the Guzerat peninsula, the adjacent Indian continent was the cradle of buddhism, and in Saurashtra are three of the "five" sacred mounts of the buddhist faith, i.e., Girnar, Satrunja, and Abu. It is however in the Bhagavata or eighteenth of the Puranas or old books, in which Krishna is described

in his complete apotheosis, and in that he is represented as the eighth avatar of Vishnu. The first Indian poet after Vedic times was Valmiki, author of the Ramayana, a complete epic poem, on one continued, interesting, and heroic action, and the next in celebrity, if it be not superior to it in reputation for holiness, is the Mahabharata of Vyasa. To Valmiki are ascribed the books subsequent to the Vedas, the sacred Puranas, which are called, the Eighteen, and which have the following titles—1, Brahmin, or the great one, 2, Padma, or the Lotus, 3, Brahmamanda, or the Mundane Egg, 4, Agni, or Fire—(these four relate to the creation), 5, Vishnu, or the Preserver, 6, Garuda, or his Eagle, 7, the transformation of Brahma, 8, Siva, 9, Linga, 10, Narada, son of Brahma, 11, Scanda, son of Siva, 12, Maricaudaya, or the immortal man, 13, Bhawishya, or the prediction of futurity—(these nine belong to the attributes and powers of the Deity), 14, Matsya, 15, Varaha, 16, Kurma, 17, Vamana, or as many incarnations of the Great One in his character of Preserver, all containing ancient traditions, embellished by poetry or disguised in fable. The eighteenth is the Bhagavata, or life of Krishna, with which the same poet is by some imagined to have crowned the whole series, though others, with more reason, assign them different composers, and they are differently arranged and named by other authorities. In the eighth avatar, Vishnu is said, by his sectaries, to have manifested himself in a degree of power and glory far exceeding any other of his forms in which he assumed only an avata, or portion of his divinity, while Krishna was Vishnu himself in mortal mould. Other tribes of hindoos call Krishna an impious wretch, a merciless tyrant, an incarnate demon, now expiating his crimes in hell. In the Bhagavata, it is mentioned that his votaries say that in this, as in his former descents on the earth, the object of Vishnu's appearance had been the destruction of giants, and the overthrow of oppressive and irreligious kings. The Bhagavata relates that his mortal parents were Vasudeva (meaning the giver of wealth) and Devaki—it mentions a miraculous escape of the infant over the Yamuna conveyed by his father, and protected by Sesha, or immortality. The guards placed by Kansa over his pregnant sister having failed in their vigilance, Kansa, enraged, ordered all newly-born infants to be slain, but Krishna escaped his various snares one of which was sending a woman, named Patma, with a poisoned nipple, to nurse him, and he was fostered by an honest herdsman, named Ananda, or Happy. Krish-

na, deified, is the shepherd Apollo of the hindoos, and his deeds, like those of Rama Chandra, have been sung by the noblest poets of the east. Krishna's names like other deified personages, are numerous. He being Vishnu, they enjoy several in common, Murari, Hari, Madhava, (Vishnu destroyed the giant Madhu) Bahgavan, are among them—Govinda, Gopala, Gokala, are derived from his occupation of herdsman, Gopinat'ha, the Gopi's god, Muralidra, the Tunesful, Kessu, Kesava, or Kesavi, refer to the fineness of his hair, Vanimala, to his pendant garland, Yadva, Vaishteyna, and Vasudeva, to his tribe and family. Gokul is a small town on the banks of the Jmuna, below Muthura, and Radha, the mistress of Krishna was wife of a cowherd of Gokul. Hence one of Krishna's titles is Gokul Nath, lord of Gokul. Gokul is almost an island, and is one of the prettiest spots in the holy land of the hindoos. The scene there is still as pastoral as it had been three thousand and five hundred years ago. Large herds of heavy-necked kine remind us of the days of Nanda, though their number is far short of nine lacs, possessed by that shepherd-chief of old.

Madhu is, also, one of the poetical names of Krishna, viz, the intoxicator, from Madhu, strong drink, and Madhu, the bee, originating our mead. In the civil wars of his kinsmen, the Kuru and Pandu, when he sided with the latter, and shared their exile, he had thrown aside his Apollonic character of Murali, where, by the sounds of his pipe (Murali) he captivated the shepherdesses as he attended the kine in the pastoral Sutasen, and had assumed that of Chacradhari, or wielder of the discus, the most ancient weapon of this Indo-Getic race. Krishna is the greatest favourite with the hindoos of all their divinities. Of the sectaries who revere Vishnu, to the exclusion of the other gods, one sect almost confine their worship to Rama, but though composed of an important class, as including many of the ascetics, and some of the boldest speculators in religious inquiry, its numbers and popularity bear no proportion to that division of the Vaishnava sect, which is attached to the worship of Krishna, and the legends told of him are innumerable. At the age of seven, the legends relate, that he uplifted on the tip of his little finger, the mountain Govard'hun, the hindoo Parnassus, to shelter the Gopa and Gopi from the wrath of Indra, the Jupiter Pluvius of the hindoo Pantheon, who, enraged with jealousy at the diminution of his votaries and sacrifices, consequent to the adoration of Krishna, attempted to destroy

them by a partial deluge. This story is represented in the Matsya Purana, whence Sir W Jones has thus poetically introduced it in his hymn to Indra. The bard

"smil'd, and, warbling in a softer mode,
Sang the red lightning, hail, and whelming rain
O'er Golul green, and Vraja's nymph-lod plain,
By Indra hurl'd, whose stars ne'er had glow'd
Since infant Krishna rul'd the rustic train
Now, thrill'd with terror. Then, the heavenly child
Cull'd, and with look's ambrosial smil'd
Then, with one finger rear'd the vast Govard'hen,
Beneath whose rocky burden,
On pastures dry, maids and herdsmen trod
The Lord of thunder felt a mightier god"

In pictures of this miracle, Krishna is always represented as a man, attended by his favorite mistress Radha, and sometimes by a multitude of shepherds and shepherdesses, the former with poles, standing the uplifted sheltering mountain, a shower of rain and fire falling vainly on its summit. Krishna and his Gopa are also represented as well in their characters of Apollo and the Muses, as in those of the sun and the planets in harmonious movements round him, and this picture was formerly adduced in support of the idea, that the hindoos had a knowledge of the true solar system, a point that no longer requires proof. The colour of this deity is azure, and several animals and vegetable of a black or blue colour, are sacred. The metamorphosis of his fleet nymph into the lovely shrub, the tulsi or black ocymin, is related in a style perfectly Ovidian in the Puranas. Tulsi forms a pretty feminine appellation to this day, for, among the women of Hindustan, the beautiful, wailike, and amorous Krishna, is a most popular deity. Nareda, the mythological offspring of Saraswati, patroness of music, was famed for his talents in that science—so great were they, that he became presumptuous, and emulating the divine strains of Krishna, he was punished by having his vina placed in the paws of a bear, whence it emitted sounds far sweeter than the minstrelsy of the mortified musician. In a picture of this joke, Krishna is forcing his reluctant friend to attend to his rough visaged rival, who is ludicrously touching the chords of poor Nareda's vina, accompanied by a brother brum on the symbols. The loves of Krishna and Radha, which, in the writings and conversation of the hindoos, are as constantly adverted to as those of Laila and Majnun by mahomedans, are said to mean, in their emblematical theology, the reciprocal attraction between the divine goodness and the human soul. They are told at large in the tenth book of the Bhagavat, and are the subject of the beautiful pastoral drama, entitled Gita Govinda by Jayadeva, who wrote before our era. This

poet, in describing one of the events of Krishna's life, in his amours with Radha, exclaims, "let him then, if his soul be sensible to the raptures of love, listen to the voice of Jayadeva, whose notes are both sweet and brilliant. Bring home the wanderer (Krishna) to my rustic mansion, spoke the fortunate herdsman Nanda to the lovely Radha. The firmament is obscured by clouds, the woodlands are black with tamala trees, that youth who roves in the forest will be fearful in the gloom of night. Go, my daughter, bring the wanderer home, Radha sought him long in vain. She roved among the twining *vasantis* covered with soft blossoms, when a damsel to whom his wanderings were known, pointing out the infidelity of her lover thus addressed her. 'The gale that has wafted round that beautiful clove plant, breathes now from the hills of Malaya. The full blown *cesara* gleams like the sceptre of the world's monarch, love, and the pointed thyrse of the *cetaca* resembles the darts by which lovers are wounded. See the bunches of *patali* flowers filled with bees, like the quiver of Smara full of shafts, while the *amrita* tree, with blooming tresses, is embraced by the gay creeper *atimucta*, and the blue streams of the Yamuna wind round the groves of *Vrindharan*. A breeze, like the breath of love from the fragrant flowers of the *cetaca*, kindles every heart, while it perfumes the woods with the dust which it shakes from the *mallica* with half opened buds, and the *cocila* bursts into song, when he sees the blossoms glistening on the lovely *rasala*. In this charming season of youth, Heu (Krishna) dances with a company of damsels." The jealous Radha, however, gave no answer, when her amiable friend pointed out Krishna, with a garland of wild flowers descending even to the yellow mantle that girds his azure limbs, distinguished by smiling cheeks, enjoying the rapturous embraces of his fair companions. One presses him to her swelling bosom, another meditates on the lotus of his face, a third points to a *vanjula* bower. He caresses one, kisses another, and smiles on a third, while a fourth, under the pretext of hymning his divine perfections, whispers in his ear, "thy lips, my beloved, are nectar." Radha remained in the forest lamenting to a confidant the wanderings of her faithless swain. "I saw him, she exclaimed, in the grove with happier damsels, yet the sight of him delighted me. Soft is the gale that breathes over yon clear pool and expands the clustering blossoms of the voluble *asoca*, soft, yet grievous to me, in the absence of the foe of Madhu. Delightful are the flowers of the *amru* trees on the mountain-

top, while the murmuring bees pursue their voluptuous toil, delightful, yet afflicting to me, O friend, in the absence of the youthful Cesava (a name of Krishna)." The festival of Huli, more classically called Hulica, otherwise Phalgutsava, meaning the festival of Phalguna, as occurring in the month of that name, commences about the full moon, at the approach of the vernal equinox. It is one of the greatest festivals among the hindoos, and almost all sects seem to partake in its festivities, and all ranks, from kings downward, appear animated by the season, which is peculiarly dedicated to Krishna. Images of the deity are then carried about in palki, and on elephants, horses, &c, attended by music and singing, and various antics. People of condition receive numerous visitors, who are entertained with dancing guls, music, singing, betel, and rose-water. An annual festival to celebrate the birth of this god, is held in the month Bhadra. On this day his worshippers fast; but, on the conclusion of the worship, indulge themselves in music, dancing, singing, and various other festivities. In the month *Shravunu* another festival is held in honour of him, which lasts from three to five days, during which the same festivities prevail, to which is added the ceremony of swinging the image of the god in a chain, suspended from the ceiling. In the month *Kartiku*, a third festival takes place to celebrate his revels among the Gopis, and in the month *Phalgunu* is also held the celebrated festival of the doli, the ceremonies of which last fifteen days, and are accompanied with great splendour and festivity. During these holidays the hindoos spend the night in singing and dancing, and wandering about the streets, besmeared with the doli (a red) powder, in the daytime, carrying a quantity of the same powder about with them, which, with much noise and rejoicing, they throw over the different passengers they may meet in their rambles. Music, dancing, fire-works, singing, and many obscenities take place on this occasion. The Rev Mr Ward says—"At these times, the grey-headed idolator and the mad youth are seen dancing together, the old man lifting up his withered arms in the dance, and giving a kind of horror to the scene, which idolatry itself, united to the vivacity of youth, could scarcely be able to inspire." Krishna is also worshipped under his infant form as Gopalu and Balagopalu, and again as Gopee-natha, the god of the milk-maids. In the picture of Krishna, observes Sir William Jones, it is impossible not to discover, at the first glance, the features of Apollo, surnamed Nomios or the pastoral, in Greece, and Opifir in Italy,

who fed the heads of Admetus, and slew the serpent Python

Krishna's favourite place of resort is a tract of country around Agri, and principally the plains of Muthi where Krishna and the nine Gopis, evidently the nine muses, usually spent the night in dancing. Major Cunningham believes that the worship of Krishna is only a corrupt mixture of buddhism and christianity, and was a sort of compromise intended for the subversion of both religions in India. Several of the legends in the mahabharata seem to have been written after the birth of Christ, whose miracles have been copied, and Krishna is made to straighten the crooked woman Kalya, which resembles the miracle of raising the bowed down woman. Amongst the goddesses of the hindoos, who once were mortals, are Seta, the wife of Rama, Radha, the mistress of Krishna, Rookmani and Satya-bhama, the wives of Krishna; and Soobhadra, the sister of Jugannatha. The stories relating to Radha, Krishna's favourite mistress, are familiar to every hindoo, being incorporated into their popular songs, the image of Radha being placed near that of Krishna in many of the temples—*W. H. of India*, p 68, *The Hind*, Vol II, pp 42, 116, 117, *Elphinstone's History of India*, Vol I, pp 173, 174, 390, 391, 392, *Tod's Travels*, pp 330, 331, 423, 425, 431-3, 509, *Tod's Rajasthan*, Vol I, p 538, *Moor's Pantheon*, p 212, *Cole Myth Hind*, pp 39, 44, *Coleman, Cyc of Ind*, Sup II, p 548, *Ward's View of the Hindoos*, Vol I, p xxxix. KRISHNA, a river in the Peninsula of India, rises in the Mahabaleshwari hills, among the western ghats. After a straight course of forty-two miles, it flows in a southeasterly direction, until it receives the waters of the Warna river, a medley of streamlets falling from the mountainous ridges. Turning then more to the east, the Krishna gradually receives the added waters of four other rivers, and finally disembogues into the Indian ocean. See Krishna

KRISHNA, Hind Sesamum indicum, also Nigella sativa or Indian Fennel flower

KRISHNA AGARU, Sansc, Tir, or Agar, Tel Aquilaria agallocha, R Black agallocha. There appear to be at least three

kinds of agallocha or wood-aloe, the trees producing which are not fully identified. Roxburgh followed by Royle, admits doubtfully the existence of two—Aq agallocha, R, and Aq ovata, Cor, the Gato demalaca of Lam, and an inferior sort is said to be derived from Excoecum agallocha, which need not be taken into account. But Lourno maintains that the best lign-aloe or culambac, which appears to be the 'nd-i-kummi of the Indian bazar is derived from a tree which he calls Alocylon agallocha, Roab, and Royle considers the Malayan agila (whence probably is derived the Hindi agnu), the aquila and eagle-wood of commerce and the 'nd-i-Hindi of the bazar, to be the produce of Aquilaria agallocha which grows plentifully to the N E of Bengal, and that it is probably identical with A ovata. Royle; *Ell Fl Andhr*

KRISHNA CHANDANAM, SINGH, or Chandanam, Tel Santalum album, L Black sandal, probably referring to the heart of the tree which is the most prized for its scent and is more or less dark-coloured according to age. W, 219, under Kaley and Kaleyaka says, "a yellow fragrant wood"—Sk says, "sandal from the mountain Japik" and quotes the Sans Kalu saraka, W 218, where it is explained by Tagara Tabernemontana coronaria

KSHETRIYA Amongst the Aryan hin-
 doos, a warrior branch of their body, taking
 social rank after the brahmins. Their name
 is from Kshata, a wound and tri, to save
 A not unusual spelling of the word is Kshat-
 riya, but Chetriya, Ch'hatiya and Chettrya
 are not uncommon, and it is also written and
 pronounced Khatiri, K'hetiri and Kluiri. The
 third Upa Veda was composed by Viswami-
 tra, and treats on the fabrication and use of
 arms and implements handled in war by the
 Chatriya tribe. The insignia of a student of
 this caste according to Menu, are thus alluded
 to in the Uttara Rama Chetritia, (*Hind Th*,
Vol 1, p 347) on the approach of Lava twin
 son of Rama.

Janaka Who is this youth that thus delights our sight?
 Arundhati Some Kshettrya lad who here awhile pursues
 His sacred studies
 Jan You have rightly judged
 His birth, for see, on either shoulder hangs
 The martial quiver, and the feathery shafts
 Blend with his curling locks, below the breast
 Slight tufted with the sacrificial ashes,
 The deer skin wraps his body, with the zone
 Of Murva bound the madder tinted garb,
 Descending, vests his limbs the sacred rosary
 Beads his wrists and in one hand he bears
 The pipal staff, the other grasps the bow
 Arun Whence comes he?

Brahmachari means a hindoo student in
 theology. All twice-born hindoos, i.e., the
 Brahmin, the Kshatriya, and the Vaisya are
 enjoined to spend the first quarter of their
 life in this state.

Hindoo writers give this branch of the
 Aryan immigrants the second place, the brah-
 mans being first, and the vesya and sudra, the
 third and fourth. In the rules of conduct for
 this branch of the Aryan race, the natural
 duties of the Chettriya are declared to be bra-
 very, glory, fortitude, rectitude, not to flee
 from the field, generosity, and princely con-
 duct. Manu says "to defend the people, to
 give alms, to sacrifice, to read the Vedas, to
 shun the allurements of sexual gratification;
 such are, in a few words, the duties of a
 Chatriya." How this soldier-branch broke
 up is extremely obscure, but though most
 of the Rajput families are believed to be-
 long to them, it is now, however, generally

thought that none of the present races in India can trace their descent from the ancient race, whose constant wars amongst themselves and for others have exhausted them. If there be a doubt on this point, the present Rajput races may possibly be of the warrior Kshetriya, and undoubtedly take the Kshetriya place as soldiers, princes and rajahs. There seem to have been two branches of that part of the Aryan family that entered India: the Solar, who traced up to Ikshwaku, and the Lunar, who traced up to Budha, and Budha, married Ella, daughter of Ikshwaku. These soldier Aryans do not appear to have adopted brahmanism readily, and the brahmins, to overawe them, consecrated by fire on Mount Abo, a warrior body who still remain, and are known, as the four Agnikula Rajput tribes, whose descendants still dwell in Rajputana. The third Upa Veda which was composed by Viswamitra, treats on the fabrication and use of arms and of the implements handled in war by the Chatriya tribe. The four Agnikula Rajput tribes are the Chohan, Solunka, Puar (or Pumar), and the Puriha. The unnamed progenitors of these races seem to have been invaders who sided with the brahmins, in their wars, partly with the old Kshetriya, partly with increasing schismatics, and partly with invading Græco-Bactrians, and whose warlike merit as well as timely aid and subsequent conformity, got them enrolled as the Agni-kula or "fire-born," in contradistinction to the solar and lunar families. The Agnikula are now mainly found in the tract of country extending from Oojain to Rewah near Benares, and Mount Abo is ascribed to be the place of their miraculous birth or appearance. Vikramaditya, the champion of brahminism, according to common accounts was a Puar. A hindoo race calling themselves Khatu, is numerous in the Upper Panjab and about Delhi and Hurdwar, and they are found along the Ganges as far as Benares and Patna. These Khatu divide themselves into three principal classes 1, the Chai-jati or four clans, viz Seth, Maihota, Khunna and Kuppoo, 2, Bata-jati, viz Chopra, Talwar, Tannuh, Seigul, Kukker, Mehta, &c; 3, Bawan-jat, or fifty-two clans, amongst whom are Bundari, Meudiao, Sehti, Suri, Sami, Unnud, Buhseen, Sohdi, Bedhi, Teehun, Bhulleh, &c. Inferior Rajput tribes, are settled in Bundelcund, and in Gurj Mandella. Others, according to Thevenot, are settled in Multan, as the original country of the Khatu, from whom he says the Rajputs are believed to spring. As soon as Alexander had crossed over to Taxila, on the east side, Ambisaces, king of the Indian mountaineers (supposed to be

the predecessors of the Ghikas,) sent ambassadors with presents to him: as, similarly, the chiefs of the Joudi afterwards made their submission to Timur, in 1398. After Alexander had crossed the Acesines (Chenab) and Hydraotes (Ravee), he appears to have been drawn out of the direct route towards the Ganges, to attack the city of Sangala, most probably being between Lahore and Multan, but we are left by Alexander's historians in uncertainty as to its position. The name Sangala, occurs only in Arrian and is said to have been a city of great strength and importance, in the country of the Cathi. Diodorus Siculus calls the same people Cathi, or Kathi, and these may possibly be recognized under the name of Cati, of Thevenot, that is to say, the Khatu or Kshetriya tribe. Thevenot speaking of the people of Multan, says, "there is a tribe of Gentiles here, called Cati, or Rajput, and this is properly their country, from whence they spread over all the Indies." Diodorus Siculus marks them by the custom of their women burning themselves alive, on the funeral piles of their husbands, which continued a practice among them as well as some other hindoo tribes, down to the middle of the 19th century. We find by Arrian, that the Cathi were confederated with the Malli and Oxydracæ, that is, the people of Multan and Outch, and which lay to the south-west of the place where Alexander might be supposed to cross the Hydraotes (or Ravee) in his way into India. That the Malli were the people of the present Multan, we can have no doubt, if we attend to the circumstances of the voyage of Alexander down the Hydaspes here. Before the arrival of the Aryan or Sanscrit speaking colony of the brahmin, Kshetriya and Vesya races, the greater part of northern India was peopled by rude aboriginal tribes described by the Sanscrit writers as Mlecha, Dasya, Nishada, &c, and it is the received opinion that those aboriginal tribes were of Scythian or at least of non-Aryan origin. The Khetri, of the Panjab, is said by some authorities to be dissimilar to the Kshetriya of the Rajput. In the Panjab their avocations are looked upon as effeminate, but these writers and traders are not much inferior in courage and firmness to the ruder tribes, while they are superior in civilization, refinement and capacity for affairs. Some of Runjeet Singh's best governors and ministers were of the Khutree race. Both Baluch and Affghan are, in truth, in their own country little better than freebooters, and the mahomedan faith has mainly helped them to justify their excesses against those of other persuasions and to keep them together under a common banner for

purposes of defence or aggression. But the Khuttee and Uroora of their cities and towns are enterprising as merchants and frugal as tradesmen. They are the principal financiers and accountants of the country. And even yet, the ancient military spirit frequently reappears amongst the once royal "Kshatri" and they become able governors of provinces and skilful leaders of armies. The Kutthri of Bejar claim to be Rajput, and to be of the ancient Kshatrya, though many of them are weavers of "nakki," "koi" and "kmaia." In reality the Khatthi of India, are a fragmentary people, from some ancient stock now untraceable, but spread all through India, and actively engaged in peaceful avocations. The late rajah Chundoo Lal was a Khetri — *Rennell's Memoir*, pp 123–133, *Records Government of India*, No 2, *Gita*, *Capt Cunningham's History of the Sikhs*, p 22, *Wilson's Hindoo Drama*. See Khetrya, Khatthi, Khetri, Vidya, Aryan, Chetia.

KU or Cu, SANS. Is a prefix, meaning 'evil,' Ku-mar, the evil-striker. Hence, probably, the Mars of Rome. The birth of Ku-ma, the general of the army of the gods, with the hindoos, is exactly that of the Grecians, born of the goddess Jahnavi (Juno) without sexual intercourse. Kumara is always accompanied by the peacock, the bird of Juno — *Tod's Rajasthan*. See Kumara.

KU, HIND. *Celtis caucasica*

KU, see India

KUA, HIND. *Cucuma zeyumbot*

KUA-KA-NASHASTAH, also Tikku, HIND. *Ariowoot*.

KUA KALANGU, also Kua-mao or Kua-mavu, MALEAL, TAM? *Cucuma angustifolia*

KUAME, HIND, of Lahore, species of *Onosma*, a root yielding a red dye, a black tapering root like a pansy, with rough glabrous leaves, very like the allied genus *Anchusa* — *Powell's Hand-book*, Vol 1, p 447

KUANG, see Cochinchina

KUANO? Guana

KUARA, see Juikundaloo

KUAY KALUNG, Kua koghai, MALEAL *Cucuma angustifolia*, *Roxb*

KUBAB, ARAB, PERS, HIND. Roast meat, little pieces of meat roasted on skewers of silver, wood or iron. Kubab are generally, in India, spitted on little slips of bamboo, though silver is often used. See Kabab.

KUBAB CHINI, HIND. Pipei cubeba. Cubebs

KUBAN, see Kabarda

KUBAYRATCHIE, SANS. *Guilandina bonduc*, *Linn*; *W & A*

KUBBI, PERS. Ape

KUBEBEN, GER. Kubebu, Rus. Cubebs

KUBEER, also written Kabu, a celebrated hindoo Unitarian reformer, equally revered by hindoos and musulmans, founder of the sect called Kubeer Punthee, or Nanuk Punthee, from which Nanuk, founder of the Sikh, borrowed the religious notions which he propagated with the greatest success. Kubeer lived about A.D. 1450, he assailed at once the worship of idols, the authority of the mahomedan Koran and hindoo shasters, and the exclusive use of a learned language. He is said to have been a weaver, or a foundling reared by a weaver, and subsequently admitted as a disciple, by Ramanand. His religious views are very obscurely laid down, but the latitude of usage which he sanctioned, and his employment of a spoken language, have rendered his writings extensively popular among the lower orders of northern India. Another account makes Kubeer a mahomedan by birth, and a weaver by profession. His disciples may be either mahomedans or hindoos. On his death the mahomedans claimed a right to bury him, the hindoes to burn him, in consequence of which they quarrelled, and placed a sheet over the corpse, which, when they withdrew, according to a legend, they found the upper part of his body to be metamorphosed into a tulsee plant, the favourite nymphæ of Krishna, the lower part into rehan, an odouriferous herb of a green colour, the colour of the prophet Mahomed — *Correspondence relative to Hindoo Infanticide*, p. 39. See Kabu, Kabu Panthi.

KUBEL, HIND. *Andropogon martinii*, *Roxb*

KUBEIS, the name of one of the holy mountains at Mecca, of which wonderful things are related, no meaning is assigned to the name — *Pule, Cathay*, Vol 11, p 391

Manna found on the dwarf oak, though
 several other plants are said to produce it,
 but not so abundantly, or of such good
 quality It is collected by gathering the
 leaves of the tree,

*** The manna on each leaf did
 Pearled he,

letting them dry, and then gently threshing
 them over a cloth It is thus brought to
 market in lumps, mixed with an immense
 quantity of fragments of leaves, from which
 it is afterwards cleared by boiling There is
 another kind of manna found on rocks and
 stones, which is quite pure, of a white colour,
 and is much more esteemed than the tree
 manna The manna season begins in the
 latter end of June, at which period when a
 night is more than usually cool, the Koords
 say it rains manna, and maintain that the
 greatest quantity is always found in the
 morning after such a night It is called in
 Turkish, Kudrat halvassi, or the divine sweet-
 meat, in Arabic, Musee, in Persia, Ghaz-
 angabin, in Koordish, Ghezo — *Rich's Resi-*
dence in Koordistan, Vol 1, p 142

KUEN-LUEN, a mountain chain as seen
 from Sumgal in Turkestan is in lat 36° 8' N,
 and long 78° 5' E, and 13,215 feet above the
 sea The Kuen-Luen, is the northern crest of
 the great range which bounds the high table
 land of Thibet This range is the true water-
 shed between India and Central Asia, the
 Indus absorbing all the streams which flow
 from the southern slopes of the range, while
 the northern rivers which form the Kara Kush
 force their way through or round the outer
 barrier of the Kuen-Luen, and wend north-
 ward to the Gobi or Sandy desert

In the Kuen-Luen, all passes above 15,000
 feet are closed in winter by the heavy snow-
 fall The following are the principal passes
 in India —

1 — Delhan

Name	Feet	Name	Feet
Bapdeo	3,499	Malsej	2,062

Long E Gr 78° to 80°*

Elchi	17,379	Yurungkash	16,620
-------	--------	------------	--------

7 — *In the Andes*

Alto de Toledo	15,590	Assuay	15,526
Lagunillas	15,590		

8 — *In the Alps*

St Theodule	11,001	Old Weisssthor (a)	11,871
New Weisssthor (a)	12,136		

(a) These two passes cannot be used for practical purposes

Trees grow very generally in the Himalaya up to heights of 11,800 feet, and in most parts there are extensive forests covering the sides of the mountains at but a little distance below this limit. In western Tibet, however, there is nothing at all corresponding to a forest. Apricot trees, willows, and poplars, are frequently cultivated on a large scale, poplars, indeed, are found at Mangnang in Gnan Khoisum, at a height of 13,457 feet, but they are the objects of the greatest care and attention to the lamas. On the northern side of the Kuen-Luen, are no trees at all, owing to the considerable height of the valleys. In the Andes, they end at about 12,130 feet, in the Alps, on an average, at 6,400 feet, isolated specimens occurring above 7,000 feet. The cultivation of grain coincides in most cases with the highest permanently inhabited villages, but the extremes of cultivated grain remain below the limit of permanent habitation. In the Himalaya, cultivation of grain does not exceed 11,800 feet, in Tibet 14,700 feet, and in the Kuen-Luen 9,700 feet. For the Andes, the limit is 11,800 feet, in the Alps, some of the extremes are found near Findeler, at a height of 6,630 feet, but the mean is about 5,000 feet. The upper limit of grass vegetation in the Himalaya is at 15,400 feet, in western Tibet, nearly the same level as for the highest pasture grounds, 16,500 feet, may be adopted, in the Kuen-Luen, grass is not found above 14,800 feet. Shrubs grow in the Himalaya up to 15,200 feet, in western Tibet as high as 17,000 feet, and in one instance, at the Gunshankar, even to 17,313 feet. On the plateaux to the north of the Kara Korum, shrubs are found at 16,900 feet, and, which is more remarkable, they occasionally grow there in considerable quantities on spots entirely destitute of grass. As an example, may be mentioned, amongst several others, the Vohab-Chulgane plateau (16,419) feet and Δ Bashmalgun (14,207 feet). In the Kuen-Luen, the upper limit of shrubs does not exceed 12,700 feet. Above this height grass is still plentiful, and shrubs being here, as generally everywhere else, confined to

a limit below the vegetation of grass, the range presents an essential contrast in this respect to the characteristic aspect of the Kara Korum. The number of species of plants, as well as the number of individuals, is exceedingly limited in the higher parts of the Kuen-Luen. Lichens are completely wanting in the dry angular gravel covering the high plateau, and the slopes of the mountains in their neighbourhood. The wild yak, the existence of which in the wild state, has been doubted, and the kiang, five to six species of wild sheep and goats, hares and mice, are found as high as 16,000 to 17,000. Two systems of cleavage are particularly regular in the central parts of the Kuenluen; the steeper one dips north 30 to 50° east, the other south 20 to 40° west. A hard crystalline rock occurs not unlike pudding-stone, which contained enclosures of spherical and angular forms, the quarries where the Yashem stone is dug are at Gulbagashen, in the valley of Karakash — *Report on the Proceedings of the Magnetic Survey of India, p 9*. See Arians, Karakoram, Yak KUEPHUL, HIND *Myrica sapida* KUEVEA, TAM, a Ceylon tree which grows to about eighteen inches in diameter, and fourteen feet long. It is used by the natives in boats and house-work — *Edge on the Timber of Ceylon*.

KUFA The old, now decayed city of Kufa, founded by the kalif Omai, was constructed from the ruins of Babylon. Four miles to the westward, Meshed Ali stands conspicuous. Kufa, gives its name to the old form in which Arabic was written. The inscriptions on Mahmood's pillar at Ghuzni are in Kufic. Ali was buried at Kufa after his assassination — *Mignan's Travels, p. 325*. See Kellek.

KUFA The Kelek is not the only singular description of vessel, traceable to antiquity, that appears on these rivers of ancient celebrity. The circular bowl-shaped basket boat or "kufa," (so named from the Arabic word, which means basket,) is also used as the common ferry-boat. Its fabric is of close willow-work, well-coated and made waterproof with the bituminous substance of the country. It holds about three or four persons with room enough, though not in the most agreeable positions. It is moved by paddles across. Herodotus notices the different kinds of boats plying on the rivers of Babylon, mentioning them as composed of willows and the skins of animals, and adds, that on their arrival at the great city, the owners sold every material of the boat, excepting the skins and those they packed on the backs of asses, and carried whence they came.

KUFELZYE more generally known as

the Popolzye, an Affghan tribe, numbering 20,000 families, an offshoot of the Abdalh, one of the branches of which, the Suddozye, gave sovereigns to the Affghans in the 17th and 18th centuries

KUFF, also Knffee, PANT Chaptalia gossypina The plant is a mere weed, from Simla to Lolon, and covers the whole of the unwooded hills in the very greatest profusion, 'knff' peeled off the leaves of the plant, is called by the paharias 'sokhta,' and they use it instead of tinder for their matchlocks, &c The plant is exceedingly common in the Himalaya, and is found over their whole extent from Munree to Almorah, as well as Simla When the leaves are damp and green, the 'knff' is peeled off the back of the leaf with great facility and quickness 'Knff' would not make the stronger and larger kinds of paper, but it would be available for that of the finest and most delicate kind The collection and disengagement of the down from the back of the leaf would cost little or nothing The maximum number of leaves on each plant is 8, the minimum 3 A kunder or hill basket of leaves, weigh about 12 seers, cost one anna, and the product 1 lb 2 oz of the film, separating the film costs about one anna more, or 2 annas for 1 lb 2 oz In some cases the leaves get blighted by the mist and fogs, one-half the underside of the leaf will often be found of a brown tinge, and whenever this is the case the film will not separate A seer of the leaves was weighed and the film separated, the product was $\frac{3}{4}$ of a chittak of film from 1 seer of the leaves, or, 2 lbs avoirdupois gave $1\frac{1}{2}$ oz of film, consequently 1 cwt or 112 lbs of the leaves would only produce 5 lbs 4 oz of the film, and 1 ton of leaves less than 1 cwt of the film—*General Cox, from Lieutenant W A Ross, (Bengal Artillery), dated Munree, 25th July 1858*

KUK'HA, a race in the north-western Panjab who occupy the rugged mountains along with the Bimba

KUKHURA, HIND Curcuma zedoaria, Rose

KUKI, the country occupied by this people

lies to the south of the Gato, Kasin, and Miku areas, on the hill ranges of Gato, Jantun and Cachar in Sylhet, Tipperah and Chittagong among the mountains to the north east of the Chittagong province. There are new Kuki who came from the inner parts of Tipperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Manipuri dialects and that of the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes,—the Thadon, the Shingshiou, the Chungsen and the Lungum, were driven into north and south Cachar and into Manipur, from their locations, by the Lushai people who speak a Kuki dialect and dwell further south. They were driven back by Colonel Lister and his Sylhet Light Infantry. He entertained the new Kuki as soldiers, and they are found to form good out-post soldiers on the frontiers of both the Lushai and the Angami, countries. The Looshai, however, are in their turn being pressed up northwards by another tribe still more powerful than themselves, called the Poi, who are approaching from the south-east. The hilly tract lying between Cachar and Chittagong, is inhabited by the Looshai, who claim and hold all the tract of country to the south of the parallel of the latitude of Chatterchoora hill, and east of Hill Tipperah to the Tepai river. The Burmese frontier. Puthen is their chief deity, he is benevolent and Ghumvishve is a malignant deity. The Kuki likewise worship the moon. They have no professed minister of religion. The Thempu, their priest and diviner, is not hereditary and his office is not coveted from fear of the imitatory rites. The Kuki occupy Sylhet, Tipperah and Chittagong, with an offset in Cachar who are called the old Kuki. Those in Cachar are skilful in the cultivation and weaving of cotton. The Cachar old Kuki are under 4000 and are arranged into three divisions, the Rhrugkul, the Khelma and the Betch. The Kuki are also called Luneta. They are little civilized, are of an active, muscular make, but not tall. The tradition of the Kuki respecting their origin is, that they and the Mug, are the offspring of the same progenitor, who had two sons by different mothers. The Mug, they say, are the descendants of the elder, and the Kuki, of the younger son. The mother of the younger having died during his infancy, he was neglected by his step-mother, who, while she clothed her own son allowed him to go naked. According to Coleman, the Kuki are all hunters and warriors, and are divided into a number of distinct tribes, totally independent of each other. The rajahships are hereditary, and the rajahs by way of distinction,

wear a small slip of black cloth round their loins, and, as a father-mark of superior rank, they have their hair brought forward and tied in a bunch, so as to overshadow the forehead, while the rest of the Kuki leave their hair hanging loose over the shoulders. Kuki are armed with bows and arrows, spears, clubs, and the dah, a hand hatchet, resembling the knife of the Nairs on the Malabar Coast and a most destructive weapon in close combat. They also wear round their necks large strings of a particular kind of shell found in their hills about their loins, and on their thighs, immediately above the knee, they tie large bunches of long goat's hair of a red colour, and on their arms they have broad rings of ivory, in order to make them appear the more terrific to their enemies. The Kuki are vindictive, blood must always be shed for blood. The Kuki have but one wife, they may, however, keep as many concubines as they please. Adultery may be punished with instant death by either of the injured parties, if the guilty be caught by them in the fact.

On the eastern frontier, the people are an entirely different race from the Kuki of the Chittagong jungles. The name by which they are commonly known is "Tipperah". In physiognomy some of them are like the Mumpooee, but the greater part bear more resemblance to the Khrishah tribes having strongly marked Caucasian, or Mongolian features, with flat faces and thick lips, not in general shorter in stature than Bengali, and far more muscular and strongly made. Many of them, with fair complexions scarcely darker than a swarthy European. The villages contained perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. On the death of a chief, the body is smoke-dried and kept for two months with the family. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill hold feasts and danceings and, after cutting the head into pieces, send a portion to each village. This is considered in the light of a sacrifice to the manes of the deceased. In the spring of 1871, they made several incursions into Assam, for the purpose as was alleged, of obtaining heads for the manes of a chief's daughter.

The Looshai dwell on the southern frontier of Cachar. In 1848-49, they drove up the Kuki, from the south, into Cachar. In their turn, they are being pressed up into Cachar, by the Poi, a tribe who are advancing from the south-east. The Looshai inhabit the hilly tract lying between Cachar and Chittagong, and claim and hold all the tract of country to the south of the parallel of the latitude of

ter Chooia hill, and east of hill Tipperah Chatte Tepai river, is Burmese frontier to them means a village, Khumia, a village. The two tribes, Khumia and Kuki, py the hills of Sylhet, Tipperah and Chittagong, the Khumia on the skirts and the Kuki on the tops of the hills. The Kuki are a more pagan, though also tinctured with Hinduism. They term their supreme god, Khojein Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq is put up in every quarter of a village, in the shape of a rude block of wood. Before this place the heads of the slain, whether of men in war, or of animals of the chase. The Chumia are located in the lower hills between the Kuki and the plains, to the north and east of Chittagong. Both tribes are described as having flat noses, all eyes and broad round faces, and to differ from the Naga in appearance, as in their features.

If a Kuki man die at night his body is buried in the morning. Vegetables and rice are placed on the spot where the body was buried, and the relatives of the deceased address the ashes of the consumed corpse thus, "We bid you farewell to-day, whatever money and rice you have acquired, leave with me." On the following day friends resort to the deceased man's house, and offer up a sacrifice of a fowl to the gods Tavae and Sangion. Liquor is freely partaken of, the good qualities of the deceased are recited, and much lamentation is made. When a married man dies, all his friends assemble and bewail their loss. Vegetables and rice are cooked, and placed on the left side of the corpse with a gourd or bottle of liquor. Amongst the hills a clan of Kuki, soon after death the corpse is washed with warm water, and covered up with a cloth. The principal deities worshipped are called Tavae and Sangion, to whom fowls, eggs, and spirituous liquor, are offered in sacrifice on all occasions of sickness, famine, or other affliction, which they conceive is the most method of averting evil and bringing their wishes and undertakings to a successful termination. The Kuki have no images or temples of any kind. The object of the Kuki incursions on the plains is not plunder, for which they have never been known to show any desire, but they kill and carry away the heads of as many human beings as they can seize, and have been known, in one night, to carry off fifty. These are used in certain ceremonies performed at the funerals of their chiefs, and it is always after the death of one of their rajahs that their incursions occur. The Kuki smoke dry the dead bodies of

the rajahs. After the death of a rajah, his body is kept in this state for two months before burial, in order that his family and clan may still have the satisfaction of having him before them. Should a rajah fall in battle by any chance, they immediately proceed on a war expedition, kill and bring in the head of some individual, hold feasting and dancing, and then, after cutting the head into pieces, send a portion to each village of the clan. This was done on the murder of the Kuki rajah by the Nimzai Naga race. This is considered in the light of sacrifice to appease the manes of the deceased chief. The Kuki have been accused of cannibalism, and in one instance the charge seemed substantiated, but they disclaim the imputation with much vehemence. Nothing comes amiss to a Kuki—the elephant, rhinoceros, and beef, being equal delicacies.

The new Kuki clans are presided over by rajahs and muntices, who decide all matters of dispute brought before them, and in such respect do they hold their rajahs that their word is law. One, among all the rajahs of each class, is chosen to be the Pindham or chief rajah of that clan. The dignity is not hereditary, as is the case with the minor rajahship, but is enjoyed by each rajah of the clan in rotation. The Kuki cultivate rice and cotton, but in a manner quite opposed to the system pursued by the Cacharee and Naga, the former of whom raise three crops of rice from the same land, and the latter four. The crop is not cut till November, whereas that of the other hill tribes is cut in August and September, their cotton is also very fine. Besides these they grow tobacco, and all the usual vegetables met with in the hills. The Kuki are described as short, muscular and active, with massive limbs, and are darker in complexion than the Chumia. The men are powerful and hardy but turbulently inclined. Having been accustomed to war in their own country, they are exceedingly well suited for soldiers, and those that have been enrolled in the Kuki levy at Silchar have turned out well. They are also particularly modest and decent, each man living with his family in a separate house. The widows also live in houses of their own (in this respect like the Naga and Cacharee), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. Underneath this they wear nothing, the whole body being bare, in which they consider there exists no want of modesty, as such has been their custom from time immemorial. The women wear a short striped petticoat, reaching from the

upper part of the stomach halfway down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a similar cloth to the petticoat wound round the bosom underneath the arm-pits. They wear then hair prettily plaited at the back, the two ends being brought round in front and tied just above the forehead in the form of a coronet. Like all hill people, the Kuki are most dirty in their habits, very seldom washing their bodies. The sites of the Kuki villages are well-chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between three and four feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.

The *Bongzu* or *Bonzu* are said to resemble the Burman, but to be less strongly built and not so well made. The Khy-eng, Kumi, Ky-an, Bonzu and Kuki vocabularies show that all are dialects of one language—*Cole Myth Hind*, p. 324, *J. H. Reynold's Embassy, Vol. of 1864 of B. A. S. KUL, HIND of Lower Himalaya hills, &c., a water course.

KUL, AR, Pins, HIND All.

KUL, KARN One who pays revenue to Government.

KUL, BRAG *Rhamnus jujub*.

KULA, the Portuguese name of a Ceylon tree, called in Tamil Kanugha. It is very heavy and close-grained, grows to about twenty-four inches in diameter, and eight feet high. The natives use it for general purposes, and for houses and vessels. It produces a fruit which they eat, and from which they extract an oil which is used as a medicine—*Edyc, Ceylon*.

KULA or Kulla, PLRS Hat.

KULA, a family, a race, a tribe. Properly the got of a hindoo is his tribe and Kula is the race. But Kula, among the Rajputs means a tribe, and corresponds to the Affghan kheil. Amongst the hindoos, there are three kinds of devata or deities to whom worship is given, the Gramma Devata or village god, the Kula Devata, the race or household or family god, and the Ista Devata, the patron or personal deity of individuals. Devata, Adhi-devata, or primitive deity, Sthana devata, local deity. The Aryan hindoo does not recognize the village gods of Southern India, but the non-hindoo Turanian races, largely worship them, and even many of those Turanian races who have been converted to hinduism, worship them. They are mostly shapeless pieces of wood or stone smeared with vermilion, and mostly represent evil spirits or devils. These are the Amma, Ammun and Amoor of the eastern and southern parts of the peninsula, and the Satwai, Bhairo, Massoba, Chamanda, Asia, Ai and Mani-yai of the northern and western parts of the peninsula, all of whom are recognized as causing harm to individuals. In health, they are neglected, but when sickness occurs, either to individuals, or as an epidemic, these spirits of evil are worshipped with much solemnity, and bloody sacrifices are made to them of goats and sheep and bullocks and buffaloes. Gotra or Kula, mean a family, and existed amongst Kshatriya, Vaisya as well as Brahmins. Gotra depends on a real or imaginary community of blood and then correspond to what we call families. No hindoo house is supposed to be without its

tutalvry divinity, but the notion attached to this character is now very far from precise. The deity who is the object of hereditary or family worship, the Kula devata, is always Siva, or Vishnu, or Durga, or other principal personage of the hindoo mythology—but the Griha devata or household god rarely bears any distinct appellation. In Bengal, the domestic god is sometimes the Saligiam, sometimes the tulasī plant, sometimes a basket with a little rice in it, and sometimes a water jar, to any of which a brief adoration is daily addressed, most usually by the females of the family occasionally small images of Lakshmi or Chandi fulfil the office, or should a snake appear, it is worshipped as the guardian of the dwelling. In general, in former times, the household deities were regarded as the unseen spirits of ill, the ghosts and goblins who hovered about every spot, and claimed some particular sites as their own. At the close of all ceremonies, offerings were made to them in the open air, to keep them in good humour, by scattering a little rice with a short formula. Thus, at the end of the daily ceremony, the householder is enjoined by Menu—3,90 “to throw up his oblation (bali) in the open air to all the gods, to those who walk by day and those who walk by night.” In this light the household god corresponds better with the geni locorum than with the lares or penates of antiquity.—*Wilson's Hind Th*

KULA ABBAAL? Laquis

KUL AALIN NAR, MALEAL Fibre of *Ficus mysorensis*

KULAB, a hill state north of Badakhshan, its chief claims a Grecian origin. See Kabul, Kush.

KULAK of Java, a grain measure = $77\frac{1}{4}$ catty

KULADHAN, HIND *Couocampus latifolius*.

KULAE, HIND *Phaseolus trilobus* Three-lobed bean. Sown like other native beans, *Riddell*.

KULAH ARKCHIN, HIND Embroidered caps

KULAR, a river of Seou and Nagpoie

KULARA, HIND *Viburnum foetens*

KULASAIKERA, Aiya Chakravarti, is found in Ceylonese history as the name of a great warrior who commanded an army sent by Kulasaikera, who is called king of the Pandians or people of the Madura country, which invaded Ceylon in 1314. The same name re-appears as if belonging to the same individual in or about 1371, when he is stated to have erected forts at Colombo, Negombo and Chilaw, and after reducing the northern division of Ceylon, to have fixed the seat of government at Jaffnapatam—*Kule Cathay, Vol II, p 422*

KULAT, HIND *Dolichos uniflorus*

KULAWAN, HIND of Smila, the small field pea, *Pisum arveuse*

KULBAGI, a tree in Canara, which grows to fifteen or twenty-five feet in height, and from twenty-four to thirty-six inches in diameter. It yields a close-grained, hard and durable wood, and is used by the natives at Mangalore and Honore for the keels and beams of vessels. It is of a dark colour, and is considered valuable—*Edye, Forests of Malabar and Canara*

KULBURGAH, a town in the Hyderabad dominions, in the centre of the Peninsula of India. It was the capital of the Bahmani dynasty (which commenced with Hassan Cao, A D 1347) and appears to have exceeded in power and splendour, those of Delhi, even at the most flourishing periods of their history. Kulburchah was central to the great body of the empire. It fell to pieces with its own weight, and out of it were formed four potent kingdoms, under the names of Visiapour (properly Bejapour), Golkonda, Berar and Ahmednuggur, each of these subsisted with a considerable degree of power, until the Moghul conquest, and the two first preserved their independency until the time of Aurangzeb. The five monarchs of these kingdoms, like the Cæsars and Ptolemies, had each of them a name or title, common to the dynasty to which he belonged, and which were derived from the respective founders. Thus, the kings of Kulburchah were styled Bahmani, those of Visiapour, were styled Adil-Shahi, those of Golkonda, Kutub-Shahi, and those of Berar and Ahmednuggur, Nizam Shah Bahani and Amud Shahi—*Rennell's Memoirs, p 1XIX, Ome's Historical Fragments, p XXXVI*

KULEAH, PERS Is a lobe exactly similar to, but worn over, an Al-Khalq

KULEEJA, HIND The liver

KULEEJEE, HIND, The pluck, viz, the heart, liver, lungs, spleen and kidneys of animals

KULIGAM, see Kashmir
 KULI KHAN, also known as Tamas Kul Khan, styled Nadir Shah, king of Persia. Invited by Nizam-ul Mulk, he invaded India in 1738, 1739, defeated and re-instated Mahomed Shah on the 7th June 1747. He was assassinated in Persia. Ahmed the Abdalla was his treasurer.

KULIMAH, AR The mahomedan creed. It contains five sections, viz

Kulma-i-Shahadat, the martyrdom-creed
 Kulma-i-Tumjid
 Kulma-i-Towhid
 Kulma-i-Iad-i Kufi
 Kulma e-Tyub or Ty-ccb

Kulma-i-Shahadat, means "I bear witness that there is no deity save God, who is the one and has no co-equal, and I bear witness that Mahomed is his servant and is sent from him"—*Herk* See Kalimah

KULIMITAN, TAM *Ocimum hirsutum*

KULIN a class of brahmins in Bengal, who are deemed by other brahmins to be of very pure descent and in consequence many are anxious to wed their daughters to them. As a result the Kulm men are great polygamists, and in the middle of the nineteenth century a pamphlet gave the following, amongst others

	Age	Number of wives
Bholi Nath Bannerjee	55	80
Bhugwan Chatterjee	64	72
Purna Chunder Mookerjee	55	62
Mordu Sudu Mookerjee	40	56
Titaram Ganguly	70	55
Ram Moy Mookerjee	50	52
Boido Nath Mookerjee	60	50
Shama Churn Chatterjee	60	50
Nobo Coomar Bannerjee	52	50
Ishan Chunder Bannerjee	52	44
Jodu Nath Bannerjee	47	41
Shib Chunder Mookerjee	45	40

Pundit Iswara Chandra Vidyasagar published a pamphlet, in Bengalee, entitled "Polygamy—Should it be abolished or not?" Most of these marriages are sought after by the relations of the guls, to keep up the honour of their families, and the children of these marriages invariably remain with their mothers, and are maintained by the wives' relations in some cases, a Kooli's father does not know his own children—*Word on the Hindoos, Vol III, p 268*

KULINJAN, DUK *Alpinia galanga*
 KULIT, MALAY Skin or leather
 Kaya MALAY Bark.

KULIT LAWANG, MALAY. The aromatic bark of a wild species of cinnamon, produced in abundance in Borneo. It is the *Cinnamomum kulitawan*, but other varieties are also found. It was probably this plant which induced the earlier voyagers to imagine that the true cinnamon of Ceylon, which this much resembles, was found in the Archipelago. The bark is well-known for its clove-like aromatic flavour, and for the essential oil it produces, but which is never extracted by the natives of Borneo—*Lowe's Sarawak*

KULIT MANIS, MALAY. Cinnamon
 KULJIKOON, GR, of Arabs *Colchicum autumnale*, *Linn*

KULKA SHINDA, BLNG *Cassia sophora*, *Linn*

KULKUL, AR *Cassia tora*, *Linn* Hab-ul-kulkul, HIND, is the *Cardiospermum halicacabum*

KULLA-BASALA-KIRE, TAM

KULONJI, HIND *Nigella sativa*

KULOOA, HIND Saccharum officinarum

KULOU-MIDVI, SINGH Calamander wood

KULRE, HIND *Picea webbiana*

KULSIAH, a Cis-Sutlej territory, has an area of 155 square miles, and a population of 62,000 souls, with a revenue of Rs 1,30,000 The family came from the village of Kulsiah in the Manjha

KULT, HIND *Dolichos uniflorus*

KUL TEAK, *Tectona grandis*, var A scarce variety of the teak tree, in the Wynand about Sultan's Battery It is considered superior to the common teak — *McIvor, M E*

KULTI, BENG, DUK, GUZ, HIND, MAHR Gram or Horse Gram, *Dolichos biflorus*, or *Dolichos uniflorus* *Dolichos biflorus*, the two-flowered bean, is grown in fields after the rains, and chiefly used for cattle, when given to horses it must first be boiled, they soon become very fond of it, and keep in as good condition as upon any other gram The Bengal gram or chenna, is the *Cicer arietinum*

KULU, TAM *Dolichos uniflorus*

KULU or Kullu, a hill state in the N W Himalaya This province consists of the mountain basin of the Beas, and the west bank of the Sutlej Sultanpuri, its capital, is elevated 4,584 feet The chain bounding the Sutlej on the west, is considerably higher than that on its east bank, and is crossed into Suket, by the Jalamu pass, elevated 12,000 feet The province of Chamba bounds it on the west, and the physical feature of Kulu and Chamba are similar The poorer Kulu people wear only a blanket, wound around the waist and one end flung across the shoulders and pinned across the chest, men and women often dress alike, but the long hair of the women is plaited in one tress The natives of Busahi, Sookeyt-Mundee and Kulu, in the Kohistan of Jhullundhur, have all sallow complexions and seem all of the same race In the hills of Kullu and Kangra are the "Goojura" and "Guddi races," who cultivate little, and keep herds of buffaloes, and flocks of sheep and goats. They claim certain beats of the forests as their "waisi," or ancestral property, subject to the payment of pasturage tolls The forests of the lower hills are apportioned out among the Guddi or shepherds of the snowy range, who, in the winter season bring down their flocks to graze In the same manner, the Goojurs with their buffaloes, take up divisions on a hill side, and carefully respect their mutual boundaries — *Cleghorn's Punjab Report, p 89, H f et T, p 203* See Ladak

KULUMB, the name of several towns in the south of India. One of these, is Colombo, the seat of Government in Ceylon, which has a population of 40,000 people It seems to have been selected by the Dutch from the proximity of the cinnamon gardens, for it has no other recommendation It was visited by the Portuguese in 1505 It capitulated on the 16th February 1796 It is on the west coast of the island, in lat 6° 56' N, long 79° 53' E, and exports largely to Europe Colombo is mentioned in Singalese histories

annals so early as A D 496, the name is said to signify a sea port. This and Cove-long, south of Madras, and Quilon of the western coast, are all the same name "Kulm" — *Horsburgh, Sur*

KULUMBU, BING *Colculus pulmatus*

KULUNG, HIND The Kulm fowl of the Bombay side of India, is the *G. cinerea*, the European crane, the *G. vulgaris*, *Pallas*. It visits India in great flocks, but wholly disappears in the breeding season. It is also called the karianch.

KULUNGI VER, MALLAL *Tephrosia purpurea*.

KU-LUNG-SOO, is an island opposite to Amoy, and commands the entrance to the harbour, for this reason, it was taken possession of by the British, at the commencement of the first China war, and retained until 1845 — *Sur's China and Chinese, Vol 1, p. 844*

KULUNJI, MALLAL. *Guilandina bonduc*, *Linn*

KULUNJUN, BENG *Alpinia galanga*

KULUSH-NUR, BENG *Panicum paludosum*

KULUTU, SANS *Dolichos uniflorus*

KULU KAY NATH or Jhol Ke Ghumay, a matrimonial ceremony

KULZUM or Colzum, the Red Sea or Arabian Gulf, represents the name of Clyma the ancient *κλυμα*, situate at the northern extremity of a bay, in long 63° 20', lat 28° 50', according to Ptolemy. But the sea of Culzum, says Hamd Allah Casvini, is likewise called Bahr Ahmar or the Red Sea. The Arabic adjective here used, Ahmar, must not be confounded with the proper name Hamen or Hamyan, bestowed by the Persian geographer on another gulf. Natives of India regard the Bahr-i-kulzum as the Caspian sea — *Ouseley's Travels, Vol 1, p 28*

KUM, a town of Liak-ajami, between Teheran and Ispahan

KUMAD, HIND of Panjab Sugar-cane

KUMAKUS, JAV Cubebs

KUMATA ? Diamond

KUMALA, the son of Asoka a legend regarding him proves the antiquity of the practice of placing eyes on the outside of buddhist temples. In a former birth, Kumala is said to have plucked the eyes from a Chaitya, for which he was punished by the loss of his own in the next birth, and because he then presented a pair of golden eyes to a Chaitya, he was afterwards born as the son of Asoka, with eyes beautiful as those of the Kumala bird, from which circumstance he obtained his name

KUMAON, a province in the N W Himalaya, bounded on the east by the river Kah,

which separates Kumaon from Nepal, on the west by the Alaknunda branch of the Ganges, and its western feeder, the Mundakini, on the north by the axis of the Cis-Himalaya, and on the south by the upper Gangetic plain. The elevation of the Terai at its base varies from 600 to 1,000 feet. The mountains of the outer ranges rise to 7,000 feet in many places, and in the interior attain to 10,000 feet, while still further north many rise to 20,000 and a few above 24,000 feet, and Nandadevi, 25,750 feet, the highest mountain west of Nepal, is in this province. The loftiest, not elsewhere in the Himalaya, are never on the axis of the chain, but rise still further north, and its great elevation may be judged of from the heights of the passes over it. Of these proceeding from the eastward may be mentioned the

Lankpur	18,000	Nini	16,800	Nina-tal	6,500
Lakhrur	18,400	Manna	18,760	Bhim-tal	4,000
Baleh	17,700	Alinora	5,560		

The vegetation of Kumaon includes fully two thousand flowering plants

The Dom of Kumaon is now, merely an inferior caste dwelling amongst the general population. In the north of India, under the Himalaya and in the Kumaon hills, the Dom were once a considerable tribe. They are still a numerous helot section of the population, being in fact the only inferior class and ordinary labourers as well as artisans. The Dom are very black with curly hair and altogether aboriginal in appearance, the Dom or Domai in the labour-market of northern India take the place of the Mhang of the south of India. The Dom of northern India are rope, fan, basket and mat-makers. In Oude and Bengal the Dom are sweepers, and carry dead bodies. The Dom are also musicians. The Mnasai Dom are mahomedans and called Mni and Mnasai. The Bodo, Dhimal and other tribes inhabiting the mountains and forests between Kumaon and Assam, are styled Tamlian by Mr Hodgson. He has done so on the supposition that all the aborigines of India, as distinguished from the Aryans, belong to one and the same stock, of which he considers the Tamlian of southern India the best representatives. And he has founded this supposition on certain general grammatical similarities which are common to the entire scythian group of languages — *Campbell, pp 16-124, Wils Gloss*. See Khas, Polyandry, Santalia, India, Rawat or Raji, Hindi

KUMAR, from the Tamil, also Sanscrit, for a virgin

KUMARA is the hindoo god of war, and is supposed to be identical with Mars, the Roman god of war. Kumara was the son of Janavi (Juno), as Mars was the son of Juno.

and, like as the Roman Mars was produced by the agency of Vulcan, so was Kumara by the hindoo regent of fire. Kumara has the peacock as his companion, and this bird was likewise sacred to Juno, and as the Grecian goddess is fabled to have had her evil drawn by peacocks, so Ku-mara (the evil-striker) has a peacock for his steed—*Tod's Rajasthan, Vol 1, p 596* See Ku

KUMARA DEVI, Kumara Gupta, Kumara Pala, Kumara Sen, see Inscriptions

KUMARI, or Komari, is a name of the goddess Durga, derived from the Tamil Kumai or Komai, and the Cape Comorin at the south of the peninsula of India is derived from this goddess. The author of the Periplus states that at the town of Komar, where there is a fort and a harbour, people came to bathe and purify themselves, for it is related that a goddess was once accustomed to bathe there monthly. Cape Comorin formerly ranked as one of the five sacred bathing places, and the monthly bathing in honor of the goddess Durga or Parvati is still continued, but the number of visitors to it is now very small.

KUMARI, CAN, of Mysore and Canara, this is the Ponnani of Malabar, the Punakad of Salem, the Chena of Ceylon, and the Tungya of Burmah, and is a rude system of culture followed in all the countries, wherein secluded tribes and others, clear parts of the forest. The kumari cultivators earn a cheap but wretched subsistence, and live in miserable huts, the Imlai and Kurumbai races on the Neilgherries, the Malai, also, on the Shevaroy, the Ponnani cultivators in Malabar, the kumari cultivators of Canara, and the Karen in Burmah, all endeavour to obtain a precarious subsistence by scattering grain after burning the jungle, and thus avoid, to them, the noisome restraints of civilized life. A hill side is always selected, and at the close of the year a space is cleared. The wood is left to dry till the following March or April and then burned. The ground is then sown with Italian millet, *Panicum itaheum*, as also with rice, *Oryza sativa*. In Canara, the seed is generally sown in the ashes on the fall of the first rain, without the soil being touched by a plough. It is fenced and weeded, and the crop gathered towards the end of the year. A small crop is taken off the ground in the second year and sometimes in the third, after which the spot is deserted, for 7, 10, or 12 years, until the jungle grows sufficiently high to tempt the tribe to renew the process. In Ceylon, the Chena lasts two years, and includes the culture of chillies, yams, sweet potatoes, cotton, hemp, &c. About the middle of the nineteenth century in Belal, the most

southern taluk of Canara, 25,746, or one-sixth of the rural population were engaged in it, but north of that taluk, it was carried on by the jungle tribes of Malai Kader and Mahilatai to the number of 59,500. Kumari was then prohibited in Mysore and under great restriction in the Bombay Presidency, and the Madras Government, in 1860, prohibited it in Government forests, without special permission, which they commanded to be given sparingly, and never in timber spots. Mr Cannan, a coffee planter of Wynad, says that in a spot thus treated, only wood regrows, unfit for any building purposes, and he had never been able to get coffee to grow on it—*Dr Cleghorn in Reports to the Madras Government, 1858, &c, Cleghorn Forests and Gardens of India, p 125*

KUM FERÖZ, a river, across which amir Azan Delemi, built the Bend-i-amir, or Bendameer. Aras, is a modern name of the ancient

Aiares, the Awaia of the Parians, now called Kumi Feioz. It takes the foot of the rock Istakhi. The snowy Aiaekun mountains are the same with those which persecuted so formidable a barrier to Alexander's progress, and by whose slopes he descended into Persia, in his advance on Persopolis. Towards the north of Armenia, runs the Aiares, with its numerous tributaries. This river which at its commencement, owing to its many affluents, bears the Persian appellation of Iazai, springs from the side of the Bui Gol, or mountain of thousands of lakes, about 30 miles south of Erzerum, and nearly in the centre of the space between the eastern and western branches of the Euphrates. Its course, from its first spring near Jebel Selhan, is almost N. E. for about 145 miles through Armenia, when it turns eastward, being then near the frontier of Kars. This proximity continues for 110 miles. The sources of the Aras and those of the north branch of the Euphrates are about 10 miles from one another. According to Ptolemy (lib vi, c 9) those sources are in the same mountain and 600 paces asunder. In modern times, the north-eastern districts, along the banks of the Aiares, intervening between Adiabian and Georgia, had been in general subject to the sovereigns of Persia—*Ptolemy, lib vi, c 9, Malacolle's History of Persia, Vol ii, p 212, Journal of the Royal Geo. Society, Vol vi, Part ii, p 200*. See Aiares also Boud Amai, Fars, Iran, Tigris.

 KU-MI also Ka-mi, a race in Aiaean, in lat 21° N, and long 93° E, in the valley of the Koladyn river, which disambogues at Alyab The Kumi assert that they once dwell on the hills now held by the Khyen. Their name seems the same as that of the Khuma of Chit-tagong. The Kumi of Aiaean chiefly inhabit the Koladyn and its feeders. The Khy-oung-tha and Ku-mi or Kumi-wi (properly Ku-mi), of the middle basin of the Koladyn, belong to the Bui-man family. Kumi, Khumi or Khum-wi, are of the same race, but their language has some peculiarities. It has been partially examined by Captain Latter, who says it is evidently cognate to the Rakham form of the Bui-man. The majority of its words however are non-Bui-man. The Kumi are fan, with small features.

The Khy-oung-tha and Ku-mi or Kumi-wi (properly Ku-mi), of the middle basin of the Koladyn

and likewise in some parts of the country, where this sad custom is not so generally prevalent among them, the practice of taking their deceased brothers' widows for wives as the mussulman Mapilla do. It is only in the Talooks of Needooganad, Cootanad, Chowghaut, and some parts of Vettutnad and a few adjoining spots in south Malabar alone, that a woman among the Nair is kept at the same time by two or three different men, who are, though, never brothers. It is, though, very possible that the Teeyer may have taken the idea from this latter error and themselves fallen into the other and more shameful one, or perhaps they observe the custom, as they in general are, as a document in its beginning shows, springing from Kummalar or the the Kummalar from them, though then then frequent intermarriages. The document calls them also Eeyoovahayer, a word equally low and contemptuous in Malabar and of the same meaning as the word Kummalar. Moreover, amongst the Nair of the whole of north Malabar (that is to say, from part of Coorombianad as far as Mangalore), though sometimes unchaste practices occur in their families, yet, I can most confidently assert, that the above abominable custom of one woman being kept by two or three men at the same time, never in ancient or modern time was once known. A Nair, there, will, though, occasionally, marry two or three women in succession, if the first or second prove barren or all the children born, die, or from any other like cause or domestic difference. Many of the Teeyer also of that part of the country do in some measure follow the custom of the Nair, but the Teeyette (Teeyer women), of the remaining Teeyer there, are notorious harlots and become the concubines of strangers of any caste or religion, and this without the least prejudice to their own caste, or any loss of esteem in society, on the other hand, any such act proved against any females of the other castes, subjects the person to excommunication from caste, banishment from society, and all religious advantages. The Teeyer females of south Malabar do not, though, so readily as those of the north, yield themselves to this disgraceful practice. Owing to the very great number of castes, and the peculiar and different manners and customs in various parts of the country, the superficial inquiries of most foreigners have led them into error and in their works they generally ascribe the same pernicious practices to all castes and parts of the country indiscriminately.

However the Nair, Teeyer and indeed all the other numerous castes of Malabar (including the Cochin and Travancore countries, these being indeed the most striking in this

respect), are in some way or other in a greater or less degree of error, and reformation therefore is indeed much needed among them all. It is, though, very lamentable to find them dormant in their original state of depression and not seeking for reformation rather than growing blindly proud of their vain and different castes and privileges, and ready to run any risk even that of hazarding their lives, only to preserve their castes"—*Madras Lit Soc Journal*, pp 52-4 of 1859

KUMYS, TARTAR MUG-TUM, Cina The

ordinary drink of the Tartars is 'kumys,' a

spirit made of mares' milk. Mares' milk has

17 per cent of solid matter and eight per

cent of sugar of milk, which renders it very

fitable to undergo alcoholic fermentation

They pour the milk into a large leather

vessel, and when they have got a con-

siderable quantity, beat it till it begins to

ferment like new wine. When it becomes

quite sour, they beat it again violently and

then draw off the butyric part. The fer-

mented whey makes a brisk sort of liquor,

with an agreeable almond flavour, very in-

teresting to those not much accustomed to

it. The Tartars also make, from goats' milk,

a kind of butter, which they boil and keep

for winter use in goats' skins, and though

they put no salt in it, it never spoils. After

they have taken off the butter, they boil the

curd again to make cheese, which they dry

in the sun, and which is as hard as iron,

these cheeses they put into sacks for the

winter store, and when the supply of milk

becomes scanty, they put this hard curd

into a leather vessel, pour hot water upon

it, and beat it till it liquifies, and with this

acid drink they have to content themselves

during the time of year so severely felt by

The Tartars live chiefly on

the book, and the produce of the chase — *Lines Christianity*, Vol. 1, p. 209, *Smiles' Chin. Misc.*

KUNAR, Pins Paperer commission

KUNAWAR is usually divided into Upper

and Lower Kanawar and includes the upper

part of the Sutlej basin to the borders of

Pit and Gage in Tibet. Its general direc-

tion is N E and S W. It has two parallel

bounding mountains. On the S E it is

bounded by the Cis-Sutlej mountains and to

the N W by the mountains of Pit. The

mountains which descend from the two

parallel bounding chains of Kanawar meet

lofly. They are crossed in the usual route

into Tibet by the Weing pass 13,200, by

the Kunang pass 14,500, the Kabinang in

the north, across the Cis-Sutlej, is 18,300

The Shini pass across the Cis-Sutlej leading

to Sina is 15,560, and the Kangang into

Pit is 14,800. The passes to Upper Pit are

more lofty. The bed of the Sutlej from 8,000

to 9,000 feet at the upper part of Kanawar,

descends to 4,000 feet in Lower Kanawar.

In Lower Kanawar, the preponderating

language is Hindi and is called Alim, but

the Bhot preponderates in Upper Kanawar.

The Labrang or Kanum and the Ladang or

Lappa are varieties of the Alim. In Sang-

num, the word 'Thibet' is used to designate

all variations from the regular form of speech.

In Kanawar, Buddhism degenerates in the

central districts and disappears in the southern,

where Buddhism in an impure form occurs

with local gods and irregular priests, every

hill having its deity or genius. Polyandry is

general in Kanawar from the higher classes

to the lowest classes, one family having one

wife, the elder brother being the more speci-

ally husband. It is called Koorpa. The tract

of country belonging to Buschun, lies on

both banks of the Sutlej, from lat 31° 15' to

32° 4', and from long 77° 50' to 78° 5'. It

runs in a N E and S W direction, and the

habitable part seldom exceeds eight miles in

breadth. The mean number of inhabitants to

a house in various parts of Kanawar is six

Polyandry, or a plurality of husbands, prevails,

also, in Chinese Tartary and in the hills tracts

towards the plains. Besides this drawback on

the increase of the population, there is another

peculiar to Chinese Tartary and the adjoining

countries, that is, celibacy which is professed

(n) *Sungla*, from Chetkol to Boonsoo of

Guthwal, is reckoned lower than Kamilan,

said to be generally bad, and is travelled for

six months. There are three passes to the

westward of Slatoo, the Jalo, Khenig

and Soongee, but they cannot be considered

in the Himalaya, being from 2,000 to 4,000

feet below the rule of conglutination. From

the above account given of the passes, it will

be seen that Mr. Fraser's saying there is no

great for the conveyance of merchandise

through the Himalaya, between Rampoor and

Budiegnath, is erroneous. The whole of

these fifteen passes are almost as good as the

Rampoor road, and many of them considerably

better. Most of the passes to the eastward

are said to be better than those mentioned

some of them are,

(o) *Shear Gali*, a difficult pass

(p) *Boorsoo* to Chinggan, much snow,

and rather difficult

(q) *Jannubec* to Chubung, high, but very

easy.

(r) *Kedriath*, said to be very difficult

(s) *Doomies*, from Budiegnath to Chu-

bung, the pass is high, there is much snow,

but the road is good, and is travelled by

loaded cattle

(t) *Birjee* pass, *Nettee* pass, *Dhimma* pass,

and *Joori* pass. These last four passes are

travelled by cattle

The passes leading from Kunawar to

Chinese Tairay on the eastward, are six in

number, all of which are practicable for

loaded sheep

1 *Chungakshago*, from Chetka to Nei-

lung, on the Jauke or Jannubec branch of

the Ganges, a lofty pass, probably not under

18,000 feet

2 *Koono* pass, from *Koono* to *Tunge*

3 *Tedoono*, from *Chaiung* to *Tunge*

These two roads are each about five days,

journey, without an intermediate village, and

like *Chungakshago*, cross a high flat piece of

ground

1 *Keobirung*, from *Nisue* to *Behni*,

five stages without a village. The road leads

up the *Taglakhar* river for 3½ days, and is

often difficult

5 *Gangtung*, from *Dahing* to *Behni*,

This properly speaking, is not a distinct road

6 *From Nungca* to *Shipke*, there are

two roads — 1st *Peemung*, the height of

which is only 13,661 feet. Part of this path

is very rugged in climbing the deep-worn gien

of the *Copsung* rivulet

There are four passes leading to *Speetee*

1. *From Pundibees*, } open 5 months

2 *Taree* from *Wangpo*, }

3 *From Laepe*, not ascertained

4 *Mancung* from *Soonggan*, open three and a half or four months

The *Jannawar* and *Tairay* are estimated the utilities of the pass, by the difficulty of breathing they experience in ascending them. Those who cross the outer chain, attribute the symptoms from which they suffer to the noxious qualities of a poisonous plant, but the best informed, who are in the habit of traversing heights where there is no vegetation, know well that they are produced by the height alone.

In *Kunawar*, the greatest height at which ice that requires water has been observed, is 6,600 feet. There are other kinds, which are not watered, that grow at 8,000 and 9,000 feet, but what is produced in *Kashmir*, which forms the chief subsistence of the inhabitants requires the fields to be laid under water, as in *Bengal*. In the higher parts cows are rare, and their places are supplied by the Yaks, described by Captain *Turner*, the male is called *Yak*. *Yag*, or *Xolh*, and the female *Bieemo*, the produce between them and the cow is common, the male being named *Zo* or *Zoto*, and the female *Zomo*. The *Yak* is strong and hardy, and like cold places.

The inhabitants of *Kunawar* are generally of a dark complexion, but good-looking, and some of them have ruddy faces, they are well made and muscular, and their stature is from five feet five inches to five feet nine inches; they are frank, active, generous, hospitable and highly honorable in their dealings. The people are fond of dancing and singing, and they have several annual festivals, in which they celebrate with a degree of joy scarcely known amongst other Asiatic nations. The greatest festival is called *Alentiko*, which prevails throughout the whole of *Kunawar*, it is held in the beginning of September, its origin is not known. All the people who are able to move leave their villages, and attend the nearest hill, they proceed slowly, making a circuit of several days, and this is a time of the greatest festivity, they adorn themselves with garlands and flowers, and sing and dance to the sound of music, which is much more melodious than the tunes of *Hindoo*-stan, they have all sorts of amusements, run foot and horse races when the ground will admit of it, perform feats of agility, feast, and drink. The religion of the mass of the inhabitants is *hindooism*, but they have no minute distinctions of caste. They either burn or bury the dead at some distance from the villages, where they erect grave-stones. Some of them profess the *Lama* religion, but that properly belongs to the *Tartars*. There are five different dialects spoken in

Kunawu, of which Gerard got vocabularies of three. With the exception of compounds, which are easily distinguished, the words are monosyllabic or dissyllabic.

1st The Michan, or common Kunawari, which is most generally used.

2nd The Thebuis kud, spoken at Soon-gum, is very different from the Michan, and the infinitives terminate in bung and pung.

3rd. The dialect used in Lubung and Kapum, in which the infinitives of verbs end in ma and na.

4th That spoken at Lee dung, where the terminations of the infinitives are en.

5th The Bhootea, or Tartar.

The Michan and Bhootea are distinct tongues, and the same may almost be said of the Thebuis kud. The other two are dialects of the Michan, and differ principally in the tenses of verbs, and cases of nouns.

The Tartar husbands have a custom

similar to those of some of the Scotch farmers, who plant the first corn cut three-fold, and fix it over the chimney-piece till next harvest, when it is renewed.

The Tartars use three ears of barley, which they paste outside above the door. At Nisung there was not a house in the village but was ornamented in this way.

The Tartars are called by the Kunawari inhabitants of the lower parts, Zhad, Bho-tea or Bhootea, and their country is often named Bhot and Bootut, the Tartars are

very different in appearance and manners from the inhabitants of Lower Kunawar, all those of Busehni were formerly under the

Chinese. The Tartars of Kunawar are not so stout as those farther to the eastward, and have less of the Chinese features.

The others are muscular, well-made, and tall, Gerard saw few under five feet ten, and many were six feet or more, then strong athletic forms were remarkably contrasted with the puny

diminutive figures of his attendants, several of whom were inhabitants of the plains. Their countenance is ruddy, and they have small

oblong eyes, high cheek bones, thin eye brows, and very few have either mustachios or

beards, which they admire much. Many of them, especially from twelve to eighteen years old, are extremely handsome, of a very

possessing appearance, and fine specimens of Tartar youth. The Kunawari people may be found as petty traders between Tibet and

Hindustan in almost every hill state between Nepal and Cashmere. The custom of several

brothers having but one wife amongst them is universal. In appearance the Kunawari are taller but less robust than the Garwari, and

the men on the whole are better-looking, but the women are plainer. The women generally wear a striped woollen blanket wound round

the body in such a manner that the plants are all behind. It is confined round the waist by a long belt, and leaves the arms and one shoulder exposed. It is fastened on the bosom with an immense brass brooch, weighing nearly a pound. They wear, like the men, a round woollen cap. The portion of Kunawar in the Sutley valley, from its turn

at the confluence of the Buspa river, is rather unproductive. Garpes are the chief agricultural produce. The inhabitants profess

to be hindoos, but their religion is highly tinged with the buddhism of Tibet. Garo, Gairo, Gaitop, Sui, Yoo-gai, or Guitokh,

for it is known by all these names, is a collection of black tents inhabited by pastoral tribes for six months. In winter, the Tartars retire chiefly to Begoon on the bank of

the river, two stages down the stream, and the Chinese governors reside at the foot of Tuzheegung, where they have houses. Garo

is the most famous mart for wool in Chinese Tartary, and there is a fair of 10,000 or 22,000 people in July, well attended by mer-

chants from Kumaon, Koonawu and Ladak, and sometimes from Yarkund. Wool, borax

articles are exchanged for the produce of the plains of India. The country about Garo

must be very elevated, since the only productions are prickly plants and small tufts of

short brown grass. It is the great summer mart of Gharu Khoisum. The pass over the

range between Garo and the Sutley is 19,200 feet above the sea. It is near the source of

the Indus river. The Garo river is the Sing-gu-chu or Indus, also called there Gar-

jung-chu, and there is no great eastern branch as some suppose. At Garo, according to

Moorecroft, it is a very insignificant stream. —*Moorecroft's Travels, Capt Gerard's Ac-*

count of Kunawar, pp 3 to 144 See Indus, Kashmir, Kulu, Khamra

KUNBA, Hind Lycoperdon gemmatum. KUNBALI, CAN Allium cepa, Linn.

KUNBI, a race amongst the Mahatras, engaged in cultivation. They are also the

main body of the cultivating population of Guzerat, where they are the chief owners of the soil, and though quiet and unpre-

tending, are a robust, sturdy, independent agricultural people. Throughout the Mahatras country, Belari, Nagpore and Khan-

desb, they are the principal agriculturists. Mi. Campbell considers them (pp 93, 94, 95) to be quite Arian in their features, insti-

tutions and manners, though their institutions are less democratic than those of the Jat and Rajput, and in the Mahatras villages they

have at their head, a Potail. Few of the Kunbi ever enlist as soldiers. Sivaji and his des-

endants and some of his chiefs were however of this race, but their followers, were drawn from the mawals of the western ghats, and latterly their armies were composed of the soldiers of fortune of every race. The Mahratta chiefs sprung from the people of Sattarah and Poouah, but Holkar was of the shepherd, and the Gaekwar was of the cowherd caste, while the Peshwa, who put the descendants of Sivaji aside were Konkanai brahmans.

The Kunbi of the Hyderabad dominions are wholly illiterate. Indeed no effort or attempt has been made to educate the people of the Hyderabad territories. Though education is making enormous strides in Berar and in British Maharashtra, there was no proper school met with in all the editor's journeys from 1866 to 1869 amounting to about 9,000 miles, and only occasionally a few lads were to be seen, children of foreigners, learning in a verandah, the elements of the Hindi or Mahratta. In that eastern part of the Mahratta country, the knowledge of reading or writing of any tongue was almost unknown. The Aijawna Kunbi reside in western India. Professor Wilson says, the Kulambi of Maharashtra and the Kalmi of Guzerat are the same people, and adds that the Kunbi claim to represent the pure Sudra of the Hindoo system. They are, for the most part, an industrious and respectable race, and, amongst the Mahratta, reckoned the rajah of Satara, and other descendants of Sivaji, among their caste. They are subdivided into an infinite number of classes, many of whom do not eat together, or intermarry.

The Kunbi, in Berar, allot themselves into eleven classes

Mali,	Haldi Mali,	Sagar,	Vindesa,
Full Mali,	Wanjari,	Atole,	Pazni
Jerat "	Gantadi,	Telale,	

With the exception of the Haldi Mali and Pazni, they have 101 vya whai, amongst each other, but not Beti vya whai, i.e., they eat with each other but do not intermarry. The Kunbi and Mali alone of the Sudra people are 834,588 souls in Berar. The Kunbi and Mali, eat flesh, drink liquor in moderation, and their widows may all re-marry if they choose, except those of the deshmukhi who follow the high caste custom. The Kunbi in the Oomraoti district, are 254,098 out of a population of 549,082. They are in eastern Berar, cultivators and farmers. This term, throughout the Mahratta country and Central India is applied exclusively to the cultivating class of Hindoo Sudra. The Kunbi form the stock of the people of the north-western parts of the Hyderabad territory and in the Hyderabad assigned districts. The western parts of the Hyderabad territories receive the rains of the south-west mon-

soon. The regur or Cotton soil is naturally very retentive of moisture and very fertile, and the country is well under cultivation, even the laterite hills are largely cultivated. The field crops grown are cereals, pulses and cottons. There are no cultivated grass fields or green forage for cattle, and these pick up the natural grasses, patches being left unploughed in the fields and by the roadsides. Throughout the Central parts of peninsular India, the cultivators regard hedges and trees as injurious to crops, which are unusually enclosed by the branches of thorny trees, consequently when the crops are off the ground the whole territory has a treeless aspect, and in many places fire-wood bears a very high price. There are great tracts however, which could be beneficially planted with trees. Kunbi women are stout, coarse and robust. See Kumbha, Kutch, Rajpoots, India.

KUNDUZ, a small town of 500 souls in a

marshy valley, about 40 miles south of the

Oxus It is surrounded on all sides by hills,

and is so very insubtrious that the proverb

runs, if you wish to die go to Kunduz The

chief of Kunduz, Mirad Beg, ill-treated

Alorcoroff and robbed him of money and

effects to the extent of 23,000 rupees In

1830, he had occupied all the valley of the

Oxus and ruled all the countries immediately

the edge of a precipice, to the terror of the

rider, they are not so quick in ascending

hills as the low country horses, but they

descend with double the speed, and endure

great fatigue The Ghooat, though a useful

animal, seldom carries any burden but a man,

the total number in Spiti is 295, they are

bied chiefly for sale They have two breeds,

one a small Ghooat, never above 12 hands

high, peculiar to the country, and the other

a large bried, from 13 to 13½ hands high, is

bought from the Chinese, and usually comes

from Choomoortee, for a Chinese ghooat two

years old they give a Spiti ghooat four years

old All are equally hardy and are kept out

the whole winter, except the yearlings, which

are housed During winter the ghooat live

on the roots of the stunted bushes, and are

very expert at escaping the snow from off

them with their forefeet The bried of

ghooat might be improved with a little care.

Many are killed during winter by wolves and

leopards —*Powell's Hand-book, Captain**Gerard's Account of Koonawur*, p 112

north of the Hindu Kush. It lies in a valley among the hills running from E to W about 30 miles, and from N to S about 10 miles, and the great mountain the Hindu Kush is visible, and Khulam, Herbah, Gori, and Indarab are subject to it. After passing Kunduz and Baghlan a traveller arrived at Andan (Andarab), where he says a city formerly existed which had altogether disappeared. Starting for the Hindu Kush (the name which he uses) they met with hot springs in which he washed, and lost the skin of his face in consequence. These were no doubt the hot springs of Snab, near where the Passes of Tul and Khawak diverge in the upper valley of Andarab, and which are mentioned by Wood as having temperatures of 108° and 124° Fahr — *Woods' Journey*, p 413. KUNG-FU-TZE, or Confucius, was the founder of the school of philosophy in China, which contains injunctions as to conduct, and may be termed the moral code of China, in which learning (*Wen*), courtesy, good breeding and propriety (*Li*), doing as you would be done by (*Shu*), sincerity in worship of the deity (*Tien*), are everywhere inculcated. He never claimed the possession of supernatural power, and invariably reproved all who attributed such to him. Every word he uttered has become, in China, a maxim, a proverb and an aphorism, and in the fact that his language is intelligible to every Chinaman at the present day, his inculcations are of greater power than the Latin or the Greek, both unknown to their descendants. Once he was asked, whether there were one word which represented all the duties of life, he answered "*Shu*," a word which Confucius and his commentators have explained to mean "as I would not that others should injure me so would I not injure them also." To seek the good of others equally with your own, is to fill a large portion of the field of virtue. At the time of his death, the number of his disciples was about 3,000, of whom about 72 were his more intimate associates. All his teach-

ing consists of a few simple words. One of his aphorisms, "*Chu Chung sun*," verbally, "Heed, faithful, sincere," mean that fidelity and sincerity are the paramount or primary virtues. Another is that Wen and Li make up the whole sum of human excellencies. "*Lun yü*," judge others indulgently, yourself severely. Confucius was a sage and a statesman. Among his other celebrated literary labours, undertaken in B.C. 190 and the following years, he edited the *Yih-king*, and appended those annotations which have given the work its subsequent value. What philosophical views may have been attached to the *Yih-king* of Wm-wang and Chou-kung by the contemporaries of Confucius, we know not. That work, together with the other three works edited or compiled by Confucius, viz, the *Shoo-king* and the *Le-ke*, constitute the whole of the ancient literature of China which has come down to posterity, and who have it only, as it was explained, arranged or modified in passing through his hands. It is well known that he expressly repudiated portions of it, as containing doctrines adverse to the views which he held and strove to diffuse. The names only of some celebrated ancient books, one dating from the times of Fuh-he himself, have been preserved. It is these circumstances which constitute the labours of Confucius, the commencement of a distinct literary epoch. Apart from the labours of Confucius himself, the permanent literary results of this, the first of the two great philosophic or literary epochs of China, are contained in the collection of works called the Four Books, composed by different members of the school which he founded. The last contains a record of the ethical and political teachings of Mencius, (Meug-tso) who died in B.C. 317, and closed the first epoch. The Chinese people are in nowise prohibited from worshipping in the Buddhist and Taoist temples, in other words, they may regulate their purely religious life by the tenets of these, or indeed of any other sect. But where Taoism or Buddhism would leave the region of religion, and, in the form of philosophy or morality, extend their direct influence into the domain of the social science and art, there Confucianism peremptorily and effectually prohibits their action. Not only are the national legislation and administration formed exclusively on Confucian principles, it is by them also that the more important acts of the private life of the Chinese are regulated, as for instance marriages. The cause of the prevalence of christianity and mahomedanism in China, in spite of discouragements, lies in the fact that Confucianism says little or nothing of a supernatural world or of a future existence. Hence

respect The house resembles a private dwelling of the better class—*American Expedition to Japan*, p. 189

KUNGU, a peculiar kind of lounge in great request among the ladies of Sindh who keep it in a little ornamented box—*Richard F Burton's Sindh*, p. 392

it leaves almost unsatisfied those ineducable cravings of human nature, the desire to reverse and the longing for immortal life, That it has, notwithstanding its want of these holds on the human heart, maintained itself not simply in existence, but as the ruling system, is a fact that must, as soon as it is perceived, form for every true thinker a decisive proof of the existence of great and vital truths in its theories, as well as thorough soundness and wholesomeness in the practical rules which it dictates By Chinese philosophy, must be understood Confucian philosophy, and by Chinese morality, the moral principles rooted in that philosophy The works of Confucius, which are used by his followers, are called the "five canonical books," and are held in the greatest veneration, the whole tenor of these works indicate morality and sound political views, one political extract must suffice "Let those who produce revenue be many, and those who consume it few, let the producers have every facility, and let the consumers practise economy, and thus there will be at all times a sufficiency of revenue" He was born B C 552, and died B C 479, aged 73 years He and Lao Tze were contemporaries, Lao Tze was the founder of the Taoist or Reason sect He was a hermit, an ascetic, who discouraged acceptance of public employment He made reason the ground-work of his doctrines, and they had much to recommend them, but his teachings have merged into gross idolatrous rites, the study of astrology and necromancy, fanatical observances, self-inflictions, such as dancing in flames, mutilating the body, practising abstinence and seclusion—*Bowring, Snr's China and the Chinese, Vol II, p. 146* See China, Kung-Fu

KUNKUR, a fresh water limestone, apparently peculiar to India, of very recent origin, some of it even now forming in the soil. Generally found in nodules, or small pieces. Its name is derived from a Hindustani word, meaning nodule. There are two varieties, the red and the white, the red differs from the white, solely in containing a large proportion of peroxide of iron, the white consists of carbonate of lime, silica, alumina, and sometimes magnesia and protoxide of iron. Kunkur is also deposited by calcareous waters abounding in infusorial animalculæ, the waters of the annual inundations are rich in lime, and all the facts that have come under observation appear to indicate that this is the source of the Kunkur deposit, which is seen in a different form in the Italian travertine, and the crescentic nodules of the Isle of Sheppey and of Boulogne. Kunkur is a limestone, mostly nodular—always fresh water and

recent—in most cases in the act of being formed under our eyes. It is sometimes found in thick stratified beds like the travertine near Rome, and seems in this case to have been formed by calcareous springs more generally it is met with in clay or alluvial soil, in the shape of small pieces from the size of peas or filberts to that of the hand. In the blue clay which stretches along the Indian shores, it is found in vast abundance generally assuming the most fantastic forms—indeed it abounds in every rice field and open soil all over the country. The more recent varieties seem to be formed by the agency of the rains—when the earth abounds with vegetation, the tepid waters are charged with fixed air and dissolve the lime prevailing in the soil everywhere around,—the mineral being again thrown down as the advancing season dispels the excess of gas. It in this state absorbs the clayey matter around and cements it into kunkur. This is collected by the lime-burner, placed with firewood in small-sized conical kilns, and burnt in the usual way. It contains 72 of carbonate of lime, 15 of sand, and 11 of clay and oxide of iron, but usually about 70 per cent of carbonate of lime, about 2½ per cent of carbonate of magnesia, a trace of oxide of iron and 10 to 20 per cent of sand and clay. Mixed with half its weight of river sand it makes an excellent mortar, burnt in pieces of a cubic inch or so in size, and then powdered without slaking, it forms a first-rate water cement, setting in a few minutes, and becoming as hard as stone. Everywhere the finer varieties of kunkur are burnt with charcoal all throughout the country, in neat pigmy-looking kilns, 2½ feet high and about as much in diameter at the base. These hold about a cubic foot of material, or about 36 lbs of charcoal and kunkur in equal parts. When burnt, it is slaked and then made up into bricks, which are sold in the bazaar for the purpose of whitewashing. The ordinary Indian cement is chunam in its various forms the only Indian building materials, which differ materially from those of the rest of the world are laterite, concrete and kunkur.—*Col Sykes, Lond. KUR, PERS Cyius

KUR, occupying the Gawilghur range of hills are not Gond, but a branch of the Kol family

KUR, also called Mursi, a hill tribe with a language quite distinct from the Gond being to the N W and W of the Mahadeva hills

The close relationship of the Kur and Sonthal and their separation from the Dravidian, are illustrated by a few examples —

English	Kuri	Sonthal or Kol	Gond dialects	Tamil	Telugu
Dog	Sita, Chita	Seta	Nai	Nay	Kukka
Lar	Lutur	Lutur	Kavi	Kadu	Chao
Hair	Op, Up	Up	Muir	Mayir	Yentekalu
Nose	Mu	Mu	Muku	Mukku	Mukku
Belly	Lai	Lai	Pir	Wairu	Kirpu
Fire	Singal	Singal	Narpu	Nerappu	Neppu
Water	Da	Da	Fanni	Fannir	Niru
House	Ura	Ora	Ron	Vidu	Illu
Star	Fpal	Ipil	Sukum	Iarakei	
Man	Koro		Muwai	Maudau	Manshi
Two	Barku	Bara	Rand	Irandu	Randu
Three	Apkor	Apia	Muid	Mundru	Muru

The Kur or Mnsi and the Koiku or Kuiku to the north-west and west of the Mahadeva hills are, in language, at least, quite distinct from the Gond tribes

From the geographical distribution of the Kol and Dravidian languages, Mr Hisslop asks, "May we not conclude then that while the stream of Dravidian population, as evidenced by the Brahui in Baluchistan, entered India by the N W, that of the Kol family seems to have found admission by the north-east, and as the one flowed south towards Cape Kumari (Comorin) and the other in the same direction towards Cape Ronnina, a part of each appears to have met and crossed in Central India" This hypothesis, a Reviewer remarks, rests on the presence of the Brahui in Baluchistan a fact, however which is not inconsistent with the supposition that the Dravidian tribes may also have entered India from the north-east, or even across the Himalaya, as the Kanwarai, Newai, Chepang and other tribes have done, while the Kol tribes were an offshoot from a latter horde, the main body of which entered the eastern Peninsula The Brahui may have been driven westward from the upper Indus by the invading Aryans

KUR, or Kai, a term in use amongst the

Mahratta and Nani races Many of the principal Mahratta families derive their name from a compound formed from that of the village where they were born, and the substantive Kui, which signifies an inhabitant, as Nimbalkui, Pattun-Kui, &c Kur, in Malkali, means a class, a party The people of Malabar, from the rajas and brahmins to the lowest races, are divided into classes, the Cheuata Kui, the fighting or ruling class, and the Panniyui Kui, the civil and laboring class, then usages differ materially, and the distinctions are carefully preserved — *Malcolm's Central India, Vol 1, p 112, Wilson's Glossary*

KURBA, the coal-bearing (Dumda) beds

of Kumbi extend for about forty miles to the

eastward, as far as Rikub in Udiput

(Oodepore). They also extend far to the

south-east towards Gangpur, and to the north-

wind towards Singur, and in all probability

are continuous, or nearly so, with the deposits

of the same nature known to occur in these

districts. Mun Pat and the neighbouring

hills, and all the country on the road from

Mun Pat through Chindagurh and Jashpur

to Rikub, consist of met morphic rocks with

the exception of a crop of trap and laterite on

Mun Pat. Indications of the existence of

coal seams, were afforded by the occurrence of

fragments of coal in the river, especially

in the Mand, where we found a few seams

near Chitra, twelve miles west of Rikub and

nearly thirty east of Kumbi. Two or three

miles east-north-east of Chitra, but they are

only from a foot to 18 inches in thickness.

In a small stream, the Koba Naddi, which

runs south of Chitra, one seam about three

feet in thickness is seen near the village of Ten-

dumuri, more than a mile south-east of Chitra.

It is nearly horizontal, lying a very low

irregular dip to the west or south-west. Part

consists of fine coal, the remainder is shaly.

The only seam examined from which it is

possible that a supply of useful fuel might be

obtained, is exposed in the same stream farther

neater to Chitra, being about a mile from that

village, close to the boundary of the village

of Tendumuri, appears to be of considerable

thickness, perhaps 20 feet, and the lower

portion appeared to be fine in places. The

dip is about 15° to the north-north-west

Lieutenant Sale, found a seam of coal about

four miles north-west of Rikub in a small

stream running into the Mand, and this may

be the source of the blocks in the river bed

Several coal localities are north of Kumbi and

Udiput. The last of Jashpur told that coal

occurred in his territory in the Khurea country,

twenty-four miles north-west of Jashpur

Magar, about one hundred miles or rather

more west by south of Ranchi.

KURBAN, Malay. A buffalo

KURBAN, Arab, Pers, Hind. A

sacrificial rites amongst the Jews, allusions to

such are to be found also in the New Testa-

ment. This occurs as the word Curban, Mark

vii, 11. But ye say, if a man shall say unto

his father or mother, It is Curban, that is to

say, a gift, by whatsoever thou mightest be

promoted by me, he shall be free. This word

is equivalent to Sdgur or Tussudoo or Eid,

and is often used by men or women addressing

any person. The word is Arabic,

derived from the Hebrew, and allusion to an

approaching to God, and means a sacrifice,

victim, an offering, an oblation, for which

also, we have the Greek *kuprotos*. The other

words, in the Arabic, Sdgur, Eid and Tussu-

door mark the continuance of the sacrifici-

rite Sdgur, properly Sdgur, from the

Hebrew, means thus, propitiatory offerings

and sacrifice. The words are continued into

Indusian, in Sdgur-jana or Sdgur-hana, to

become a sacrifice for the welfare of another,

and Sdgur-karim, to sacrifice for the welfare

of another. Allusions have to great Kur-

ban or religious festivals, the Baki-Eed, called

also Eed as Zoha, also Eed in Kumbi, which

is held on the 10th Zu ul Hay in commemora-

tion of the offering up of Ishmael by Abraham.

The other is the Eed ul Fitr or Ramzan Eed,

held on the 1st of Shawal at the close of the

Ramzan fast. The three lesser Eed are the

KURD This people is supposed by Dr Latham to be identical with the Karduchi of the Anabasis. Meiv is held by the Kurd Nomade Kurd tribes, occasionally occupy the elevated valley of Dasht-i-be-Dowlat, N W of Moostug, at the head of the Bolan pass. On the west of Saharawan the country is held by pastoral tribes, the Supheria and their branch, the Rodani, Kurd of the Dasht-i-be-Dowlat. Sheikani of Khad, and the Raisani of Dolai and Khanak. The Dasht-i-be-Dowlat in the northern part of Saharawan and west of the Bolan hills, is about 15 miles in length and breadth. In spring it is covered with lovely flowers and grasses, and is then covered with the toman of the Kurd, who return to Meiv after the harvest of autumn, and then predatory bands of Khaka roam over the ground and attack travellers. The Kurd possess the Dasht-i-be-Dowlat and Meiv, also Tikani in Kaeh Gandava. The Kurd of the Dasht-i-be-Dowlat are supposed to have come from the west in the train of some conqueror and settled where they now are. The Turkoman is a shepherd and neatherd, the warlike Kurd is pastoral and nomade, the Georgian is largely endowed both physically and mentally, but are less tenacious in purpose. Amongst their families are treasures of female beauty. The Kurd are distributed over the western part of Asia much after the manner of the Armenians, and there are whole tracts of country where the Kurd and Armenian villages alternate. The nucleus, however, of the Kurd family lies south of Armenia, along the mountain-ridge which separates Asiatic Turkey from Persia. There are, also, a few of the Kurd within the Russian frontier. Some pay allegiance to both Persia and Turkey, but there are more which are independent of both. Some are well within the Turkish, others as well within the Persian, frontier. They all speak the Persian language, but their feelings of nationality are local and tribal rather than general. Their habits are rude and predatory. They are hardy, brave, rapacious. The costume of the Kurd is,

with the wealthier classes, entirely oriental, that of the people varies from it a little. The men wear wide linen trousers, and over them a shirt confined by a girdle, as well as sometimes a woollen jacket without sleeves, made of stuff of only a hand's breadth wide, and sewed together. Some, instead of white trousers, have brown ones, which are excessively ugly, and look like sacks with two holes to thrust the feet through. Their chaussure consists of boots of red or yellow leather, with large iron heels, or sometimes shoes made of coarse white wool, and adorned with three tassels. On their heads they wear the turban. The women have the red and yellow boots, with iron heels, and loose trousers like the men, but over this they wear a long blue garment, long enough to reach half an ell below the feet, but which is tucked up under the girdle, and a large blue shawl hangs down below the knee. Round their heads they wind black shawls in the turban fashion, or they wear the red fez, with a silk handkerchief wound round it, and on the top of that a sort of wreath made of short black fringe, put on like a diadem and leaving the forehead free. The hair falls in narrow bands over the shoulders, and from the turban hangs a heavy silver chain. It is not easy to imagine a more becoming headdress. Girls and women go with their faces uncovered, and exquisitely beautiful girls with really noble features, are to be seen. Their complexions are brown, and the eye-brows and eye-lashes black, or dyed with henna. Nose-rings are only seen among the women of the very lowest class. A Kurdish writer, in his preface to a history of his native country, states that authors differ regarding the origin of the Kurd. Some believe them to be descended from those persons who were saved from the cruelty of Zohak. The prisoners informed Xenophon, that the Carduchi who inhabited the mountains along the Tigris, through which he desired to march, "were a warlike nation and not subject to the king, and that once the king's army, consisting of one hundred and twenty thousand men, penetrated into their country, whence not one of them returned, the roads being hardly passable." There are some Arabian tribes in this tract of country, and several of the principal Kurdish chiefs boast a descent from families of that nation. The historian of Kurdistan includes all the province of Laristan in that country, which, according to him, extends to the Persian Gulf. The same author states, that Kurd signifies "valiant," and that Roostum, though born in Seistan, was of a Kurdish family. He says, that the common reading of Roostum-e-Goord, in Ferdusi, is erroneous, and that it should be Roostum-e-

Kuird, or Roostum the Kuird—*Latham's Nationalities of Europe*, Vol II, p 131, *Sunnets' Lady's Voyage*, p 212, *Malcolm's History of Persia*, Vol II, pp 207-208, 240

KURD? Galepura aboira

KURDEH or Cuiidee, Hind Safflower

KURDISTAN The country of the Kuird, is a district in the east of Persia, though the Kuird are also found in the west of Persia, in Asia Minor and Syria. They own a partial subjection to the king of Persia. The Kuird are mahomedans in creed. They are wily and bony in make, with very prominent features, elongated faces and dark skins. They are divided amongst each other into tribes, called the Dubbass, the Jaf, Beb, Sindjari, and in the south, the Lak, Fali or Bakhtiyari tribes, in the mountainous parts south of Kirmanshah. Its limits comprise the greatest part of the territory of the Kuird or Carduchi. This extensive tract is divided into four districts, two of which are Kirmanshah and Aidelan. The Kaldani people, according to their own account, were converted to christianity by St Thomas and two of the seventy disciples. By means of a rigidly enforced system of exclusion, they have preserved their freedom as a republic, then religious tenets and simple liturgy have also remained nearly unchanged since the Gospel was introduced into then secluded valleys. The remarkable country of the Kaldani stretches eastward of the district of Amadiyah, between lake Van and the Taurus. In the interior, are terraces cultivated with rice or other grains, with a succession of deep, dark, wooded valleys, between the high and rugged Alpine ranges of Julamerik, the Jawri Tagh, and other chains, which rise to the uplands, situated beyond the back-bone of Kurdistan. A production in ancient Assyria is the celebrated manna, (Exod xvi 15, 31, 33 and 35, Numb xi 7,) which, in Turkish, is most expressively called Kudrat-al-bwasssi, or the divine sweetmeat. The Kuird not only eat manna in its natural state as they do bread or dates, but then women make it into a kind of paste, being in this state, like honey, it is added to other ingredients used in preparing sweetmeats, which, in some shape or other, are found in every house throughout the east. Goats and sheep are met with in large flocks, and the wool of the latter is particularly good, provided it is carefully washed. The buffalo is not so common as in the plains, but oxen and cows are abundant, and of full size, they are used almost universally for gaily light built teams, chiefly of coin, which is balanced over the back of the animal in a stout double bag, made of thick woollen cloth. Of the population of Kurdistan, Hind Safflower

tion of Kurdistan it is difficult to speak, with any degree of precision, but it appears to be thickly peopled, considering the mountainous character of the country, such is certainly the case in those parts which have been examined by Mr Rich, Major Rawlinson and preceding travellers. The Sekki, Nuri-ud-din, Shinkis, Gellates, Bulbasi, Jass, Mikris, together with the Bahdiani tribes, under the prince of Amadiyah, and Rowan-duz, make up an aggregate of about 400,000 souls, to whom must be added a large nomade population, and the numerical strength of many, as yet, unvisited districts. The number of the Chaldeans and Nestorians proves to be much under the estimate made previous to Mr Ausworth's visit to their country, but still, it may be presumed that the population of Kurdistan, west of Zagros, amounts to about 2,500,000, or, perhaps, rather more, and a smaller number would scarcely bear a fair proportion to the horses and other cattle which are known to exist in the country. The Kuird are a frontier population, some being within the Turkish, others within the Persian boundary, their name is the same as the ancient Godicæ, and they are the Kair-uchi. They are mostly mahomedans, and its southern members are the Lak, Feli and Bukhtiyari tribes who dwell south of Kirmanshah. The Sindjari, are a predatory tribe of Kuird depending upon Persia, who alternately inhabit the mountains of Kirmanshah and the plains upon the Turkish frontier. They do not number more than 2,000 families. Mr Rich tells us that the people of Kurdistan are divided into two different races the one consisting of the tribes, the other of the peasants or Goorani. The Kuird, like the Persian, eat slowly, and talk between whiles, their dinner lasting as long as ours. They have a great objection to the venous mode of feeding practised by the Turks, among whom the dishes are put down separately on the table, and taken off after a few mouthfuls have been snatched by the guests. This seems to be the old Tartar fashion, while the Persians appear always to have been deliberate at their meals. Haz alludes to this when saying, "these wanton damsels have snatched away quiet from my heart, as Turks do a tray of plunder," the different breeds of Arab horses do not breed well in Kurdistan though the sire and dam be true descent Nedji, the colts never turn out anything but very common horses. The Jaf tribe possesses a breed of small stout horses, much celebrated for their strength and activity. There are Kuird in the Dashi-ibe Dowlat, Merv, and part of Kutch Gun-daya, who are divided into six tribes or clans.

Lower Kurdistan is the name given to that part of the pashalik of Baghdad which lies to the N E of the Tigris and which comprised the chief part of Assyria, and seems to be the land of Kni spoken of in the second book of Kings and in the prophet Amos. In Kurdistan, Dr Wolff had long conferences with the Jews, whom he found possessed of much learning. He spoke with them in Hebrew and Chaldean, which they mix considerably with Turkish. The ordinary, as well as some of the more precious metals and valuable stones, are found in the eastern provinces, and also in Azerbaijan, copper and other ores abound in Kurdistan, the Julamerik, and other mountain districts. Mr Rich procured from Oman Aga a list of all the districts of Kurdistan, commencing from the Bagdad frontier. Diwanda, it commences four hours from Kifri Dillo, Zenganeh, Kuom Zuu, are so called from the people who inhabit the district. Sheikhhan, Nara and Tehematehemal, Tehia Sour, &c, the Green Mount, Kewatehemala, Shuan, Schubook, Kulaa, Eskei, Kulau, Sewka, Gird Khaber, Baziau. This finishes the outer line to Sulmania, Karadagh, is bounded by Dillo and Zenganeh on the west and north, on the south it goes to the Diala. The pass of Ban-i-kilan on the Diala is in Karadagh. Karadagh is a large government, and is subdivided into several districts, that in which Ban-i-kilan is situated is called Dizzinoesh, in which is also Gewiakalan. Waimawa, Sertehina, in which is Sulmania, Soordash, Mount Goodroon is in this district, Meigeh, Pizhdei. Between Meigeh and Pizhdei flows the river of Altoon Kupri, whose source is at Lajan, four or five hours west of Suouk Boolak. Ghellala, Shinek, Mawutt Aalan, Siwell, Seraou, Mnawa, bounded by Mawutt, Siwell and Aalan. Balukh Gapnou, Sheheibazai, Berkeou, Seitchik, Kulambar, Hallehjee, bounded by Kulambar, Juauoo, Waimawa and Zehai Shemuan, a mountainous and desert district on the other side of the Diala. Tehowtan, written Tchesta, it adjoins Kizzeljee, Terratool, Kara. The Bakhtiari, are wandering pastoral tribes of Kurd, who take up their warm winter quarters in Arabistan, at the head of the Persian Gulf, but, in summer, travel northwards amongst the mountains of Kirmanshah. The inhabitants of Luri-Bazurg are now classed under the general title of Bakhtiari, but originally this name merely applied to a small tribe, one of the twenty-six distinct clans, among whom the province was divided. The Bakhtiari, with their dependences, numbered recently 28,000 families. They comprise exclusive of dependences, three divisions—the Haft-Lang, the Chahari-

Lang and the Dinarum. The Bakhtiari tribe who inhabit the mountains of Luristan, west of Irak between Shuster and Ispahan, and from Shuster to near Kirmanshah, often wander to other parts. They have often attacked Ispahan, Nadir shah alone having almost reduced them. They are named Πασιλογοι by Strabo, and Patiskharis in the cuneiform inscriptions. Their manners and language have scarcely changed since the days of Cyrus. They retained their independence till about 1840, when they were conquered and decimated by the Persian government, and their chiefs kept in perpetual imprisonment at Teheran. The country is famed for the expedition of Alexander and his successors. The country south of the great chain probably formed the site of the ancient Elam of Scripture, a powerful nation in the early days of Abraham, before the kingdoms of Assyria and Babylon rose into notice in the east—*Euphrates and Tigris*, Col Chesney, p 128, *Dr. Wolff's Bokhara*, Vol 1, p 5, *Rich's Residence in Kurdistan*, Vol 1, pp 110, 126, 272, *Baron C A DeBode's Travels in Luristan and Arabistan*, p 522, *Ferner's Caravan Journeys*, pp 8-500, *Malcolm's History of Persia*, Vol II, p 165. KURKU, or Kur, a race who occupy Nimai, the Gawilghni hills of Berar, Kalibhat, the western Satpura, in the hills about Gawilghni near Ellichpur and northwards towards Indore Major Keatinge describes them as a tribe of Gond, but that is a mistake, they are not Gond, but a branch of the Kol family The Kurku and Gond keep themselves separate, and they each have a separate language Voysey had mentioned that the Gond consider themselves as a distinct tribe from the Kur, and neither eat nor intermarry with them Their language has a great resemblance to that in use by the Lurka Kol and Santal None of these correspond with the words of the Davidsonian tongues The Kurku language is identical with that of the Kol There are 28,709 of this race in Berar along with the Andh, Gond and Kolamb, they occupy the Malghat and the southern skirts of its hills These four races all resemble each other in appearance, though they each speak a different tongue, and in their features they differ from the villagers Many of the Kurku occupy the Malghat, a strip of wild country

along the Wundah river, where, also, dwell the Gond, Raj Gond, Agamunde Gond, Bhoya Gond, the Paidhan or bard of the Gond, the Ballai or Gond Pariah, the Nihal or outcaste of the Kurku, the Muge fishers and quail-catchers, numbering in all about 34,650 souls of the aborigines, along with whom are 5,196 hindos — *Campbell*, pp. 41-2

KURKUM, HEBREW, PERS *Crocus sativus* *Linn*

KURKUNI, HIND, also Tulikukai of Hazara, *Gudenia tetrasperma*

KURKUTCHIA, a range of mountains which separates the valley of Kabul from the plain of Jellalabad, and connects the Hindoo-Kush with the Sufed-Koh The altitude of the range varies from 1,000 to 2,000 feet above Kabool, and the highest part, in 31° 25' and 69° 30', is 8,000 feet above the sea There are four routes over this range, practicable only for a man and horse, at Lattabound Pass, 4,000 British troops were destroyed in their retreat in 1842 Cold, intense during winter, the frost splitting the rocks into huge fragments

KURMA, HIND *Phoenix dactylifera*

KURMA, HIND A tortoise

KURMA, or the Tortoise incarnation of Vishnu, was the second grand avatara of Vishnu, in the form of a tortoise, and evidently refers, like the first matsya or fish avatar, to the flood For the purpose of restoring to man some of the comforts and conveniences that were lost in this flood, Vishnu is fabled to have become incarnate again in the form of a tortoise in which shape he sustained the mountain Mandara, placed on his back to serve as an axis, whereon the gods and demons, the vast serpent Vasoky serving as a rope, chained the ocean for the recovery of the amrita, or beverage of immortality And the result of the operation, that chiefly distinguished this avatara, was the obtainment of fourteen articles, usually called fourteen gems, or chatvareda ratna, in common language chowda ratni These fourteen jewels are thus enumerated 1, the Moon, Chandia, 2, Sri, or Lakshmi, the goddess of fortune and beauty, 3, Sura, wine, or Suradevi, the goddess of wine, 4, Oochisiava, an eight-headed horse, 5, Kustubha, a jewel of inestimable value, 6, Parijata, a tree that spontaneously yielded every thing desired, 7, Surabhi, a cow similarly bountiful, 8, Dhanwantara, a physician, 9, Iravati, elephant of India, with three proboscis, 10, Shank, a shell conferring victory on whoever should sound it, 11, Danusha, an unerring bow, 12, Bikh, poison, or dings, 13, Bhembra, the Apsara, a beautiful and amiable woman, 14,

the districts and are found mostly in rich black soil tracts. It is a common saying that no Kurmi can exist where he is unable to raise rabi crops. They are a most peccable set of men and have always been remarkable for their loyalty to the ruling power. They are very tenacious of their ancestral holdings, and seldom renounce rights in land unless under the greatest pressure of circumstances. A Kurmi is rarely known to follow any other profession, but that of agriculture, whether as cultivator or farmer, and the real secret of their unflinching success in agricultural pursuits generally does not appear to lie so much in their reputed superior skill, as in the fact of women as well as men engaging equally in fieldwork, while the women of several other agricultural classes are precluded, by prejudice or custom, from assisting the male population in their labours. Scarcely inferior to the Kurmi as agriculturists, are the Lodhi who, however, are the opposite of the former in natural temperament, being turbulent, revengeful, and ever ready to join in any disturbance. They make good soldiers, and are generally excellent sportsmen. Both among Kurmi and Lodhi, there is no distinction between mistress and wife, provided always that the former is of the same caste as the husband, or better still the widow of an elder brother or cousin, however far removed. The children born from such connexions are on an equal footing as regards inheritance of property, whether personal, real, or ancestral, with those born from regularly married wives. Large numbers of the Gond and Ahir too are agriculturists. They are the only tribes which inhabit the wooded and hilly portions of the districts, and are generally poor, of unsettled habits and indifferent agriculturists. In the plains they are principally employed as farm-servants. In 1866 the Rajput population amounted to 952,754, almost all of them immigrants,—Kurmi, Teh, Lodhi, Chamar, Ahir, Gana, Kandi, Kauwai, from the north, the Halba from Bastar, and Chanda and Mahattas. The Kurmi, Teh, Chamar and Halba are the chief agriculturists of the Rajput district. The Kauwai are regarded as the prior occupants, they prefer the jungle tracts, but are supposed to be Rajputs imperfectly Hinduised. The Halba are immigrants from the south. Once in his life-time, a Halba sacrifices three goats and a pig, one to each of the national deities, called Narayan Gasain, and Burha Deo, male deities, Sati and Ratna, female deities.—*Elliot, Tod's Rajasthan, Vol II, p 371*

KURMRU, HIND *Albizia odoratissima*

KURMSAQ, PERS. As an expression of contempt, the word Sag, signifying "a dog," is generally applied to christians by the

Persians, and among themselves, as equally contemptuous, Kurmsaq is in very frequent use. Both appear to be terms of no mean antiquity, for Ouseley suspects that Sag and Kurmsaq are the Sacer and Khor-Sa-la mentioned by Solinus, those barbarous words being probably latinized from an imperfect apprehension of their sounds. "The Persians in their language," according to this author, "call the Scythians Sacer, and in return the Scythians call them Chor-sa" Scythia, Persa lingua sua Sacas dicunt, et in eadem Scythia Persas Chor-sacos nominant.—*Solin Polyhist, lib. in Ouseley's Travels, Vol II, p 512*

KURMU, HIND Dilemma pentagonum

KURNAH Near the junction of the Euphrates and Tigris in long 31 north, and lat 17° east, after a course of 950 miles, is the walled town of Kurnah, with about 800 houses, disposed along the right bank of the Tigris, and the left of that of the Euphrates. It fluctuates in size, and it was larger in 1831 than it was found in 1836 and 1837. It is chiefly constructed of reed-mats, and is on part of the supposed site of ancient Apamea, which probably stood within the line of walls still extending across the peninsula formed where the two great rivers cease to be known by their individual names. Below the Tak-i-Kesir or Arch of Chosroes, and which marks the site of the ancient Ctesiphon, and a little lower down the remains of the ancient Seleucia, the continuations of the Tigris bear the well-known appellation of Shatt-al Dylah as far as Kut-ul-umrah, a small town on the left bank nearly midway between Bagdad and Kurnah, being about 178 miles by water from the former city, and 97½ miles directly S S E from the latter. Lower down, after passing for about 40 miles through marshes, and coming near the tomb of Ezra, the river resumes its former size and character, as it winds in the general southern direction, to Kurnah, which place is 232 miles from Kut-ul-umrah by the windings, and 141½ in direct distance. The whole course thus briefly described may be estimated at 1,146 miles, which is little more than half the length of the sister stream, the Euphrates, from the sources of the latter to their junction at Kurnah, but it discharges more water, owing to the numerous tributaries which it receives on its eastern side, among which may be particularly noticed the two Zab rivers, and the river Diyala. There are, however, only two feeders of any moment on the western side throughout the long distance from Diyai Beki to Kurnah. A considerable increase of the river Tigris takes place during the rains of November, sub-

sequently it decreases and swells irregularly at intervals, till the different feeders are bound up by the frost and snow of January, in the Kurdistan mountains. This serious check retards for a time the swelling of the river, therefore its permanent rise, like that of the Euphrates, does not usually begin till the middle of March. There is an active commerce along the Tigris, between Basrah and Bagdad, by means of the large country boats, which go in fleets, and above the latter city it takes place chiefly by means of rafts from Mosul. On the junction of the Euphrates and Tigris, the one tidal channel, almost half a mile wide, takes nearly a straight course, S 37° east under the well-known appellation of Shatt-el Arab, and when five miles below Kuinah then united waters receive those of the Kerah, or Keikah, which, coming from the mountains of Ardelan through an extensive tract of country, passes a short distance westward of the ruins of Susa and likewise of the town of Hawizah. After receiving this accession, the Shatt-el-Arab flows through date groves and near several villages, chiefly on the left bank, and at length arrives opposite Basrah, which is 39½ miles by the river, and 36 miles south 34° E direct from Kuinah. In the whole of this distance there are but two islands, both of them large and the river has an average width of 600 yards, with a depth of 21 feet, it has a current of two knots per hour during the flowing, and three knots per hour during the ebb tide. Kuinah is one of the towns founded, and called Apamea by Seleucus Nicator, after Apama, his wife. Seleucus Nicator founded thirty-five cities in greater and lesser Asia, sixteen of which he named Antioch, from Antiochus, his father, nine Seleucia from his own name, six Laodicea, from Laodice, his mother, three Apamea, from Apama, his first wife, (of which the city of Kuinah was the chief,) and one Stratonicea, from Stratonice, his last wife. According to Dean Prideaux, he was a great protector of the Jews, and the first who gave them settlements in those provinces of Asia, which he on this side of the river Euphrates. As they had been faithful and serviceable to him in his wars, and in many other respects, he granted them great privileges in all the cities which he built—*Euphrates and Tigris, Col Chesney, p. 39, Prideaux's connection of the Old and New Testament, Mignan's Travels, p. 4*. KURNOOL, a walled town on a tongue of

land on the right bank of the Tumbudra river and left bank of the Hindri, in lat 15° 48' N, long 78° E, 900 feet above the sea, the junction of the Hindri and Tumbudra occurring to its south-east. Kurnool, was long held by a feudatory Pathan chief. Lying between the Ceded Districts and the Hyderabad territory, it was surrendered to the East India Company on 15th December 1815, but on the 18th October 1839, was again taken possession of, and on the same day a battle was fought at Zorapore, a few miles off, the nabob of Kurnool was captured and the territory annexed, this Pathan family accompanied Nasir Jung to the Carnatic in 1750. Kurnool province is now a small collectorate of the Madras Presidency with 273,190 inhabitants to the north of Cuddapah, throughout which, the river Tumbudra runs and joins the Kistnah river a few miles down. The basins of the Kistnah river and its affluents, the Gutpurbah, Malpurbah and Beemah are occupied by quartzites, slates, limestones, &c, which cover the larger portion of the districts of Cuddapah and Kurnool, westwards through the Raichore Doab by Gogi, Gulburgah, to Kulladghee and Belgaum, and appear to represent the older portion of the great Vindhyan series. Rocks of the same mineral character appear under the great flows of the Dekhan trap, and resting quite uncomfortably on the gneiss rocks in parts of the Raichore Doab, and the vicinity of Belgaum, and under parts of the ghats on the western coast, and that they belong to the same general series as the rocks in Cuddapah and Kurnool, there is no doubt.

KURRAHEE, a flat vessel of iron, brass, or earth, in which food is boiled or fried

KURRAL The Dhund, Tanaoli, Alpial, Kurial, Awan and Gukkur, are petty tribes known only by their tribal names without any common appellation living north of the Salt Range. They are described by Mr Campbell as the finest and handsomest men in India, perhaps in the world. They profess mahomedanism and have fanciful mahomedan genealogies, but are wholly Indian in their language, manners, habits and constitutions. Their language is Punjabi. They have no connection with the Pathan races, and they claim none with the Jat and Rajput, the Dilzak alone claiming to be of Hindustan origin. Their features would seem to show that they have kindred with the Kashmiri, or with the pre-hindoo congeners of the earlier Indians found in the hills far west, but their language and character, their dress and the architecture of their houses would indicate that they are nearly allied to the Punjabi. The Dhund, are a very handsome race, and the Tanaoli dwell to the north in the outer range of the Himalaya, and about the Indus near Toibela, but they are not considered to be brave or trustworthy. The Awan of the lower lands and the Dhund, &c, of the higher lands have democratic village institutions — *Campbell, p 97*

KURRANJ, HIND Pongamia glabra

KURTIN, EGYPT. Safflower.

KURU, son of Hastin, son of Bharata.

KURU, one of the great hindoo families who settled in Hindustan, many of whom were dispersed over India and Central Asia, amongst whom we may place the Ootouu Cooiu races (northern Cooiu) of the Pooiaus, Ottoioouia of the Greek authors. The Balica and Indo-Mede were also occupying those regions. The battle of Kuru Kshetia was a memorable event in the history of the Lunar race. It was fought about B.C. 1367 between the Pandu and the Kuru of Hastinapura, two branches of the race, and after a series of single combats through a space of 18 days, the Kuru were completely defeated, their leader Duryodhana had been slain, and Yudisthira then retired to Dwarka with Krishna, his principal adviser. The Kuru Kshetia was a great battle fought between two branches of an Aryan family, the Pandava and Kaurava, in which another branch, the Yadava, aided the Pandu. They were all blood-relations, some of them nearly allied to each other, and connected by intermarriages. The battlefield is supposed to be identical with Paniput. The

battle lasted 18 days, and terminated in the complete destruction and extinction of the power of the Kaurava family. The commanders-in-chief, whom the Kuru lost, were Bhishma, slain on the 10th day, Drona, on the 5th, Karna, on the 2nd, and Salva on the first days of their commands. It is this war of succession which is described in the great Sanskrit poem, the Mahabharata. One of the last incidents of this battle, occurred on the night of the 18th day, when Aswatthama entered the Pandava camp and killed the sons of the Pandava, whose heads he brought to Duryodhana. The Kuru drew up their army in the form of a spider's web, but in many cases, it was a series of single combats which chiefly marked this war, each chief or warrior had challenged opponents, in the daytime, in the presence of the armies, and this act of Aswatthama was so contrary to the usage of the war, that Krishna remonstrated with Aswatthama against his doing it, but, along with Kritavarma, accompanied Aswatthama to the gate of the Pandava camp and held the gate during the midnight butchery. The ultimate fate of Aswatthama is uncertain, but he seems to have been pursued and killed by Bhima. This battle field of the Kuru is near Tanisha, between Kurul and Sindh, is generally identified with the field of Paniput to the north-west of Delhi, and the locality is deemed holy. It was a war to the knife between near kinsmen to gain possession of lands, of which the Kuru had long held possession to the exclusion of the Pandu. Yudisthira, son of Pandu, lost in gambhug to Duryodhanu, his kingdom, his wife and even his own and his brothers personal liberty, and became an exile from the banks of the Jumna for twelve years. The traditional history of these wanderers during the term of probation, their many lurking places now sacred, the return to their ancestral abodes, and the grand battle or Mahabharat which ensued, form highly interesting episodes in the legends of hindoo antiquity. To decide this civil strife, every tribe and chief of fame, from the Caucasus to the ocean, assembled on Kuru Khetu, the field on which the empire of India has since more than once been contested and decided. This combat was fatal to the dominant influence of the "fifty-six tribes of Yadu." On each of its eighteen days' combat, myriads were slain, for "the father knew not the son, nor the disciple his preceptor." Yudisthira, Baldeva, and Krishna, afterwards retired with the wreck of this ill-fated struggle to Dwarka, but the two former had soon to lament the death of Krishna, who was slain by one of the aboriginal tribes of Bhils, against whom, from their shattered condition, they were unable to

contend After this event, Yudishtira, with Buldeva and a few followers, entirely withdrew from India, and emigrating northwards by Sind, to the Himalayan mountains, are there abandoned by hindoo tradition & history, and are supposed to have perished in the snows Herodotus describes the numerous passion for play amongst the Seythic hordes, and which may have been carried west by Odin into Scandinavia and Germany Tacitus tells us that the Germans, like the Pandu, staked even personal liberty, and were sold as slaves by the winner Bunsen estimates B C 1606 or 1486 as the first year of the Kaurava, and B C 1107 or 987 as the last year as the close of the great war, after the battle of Kurukhet The life of Krishna forms a second memorable part of the history of the Kuru race, as he has been deified throughout hindoo India, and is regarded as an incarnation of Vishnu — *Tod's Rajasthan, Vol 1, p 50, Bunsen, iii, Wheeler's Mahabharata, 567, Hardy's Eastern Monachism, p 438*

KURUFS, ARAL, Apium graveolens, *Linn* Celery.

KURUK, HIND, MAHR Garuga pinnata, *R*

KURUK, MAHR Cedrela toona, also Celastrus montana, *Rorb*

KURUK, KOUK or BARK, a coarse, brown cloth, half woven and half felted, forming the ordinary winter dress of the Afghans The best are made at Denai but those of Kanabagh are very good During the English occupation it was a favourite article of dress both with officers and men The manufacture of the Kouk or bark, is from an exceedingly fine and silky wool which grows on the belly of the camel, nothing can be softer or warmer than the bark, but unluckily they are badly woven if they were better made, they would be preferable to every other kind of cloth As the nomades never dye the raw material, the bark is of the same colour as the camel, the price varies from ten shillings to four pounds a piece — *Ed Ferriar Journ, pp 192-240* See Koolk

KURU-KIET, see Kuru

KURUKITI, TLL Gardenia latifolia, *Ait*

KURUKU, TAN Aigemone mexicana

KURULA, BENG Momordica charantia, *Linn* Honey or spiked bitter gourd, also Momordica muricata, also Luffa amara

KURUMARTI MARA, CAN Terminalia alata

KURUMBAR or Kurubu, CAN, a shepherd from Kuru, a sheep, a pastoral shepherd race who occupy the peninsula of India They are an ancient people, the earliest known occupants of Diavida Desam, the modern Carnatic and Coromandel They seem to have established numerous petty principalities over the whole peninsula, which were ultimately absorbed in the Chola empire Numerous sites attributed to this race and still called Kurumbai Kot, are to be met with Small communities of the Kurumbai tribe to this day dwell all over the peninsula, wandering with their flocks, and others of them occupy the less accessible hills and forests of many parts of the peninsula, tending their flocks The section called Hala-Kurubi does not weave blankets the Hande-Kurubi section who take service in towns is regarded as the highest of the race, and the Mesa-Kuruba are the lowest in rank Arcot town, about 65 miles W from Madras, takes its name from two Tamil words, Arakudu, the jungle on the river Palai It is in lat. 12° 54' N, and long 79° 19' E and 599 feet above the sea It is the Arkatou Basileon of the Greeks, and the capital of the nomadic Sora, (*Swpai*) and once formed the centre of the Chola kingdom, the whole of the neighbouring territory for several centuries after the christian era, having been occupied by wandering Kurumbai Rennell says that Arcot must have been a place of great antiquity, by its being taken notice of by Ptolemy as the capital of the Sore or Soramandalum, from whence corruptly Chorumandel or Sora district, the Coromandel of modern geographers It was then a pretty large city, and its citadel was esteemed a place of some strength, for an Indian fortress The Arkatou Basileon of the Greeks, was supposed by one of the editors of Ptolemy to be Bijnagur, but as the Greeks represent it as the capital of the nomadic Sora (*Swpai*), and the local traditions indicate that for several centuries after the christian era, the occupants of the tract lying between Madras and the ghauts, were Kurumbai or wandering shepherds, nomades, but it is doubtless the present Arcot, which was then, as now, included in the ancient Sora or Chola kingdom On the Neilgherry hills, above the Erulai, at heights varying from one to two thousand feet, in the clefts of the mountains and little openings in the woods,

with which at this elevation they are gut, live a race, calling themselves Kurumbai. They occupy the highest range bordering on the Neilgherries. The Toda do not consider the Eulai as forming a part of the inhabitants of the hills, but they allow this designation to the Kurumbai, whom they call Curb, and from them they receive certain services. The nomade shepherds, Curb, Curubai or Kurumbai, who occupy the dense deeper forests of the lower slopes of the Neilgherries, are occasionally stumbled upon by adventurous sportsmen, and the smoke of their fires may at times be seen rising from the lower gorges of the hills. The Neilgherry Kurumbai are a short miserable-looking race, who live on the slopes of the hills in the most feverish places, and the Mula or jungle Kurumbai are little raised above the beasts of the forests. It is probable that the Kurumbai of the Neilgherry hills are of the same race as of the nomade Kurumbai of the plains. In disposing of their dead they either burn or bury whichever may be most convenient. Swarthy and unhealthy-looking in countenance, small of stature, the head but thinly covered with sickly-looking hair, the only covering it has,—little or no eyelash, small eyes, always blood-shot and apparently much inflamed, pot-bellied, they have in most respects the semblance of savage men. Their women and children have much the same squalid appearance, though on their necks and wrists they wear ornaments made of the different kinds of wild seeds and of berries. Many of the men also wear ornaments in their ears, of yellow straw, plaited with some degree of ingenuity, but, in their general appearance, they are much like the Eulai, pictures of wretchedness and misery. They gave a party an abundant supply of honey, plantains, and such fruits as, on the higher parts of the mountains, or in the vicinity of Ootacamund, are considered delicacies. They have no marriage ceremony, but occasionally, when two have been living together for some time, they will enter into an agreement, in the presence of friends to remain united for life, and in a family where a succession of such unions has taken place, they will, once in two or three generations, perform a ceremony, and hold a festival in celebration of them. This is done by pouring pots of water over one another, the pairs seating themselves together for this purpose, the ablution, commencing with the seniors. They then put on new clothes, and end the day in feasting and merriment. The Kurumbai, and all the classes occupying the lower regions of the Neilgherry mountains, are many stages

behind the Budaga, in civilization, but possessing all the cunning natural to this unenlightened state.

The Kurumbai of the Wynnad forests have two sections, the Jani and the Mulli, and the Gurchea, Pannai and Pullai races live along with them. The Jani Kurumbai live entirely in the forest, they are the only axe-men, and, without them, it would be difficult to work a forest, and the wood-contractor and planter alike employ them. They are very docile, quick of imitation, and slavishly submissive to their moodily or headman. This individual, like a patriarch of old, exercises undisputed power over his own family, numerically containing about twenty or thirty beings. Those employed by the coffee planters are a little civilized, appreciating the comforts of life in a slight degree higher than their more savage brethren. They erect rude huts for the habitation of themselves and family, which are built on elevated ground, surrounded by jungles, and about six in number, they touch one another, and the whole present the form of a crescent. One larger than the rest, styled the eutcheri, is erected in the middle in the shape of a hall, for the sojourn of casual strangers. It is dedicated to their household deity, and the place cannot be contaminated by a shod foot. They are but migratory occupants of these habitations, the presence of a suspected stranger in their vicinity, sickness, or other trifling but natural cause, will make them emigrate from one place to another, generally within the same district, and sometimes for miles away, but always preferring lonesome localities and dense jungles. The Kurumbai does not stop for two weeks together in the same place, hence though some are partly civilized, they have not yet been brought into a settled mode of life. The extent of government lands in Wynnad is not known, but government also possess some forest lands towards Periah and Ternate, and in several spots over Wynnad and in teak belt are several bands of Kurumbai, some of the Jani and others of Mulli caste, they amount to about,

Kurumbai	200	Pannai & Poolai	100
Gurchea	50	Chetty & Squatters	50

These Kurumbai live entirely in the forest. They are the only axe-men, and without them it would be difficult to work a forest. The Kurumbai are held responsible, through their headmen, and the Chetty tribe are also responsible for their Pannai or farm-slaves. The Kurumbai services are constantly called for by the wood-contractor and the planter, but, they will not leave their haunts in the forests for any time.

Mr Campbell (p 31) describes the Kurumbai, Bai, Inlai, Pulii and Vedei, as in the lowest stage of life, mere men of the woods, of very diminutive stature, with thickly-matted locks and supple limbs, living under trees, in caves, or in the rudest wigwams, keeping sheep, or collecting forest produce, very stupid, but also very mild and inoffensive, though reputed as sorcerers and believers in demons. But such a character is only applicable to the secluded families who have been forced into the forests and mountains. The Kurumbai who herd their vast flocks from the Godavery to Cape Comorin are tall, slender, graceful men, with skins blackened by their food and the great heat, and in travelling over the swelling lands of the interior, these self-reliant men are to be seen engaged in their lonely avocation. They wear only a coarse blanket or cumbl. They appear to be a wholly different race from the Idyan or shepherd branch of the Tamil-speaking people who take the honorable appellation of Pillay or son, to distinguish them from the Vallai who are styled Mudi or first man. The nomade shepherd is called Kurumbai-Idyan.

The Kurumbai are a wandering race in the south of India divided into Betla and Genu. Both of them have a Mongolian caste of head, high cheek bones, short and somewhat flat nose, and prominent lips. Eyes, small, dark and deep set. Hair, curly, but woolly and matted from neglect. Of middle size in stature, well-proportioned body, nimble, with powers of endurance, and daring. Colour, dark. Hair on upper lip and chin, but no whiskers. They are laborious, basket-makers, and gather honey and other forest products. They are supposed to have come from Mysore. They profess to worship Kali — *Wilson's Gloss*, *Cape Malacca*, *Nelgherry Hill*, *Mr G Campbell*, *Renell's Memoir*, *Part 2*, p 265-328. See India.

KURUMBI, or Kondatungeli, Tr. Cassia Boida, *Vahl*. KURUMBOL, MATEAL. A tree in the Canara forests. It grows to about twelve or eighteen inches in diameter, and from fifteen to thirty feet high. It is used by the natives for house-work, and is considered a useful and durable wood — *Edye*, *Forests of Malabar and Canara*.

KURUMBANAD, see Kummaler. KURUMCHA, or Kummuchi, Beng. Calissa caudatas, *Linn* Jasmine-flowered Candia.

KURUMBERU, or according to Buchanan, Kaubai, according to Abbe Dubois are three migratory tribes, one branch of which engages in the traffic of salt and grain on the backs of asses, backwards and forwards from the coast to the interior. Another branch who

manufacture osier panniers, baskets or mats, live in tents 3 feet high, 4 or 5 broad and 5 or 6 long, made of bamboo, and they move from place to place to obtain work. The third branch are called Kalu bannu and are said to be robbers by profession — *Buchanan's Journey through Mysore*, Vol. 1, p 395.

KURUMINGA, Singar. The Butocera rubus, a beetle of the south of India which penetrates the trunk of the cocconut tree near the ground and there deposits its eggs, and its grubs, when hatched, eat their way upwards though the centre of the tree to the top, where they pierce the young leaf-buds and do irreparable damage — *Tenney's Ceylon*. KURUMASSA, a river in the Beguigas district of Bengal near Buxai.

KURU MOELLI, Malabar. Placouina separata, *Roxb*.

KURUND, Hind. Corundum. KURUND, Hind. Chonodum minale. KURUNDA, Hind. Calissa caudatas. KURUNDU, Singar. Cinnamon. KURUNGU MUNGA, Malabar. Bixa orellana.

KURUNJA, Beng. Kurung Hind. Pongamia glabra, *Vent* Kurum k tel, its oil.

KURUNJA, Hind. Dilbeiga mboiga. KURUNJOTI, also Kurum ludi, Malabar. Sida levis, *Linn*.

KURUNTVKA, or Kurantaka, Sans. Baileia pinnatis.

KURU NUVVULU, Tr. Small Sesamum, qu. Kuru nuvu.

KURUT, a kind of pudding or pottage, used in Abyssinian as food. It is made of Indian corn, broiled, bisected between two stones, or made into bread, on which they pour ghee or clarified butter. See Kooout, Kooout.

KURUT, Hind, of Peshawar. A kind of cheese.

KURUTALE, see Kurumbai. KURUTU PATA, Malabar. Tabernaemontana crisp, *Roxb*.

KURUVENDA, Tr. or Puvula guin-venda, 2 c, flowerly Abius, adding "the common plant Hiptage madibola" *W*, 232, under Kuruvinda has Cypripis hexastachys.

KURU VERTAI MARAI, Tr. Begera kougii.

KURUVERU, Tr. Coleus osmorrhizon or Plectranthus, sp, *Rhede*, ix, 74. Hindoo women use the scented roots to ornament their hair. It is also employed in offerings to idols, and as a drug, for which purposes it is cultivated generally in gardens.

KURU-VERU, Tr. Andropogon muricatus, *Retz*.

KURUVINGI ? Tr. Etheia burfolia. KURVAH TANGA MARAI, Tr. The wild cinnamon-wood tree of the jungle. It

grows to about twenty or thirty feet high, and from twelve to fifteen inches in diameter it is very scarce, and consequently not much known or used — *Edge, M & C*

KURVI, TAM A bird

KUSAVIAN, TAM A potter

KUSBAS qu ? Khush-bas, HIND *Saccharum violaceum*

KUSB-SINI, ARAB *China-root*

KUSBUL, HIND *Aplotaxis fastuosa* The shepherd's tinder This is found in the

Sutlej valley between Rampur and Sungnam at an elevation of 7,000 to 9,000 feet The tomentum on the under-surface of the leaves is employed by the hill people as tinder — *Cleghorn's Punjab Report, p 67*

KUSH, or Cush, a term familiar to readers of Scripture (Gen II, 13, also x, 6 to 8, and Ch I, 10) as the name of the eldest son of Ham (Chania), and before the flood, of a country encompassed by the Gihon, the second river of paradise The name seems to have descended to Noah's progeny, who took it for themselves and gave it to countries There was an African Cush, and the Cushan of Habakuk III, 7, is another The Hamitic Cushites appear to have spread along tracts from the Upper Nile, to the Euphrates and Tigris In the history of India, Kush or Cush, the second son of Rama, gave his name to the Cushwaha or Cutchwaha princes of Nuwar and Ambei, though the tortoise is supposed to be a source of this name The country of which Ayodia (now Oude) was the capital, and Rama monarch is termed Koshula, in the geographical writings of the hindoos, supposed by Col Tod, to be from Koshulya the mother of Rama, and in the archives of the Rana of Mewar, the first emigrant from the north is styled Koshulaputra—son of Koshula

KUSH, or Koh-i-Kush or Hindu Kush, is the term applied to a lofty peak in the range of mountains, continuous with the Himalaya, west of the Indus, and also to the range itself The only part of the range covered with perpetual snow is the Koh-i-Baba between Kabul and Bamian The Hindu Kush peak is visible from Kabul and is entirely covered with snow, and also from Kunduz, distant 150 miles All creatures, including man, birds and beasts of burden, suffer in crossing it and many perish In its perpetual snow, however, is a creature called the snow-worm which perishes if removed below the snow line The highest pass does not exceed 12,400 feet Many parts are devoid of wood and even of verdure There grows merely a stunted fuize, used as fire-wood called Kullah-i-Hazara or Hazara cap

The Hindu Kush was crossed by the Arians who settled on the western slopes. The Arians started from the northern slopes, crossed the Hindu Kush range and settled on the southern slopes The people of Cashmere have, from time to time, been mixed with races from the north, the south and the west, and while their language is hindoo and their faith mahomedan, the manners of the primitive Kush or Kutch tribes, have been influenced by their proximity to the Tatar races The hills westward from Kashmeer to the Indus are inhabited by

Kukka and Bumba, of whom little is known, but towards the river itself the Eusofye and other Afghan tribes prevail, while there are many secluded valleys peopled by the widely spread Gujar, whose history has yet to be ascertained, and who are the vassals of Arabian "syeds," or of Afghan and Tookamun lords. The countries north of the Hindu Kush, which lie in the valley of the Oxus and its tributary rivers, from Balkh upwards, have no general designation. Eastwards of that city lies Kunduz, the Mu of which subdued all the smaller provinces, and it has another dependency, Badakhshan further eastward. To the north of this territory are the hill states of Wakhan, Shughnan, Darwaz, Kulab and Hissai, whose people claim a descent from Alexander the Great. To the eastwards of Badakhshan lies the plain of Pamir inhabited by the Kirghis, and beyond the Belut Tagh mountains are Chitral, Gilgit and Iskardo, that extend towards Kashmir. South of Badakhshan is the country of the Siah Posh Kafir, who occupy a great part of the range of Hindu Kush and a portion of Belut Tagh. It is bounded on the north-east by Kashkar or Badakhshan, and on the north-west by Kunduz in Balkh. On the west it has Inderab and Khost, also in Balkh and the Kohistan of Cabul, and on the east it extends for a great distance towards the north of Cashmere, where its boundary is not distinctly known. The whole of this Alpine country is composed of snowy mountains, deep pine forests, and small but fertile valleys, which produce large quantities of grapes, wild and cultivated, and flocks of sheep and herds of cattle while the hills are covered with goats. Grain is inferior both in importance and abundance. The common kinds are wheat and millet. The roads are only fit for men on foot, and are often crossed by rivers and torrents which are passed by means of wooden bridges or of swing bridges made with ropes of some other plant fibre. All the villages described as built on the slopes of hills, near the roof of one house, forms the streets to the one above it. The people have no general name for their nation. Each tribe has its peculiar name, for they are all divided into tribes, though not according to genealogy, but to geographical position, each valley being held by a separate tribe. Kush has probably the same derivation with Kash. Hindu Kush is the original Cuch of scripture, the land compassed by the Gihon — *Bunsen, Vol iv, p 52, Burnes, Elphinstone quoted in Ferriar's Journal, p 51*. See Cuch, Koh, Koh-i-kush, Kosi, Chozar, Kushika, Kushau, Viswamita.

KUSH, also Kus also Kaga, HIND. *Saccharum spontaneum*

KUSHIA, HIND *Poa cynosuroides*

KUSKUS, BENG. *Andropogon muricatus*

KUS KUSU, AR One of the numerous kinds of what the Italians generally call Pasta The material is wheaten or barley flour rolled into small round grains In Barbary it is cooked by steaming, and served up with hard boiled eggs and mutton, sprinkled with red pepper The Bedouin Magharabi Arabs merely boil it

KUSMOR, see Khybei.

KUSNIR, BENG *Ficus elastica*, *Roab*

KUSOOMBA, a term used by the Rajputs to designate opium In times of peace and ease, the Rajput leads an indolent and monotonous life After a midday siesta the chief rises, washes his hands and face, and prepares for the great business of the day, the distribution of the red cup, Kusoomba or opium He calls together his friends into the public hall, or perhaps retires with them to a garden-house Opium is produced, which is pounded in a brass vessel and mixed with water, it is then strained into a dish with a spout, from which it is poured into the chief's hand One after the other the guests now come up, each protesting that kusoomba is wholly repugnant to his taste, and very injurious to his health, but after a little pressing, first one and then another, touches the chief's hand in two or three places, muttering the names of Dev, friends or others, and drains the draught Each, after drinking, washes the chief's hand in a dish of water which a servant offers, and wipes it dry with his own scarf, he then makes way for his neighbour — *Ras-Mala Hindoo Annals*, Vol II, pp 261-62 See Kusumba

KUSRANI, an Afghanistan tribe whose hills extend from the Korah pass downwards for a distance of about fifty miles, about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain and the half desert tract at its base, and the remainder live in the hills The hill Kusani can muster some 1,200 fighting-men, of whom 50 are horsemen They are very thievish, and were in the habit of proceeding through the land of their brethren in the plain to plunder in the villages near Dehra Ishmael Khan From the Kusranee limits the hills of the Bozdai tribe extend along the British frontier for about 15 or 20 miles The range is

intersected by some nine passes leading into the plains, the chief which is the Sunguh pass, through which there is considerable traffic with Candahar and the Punjab. Opposite these hills lies the Sunguh low-land (forming the upper portion of the Dehra Ghazee Khan district and cultivated by several peaceful tribes) and very much at the mercy of the Bozdai There is only one Bozdar village in the plains, but there is much scattered cultivation belonging to the tribe Almost the whole tribe and their chiefs live in the hills They can muster 3,000 or 4,000 fighting men, some portion of whom are horsemen They are probably the most formidable robbers in this part of the frontier Under the Sikh regime they repeatedly carried fire and sword into the Dehra Ghazee Khan district See Khybei

KUSSAM, HIND Kussamba, CAN *Calthamus tinctorius*

KUSSAN, see Viswamitra

KUSSAR There are 3,085 of this caste in the Oomraoti district

KUSSAVU, TEL *Anathium muricatum*

KUSSOO, BURM A Tenasseim tree, maximum girth 2 cubits, of maximum length 15 feet Abundant near the sea or the river's edge, all over the province When seasoned it sinks in water It has a very tough wood, durable, and as good as Kya-zai, for helvcs. Kya-zai wood is of the colour of oak with a yellowish tinge The Kussoo is nearly white The Burmese name of the soondree wood is nearly the same — *Captain Dance*

KUSSOOR, HIND *Lathyrus sativus*

KUSSOWLEE, in the Himalaya, is elevated 6,500 feet above the sea It is a military post on the crest of a ridge which overlooks the Kalka valley, the inner slope is covered from the summit to perhaps 1,000 feet below it, with an open forest of the *Pinus longifolia*, a fir nearly resembling that of Scotland The barracks for the troops and the houses of the residents are scattered over the northern slope The vegetation is characteristic of the temperate zone In the shady ravines north of Kussowlee, where there is the greatest approach to a forest, a species of laurel is the most conspicuous tree On the more exposed hills, *Falconeria insignis* and *Euphorbia pentagona* occur, scattered as small trees, and one small wood of *Ægle marmelos* grows close to the village of Haripur The most common shrubs are *Adhatoda vasica* *Carissa* and *Zizyphus jujuba*, species universal in the plains of Upper India On the cliffs near Kussowlee are to be seen the well-preserved impressions of various species of land plants, leaves, seeds, and stems See Sanitarium

KUSSUB, penance, a term used in the science of exorcism.

KUSSUB-BEWA, Guz ?

Godruvuz, HIND | Waj-i Igar?
Venkund, ,, | Sweet flag

Acotus calamus

KUSSUB-UZ-ZERIREH, AR *Chuseta*

KUSSIALGARH, lat 33° 28', long 71° 54', in the Panjab, on the right side of the Indus, north-east of Kalabagh. The mean height of the plain is 970 feet. The tower station is 1,025 feet. The level of the Indus during the dry season is 799 feet. Mean flood level of the Indus is 855 feet. Maximum flood level during a cataclysm is 890 feet — *Idl, Schl, Walker*

KUSU-KANDIRA, TEL *Kousu landira*, TAM *Strychnos bienertia*, *Lesch*. The Telugu derivation is from Kousu, "a disagreeable smell," which is characteristic of the plant. The plant is plentiful in the Nagari hills under the name of Tige musiti.

KUSSUMB, HIND *Schleichera tigris*

KUSSUMBA, HIND

Gul-i-masahr,	PERS	Bastard saffron <i>Carthamus tinctorius</i> , L. Kusumbakum, TAM
Safflower		
Kajira,	BENG	
Lollora,	HIND	

This plant yields 6 or 7 distinct shades of red, the palest pink or piyazi gulabi (pink), gulabi sukhi (rose colour), kulhi or gul-i-shaftali (deep-red). In combination with harsinghai flowers (*Nyctanthus arborescens*), it yields saucer or golden orange, narangi, deep orange and shirabati, salmon-colour and with turmeric (haldi, zaid ehob), it gives a splendid scarlet, gul-i-rumai, and other tints, again if combined with indigo, Prussian blue, &c, a series of beautiful purples, known as liywardi, uda, nafairami, sosuni, krsni, (a delicate mauve), falsai, kokai and the deep-purple bangni. All these tints are more or less beautiful, but scarcely one of them will stand washing. There is a great want of that series of substances known as mordants. The use of the salts of tin and lead is entirely unknown to native dyers — *Powell's Hand-book, Vol 1, p 457*

KUSSUMBA, in Sind, is the name given in good society to a solution of opium, which the natives extensively use. In Cutch, it means a Rajput practice of drinking a solution of opium from each other's hands to stanch feuds — *Burton's Scinde, Vol 11, p 143*. See Kussoomba.

KUSSUR-KA-GHAR, HIND. Literally factional house, a term used in forming magic squares.

KUSSUS, AR *Hedera helix*, the Ivy

KUSUMB, MAUR. *Schleichera tigris*

KUSUMBA, TEL *Carthamus tinctorius*

KUSUMBA-JAVA, see Dyes

KUSUMBA NUNA, TEL Safflower oil

KUSUNDA, a Nepali tribe. The Cheping, Chetung, Kusundu and Huiyu are four uncivilized Bhot tribes who reside amid the dense forests of the central region of Nepal, to the westward of the great valley, they dwell in scanty numbers, and nearly in a state of nature. They have no apparent affinity with the civilized races of the country, but live in huts made of the branches of trees, on wild fruits and the produce of the chase. The Cheping are slight, but not actually deformed though with large bellies. Mr Hodgson says they are of Mogul descent. Their language is akin to the Lhopa. The Cheping, Huiyu and Kusunda, seem to belong to the Rawut group of frontier populations. They are named by Mr Hodgson, the Dute, Denwu and Brahmo, which Mr Litham believes to be the same as Tharu, Dhungu, and possibly Rawa. They occupy the districts where the soil is moist, the air hot, and the effluvia miasmatic — *Latham*. See India.

KUSUND KA KATORA, a cup made of bell metal

KUSWUR, HIND. The flower from which is made the yellow Kuswuri dye used in hindoo marriages. To use it on the day of battle is among the hindoos deemed a sacred pledge to die or conquer. Volunteers are often invited to assume the yellow dress, which implies desperation in any undertaking. Amongst Rajputs, it was a not infrequent usage to imitate the hindoo suits and warriors, and dye their garments with yellow, the hymeneal colour, which indicated that they went to battle as to a bridal feast, and were determined to die, or to live, exulting conquerors — *Malcolm's Central India, Vol 1, p 358*

KUT, see Chaldean

KUT, HIND *Abelia tinctoria*

KUT, also Kutch, HIND *Catechu*

KUT, also Ooplate, Guz, HIND *Putchuck*, the root of the *Aucklandia costus*. A bitter aromatic tonic used in fever, the roots have a pleasant smell and are used as perfumes. It is chiefly exported to China, where it is used as an incense — *Powell's Hand-book*, Vol 1, p 356

KUTA, MALLAL Baskets

KUTAR, a drink or dagger carried by fugitives. See Kalan

KUTAY KI CHITRI, DUK A mushroom

KUT-BEL, BENG. Elephant apple, *Feronia elephantum*, qu ? Kat-bel

KUTCH or Cutch, a province on the north-west of the peninsula of India bordered by the Runn. Its capital is Bhooj, on the north are Pawan and Patcham. Kanta extends along the coast containing the seaport towns of Mandavie, Munna and Tuma, the bandar or port to Anjar. Waghan, to the east, contains Shahpur Aidasu. To the west, are Gariah and Ubiassa, in which are the towns of Mhai, Naina, Lakpat Baudai, &c. The inhabitants of Kutch are given to predatory habits. The Kumbi or cultivators are not numerous, the Chalon and Bard (Bhat) are numerous. The Jhalla are Rajputs of Sindian origin, and there are tribes of Lowanni, Ahu and Rebbai. The Bhatta of Sindian origin, are a fair handsome race, skilful and industrious mechanics, and found in all the ports of Arabia and Western India. Kaba, a practical tribe in the gulf of Cutch. The Khosa are a marauding tribe on the Thul desert between Hindustan and Sind. Amongst the Cutchoolie striata some are evidently marine, yet from what Mr Hyslop had seen of those in the Deccan or those in Bengal none of them in either of these districts exhibit the least evidence of having been deposited in the sea or ocean all seem to be of fresh-water origin — *Mrs Elwood's Letters*, *Wilson's Glossary*. See Cutch, Infanticide, Rajpoots, Kelat, Hindoo

KUTCH, the breeches of the Sikhs, the adoption of which is of as much importance to a Sikh boy as was the investiture with the toga virilis, to a Roman youth

KUTCHERRY, HIND An office, a court or place of public business

KUTCH GUNDAVA, a champagne district of Baluchistan, a depressed level plain. See Kelat

KUTCHHOOR, DUK *Kutchooria*, HIND *Curcuma angustifolia*. The species of *Curcuma* growing in the Mahabaleshwar hills seems to be the *Curcuma montana*. In the East Indies large quantities of arrow-root are prepared from different species of curcuma, all of which have not been clearly ascertained, but the *C angustifolia* and *C leucomiza* are recognised. In the Madras Exhibition of 1855, arrow-root from the *C angustifolia* and *C montana* of Roxburgh, was exhibited from Canara, Cochin and Travancore, where it has been, for many years past, prepared in large quantities, and, from Travancore, it is a regular article of export.

KUTHERI, TAM Hoise

KUTHERI, HIND. A kind of rice in Kangia

KUTH JAMUN, HIND ? A tree of Chota Nagpore with a soft, red wood — *Cal Cat Et* 1862

KUTH-LAH is a great, black, chubby fish with large scales, and a very big mouth without teeth—it has been known to attain a size weighing two Bengal maunds, which are equal to 16½ lbs. This fish does not take a hook. The "Ro-hoo" and the "Min-gah" resemble each other in size and habits, they are very much like the salmon, but have tiny little mouths with no teeth. The "Ro-hoo" in season has very pretty red fins, and both have ash-coloured backs, with silvery bellies, they attain to the weight of 20 lbs, and afford the angler excellent sport at bottom-fishing, sometimes engaging him for an hour before he can attempt to land his fish. The "Keel-bause" is a pretty little dark ash-coloured fish with a small toothless mouth, and has a whisker on either side of it. This fish also affords the angler good sport, and is found of five or six pounds in weight. These are all plentiful in Calcutta and lower Bengal, and, while young, could be easily exported.

KUTUB MINAR, at *Delhi*, is said to have been erected A D 592 by *Kutub-ud-deen*, *Aibek* The epigraph in *Persian* over the outer midway of the eastern entrance, embodies his name in the following terms *Kutub-ud-deen*, *Aibek*, founded this mosque May the Lord bestow pardon on that slave The *Minar* is erected at the south of the square *Col Tod* found, in *Guzerat*, a column, several feet high, of three compartments, gracefully tapering as it rises from a circular base, consisting of three marble steps, sculptured with innumerable minute niches, each containing a figure of the *Jineswai*, in the customary contemplative attitude One like this, is a common appendage of *Jam* temples, *Col Tod* is inclined to rank with it the *Kutub Minar* at *Delhi*, imagining that the mahomedan architects have only fluted the latter, in order to remove the obnoxious images Of this class, also, is a column on the summit of *Cheetore*, nearly eighty feet in height The uncompleted minaret of the *Kutub-Minar* at *Delhi* is 82 feet in diameter It was begun by *Alu-ud-din*, the penultimate predecessor of *Mubarak Shah* The total diameter at the base is 47 feet 3 inches, and at the top about 9 feet The doorway is not larger than an ordinary *London* street door The uncompleted minaret is certainly not half the height of the *Kutub* in diameter, it is perhaps twice as great *Ibn Batuta* was certainly misinformed as to the date and builder of the *Kutub* He ascribes it to sultan *Muiz-ud-din* otherwise called *Kakobad*, grandson of *Balban* (A D 1286-1290) But the real date is nearly a century older It was begun by *Kutb-ud-din*, *Aibek*, when governing for *Shahab-ud-din* of *Ghizni* (otherwise *Mahomed bin Sam*, A D 1193-1206), and completed by *Altamsh* (1207-1236) *Ibn Batuta* ascribes the rival structure to *Kutb-ud-din Khilji* (*Mubarak Shah*, 1316-1320) and in this also, *Colonel Yule* thinks he is wrong — *Tod's Travels*, pp 108-327, *Col R MacLagan*, *R E in Yule, Cathay*, Vol II, p 434

KUTUB SHIAHI, a dynasty of kings of the 16th and 17th centuries ruling in *Golconda* and *Hyderabad* in the *Deccan*

KUTUB-UD-DIN, AIBEK, a slave of *Shahab-ud-din*, who gave him the government of *Delhi* *Kutub-ud-din*, extended his domi-

mon, became independent and died 1210. In A. D. 1206, on the death of his master, Mahomed Gori, Kutub-ud-din retained possession of Hindustan. He was the first of the Turki slaves who attained sovereignty and furnished a succession of rulers to Hindustan. Kutub, after a reign of four years was succeeded by his son Alam, who was, within a year displaced in 1211 by Altamsh, a slave and son-in-law of Kutub-ud-din. Bakhshai, general of Kutub-ud-din Aibek, in A. D. 1201, conquered Behar and in 1203, conquered Bengal, but was defeated and driven back from Bhutan and Assam. Altamsh, a slave and son-in-law of Kutub-ud-din in 1211 succeeded Alam, son of Kutub. He ruled Hindustan 25 years, and in that time subdued the fortress of Rintamboire in Rajputnah, captured Gwalior and Mandoo and conquered Oojein. It was in his reign that Cheughis Khan ruled in western Asia, destroyed the temple of Mohakal, which Vikramaditya had erected at the beginning of the christian era. Altamsh died in 1236. His son reigned six months and was deposed, and then his daughter sultana Razia, who ruled ably for three and a half years. See Kutub Miwai, Ibn Batuta.

KUVEAMA, TAM A Ceylon tree. It grows to about two and a half or three feet in diameter, and is curved in its growth. Wood is remarkably heavy and strong, and used in the frames of native vessels. It produces a fruit which is of no use. — *Edey*

KUVEER PUNTHEE, see Kabu Mendicant

KUVERA, the hindoo god of wealth and hindoo Plutus, he is also the regent of the north. This deity was a son of Viswasrava, and a brother of Ravau, who was overcome by Rama. He is also called Paulastya. Only a brief notice has been taken of him in hindoo mythology, although he is a deity whose favours are by no people more valued than by the hindoos. He is represented as a magnificent personage residing in the splendid palace of Alaca, or borne through the sky on the heads of four figures, in a radiant car, called pushpaca, which was given to him by Brahma. In each of two of his hands he

holds a closed flower of the lotus, and has on his head a richly ornamented crown. His sakti is Kuveri. The Guhyaca are servants of Kuvera, the deformed deity of riches — into such beings the dark souls of men, addicted in this world to selfish gratification, transmigrate. — *Cole. Myth Hind*, p 111, *Moor*, p 108. See Sati, Bramicide, India, Inscriptions, Meru, Ravau, Saraswati, Tripati.

KUVIR or Kubeer, as it is called by the natives, is the salt desert which predominates in Khorasan, and salt abounds in many districts, to which the desert does not reach. There is little doubt, that this salt desert penetrates through the inhabited isthmus extending between Herat and Mushed, into the mountainous districts of Kohistan, and Hazarah where we are informed there is much salt and blackish water. There is a great deal of Kubeer, or salt desert all through the steppes of Khwarezm and the desert lying between the Oxus and Caspian sea. — *Fraser's Journey into Khorasan*, p 253.

KUZZILBASH Their native country, is the neighbourhood of Tabriz, Meshid, Keiman and Shmaz, where they are horse-breeders, shepherds and cultivators. See Kazzilbash.

KWAN, or Kouan, the Cochinchina name for a string of about 600, "cash," the popular coin. Each kouan makes 10 heaps, or "tieu," each of 60 cash. The Spanish dollar averages about 4 kouan, in Upper Cochinchina being worth 3 to 4 kouan, and in Lower Cochinchina, 5 or 6 kouan. As a weight, 500 kau or cattis, of 1½ ounce each, make 1 kouan. — *Simmond's Dict*

KWANG-TUNG-CHI. A general account of Kwang-tung, is a Chinese work usually

stitched in 140 Chinese volumes its officers are—

Tsung-tu, the governor-general

Fu-tai, the governor

Fan-tai, the superintendent of finance

Nie-tai, the provincial judge.

Chi-fu, *Chi-le-chou* and *Chi-le-tung-chi*, prefects

Tung-Chi, sub, and *Tung-pan*, deputy sub-prefects

Chi Chou and *Chi Hsien*, district magistrates

Ching Le and *Chau-mo*, secretaries

Ghar Kwan, superintendent of customs in China, is the superintendent of the maritime customs of Yue. There is also a superintendent of customs for Kwang-tung. The prefect of Kwang-chou is the chief local authority of a territory equalling in extent the kingdom of Holland, and containing a much larger population. His Yamen is the first court of appeal from fourteen others, each resembling in their power British courts of assize — *Meadow's Desultory Notes*, p. 8

KWANG-YIN This rock, with an excavation near its base, serves as a temple and dwelling for several priests of Fo. It is composed of one solid mass of grey marble, rising out of the margin of the river to a height exceeding six hundred feet. In a large rent near the base is a temple of two stories, ascended by flights of steps hewn out of the sides of the cavern — *Baron Macartney's Embassy*, Vol. 1, p. 28

KWAN SAF SAFEI, HIND. *Solanum nigrum*

KWAN-SE is bounded on the north by Ho-nan, and an irregular chain of lofty mountains on the south and east by Kwang-tung, on the west by Yun-nan. Its surface is estimated at eighty-seven thousand square miles, and its population is between seven and eight millions. Kwy-ling-foo, is its capital. This province contains eleven cities of the first class, twenty-five of the second class, and 170 of the third class.

KWAN-TUNG, or Yue-tung, which signifies the "eastern breadth," extends along the southern coast from the centre of the gulf of Tonquin, nearly as far as the portion of the coast which is opposite the island of Formosa.

KWAN YING, the Chinese goddess of mercy

KWARGANDAL, HIND. *Aloe perfoliata*

KWASSZE, RUS. Alum

KWE-HWA-CHING, a large mart in the Shan-se province of China, immediately beyond the Great Wall, 400 miles north-west of Peking and 240 west of the pass of Kulgan. See Kalghan.

KWEI, CHINESE. Rubiunquis, speaking of

certain envoys of a Korean nation whom he saw at the court of Kamakouru, says "The principal envoy had in his hand a tablet of polished ivory, about a cubit long by a palm broad, and whenever he addressed the Khan or any other great personage he kept his eyes fixed on this tablet, looking neither right nor left, as if he read there what he had to say." The use of this tablet, called Kwei, was a very ancient Chinese etiquette. It is mentioned in Demailla's version of the Chinese annals in connexion with Yu, one of the most notable worthies of ancient China, who is said to have flourished B.C. 2286 — *Rubiunquis*, p. 290, quoted in *Yule Cathay*, Vol. 1, p. 142.

KWEI IIWA, CHIN. *Olea fragrans*

KWEI PE, or Kwei-pie, CHINESE. *Cassia lignea*, *Cassia bark*

KWUN, BURM. *Aieca catechu*, *Linn*

KYA BIN, MALAY. *Terminalia chebula*

KYABOCA WOOD, or Amboyna-wood, is imported from Singapore. It appears to be the excrescence or burl of some large tree, it is sawn off in slabs from 2 to 4 feet long, 4 to 24 inches wide, and 2 to 8 inches thick, it resembles the burl of the yew-tree, is tolerably hard, and full of small curls and knots, the colour is from orange to chestnut-brown, and sometimes red-brown. It is a very ornamental wood, and is much esteemed in China and India, where it is made into small boxes and writing desks, and other ornamental works. The kyaboca is said by Prof. Reinwardt, of Leyden, to be the burl of the *Pterocarpus indicum*, by others that of *Pterocarpus diaco*. It is from the Moluccas, the island of Borneo, Amboyna, &c. The native name appears, from the specimen of Mr. Watson Saunders to be "Senoulcut," the wood itself is of the same colour as the burl, or rather lighter, and in grain resembles plain mahogany. "The root of the cocoa-nut tree, says Colonel Lloyd, is so similar when dry and seasoned, to the 'bird's-eye' part of the wood here termed kyaboca, that no difference can be perceived, the cocoa has a tortuous and silky fracture, almost like indurated asbestos." The comparison of the palm wood

with the kyaboca, renders the question uncertain, as amongst the multitudes of ordinary curly woody fibres, which one cannot account for in a palm there are a few places with soft fibrous matter much resembling it. At the Madras Exhibition of 1855, a slab of kyaboca wood, imported from Singapore, was exhibited by J Sanderson, Esq. A small portion was polished, and showed well the highly ornamental appearance of the timber in its marking. The specimen exhibited the very knotty character and curly fibres of the wood, from which pieces of even a foot square free from flaws, can rarely be obtained. The botanical name of the tree has not yet been determined with certainty, although this valued ornamental wood and another, the Lingoa wood of commerce, are supposed to be the produce of the same tree, the *Pterospermum indicum*. Of late years, its estimation seems to have decreased in Europe, but it is still much valued by the Chinese. It is brought from Ceram, New Guinea and the Amu islands of the Moluccas. In Singapore it is sold by weight.

The Lingoa wood is also known in commerce as kyaboka wood, and very large slabs are obtainable from the lower part of the tree by taking advantage of the spur or lateral growths. They are thus sometimes as large as nine feet in diameter. It is very durable, takes a considerable polish, is very abundant and may be had in any quantity.—*M E Jones' Reports of 1851, Col G A Lloyd, Holtz*

KYAI-GYEE, BURM *Barringtonia speciosa, B angustifolia*

KYAI-THA, BURM. *Barringtonia acutangula, Gaertn*, *B macrostachya* A Tenasserim tree, maximum girth $1\frac{1}{2}$ to 2 cubits, maximum length 7 feet. Scarce, but found widely scattered on low marshy grounds in the provinces. When seasoned it sinks in water. The wood is excellent for planes, or for any other purpose, for which a straight grain, great toughness and strength are required.—*Captain Dance*

KYAI-THA, BURM A tree of maximum girth 4 cubits, maximum length 18 feet. Found abundant, but scattered up the Attarian, Gyne, and Thoungween rivers near Moulmein and near Tavoy and Meigui. When seasoned, it floats in water. It furnishes a very compact hard timber, used for posts of houses, zyats, &c. The fibre is liable to start with repeated percussion, and the wood itself is subject to dry rot. This is called Itchwood, because the fruit, chips, or bark produce, when touched, an itching like that caused by cowhage.—*Captain Dance*

KYAI YEW, BURM A tree of Amheist,

Tavoy and Meigui, of maximum girth 3 cubits, maximum length 22 feet. Rather scarce but found all along the banks of rivers all over the provinces. When seasoned it floats in water. Its wood is used by the Burmese to make charcoal, also sometimes for posts of small huts but is brittle.—*Captain Dance*

KYA MOUK, BURM? A kind of oak in Amheist, Tavoy and Meigui, maximum girth 4 cubits, maximum length $22\frac{1}{2}$ feet. Abundant but widely scattered all over the provinces inland. When seasoned it floats in water. It is an excellent tough wood, durable and sufficiently light, used for all purposes by the Burmese. Strongly recommended for helms, hammer handles, handspikes, staves of casks, and many other purposes, but too widely scattered to be easily obtained, unless a large quantity be ordered which should repay a search in the forests much used by Burmese as a pole for carrying baskets.—*Captain Dance*

KYAN, a small tribe in Aikan, whose language is allied to Burmese

KYAN, a powerful tribe of about 100,000 souls, who occupy the country from the south of the kingdom of Bunnai, swept away into the interior. They strongly resemble the Dyak. Mr Dalton states that the Kyan, amongst whom he lived, amount to 270,000 souls and that they were greatly addicted to head hunting. Of the tribes of Borneo differing from each other sufficiently to be classed under separate titles, the Kyan, as the most numerous and powerful, first claim attention. Personally, little is known of their divisions by the English, though the Netherlands of India Government has been supplied by its officers with many particulars concerning those who inhabit the south and south-east of the island. This people, differing however in various customs, are found on the great rivers Banjar, Pasu and Coti, and probably on all the rivers of the eastern coast. The Orang Tedong are, most likely, a tribe of the great Kyan division of the nations of the island. On the north and northern parts of the island, they are found in the interior of the Bintulu, Bariam, Rejang, and other great rivers, as far west as the country of the Sarebas Dyak, but they only occupy the inland parts, at a great distance from the coast, always having between it and them other tribes, and frequently Malayan states, which latter have, by their intrigues, in a great measure prevented our acquiring that knowledge of them, which the settlement of Sarawak might otherwise have obtained. The Kyan of the rivers Banjar, Coti and Pasu, appear to have been always subject to the European or Malayan power, which held the mouths of

then respective streams. But the Kyan of the north-west have always been feared by the inhabitants of the Malayan towns of the coast, and the chiefs of Hoya, Mocha, Egan and Serekei, have always eagerly sought alliances with their barbarous but powerful neighbours, and, on several occasions such as have quarrelled with them, have found to their cost, that they were implacable foes, several coast towns having been burnt by them to the ground. The populous town of Sarebas was one year attacked by them, in conjunction with their ally, Dattu Patangi Abdul Rahman, of Serekei, to whose assistance they are reported to have come, with ninety boats, under three of their rajahs or most powerful chiefs. In their Government they are said to resemble the sea Dyak, each village being under one chief, who is, however, much more subservient to the authority of a higher chief, than either the Serebis or Sakai in Orang Kaya. The country is divided into little states, each of which contains many villages, tributary to that in which the rajah of the province, as he is said to term himself, resides. The principal chief of this kind is the rajah Nipa, on the head waters of the great Rejang river, and he is very much feared by the neighbouring tribes of Dyak, Milauowe, &c. He is the ally of the chief of Serekei, who, though a mahomedan, is not of the pure Malayan race, his mother having been a Kyan woman. The country of the Kyan is reported, by all who have visited it, to be very populous, much more so than any other parts of the island. In some parts of it, gold and diamonds are found. On the Banjar river the people are said to wash the earth for these precious commodities as do the Dyak of Santang, in the interior of the western branch of the Batang Lupat river.

The houses of the Kyans are built, like those of the Sea Dyaks, in one long terrace, with the verandah fronting its whole length. They are said to be formed of the most substantial materials, the posts being always of the very hardest wood, and the roof of planks of the same material. In the south of Borneo where there are tribes who live only to desolate each other, all the villages are said to be surrounded by a high and strong pagar, but the low country of the south of Borneo has its effect upon the customs of the people as there are no paths in that flat and swampy part of the island, as in that of the country of the Kyans of the north, and all communication between the tribes of the Banjar river, even far inland, is carried on by boats.

The Kyan tribes of the north are not engaged in incessant conflicts with each other,

nor do they seem to have any foreign enemies whom they dread. They are the hereditary foes of the Dyaks of Sarebas and Sakai, than whom they are more powerful, although the report merely of two or three muskets which they possessed, sufficed to beat the Kyans, of whom, in reality they have great dread. They are allowed by all their enemies, and others who have known them, to possess in a much higher degree personal courage, than any of the other tribes inhabiting the island. Their bodies are beautifully tattooed, of a blue colour in various patterns, but images of the sun, moon and stars are amongst the most frequent.

It is reported that some of the tribes on the Barisan and Buntulu rivers do not tattoo the persons of the males, and that the practice is there confined to the women, who thus dis-colour their arms and legs only. The Kenawit Dyaks, whose country borders that of the Kyans, also practise tattooing, as do the Orang Titow, who live near the Buntulu river, and more towards the coast than the Kyans. These people also call themselves Dyaks, but the races appear to be so easily traced through the Tatows, the Kenawits and other tribes, to the Dyaks of Sarebas and Sakai, that there is no doubt that one comprehensive term, whether it be Dyak or Kyan, is applicable to all their divisions, and the whole of the inhabitants of the island are certainly of the same race.

The Dutch authors always speak of the Kyans of south Borneo, as the "Dyak Kyan," including all the infidel natives of the island under the former term, and using the names of divisions and tribes as specific names of this generic appellation. In dress and person, the Kyans very much resemble the Dyaks, the women wearing the small bedang, and the men the chawat, this latter is said to be uniformly of greater length and width than those used by the Dyaks, and to be frequently made of European cloth, though the women are expert in the manufacture of coarse kinds, both from cotton, and, it is said, also, from the fibres of the pine-apple leaves which are abundant in this country. The dress of the Kyan women of the Buntulu river, is reported to consist of two cloths, a little longer than the bedang, which are tied on opposite sides of the person, the one covering lapping over the other, but their dresses from the Rejang are made like the bedang. The jacket of the Kyan women is not loose, like that of the Dyaks, but fits closely to the person, and is longer than the cotton ones of the hill tribes. It is also frequently made of the pineapple fibre. In war, the dress of the men differs much from

the Dyaks of other denominations. The jackets they wear on these occasions are made of the skins of beasts, those of the panther and the bear are the most esteemed, but those of goats and dogs are sometimes substituted in a scarcity of the others. The broad part of the skin forms the back part of the jacket, the edges of which are bound with wide strips of red cloth. Bunches of feathers of the rhinoceros hornbill, which seems to be the war-bird of all their tribes, depend from little strings of beads, fastened to the skin, and dangle in the breeze as they move about. Their head-dresses in war are also peculiar to these people, and unknown to the other inhabitants of the island; they are of various descriptions, but the favourite ones are caps made in the fashion of a man's face caricatured, in those which represent the faces of animals. The weapons of the men are the sumpitan or blow-pipe: this is a long tube of hard wood, through which small poisoned arrows, or darts, having on their end a piece of pith, or some other light substance adapted to the size of the bore of the tube, are blown with great force and accuracy of aim. The sumpitan has, at its farthest end, an iron sight by which they regulate their aim. It is also at this end furnished with a large double-bladed spear. Both the sight and the spear are nicely bound on with rattans, which are woven over them. The dart used is poisoned with the ipoh, which is the same as the npas and chetik of Java, described by Dr. Hoisfield; the darts, which are very thin and about ten inches in length, are pointed with the sharp teeth of fish, neatly bound on to them. A Meru man, who was very expert with the sumpitan, at the distance of from fifteen to twenty yards, could readily transfix a bird of the size of a starling with one of the little darts. The whole distance to which the arrow can be blown with any thing like effect, is sixty yards, and at that distance, they would probably not pierce the skin. The sumpitan varies in length, being from seven to ten feet. It is used also by the Mui people, the Benkatan and the Tatow, and by all the tribes of the east coast. The Idaan or Meroot, are said by Forest, also to possess it. Mr. Low saw specimens from the river Essiquibo, in south America, which resembled those of the Dyak in appearance and size, but were without the sight and the spear at the end. The Kyan must be very numerous, the tribes on the Cota river were reported to Mr. Dalton, who resided for the purposes of trade for fifteen months in the years 1825 to 1826 at the Dyak (Kyan) town of Tongauon, above the Bugis settlement of Semerindem, to

be above 270,000 in number, and if we may judge from the tribes of the west, this number is not likely to be an exaggeration, but the contrary. Notwithstanding this comparatively large population, Mr. Dalton informs us that head-hunting is practised to a frightful extent, and that desolating wars are constantly carried on for the purpose of obtaining these ghastly trophies. The manners of the young females resemble those of the sea Dyak, but, adultery after marriage is punished by death to the man, who, under whatever circumstances the criminal action takes place, is always considered the guilty and responsible party concerned. On the death of a person, it is said that a head must be procured previous to his burial. And though bloody and ferocious tastes lead to their wars, they are not, as they have been hastily stigmatised, cannibals, nor does any race, which, like the Batta of Sumatra, practise the horrid custom of feeding on the bodies of their own species, exist on the island — *Journ Indian Archip*

KYANAN, BURM. On the low lands near the sea-coast of Tenasserim, there grows a large tree, of which canoes are occasionally made, that is much used for saulals, house posts, musket stocks, and spear handles. The wood is red, but turns black on being anointed with petroleum. The tree has pinnate leaves, with two pairs of oval leathery leaflets, and is a leguminous tree — *Dr. Mason, Captain Dance, Cal Cat. Er 1862*

KY-A-NI, BURM. Copper

KYAN-PHO, BURM. A tree of Moulmein, a strong wood, good for building purposes — *Cal Cat Er 1862*

KYAR, a naddi near Bectiagnunge in Azimguih

KYARI, HIND. A bed in a garden, or plot in a field, also a shallow pan for evaporating salt

KYATPEN, see Ruby Mines

KY-AU or Kyo, and the Khy-eng, according to Mr. Logan, appear to be similar to the Ku-mi. They have numerous common words, and each has words common to Khumi and Burman, or to Burman only. All the ancient or pre-Burman dialects of Arakau, from the Khy-eng to the Kuki, retain one of the characteristics of the Mon-Kambojan alliance and of Tibetan, the use of definite prefixes ha, a, ma, &c. While the adjacent highlanders have a Tartar-like physiognomy, the Ky-an, in features, dress and appearance, can scarcely be distinguished from the lower class of the Bengali peasantry of Chittagong. They are dark with large features, while the Kumi are fair with small features — *Mason*

KYAU THOO, Dipterocarpus, species.

KY-A-VE-KHET, BURM. Coral

KYAY-TSAY-BAYOUN, BURM A Tavoy wood, useful for common carpentry.

KYAY-TSAY-GYU-KHY-AY, BURM In Tavoy, a heavy, compact, dark wood, suitable for gun-stocks

KYA-ZOO, BURM In Amheist, a very heavy wood, like Saul, also a tree of Moulemein, used for building material—*Cal Cat Ex* 1862

KYBURTO Amongst the hundoos of Bengal, the Gaoi are the most numerous, after them, the brahmin and khist races, are the Bagdi, an aboriginal people, and a class of cultivators called Kybuto.

KYCHEE-WARRA, the country inhabited by the Kychee Ryputs—*Malcolm's Central India, Vol 1, p 470*

KYDIA, a genus of plants occurring in Southern Asia Several of the family it belongs to, abound in mucilage, and as a Guazuma is employed in South America in clarifying sugar, so a Kydia is in India Dr Wight in *Icones*, gives Kydia calycina, fraterna, pulverulenta and Roxburghiana The Kydia genus of plants occurs especially in the Pegu and Toungthoo districts The small saplings are used, from their great strength and elasticity, by the natives, for making banghy sticks, but it is large enough to afford timber of three or four feet girth Its wood is white-coloured, and adapted to every purpose of house-building.—*Roxburgh, McClelland, Voigt*

KYDIA AXILLARIS, *Thw*, a middle-sized tree near Badulla in Ceylon, growing at an elevation of about 2,000 feet

KYDIA CALYCINA, *Rorb*, *Com*
Kydia fraterna *Rorb*

Bo ke-mai za,	BURM	Putti pulow,	KAMAON
Pandiki,	TRF	Pula, Pulli, Pola, Puli,	
Potari,	"		PANJAB

This is a middle-sized tree, about 20 feet high and 2 feet in girth, pretty common along the western ghauts, in the valleys of the Cical mountains, in Mysore, and on the slopes of the Nilgiris, and plentiful throughout the Pegu forests, more especially in the Pegu and Toungthoo districts, in Kamaon and Garhwal and in many parts of the Siwalik tract up to 3,000 feet The bark is mucilaginous and is employed in northern India to clarify sugar The small saplings are used, from their great strength and elasticity, by the natives, for making banghy sticks, but it is large enough to afford timber of three or four feet girth Its wood is white-coloured and adapted for every purpose of house-building, charcoal and fuel, and being light and elastic is made into oars, and used on the rafts floated down the Ganges This tree grows rapidly in the outer valleys, but is not common west

of the Sutlej—*Rorb Fl Ind*, iii, 188, *Captain Druce's Useful Plants, Madras Hort Gard Cat*, Dr McClelland, Dr J L Stewart, p 25, Messrs Thomson, Jameson, Powell, Voigt

KYDIA FRATERNA, *Rorb*, or Kydia calycina, *R W* A small tree of the cinna, *Rorb Fl India*

KYEATTEE, *TAV* ? In Travancore, a wood of a ash colour, specific gravity 0.972 Used for carts and buildings—*Col Frith*

KYEE, BURM, of Moulemein, Cassia sumatrana

KYEE THIA, BURM The name according to Dr Mason, of Syndesmonis Tavoyana, and also called Kyay Mishoung But according to Dr McClelland it is Burmingtonia reticulata This tree is of maximum length 10 or 12 feet, it is very scarce in Moulemein, but sufficiently abundant at Tavoy

KY-EING-NEE, or Ky-eng-ni, BURM Calamus diaco, *Willde*

KYEING-TA-BOUNG, BURM Calamus KYEM, *HIND* ? *MAHR* ? In Nagpore, a light coloured wood inferior to teak in strength, and greedily eaten by white-ants Its length is from 16 to 28 feet and girth from 4 to 3 feet It sells at 5 annas the cubic foot and it would answer for rafters—*Captain Sankey*

KYEN, see Karen

KYEN-YO, BURM In Tavoy, a kind of teak

KYERE, *HIND* Euphorbia hirta or E thymifolia

KYET-BET-YA, BURM Boehmeria interupta, *Willde*

KYET MOUK, BURM Celosia cristata, *Linn*, *Rorb* Cock's-comb, a moderate-sized tree, found wild in most parts of the Burmese country The fruit is sour, red, and the colour of a cock's-comb, and has similar corrugations on the skin It hangs in grape-like clusters—*Malcolm*, vi, p 181

KYET TET, BURM One of the Coffereæ

KYET-THIA-IEN, BURM Antidesma paniculata, *Rorb*, *McClelland*

KYET TSUT SHI, BURM Castor oil

KYET YET, BURM Celosia sp Prince's feather

KYET YUNG, BURM One of the Cun-chonacæ

KYE YO THOO, BURM A tree, very abundant at Mergui, not procurable at Moule-

men, but found inland up the rivers all over the provinces, in minimum girth $2\frac{1}{2}$ cubits, and maximum length 15 feet. When seasoned it floats in water. It has an uncommonly smooth-grained, tough, close, yet not heavy wood. Durable and with but one fault,—the smallness of its girth,—which unfits it for gun-carriages. It is strongly recommended for heaves and handles of tools of all sorts, also for handspikes and for spokes. This wood, on careful examination, appears to be identical with Tincomillee wood, though this cannot be positively stated till the flowers of the tree can be procured.—*Captain Dance*

KY-KAYA, is supposed by Dr Carey, to be a king of Persia, the Ky-vansa preceding Darius. The epithet Ky not unfrequently occurs in hindoo traditional couplets. One is connected with the ancient ruins of Abhaner in Jeypoor, recording the marriage of one of its princes with a daughter of Ky Camb. 'Tu beti Ky Camba, nam Peimala ho, &c', 'Thou art the daughter of Ky Camb thy name is Fairy Garland'. Ky was the epithet of one of the Persian dynasties. Qu Cam-baksh, the Cambyses of the Greeks?

KYL, KASHMIR Ibex

KYLAS. The finest specimens of brahmanical caves, properly so called, are at Ellora and Elephanta, though some good ones exist also on the island of Salsette and at Mahabalipur. In form, many of them are copies of, and a good deal resemble, the buddhist viharas. But they have not been appropriated from the buddhists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all viharas are, and their walls are invariably covered or meant to be covered with sculpture, while the viharas are almost as invariably decorated by painters, except the sanctuary. The subjects of the sculpture of course always set the question at rest.

Another class of caves consists of rock-cut models of structural brahmanical temples. To this class belong the famous Kylas at Ellora, the Sivite temple at Doonai, and the Ruth at Mahabalipur. This last is cut out of isolated blocks of granite, but the rest stand in pits.

The India Subha group at Ellora should perhaps form another class, but whether they are brahmanical or jaina is undecided.

KYLAS, the heaven of Siva. He is usually represented with his bride, the mysterious Durga, by his side—and broods upon his endless task of world-destroying. See Kailas.

KYLLINGIA MONOCEPHALA. One-headed Killergia, common at Ajmere in low grounds. The root is sweet-scented, used and named as zedaira "nubishee."—*Genl Med Top*, p. 174

KYNDLI, MALLAL, CAN. A wood called in Tamil Belleiom.

KYMORE. The whole of the Kymore range in Shahabad is described as of mountain limestone which also shows itself in the valley of the river Sone as far at least as Mungeysni peak in Mizapur, and it crops up at Rhotas forming a sloping base to the precipitous sandstone rock. Below the mountain limestone is one of a bluish grey colour mixed with occasional crystals of calc-spar, this, like the Kurnool stone, is admirably suited for lithography. Below the latter, in Kymore, is a limestone of a hard tenacious almost indestructible composition admirably suited for building.

Mr. R Bingham adds the following remarks on the sandstones of the Kymore range, which have a high commercial value at Chunar and Mizapur, being used as flagstones, and for ornamental purposes. The stones at those places owe their advantages to the proximity of the Ganges, which affords an easy river carriage, otherwise they are the worst and most destructible description of stone in the range. The millstones of Chynepore, Sasseram and Tilowthoo (perhaps also Akbarpore), are famous, but must always be dear in a distant market for want of river carriage. The Sone causeway and the Koylwan railway bridge are built of the dense sandstone of Sasseram, little quantities are found in the higher portions of the range towards Rhotas. The best stone, while easily workable, is almost as hard as granite, and may be had of any colour, white, crystalline, blue, grey, and all shades to a dark red. Flexible sandstone is found at Ulwai, Jhend and Jubbulpore.

At the Punjab exhibition held at Lahore, there was a good collection of building materials from Sahi Walabagh, in the Delhi district, including the red, the spotted, and the light coloured sandstone, so much used in the large buildings of Hindustan, and from the same place are polished blocks of white marble, and of a pretty dappled gray marble called Nainani marble, which last was exhibited from the Hissar district.

L, is the twelfth letter in the English alphabet, and is usually denominated a semi-vowel or a liquid. In the English language it has only one sound as in *like, canal*, but in other languages is found interchangeable with *l, n, m, d, r, u* and *z*. Letters with the sound of *l* are in use in all the written tongues of the East Indies but in the Vedas and in the Marathi and other languages of the south of British India, *l* has a rather harsher sound, and in some parts of the Tamil country, medial *l* has the sound of cerebral *l*, and that of a cerebral *l* when final. In other parts of the Tamil region, *l* has the sound of *h*, and in others again of *zh*, so that *pāllām* fruit is also pronounced *pāzhām*. *L* and *zh* are therefore frequently confounded. The languages of Southern India have a sound correctly expressed by *zh*, but taken by the untutored ear to be *l*, and written *l* even by scholars, thus Tamil is properly *Tamizh*, Tuluva is *Tuz-huva*. In non Aryan speech *l* sometimes takes the place of *zh, sy, s*, and *j* or other sibilant. *L* is used in China in the place of the letter *l*. *L* does not exist in Zend. In New Zealand, *l* is substituted for *l*—*Rev W Farrar's Lectures on families of speech, London, 1870, Dr W W Hunter, Wilson's Glossary*

LABBAT-UT-TUARIKH, a history of Asia, by Kasvini

LABBAY, tall, well-made, robust men, inclined to be obese, with a light brownish yellow colour. Their arms and lower limbs are large, their cranium is singularly small. Their eyes are slightly oblique, and not wanting in expression, cheek bones prominent, lower jaw large and heavy, beard usually sparse. They wear the loongi or piece-cloth, wrapped

around their waist and limbs. They are mahomedans, and except pork eat the usual kinds of animal food. Their chief locality is on the eastern coast of the southern part of the peninsula of India, between Pulicat and Negapatam, but chiefly at Nagore where is the shrine of Kadu Wali. They are extensive merchants and traders, are engaged in every branch of foreign and inland trade on the south-eastern side of India, and are exceedingly industrious and enterprising. The hide and horn trade is almost monopolized by them. Their origin is obscure, but the commonly-received opinion is that they are the offspring of Arab fathers with Tamil mothers. Their language is Tamil—*Pto Mad Govt, 1867, p 3*. See India, Mahomedan

LA BEHIMEN, Bombay The dried roots of two varieties of a composite plant, chiefly obtained from Kabul. Used by the natives as a tonic in debility, in doses of 4 drachms, also in impotence as a deobstuent. Price eight annas per lb. Not at present used in European medicine, but was formerly employed as an aromatic stimulant—*Cal Ex. 1862*

Wild variety

Adavi chikkudu kaya, *TEL*

Red variety

Yerra chikkudu kaya, *TEL*

A common plant in the hedges in many parts of India, whence it has travelled into the tropical parts of America. It is a smooth perennial with showy white or purple flowers, and large horizontal pods, containing from three to four seeds. It has a heavy disagreeable bug-like smell, prefers a rich black soil that cannot be flooded by rains, and produces a coarse but wholesome pulse, much eaten by the lower classes in India. This bean is sown in the fields like all others in rows, and is eaten both boiled or put into curries, when young, the legume is eaten pod and all, when full-grown the seeds only are used. It is about five inches long and has got its names from the reddish colour of its edges. Burmese and Karens grow several varieties of one or two species of lablab, which occupy the place of kidney or French beans in Europe. Commonly cultivated in gaudes, of easy growth, a pandal is required for its support. Its composition, in 100 parts, is as under —

Moisture	10 51	Moisture	12 02
Nitrogenous matter	24 55	Nitrogenous matter	22 15
Starchy matter	60 81	Starchy matter	60 52

LABU AMBON, MALAY Calabash Cucurbita lagenaria

LABUAN, an island about 10 miles long and from 2 to 5 broad, ceded to the British Government in 1846. It has the harbour of Victoria on its south. The island is on the N W coast of Borneo, and is in shape, a sort of triangle, of which the longest side, running about N E and S W, is 11 or 12 miles in length and approaches a straight line. The coast line is, for the most part, flat and sandy, although in one or two places, low cliffs abut upon the sea and at about the centre a sloping cliff, 100 feet high or more, leads out to a long sunken ridge of rocks, terminated by a rocky islet named Lyang Lyangan. At this point, deep water may be found up to the beach, but elsewhere shoals and coral reefs extend to a great distance from the land. The southern side of about 6 or 7 miles in extent from E to W, is indented by a broad bay having for the most part very shoal water, from the bottom of which a considerable stream, the China river, pursuing a very tortuous course through mangrove swamps, but in a general N and S. direction, divides the island for about two-thirds of its length into two nearly equal parts. Victoria harbour may be considered a part of this bay, for it is probable, though not certain, that the mangrove swamp at its head is continuous or nearly so with that bordering the China river, so as to separate the range of low hills on the west of the harbour from the rest of the island. From the opposite sides of this bay two ridges of hills, probably nowhere more than 200 feet in height, converge towards the head of the China river, the most elevated parts probably occupying about the central lines of the two divisions and forming the water shed between

the central mangrove swamps and the ravines of the eastern and western shores. Besides the main central drainage of the China river, there are upon this coast several minor creeks, dignified by the name of rivers, which penetrate but a short distance into the jungle.

The dependent islets of Labuan, with the one exception just mentioned, all lie to the south, and proceeding from W to E are as follows.—Pulo Krimman, consisting of a long low ridge and a good deal of sandy beach, is about $1\frac{1}{2}$ miles in length and is situated a little to the S. W. of Tanjung Krimman, the west point of Labuan. Lastward of it is Pulo Bunong, opposite the mouth of the China river, a round mass of limestone rock about 50 or 60 feet high. Off Tanjung Rinchu Rinchu, to the west of Victoria harbor, is Pulo Belulang, a small limestone rock, and south of it is Pulo Enoo, a small hill surrounded by extensive sandy tideway. On the east of the harbor entrance lies Pulo Kuhn Pippin, a small ridge with sandy beach on each side, and connected by a line of rocks, for the most part sunken, with Pulo Dait, which is the largest of the islands, being 4 or 5 miles in circumference, and containing several hills 50 or 90 feet high. Still eastward and in the mouth of the Kalis river, passing over an island named Labangan, is Pulo Malin Krimman, which by some mistake in the naming of the early charts was ceded without the intervening island. All these islands are nearly in a straight line. To the southward of Krimman are Ooookan Kichul and Ooookan Besen, rocky islets with a little flat sandy plain and surrounded by very foul and dangerous ground.

The eastern side of the island forms also a shallow bay almost filled with coral reefs and sand banks, and partially fringed with mangroves. Towards the north another smaller river, the Gingarah, drains a considerable extent of country, chiefly swampy, producing a luxuriant vegetation of various palms and mangroves, and the greater part of it hardly elevated above the level of the sea. Its sources are, for the most part, to the southward of its debouchment, though one small branch runs in a northerly direction, and they are divided from those of the China river by the united northern extremities of the two ridges before mentioned, which are here, for the most part, very low.

The measures of which the whole island is composed are alternating clays and sandstones, with all the intermediate modifications usually found in an English coal field, but having throughout the appearance of having been exposed to much less pressure and condensation. Coal occurs in several places, and the

veins appear to be associated in groups. In one place five, in another three veins (one very small) are distributed in a very small space of ground, and in each case, the continuing group of clays is placed between two very thick beds of sandstone. The clays are usually very slightly laminated, excepting where they are alternated with sandstone in excessively thin beds, a formation rather common. They are also much less carbonaceous in general than the corresponding members of the Welsh and north of England coal fields, but to this there are some exceptions. One bed of blue shale, apparently of considerable thickness, yields in several places small springs of dark colored but tolerably pure petroleum. This bed is in perpendicular depth some 100 or 500 yards below the principal coal seam. No regular beds or veins of non-stone have been detected, though the clays frequently contain nodules of argillaceous non-stone, sometimes in nearly continuous courses. These nodules are often septarian, and are filled with crystallized but very friable carbonate of lime. Small masses of uncrystallized pyrites are also sometimes enclosed in them, as well as in the clays themselves. These nodules when exposed to the air, appear in the course of a great length of time, to become converted into red oxide of iron of various degrees of hardness, from a powdery yellow soft substance, to a dense dull purple cavernous stone of vitrified appearance, capable of striking fire with steel and closely resembling the bitumens of Singapore. The whole surface soil of the island and the beds of most of the streams are more or less covered with scattered masses of this substance. It is also found on the main land, and is the ore from which the Kadjan and Moorat, native tribes in the neighbourhood of Brunei, manufacture their iron.

The coal is of very good quality, hard, dense and with a fracture inclining to conchoidal, and is remarkable for having dispersed through its substance masses of imperfect amber, sometimes light yellow and very transparent, sometimes approaching to black and in a semi-carbonized state, but always extremely friable and brittle, when burnt it diffuses the fragrant smell of recent resin, and is in a sufficiently perfect state to be collected by the workmen and used with fresh dammar in making torches. In some seams of coal on the river Bintulu, to the south of Brunei, the late Mr. Burns mentioned that almost half the seam consists of this substance, which is there commonly dug and used by the inhabitants as dammar. Specimens of coal from Ruteh, on the east coast of Sumatra near the Indragiri, contain much of this substance

Lac is obtained from incrustations made by an insect (*Coccus lacca*), similar to the cochineal, (*Coccus cacti*) on the branches and twigs of many trees in India, but seemingly all from the punctures of the *Coccus lacca*, the names of the trees are

Alemites laccafera	Peromia elephantum
Anona squamosa	Inga dulcis
Butea frondosa	Mimosa coccinea
Cassia spinarum	Rhinnus juyaba
Celtis, sp	Schleichera trigyna
Croton duneo	Urostigma religiosum
" laccafera	Vatica laccafera
" sanguiferum	Vismia " ?
Erythrina indica,	" mitchamith ?
" monosperma	Zizyphus juyaba

The *Coccus* genus of insects belongs to the order Hemiptera. The species known in the south of Asia are the *C. cacti*, the cochineal insect, the *C. lacca* that yields the stick lac of commerce, and the *C. maniparus* of Arabia, which punctures the *Tamarex gallica*, and causes the exudation of the Arabian manna. The *Coccus lacca* produces the substance called lac. When the females of this *Coccus* have fixed themselves to a part of the branch of the trees on which they feed, a pellucid and glutinous substance begins to exude from the margins of the body, and in the end covers the whole insect with a cell of this substance, which, when hardened by exposure to the air, becomes lac. So numerous are these insects, and so closely crowded together, that they often entirely cover a branch, and the groups take different shapes, as squares, hexagons, &c, according to the space left round the insect which first began to form its cell. Under these cells, the females deposit their eggs, which, after a certain period are hatched, and the young ones exit their way out. It is found encrusted twigs and branches. The broken twigs covered with these incrustations are called 'stick lac' in commerce. After the colour has been extracted and further purified, shell lac results. Lac lake was first made in Calcutta in the beginning of the 19th century, afterwards the lac dye *Coccus sinensis* of China secretes a wax from which candles are made. The lac is formed by the insect into cells, somewhat resembling a honey-comb, in which the insect is generally found entire, and owing to whose presence, stick-lac yields by proper treatment a red dye, nearly if not quite as bright, as that ob-

taured from cochineal, and more permanent Lac is found encrusting the branches of these trees in the form of a tube, $\frac{1}{2}$ inch to one inch in diameter. The broken branches with encrustations at various distances, is called in commerce stick-lac, which ought to be semi-transparent. The colouring matter obtained by grinding stick-lac, and then treating it with water, constitutes seed-lac. At the Madras Exhibition of 1855, the crude stick-lac attached to branches of various trees was exhibited from 16 localities, extending from Kumptee to Trivandrum. It is abundant in the jungles of S. India, but is not much collected for commercial purposes, although always procurable in the bazars; the best lac is produced upon the *Schleichera triguga*, which abounds in the central provinces, and yields the resinous secretion twice a year. In Bengal, lac is chiefly produced in the forests of Sylhet and Burdwan, but it is also procurable in the Deccan, and Siam and Pegu afford the largest supplies. At the Madras Exhibition of 1857, lac was exhibited from the Ficus elastica, Butea frondosa and Zizyphus jujuba. It is found in great abundance on the *Croton laciferum* growing near Colombo, in the island of Ceylon; it is also an article of commerce from Siam and Pegu. The Abbe Rochon informs us that gum lac is brought from Quanton in the province of Quier-chu in China, but of a quality greatly inferior to that of Bengal. The Reverend Mr. Waid also points to this superiority. The Hindoo physicians of the South of India, known as Vyteems prescribe Komburruk in old and obstinate bowel complaints, when the habit has been much reduced; they also, when mixed with guggulu oil use it as an external application for the head, in cases, in which the patient is debilitated from long continued fever. The stick-lac from Pegu is, perhaps, the finest in the world, preferable even to that of Bengal. The jungle at Taldungah consists chiefly of thorny bushes, jujuba of two species, an *Acacia* and *Butea frondosa*, the twigs of the latter often covered with hard red tears of lac, which is there collected in abundance. As it occurs on the plants and is collected by the natives it is called stick-lac, but after preparation shell-lac. In Mizapore, a species of *Celtis* yields it, and the Peepul very commonly in various parts of India. The elaboration of this dye, whether by the same species of insect, or by many from plants so widely different in habit and characters is a very curious fact, since none have red juice, but some have milky and others limpid. The cells made by the insect, for its eggs adhere to the branches in grains, completely encrusting them, and, in commerce, are either

imported in that form, and called stick-lac, or the grains are gathered from the branches, then colouring matter extracted, and formed into flat cakes, still preserving the granular appearance, and called seed-lac, or the seed-lac is melted up into masses, and called lump-lac. Shell-lac, is seed-lac further purified by being put in bags of fine linen, and melted over a charcoal fire until it passes through them. The bags are squeezed, and passed over a smooth surface of wood, on which the lac is deposited in thin layers. If pure, this kind of lac will take fire on a hot iron and burn with a powerful smell. The heat of a ship's hold will sometimes run it into a solid mass, and thus diminish its value. The chief consumption of lac in Europe is for the manufacture of sealing-wax and varnishes. In India the inferior kind is made into bangles or armlets for women of the lower classes, the superior is fashioned into rings, beads, and other trinkets, and, to fit it for such purposes, the natives purify it by melting in the manner above described. When the lac begins to exude, it is scraped off, and the bags are twisted or wrung by means of cross sticks at their ends, to force out the melted contents. The natives of India make a good varnish of lac, coloured with cinabai or some other pigment, with which they varnish boxes, cabinets, and other articles. Coloured varnishes of this description are much used in the adornment of their religious houses. They also employ lac as a dye. By pouring warm water on stick-lac a crimson colouring matter is obtained, which is made into square cakes for sale, and called lac dye, lac lake, or cake lake. These cakes when broken are dark-coloured, shining, and compact, but when scraped they yield a bright red powder approaching carmine. A mixture of lac, alum, and tamarind-water is the native dye for silk or cotton cloth of a crimson colour. The Indian lapidaries make use of lac as a vehicle for retaining the hard powders used in cutting and polishing gems. The lac dye constitutes much of the value of lac, and is due to the insect which makes the cells. The parent lac insect, after laying her eggs, becomes a mere lifeless bag, of an oval shape, containing a small quantity of a beautiful red liquid. The young insects feed on this liquid, and their bodies assume the same hue, so that the branch which bears them appears to be covered with red powder. The cells of gum-lac which shelter them are more or less deeply tinged with the same colour. The best time for gathering stick-lac so as to secure the colouring matter, is before the insects have made their escape. Previous to the discovery of the true cochineal, the colouring matter of the lac

insect was universally employed for dyeing. The crimson of Greece and Rome, and the imperishable reds of the Brussels and Flemish schools, were obtained from this source. The best quality of stick-lac is obtained from Siam, the twigs being frequently encrusted all round to the depth of a quarter of an inch, while sometimes a great accumulation takes place on one spot that of Assam ranks next the stick-lac of Bengal is inferior to these, being scanty and irregular in its coating of resinous matter. The supply of lac from among the mountains of India, could support a consumption ten times greater than at present. The accumulation of insects is so great, that the trees, often a species of ficus, on which they live, are exhausted and injured by this vermin. The lac which is so largely exported from Burmah, is obtained chiefly in the Shan districts. It lives in Assam, chiefly on the *Ficus religiosa*. After the dye is extracted, the gum-lac still requires much purification before it can be used for the more delicate varnishes. It was long a desideratum to render lac colourless, its dark-brown hue being a drawback to its use as a spirit varnish. A premium of thirty guineas and a gold medal were offered by the Society of Arts for "a varnish made from shell or seed lac, equally hard, and as fit for use in the arts," as that prepared from any other substance. These were claimed by two persons, Mr Field and Mr Luning, and as both their processes were found to answer the desired end, a premium of twenty guineas was awarded to each.

The imports into Great Britain were as under —

Year	Lac-dye. Tons	Shell-lac Tons
1847	277	472
1848	371	431
1849	222	718
1850	679	739
1851	906	764

It was imported into Liverpool from Bombay as follows —

The resinous excretion or exudation called, Shell lac, Stick-lac, Seed lac		The colouring matter of the body called, Lac dye or cake lac, Lac lake	
Year	Cwt	Year	Cwt
1851	323	1851	48
1852	150	1852	120
1853	325	1853	82
1854	120	1854	60
1855	79	1855	36

The exports of Lac from India were almost all from Calcutta and were as under in the eleven years 1850-51 to 1860-61 —

Year	Tons	Value £	Year	Tons	Value £
1850 51	3,757	139,177	1856 57	2,489	105,595
1851 52	2,867	105,823	1857 58		107,677
1852 53	3,817	150,680	1858 59	1,351	80,567
1853 54	3,527	102,792	1859 60	1,972	78,012
1854 55	2,512	92,232	1860 61	2,186	171,616
1855 56	2,906	126,878

LAC, LAT Milk

LAC, a barbarous native tribe in Persia. The Zund, and all other branches of the Lac tribe, are as barbarous as any of the wandering tribes of Persia. The Manfee are, like the Zund, a barbarous branch of the Lac — *Malcolm's History of Persia*, Vol 11, pp 150 and 160.

LAC, in hindoo numeration, 100,000, a lac of rupees is therefore £10,000, ten rupees going to a pound sterling, a crore, or krori, is 100 lacs.

LACARU, Guz Wood Timber

LACCA, In Lac

LACCADIVA, or Laccadives, an archipelago of low islands, off the coast of Malabar, extending from lat 8° 30' N to the parallel of 13° 52' N, and from 71° to 73° 40' E L. Most of the islands are low, and surrounded by steep coral reefs. The Laccadives form a group of 32 small islands, west of the Malabar coast, surrounded by coral shoals. The inhabitants subsist mostly on cocoanuts and fish, and their chief trade is in cocoanuts, oil, con, jaggery and coral. The inhabitants call them the Lakheina-deevh. Ptolemy mentions them as the Dimuice Insulæ, but Ammianus Marcellus, in the 4th century styles them merely Divi, and the Arabs and Persians call them Debatat. They were re-discovered in 1499 by Vasco de Gama and afterwards plundered by the Portuguese. They were then subject to the mahomedan chiefs of Cannanore, some of them afterwards were under the Bedui queens of Bednore, and latterly under the Beeby of Cannanore and the British, and between the last two they are now apportioned. They were visited

in 1844-45 by Mr W Robinson, and in 1867 by Mr Sewell, 8 or 10 islands are more or less inhabited, and each with 2 to 3 miles of superficial area. They are all about 15 or 20 miles apart, separated by great channels, but none of the islands are more than 10 to 15 feet above the sea level. The people are estimated to be 7,000 in number. They are of Malayala origin, but are now mahomedans and adhere to the Alya-santan, or decensus ab utero, though some of the islands are adopting the filial law. They are poor, quiet and inoffensive, make good pilots and use a dialect of Malayalam. They produce the coconut palm and corn, jagger and a few pulses, a few cattle, sweet-potato and betel-nut. The castor oil and aintotto plants are grown, tortoiseshell, holothuria or sea slug, mats, shells, shark and fins. Their boats vary from one to fifteen tons burthen, and they visit all the western coast of India from Goa to Cochin. They are taught Arabic and Balite (a dialect of the Malayali) in the mosques, by the priests. There are 19 considerable islands, but the approach to most of them is very dangerous, as they are surrounded by reefs and steep rocks with a great depth of water close to them. The largest island is about 7 miles long and $2\frac{1}{2}$ broad, and there are many navigable channels between the islands, the largest of which is the Mannaie or the Nine-degree channel. They pay £1,000 of tribute to the British Government. The islands are very difficult to find in thick, squally weather, as scarcely any of them rise more than six feet from the surface of the water. They have a novel appearance when first coming in sight, as the coconut trees with which they are thickly covered, have the appearance of growing out of the sea. They are all of coral formation, and very few have any anchorage near them. As a rule, no bottom is found at a hundred fathoms close up to the beach. The four northern islands, are Chitlai, Kitban, Aimm and Candanum — *Johnson, Gazetteer, Mr William Robertson's Report, Mr Sewell's Report*

LACCA EM PAOS, PORT LAC

LACCA TREE, ENG Tanaisius major

LAC DYE, or Lac Lake, consists of the colouring matter extracted from the stick-lac. The lac dye of commerce is prepared by evaporating the coloured tincture to dryness, when the residue is formed into little cakes, two inches square and half an inch thick, these are of various qualities and are marked with different letters by which the quality is recognized. They are used as red dyes for some purposes, instead of cochineal. Lac dye is largely manufactured in Bengal, whence it is exported to England. A sample of lac-lake dye was exhibited at the Madras

Exhibition of 1855 by Dr Flynn, who prepared it by boiling coarsely powdered Rangoon stick-lac in several portions of water, until it ceased to yield any colouring matter, a small quantity of alum was then added to the filtered solution, after a few minutes, a small quantity of Liqui Potassa was used to throw down the alumina with the colouring matter, the fluid at the same time being constantly agitated. The precipitate was allowed to settle for a day, the fluid then drawn off and the sediment pressed into cakes and dried in the shade. This dye is usually obtained from the lac by treating the crushed lac with water to dissolve the colouring matter, but the lac should be gathered when the insect is within the lac concretions appearing as a small oval body consisting apparently of nothing but a soft red substance nearly liquid. If the lac is not gathered till after the insect has escaped from its resinous envelope, the quantity of colouring matter obtainable is very small. Dr McLeod, of Madras, prepared a superior lac dye, by digesting stick lac (crude lac) in the cold, in a slightly alkaline decoction of the leaves of Memecylon tinctorium, and the solution being applied to woollen cloth, after preparation with a mordant formed of a saturated solution of tin in muriatic acid, produced a brilliant scarlet dye — *M E J R, Powell's Hand-book, Econ Prod, Pangab, p 183*

At the Madras Exhibition of 1865, some very fine thread lace was contributed by the Edeyengoody Mission School, Trinnevelly, and by the Nagercoil Mission School, Travancore, so nearly equal in merit that a second class medal was awarded for each. The patterns of both were varied and tasteful, but the prices above those of European lace. The Cochin Local Committee exhibited some very creditable specimens of lace insertion and edging. Some excellent specimens of Gold lace; Cord Sashes and sword Knots were exhibited by the Madras Local Committee, deserving of honorable mention. Lace, is a term applied to two very distinct products, one consisting of gold and silver wire, or even silk thread, woven into ribands for embroidering hats and uniforms. The other is the well-known transparent network, in which the threads of the weft are twisted round those of the warp, it may be made of silk, flax or cotton, or even of gold and silver thread, and has usually a pattern worked upon it, either during the process of making the lace, or with a needle,

after this has been completed Much lace is made by machinery, but the highly esteemed genuine articles is made by hand Lace-knitting is considered to be a German invention, but lace worked by the needle is of far older date, and was probably an eastern invention, though it does not appear to have been known or practised in India Lace however, is enumerated by General Cullen as being made in the territories of the rajah of Travancore, and the Madras Central Committee, in their final report state that the lace of Nagercoil, though knit by natives of the country, was equal to the best French lace A few of the European residents are already aware of the superior quality of the Nagercoil lace, and use it, but its beauty is well-deserving of being more generally made known than it at present is This lace, when seen at the Great Exhibition, was much admired, and some said that it must have been made in France Samples of six different kinds were sent Gold and silver blond lace are both excellent of their kinds, but as the demand is limited, and fashion changeable, they might not always command a sale But the broad black lace on wreath-ground, and the broad white and fine lace on Brussels ground, and of the nature of Bedfordshire lace, were highly approved of by the best authorities The broad being thought worth four shillings, and the narrow worth two shillings a-yard—*McCulloch's Dictionary of Commerce, M E J R, Royle's Arts, &c of India, p 503*

Under the family name Lacertians, Cuvier arranged—1st The Monitors and their subdivisions, namely, the Monitors properly so called, including the Ouans of the Arabs (*Varanus*), &c, the Dragons (*Crocodilus* of Spix, *Ada* of Gray), and the Sauvegades (Monitor of Fitzinger and Ameiva) 2nd The Lizards properly so called The second group comprises, according to Cuvier, the genera *Lacerta*, *Algyia*, and *Tachydromus*, but these are now arranged under other families—*Eng Cyc, Gunther's Reptiles*

LACHU LACHU, HIND Rheumatism

LACK, GR Lac

LACKER, a varnish either for wood or for brass, made with shell-lac and spirits of

wine That for wood, called hard-wood laker, may be in the proportion of 2 lbs. of lac to the gallon Another recipe is 1 lb of seed-lac and 1 lb of white resin to a gallon of spirits of wine For brass the proportions are $\frac{1}{2}$ lb of pale shell-lac to 1 gallon of spirit It should be made without heat, but simply by agitation for five or six hours It should then be left until the thicker portions have subsided, when the clear laker must be poured off, or if not sufficiently clear, it must be filtered through paper It darkens by exposure to light, so that paper should be pasted round the bottle to exclude it A pale yellow laker may be prepared from 1 oz of gamboge and 2 oz of Cape aloes, powdered and mixed with 1 lb of shell-lac For a full yellow, $\frac{1}{2}$ lb of turmeric and 2 oz of gamboge for a red laker, $\frac{1}{2}$ lb of dragon's blood and 1 lb of annatto The colour, however, is modified by that of the lac employed. Lakers may also be coloured by dissolving the colouring matters in spirits of wine, and adding the proper proportions of these to the pale laker, according to the tint required Mr A Ross prepares laker with 4 oz of shell-lac and $\frac{1}{4}$ oz of gamboge, dissolved by agitation in 24 ounces of pyro-acetic ether The clear liquor is decanted, and when required for use is mixed with eight times its volume of spirits of wine Hardwood laker is applied nearly in the same manner as French polish In lakering brass, the work must be cleansed from grease and oil, and if convenient, heated to the temperature of boiling water, when the spirit evaporates, and the varnish attaches itself more firmly to the metal, producing a brilliant effect If heat cannot be applied, the air should be dry and warm The lakering should follow immediately after the work is polished, otherwise it will become tarnished, and prevent the laker from adhering To prevent this tarnish, the work may be smeared over with oil, or kept under the surface of pure water, or wrapped closely up in cloths Before lakering, the oil must be carefully cleaned of with muslins, and afterwards with whitening applied with a rag or a brush In brass work factories, a lakering-stove, with a broad, flat top, is used for holding the articles which are to be heated preparatory to lakering, or a metal plate, supported by four legs like a table, and heated by a ring of gas-jets below, may be used Brass tubes may be heated for lakering by being filled with boiling water, the ends being stopped with corks In lakering the heads of a large number of small screws, they may be inserted in a piece of card, and heated over a charcoal fire or a gas flame, and the whole

be lackered at one process. In thin circular works, the friction of polishing gives the heat required for the process. The lacker must be laid on quickly and uniformly by means of a camel's hair brush, and as soon as one coat is applied, another must be put on, heat being used between the two coats if necessary. Circular works may be lackered on a lathe. The word lacquer is evidently derived from the Indian name for lac. The name occurs in Avicenna, who mentions it, as described by some, as the gum of a tree like the myrtle, and by others that it is a substance like to, and having some of the properties of, amber. It is mentioned in many Indian works, and is apparently alluded to by Ctesias. This substance is used for a variety of purposes in India, and it is the common material for uniting things together, as gum and glue are in Europe, toys of various kinds, lac chains gilt, and lac grindstones, are made from it. The term lacquer is applied to laying on or covering with a preparation of lac, but two different processes are usually confounded under this term. The one prevailing in Burmah and the southern parts of the Indian peninsula is from the balsamic juices of trees and was well-known to Dampier, in 1638, as he says, "The lac of Tonquin is a sort of gummy juice which drains out of the bodies or limbs of trees," and that "the articles lacquered are cabinets, desks, &c." Some chemical change, no doubt, takes place on exposure of these juices to the air. This kind of lacquered-ware was much appreciated in the last century, and was imported chiefly from China, much, however, was always prepared in Burmah, though that of Japan was always considered superior to any other. Both these and the lacquer of Burmah are prepared only from the juice of the *Terebinthaceæ* family of plants. The chief expense of the manufacture arises from the care with which successive layers of varnish must be laid on. Another kind of lacquer-work is rather of the nature of papier-mâché, covered with one or more layers of lac varnish. This is the case with the lacquered boxes from Cashmere and Lahore, so remarkable for the beauty and elegance of their patterns. At the Madras Exhibition of 1855, a series of lac-ware from Hyderabad consisting of bracelets, chains, neck ornaments, pin-cushions, purses, and other ornaments were exhibited through Dr. Smith, excellent of their kind, and well-finished. Some large and interesting specimens of this manufacture contributed from Kinnool, consisted of charpoys, trays, an almshouse and several boxes, and exhibited considerable proficiency in the execution and arrangement of the patterns, but too great a sameness of colour with a

preponderance of yellow. The joinery also admits of much improvement. In China, lacquered-ware was formerly exported in considerable quantities, but partly owing to the liability to injury on the homeward passage, and being superseded abroad by other things more substantial, the exportation has dwindled to a mere trifle. Such articles as are exported consist of those which have always been in request, as fans, waiters, boxes, tea-boards, tea-caddies, teapoys, &c. The patterns worked on them affect their sale, and the least mark spoils the varnish. The best kind of lacquered-ware comes from Japan. The beauty of the lacquered-ware of China owes its lustrous colouring to a composition of lamp-black and the clarified juice obtained from a species of sumach, called Rhin varnish or *R. vernicia*. Wood oils are obtained from other plants of the same family, and the different qualities of lacquered-ware are owing to the use of these inferior ingredients. The real varnish tree is described by De Guignes as resembling the ash in its foliage and bark, it is about fifteen feet in height, and furnishes the sap when seven years old, which is carefully collected from incisions in the trunk opened in the summer nights. The body of the ware is wood partially smoothed, or paste-board, upon which two or three coats of a composition of lime, paper, and gum are first laid and thoroughly dried and rubbed. The surface of the wood is also hardened by rubbing coarse clay upon it, and afterwards scraping it off when dry. Two coatings of lamp-black and wood oil, or in the finer articles, of lamp-black and varnish, are laid upon the prepared wood, and after drying, the clear varnish is brushed on, one coating after another, with the utmost care, in close and darkened rooms, allowing it to dry well between the several coats. The articles are then laid by to be painted and gilded according to the fancy of customers, after which a last coating is given them. The varnish is brought to market in brownish cakes, and reduced to its proper fluidity by boiling, it is applied to many purposes of both a varnish and paint, when it is commonly mixed with a red or brown colour. A beautiful fabric of lacquered-ware is made by inlaying the nacre of fresh and saltwater shells in a rough mosaic of flowers, animals, &c., into the composition, and then varnishing it. Another kind, highly prized by the Chinese, is made by covering the wood with a coating of red varnish three or four lines in thickness, and then carving figures upon it in relief. The great labour necessary to produce this ware renders it expensive. A common substitute for the varnish is the oils of the *Diyandia*,

Jatropha, Croton, and other members of the Euphorbiaceous family, expressed from their seeds by a variety of simple machines, consisting for the most part of different applications of power to cylinders and pestles by which the seeds are pressed or pounded. The oil, after pressing, according to DeGuignes, is boiled with Spanish white in the proportion of one ounce to half a pound of oil, as it begins to thicken, it is taken off and poured into close vessels. It dissolves in turpentine, and is used as a varnish, either clear or mixed with different colours; it defends wood-work from injury for a long time, and forms a good painter's oil. Boiled with iron rust, it forms a reddish brown varnish. In order to prevent its penetrating into the wood when used clear, and to increase the lustre, a pruning of lime and hog's blood simmered together into a paste is previously laid on — *Tomlinson, Royal's Arts, &c, of India, p 486, M E J R; Withams' Middle Kingdom, Vol II, p 121, Hon'ble Mr Morrison's Compendious Description*. LACQUE, FR Lac

LACQUER, see Japan, Lacker varnish

LACQUER-WARE of Benares is good. Two kinds of resin are used, one called lal or lala, is sold at eight annas the seer, and is said to be brought from Mizapoor to Benares. The fine lacquer is made of a resin called gaharba, for a seer of which one rupee and two annas are paid. The beautiful China lacquer-ware, which is so universally admired, is made principally near Nankin, being considered far superior to that which is made in Kwau-tung and the other provinces. The ware is frequently used for articles of furniture, and the process of the manufacture of a table, which has a landscape with figures delineated on the top, in gold, may be thus described. The timber being first put together, and rendered perfectly smooth, is covered with transparent paper, besmeared with pork fat. As soon as this paper is quite dry, it is covered with paste made from a peculiar description of clay. When this substance has become completely dry and hard, it is rubbed down with a whetstone, to remove all inequa-

lities of surface, as soon as this process is complete, the lacquer is laid on, then allowed to dry and harden, when the process is again repeated three or four times more, the lacquer being allowed to become completely dry and hard between each several coating. The intended landscape is traced on the top of the table, by throwing a fine white powder, over paper, on which the landscape has been traced, by means of small perforations, thus forming the outline of the picture. A minute instrument, somewhat resembling a style, is drawn carefully over the perforations, by this means tracing the landscape on the surface of the table. The picture is then besmeared with a compound of size and red paint, the gold, first reduced to a powder, is then applied, the raised appearance of the figures being produced by means of a preparation of gum combined with other ingredients, the picture is allowed to become perfectly dry, when, if requisite, another coat of the lacquer or varnish is added. To prepare this lacquer-ware in perfection, requires a lengthened period, and a Chinese manufacturer mentioned that to produce a fine specimen, elaborately painted, six months ought to elapse between the commencement and the termination of the work, thus allowing time for each coat of lacquer to become thoroughly hardened before another is applied. The designs traced upon their porcelain or China are very inferior, but the colours used by the artists who paint these designs are far superior to any European colouring. Of all the works of art in which the Japanese excel the Chinese, the lacquer is the most striking. Some of that now made is very fine, but not to be compared with the real old lacquer, which is very rare, and is hardly ever brought into the market, except when some old family is in much distress for want of money, they then bring pieces of antique lacquer (which is as highly esteemed by them as family plate with Europeans) to be sold at Yedo or Yokohama. There are on some of the noblemen's estates, manufactories of lacquer, celebrated for their excellence and from which their owners derive great wealth. Articles made there are always marked with the crest or crests of the owner of the estate, so that that which is much sought after, such as prince Satsuma's lacquer, may at once be recognized by seeing his crest upon each piece. Old Japanese lacquer is, like good lace, inimitable, but an experienced connoisseur can at a glance pronounce upon its merits and reality. It is very difficult now to meet with a good old specimen, the market is stocked full of modern work, made expressly for Europe, now and then, however, a Daimio, very hard up, or a courtesan in temporary

embarrassment, sends secretly from Yedo a choice piece for sale, and it is astonishing to find the enormous price it will realise. Twenty, forty, sixty sovereigns or more are given for an old box not a foot square, but the sale is tacitly interdicted, indeed it is almost as disgraceful for a Japanese to put with old lacquer-ware, as it is for an English gentleman to dispose of his family-plate. The laque is vegetable: it is the sap or juice of a very handsome tree, *Rhus vernix*. But the manner of preparing it, and the mode of applying it to the perfection of those exquisite old specimens is, and is likely to remain, a secret for a long time. The bark of this tree, on being cut, yields a white milk, which becomes black on exposure to the air: the leaves, petals, and nearly every part of the tree yield also the same liquid. As one of the ingredients in its preparation, the oil of the *Bignonia tomentosa* is employed. If secret there was, it seems lost to us and themselves, for the modern laque is such a wretched imitation of the ancient, that is very difficult to admit that the same composition could have produced the two qualities. Ordinary laque has the consistency of treacle, and much the same colour, the first coating is thin and yellowish, the second of a brownish tinge, and the last (as I have seen it employed on my own furniture) a bright mahogany.

Colour Sticks for lacquer-ware, are used in the Panjab by the Khatri, or wood turner, to colour his ware when the turning process is complete. The stick consists of shell-lac, melted down with a certain proportion of wax and sulphur, and coloured by various simple or compound colours. They are applied by the hand. The operator holds the colour stick against the turned wood object while revolving rapidly, the heat produced by the friction melts the lac and the colour is deposited on the surface of the wood. The skill and fancy of the operator directs him either in laying on a uniform layer of colour, or else putting it on in little spots or touches, by allowing the colour stick only very lightly to touch the revolving wood, thus producing either a smooth uniform colour, or the pretty mottled appearance so often observed in lacquered ware. Two or three different colour sticks are often applied, giving the whole a marbled appearance of great beauty. The colour thus applied is spread, fined and polished, by pressing the edge against the turned object while revolving. The final polish is given by a rag with a little oil. The principal colours are of lac, crimson, or piment, red-lead, green, made of piment and Prussian blue, dark blue, indigo or Prussian black, white, brown or gold colour, light blue or

ulthamaine — *Hodgson's Nagasaki*, pp 28, 29, 31, 32, *Sun's China & the Chinese*, Vol 1, pp 400, 402, 403, *Powell's Hand-book*. See Lackey.

Choff,	EGYPT	Roman lettuce,	ENG
Lettuce,	EG	Kalu,	HIND
Garden lettuce,	"	Salada,	SING
Cos,	"	"	"

It is used by natives as a demulcent only. The lettuce is a garden vegetable, inodorous, of sensibly sensible taste, or slightly bitter. At the flowering time it contains a milky juice, which has acquired some celebrity under the name of Lactucarium, or Thuidace. Its seed, called Khas-ka-bij, is in Hindoo medicine regarded as a very cold remedy — *O'Shaughnessy*, p 406, *Powell's Hand-book*, Vol 1, p 355, *Dr Stewart*, p 127.

LADAK Ladak lies between Nari-khoi-sum on the S E and Balti on the N W to the N of Dras, Zaskari and Puring. Ladak territory lies between lat 34° 35' N, and long 75° 78' E. The Shyok and Indus rivers run through it. In its E and W course, the Indus descends from 14,000 feet at Dem Chok to 10,500 feet below Le, and at 8,500 feet enters Balti. Ladak is occupied by the Bhoti race. It is a province of Kashmir. Between the British territory and Ladak and the countries beyond, a trade exists in shawl wool and chinas, which are taken in exchange for opium, the produce of the Kulu hills, otter skins, cotton, piece goods and drings. The Bhoti, in the Ladak frontiers of the western Himalaya, salute by raising the back of both hands to a height even with the forehead and then repeatedly describing a circle in the air with them, by dropping the fingers downwards and turning the palm inwards. This is similar to the mahomedan practice of Billaen-lerai, where a woman is supposed to take upon herself all the evils which would befall the person whom she addresses. The Ladak country is called La tag in Tibetan, Ka-chim-pa, or Snow-land, Mai-yul Redland, or Lowland. It is bounded on the north by the Kua-koram mountains, which separate it from the Chinese district of Kotan, on the east and south-east, are the Chinese districts of Rudok and Chumuti, and to the south are the districts of Lahul and Spiti now attached to British India, but formerly belonging to Ladak. To the west lie Kashmir and Balti. Its greatest length is 290 miles and breadth 240 miles, and its whole area is 30,000 square miles. Ladak is politically divided between the rajah of Kashmir and the British. Ladak, anciently was called Kie-cha, by the Chinese, it is still

called Kha-pa-ehau or Kha-ehau, abounding in snow or snow-land, and the people as Kha-pa-ehau-pa or Kha-ehau-pa, men of the snowy land. Ptolemy's A-khassa regio, is no doubt Kha-ehau-yul, snow-land or Ladak. It is one of the most elevated regions of the earth, and the joint effect of elevation and isolation, amidst snowy mountains, produce perhaps the most singular climate in the world. The plains between 16,000 and 17,000 feet are covered with wild horses and hares and immense flocks of domestic sheep and goats, while the slopes of the hills up to 19,000 feet abound with marmots and alpine hares. Both meats and fruits are cured by mere exposure to the air, a sure indication of its intense dryness. It seldom snows and scarcely ever rains. Its mountain ranges stretch in parallel lines from south-east to north-west, determine the course of the rivers and form the natural boundaries of the country. The general aspect of Ladak is extreme barrenness, but many fertile tracts occur along the rivers, covered with luxurious crops. The yellow plains along the Indus, are covered with flocks of the shawl-wool goat, and all the principal thoroughfares of the country are dotted with numerous flocks of sheep laden with the merchandises of China and of India. No rain falls and but little snow. Burning heat by day is succeeded by piercing cold at night and everything is parched up by the excessive dryness of the air. During the short summer, barley ripens at 15,000 feet, although the temperature falls below the freezing point, every night. Ladak is in general of the buddhist faith. The valley of Le or Ladak proper, Zaskai, Dias, Suiu and Puniik are all buddhist. Cultivation goes on in Zaskai on the Indian side of the Indus, and at Nubia Nua 12,000 feet, on the north side of the Indus, Yul-chung 13,000 feet, and 14,000 and 15,000 feet at Phutaksha. Ladak is agricultural but enjoys a transit trade, and much labour has been expended in constructing roads through Kashmir, Jammu, Kullu, Lahul—leading to the Panjab, Kabul, Lhasa, Chinese Tartary, Khoten Yarkand, Little Tibet and Bilti. All these follow the lines of rivers, cross passes 18,000 feet high, and over rivers by ferries, by inflated skins, and suspension bridges. Three varieties of the sheep and three of the goat are domesticated in Ladak, and the domesticated Yak, is used for carrying loads. The Dso, hybrid between the yak and cow is a beast of burden. Rain fell ten times during the two years that Moorcroft remained at Leh. Its population amounts to 433 persons in the square mile. In Ladak, the nuns and monks bear a large proportion to the population. It was subject to L'hasa,

until A. D. 1834, when it was seized by Zorawar Sing, general of the raja of Jammu. Ladak is inhabited by a peculiar race who call themselves Bot-pa, who speak a peculiar language in Europe called Tibetan and who profess the religion of Buddha, under a hierarchy of monks called Lamas. The term Tibetan is unknown to the people as also to the Indians who call them Bhotiya and their country Bhutan. Ladak belongs partly to the Jammu Rajah and partly to the British, and is Bhut along the banks of the Chandra and Bhaga, but Hindu after their junction. To the north of the Ladak country, the people of Yarkand and Kotan speak Turki. To the west, beyond Bilti, the people of Astor, Gilgit and Hunza Nagar, speak different dialects of Dardic, while the Kashmiri have their own peculiar language. To the south, the people of Chamba Kullu and Bisham, speak a dialect of Hindi, and to the east and south-east, the people of Rudok, Chang Thang, and Gnam speak Tibetan only. Moorcroft lived for two whole years in Ladak, from September 1820 to September 1822. In Ladak proper, is the valley of Le, the main stream of Indus. Ladak, or the Bot Pa of Tibet, includes Spiti, Zaskai, Puniik, Suiu, Hembiko (Dias), Ladak proper or Le, Nubia, Rong, Rupshu and Hanle. The natural divisions of the country are seven, viz., (a) Nubia on the Shayok, (b) Ladak proper, on the Indus, (c) Zaskai on the Zaskai river, (d) Rukhu around the lakes of Tshomoru and Tshokai, (e) Puniik, Suiu and Dias or Hembaks, on the different branches of the Dias river, (f) Spiti on the river of this name, and (g) Lahul on the Chandra and Bhaga or headwaters of the Chenab. Ladak is the most westerly country occupied by the Tibetan race who profess the buddhist faith. Ladak is supposed by Major Cunningham to be the Cesi of Ptolemy. Chang-thang, Tib, literally northern plains, the Chitæ Scythæ of Ptolemy, north-east of Ladak. Major Cunningham, in his 'Ladak,' &c., remarks that "the water-fowl swarm on the lakes and on the still waters of the Upper Indus. I have, he says, shot the wild goose on the Thgyi Chummo and Chomoru lake at 15,000 feet, and Col Bates and I shot three teal on the Suiy Dal, a small lake at the head of the Bhaga river, at an elevation of upwards of 16,000 feet." Leh, the capital of Ladakh, is situated upon a rising ground, at an elevation of 11,000 feet above the level of the sea. Like the generality of the fortress-looking towns and villages in Ladakh, it has an imposing appearance from a distance. The old palace, fort and ruined wall on the face of a ridge are striking enough, but, in

common with every one of Gulab Singh's conquests, tyranny and neglect sadly chauged Ladak since the time of its legitimate rulers. The men, it is said, were chiefly employed in the sulphur and borax mines, so that the greater part of the cultivation and manual labour in and about Leh is performed entirely by women. At stated times caravans from Yarkand arrive with brick-tea, shawl wool, China silks, ponies, &c, which are exchanged for grain, English calicoes, and the like, so that Leh is but a market-place for Cashmere and Yarkand merchants. The buddhist monastery of Himis is 12,324 feet above the sea, in lat $33^{\circ} 59'$ north, and long $77^{\circ} 16'$ east. The people are of a cheerful disposition and often may be heard humming simple tunes. The richer Laho, wear silver and even gold pins. This refers to those parts of Ladakh near Kashmir, far on this side of Leh. At Leh itself and among the wandering Taitai tribes, the women dress with woollen or variegated petticoats, and tanned sheep or goats' skins as mantles. The principal ornament of the Ladakhi women is a head band hanging like a long tail, and studded all down with large tinquoises, this is called "berak" and often, even with common people, worth Rs 20 or 30. The great article of trade in Ladakh is the shawl wool from the further provinces. The route to Amritsar via Ladak is that which brings the trade of Yarkand and eastern Turkistan. There is also a route from Amritsar, Jalandhar or Ludhiana via Naurpur, Mandi and Kulru, to the same places. The Tibetan provinces of Ladak and Balti which continue, as formerly, appanages of Kashmir, have been very completely explored botanically by several travellers, their herbaria contain many plants found within the British boundaries. Buddhism was still prevailing in A.D. 1419, in Turkistan, in the cities of Turfan and Kamil, when Shah Rukh's ambassadors passed through, and Toghlaq Timur was the first mahomedan sovereign of Kashgar of the lineage of Chengaz. There are now many buddhist priests at the capital of Khotan, but mahomedanism had been extensively prevalent in East Turkistan for centuries prior to its conquest by the Chinese in A.D. 1757, and the buddhist priests and temples may have been since introduced. Nearly all Ladak is of the buddhist faith. The valley of Le or Ladak proper, Zaskar, Hembaks or Dias, Suru and Purik, Spiti, Nubra, Janskee, Roug, Rupshu and Hanle, are all buddhist. In the valley of the Upper Indus, that is in Ladak and little Tibet, the prevailing race is the Bhot sub-division of the great Taitai variety of the human race.

Lower down that classical stream, in Gilgit and Chilas, the remains of the old and secluded Durdoo and Dugheri races are still to be found, but both in Iskardo and in Gilgit itself, there is some mixture of Toorkaman tribes from the wilds of Pamer and Kashkar. The Dard race lying along the Indus, to the westward of Ladak, speak three distinct dialects. They use the Persiau character in writing Dardu, the three dialects of which are called Shina, Khajunah and Ainia. The Shina dialect is spoken by the peoples of Astor, Gilgit, and lower down in Chelas, Darel, Kohli and Palas on both banks of the Indus. The Khajuna, by the people of Hunza and Nager, and the Ainia in Yasan and Chinial. Astor has an area of 1,600 square miles, on the left bank of the Indus. Gilgit, in Thibetan Gylgyid, has an area of 2,500 square miles on the right bank of the Indus. Dard or Durd are supposed by Vigne to be the Dadicæ (*Δαδίκαι*) of Herodotus, and the people who now occupy the country called Dardu. Under the name of Chinese Tibet, for convenience, may be included the whole of the territory made up of the districts of Chauthan, Guari Khoisum, Chumuti, &c, which lie to the east of Ladak and march with the Spiti and Bussahir boundaries to the south. But little is known of this country, as the local authorities, though not at all objecting to being visited by the men of Ladak, Lahoul and Spiti, have the greatest aversion to the intrusion of any European. No actual violence is offered to the latter, but supplies are refused, and the head-men distinctly say that if the traveller insist on proceeding he can do so as he will not be opposed, but his advancing will be the death-warrant of those who allowed him to enter. The chief towns with which British trade has to do are Rudokh, to the east by south of the Pangong Lake at about $33^{\circ} 25'$ lat and $72^{\circ} 40'$ long, and Gardokh, lying between the sources of the Indus and Sutlej, at about $31^{\circ} 40'$ lat and $80^{\circ} 25'$ long. The latter is an important and prosperous city and a famous commercial entrepôt, where annually in August there is a very large fair. Through both these towns from Leh there is a route to Lhasa, the more direct one by Gardokh, being 1,350 miles in distance or $4\frac{1}{2}$ months' journey. By the route by Rudokh the Sokpo are said to have invaded Ladak in 1826-7, and again 3,000 Changpa in 1834, the latter rapidly retreating as the Kashmere troops approached. Shortly after both Rudokh and Gardokh fell under the dominion of Maharajah Gulab Singh, but disasters attending his army, in 1842, the old boundary between Ladakh and Chinese Tibet was once more re-established. Another

town, Shipki, is just without the Bussah frontier, and but 100 miles from the termination of the Hindustan and Tibet road at Serahun. From it there is a pretty regular communication with Simla, Rampore in Bussah and Kooloo. There is no possibility of forming an estimate of the trade entering the Panjab from Nari Khoison, but it is considerable. Its trade with Leh was calculated by Cunningham in 1854-5 to cover £48,365. One of its chief exports is the shawl wool from Chanthan in the vicinity of Rudokh, a tract of country long celebrated for the fine fleeces of its herds of sheep and goats. Bussah is the territory on either side of the Sutlej, which touches on Spiti to the west and Chinese Tibet on its northern flank. Kunawu, its largest subdivision, is in length about 70 miles by 40 and 20 broad at its northern and southern extremities, according to Mr. Davies, who in his Trade Report alludes to its genial climate beyond the influence of the periodical rains of India, the winters also being comparatively mild. "Grain and fruit," he says, "are produced abundantly, the poppy also flourishes." The people of the north are active traders. They proceed to Leh for Churns and to Rudokh for shawl wool giving in exchange money, clothes and spices. The mountain paths are scarcely practicable for laden mules, and merchandise is earned chiefly on the backs of sheep and goats. An annual fair is held in November at the capital of Rampore on the Sutlej. The town is of some importance as the point where the commercial routes from Leh, Gardokh and Simla meet, and also as a seat of the pushmenga manufacture. In 1840, the value of the pushmenga or shawl wool imported, was put down by Cunningham at about Rs 90,000. Trade from Bussah catches up the Hindustan and Tibet road at Serahun and passes by Kotghui to Simla, and from Rampore direct by Spiti to Leh or to Sooltanpore in Kooloo and thence to the Panjab.

Eastern Turkistan may be described as the country to the east of the Pamir steppe. It is bounded on the north by the Thian Shan range, on the south by the Himalaya and Kuen Luen, and on the east by the Great Gobi desert, which stretches away to the confines of China proper. For many years this province was held by the Chinese, but in 1862 an insurrection broke out, and by 1864, Yakoub Begi, the commander of the rebel forces, succeeded in completely ousting the Chinese and seating himself on the throne. He evinced no small powers of governing, was brave, energetic and prudent, and by his liberal treatment of merchants and his merciless severity to robbers, did all he could to

encourage trade. He was known under the name of "the Kushbegi" or commander-in-chief, but he assumed the title of Atahgh Ghazi, and he received with honour and distinction, Mr. Shaw, the gentleman who with Lieutenant Hayward penetrated into Yarkand, and he expressed a desire to send an envoy to the Viceroy of India. The chief towns in Eastern Turkistan nearest to British frontier are Yarkand and Khoten. Yarkand is the largest city in the territory and has a population exceeding 100,000 souls. It is also by far the most important. It stands between the branches of the Yarkand Daria (river) in long 71° north, by lat 42° east, and is encompassed by a wall eight fathoms high and 17 miles in circumference. There are numerous bazars, and also a large bazaar in the centre of the city. Yarkand lies 217 miles from Aksu, 270 from Khoten and about 200 from Kashghar by well-travelled routes. Khoten, Ilsa, Ilich or Ili lies to the south-east of Yarkand, in long 79° 25' north, by lat 37° 15' east, and is situated between, or rather above the junction of the Khoten and Kunakash rivers. It is surrounded by a low wall and has 18,000 houses, with eight scurs for the use of foreign merchants. Khoten is nearer than Yarkand to Kashmere, but the routes from and to the latter place are more generally adopted by traders. From Yarkand to Leh in Ladakh the distance is reckoned at very nearly 500 miles, while from Khoten to Leh it is about 350, and from Leh to Sultampur in Kooloo it is close on 250 miles more. The chief exports from Eastern Turkistan to Hindustan consist of silks, shawl-wool, churns, felts and ponies, and the imports are mainly in opium, red goat-skin, piece goods, chintzes, spices, sugar in a raw state and drugs. The shawl wool, termed in Eastern Turkistan "Toorfinnee" or 'Kuchance,' has only of late been brought into use in the manufacture of shawls. This Toorfinnee wool is quite as good, if indeed it is not better than the "pushmenga" exported to Kashmere from Chanthan. The natives of Ladakh deny the possibility of any approach at domestication of the Kiang, and state the young always died in confinement. The chief food of this species appears to consist of the stunted fescue grasses common on the plains and mountains, together with a red-flowered vetch, possibly *Oxytropis chilo-phylla* of Hooker. The speed of the Kiang is great, its action seems to consist of a long step or trot, which is never varied, with which a herd bounded down a steep hillside.—Dr. Latham's *Descriptive Ethnology*, Major Cunningham's *Ladak*, p 3 Adams, *Oleghorn's Punjab Reports*, pp

LADKHANA, or Larikhana, twenty-one miles from Shikarpur, the road leads through jangal, and is unsafe Ladkhana a large, populous, and commercial town, the bazaars exhibiting great activity — *Masson's Journeys, Vol 1, pp 460-461*

LADRONE ISLANDS, the Grand Ladrone called, by the Chinese, Tyman-Shan, is in lat 20° 56' N long 113° 44' E 12 miles east of Macao, and 29 miles east of Canton factories It is steep and bold and 2 miles in circumference On its west side is the little Ladioue The Ladioues were the first islands seen by Magellan From these he sailed to the Philippines where, in the island of Mactan near Zebu, he was killed, as also was Barbosa Magellan's companions then visited Timor in 1522 and returned to Lisbon, making the first circumnavigation of the globe The opening of this archipelago to Europe was gradual Entering the utmost eastern confines of the archipelago, Magellan discovered the Ladioues, or Isles of Thieves They have since

been named the Marianas, but still deserve their original appellation, as the people of the surrounding groups stand in dread of their predatory inhabitants. On one of the Meaco-shimah isles walls have been raised and pierced with loopholes, as a defence against these roving banditti of the sea The Ladioues lie about four hundred leagues east of the Philippines Only one of them is now tenanted, and that by a small and savage tribe Plantations of caper trees are in perpetual bloom — *Bikmore, p 206*, *St John's Ind Arch, Vol 1, p 102*, *Vol 11, p 357*; *See E Belcher, Vol 1, p 84*, *Hoisingburgh*.

LADRONES, PORT The term applied by the Portuguese to the Chinese pirates, who commenced to gain power by the close of the 18th century. The Ladioues or pirates of the Archipelago consist wholly of the inhabitants of the free mahomedan states in Sumatra, Lingin, Borneo, Magudano, and Sulu, those natives who have remained uncontaminated by the doctrines of the Arabs never being known to engage in the like pursuits Europeans who were unfortunate enough to fall into their hands were generally murdered, while the natives who compose the crews of the captured vessels are sold for slaves — *M Earl, p 42*

LADUNUM, or Labdanum

Cistus creticus, Linn

Laden, Ladun,	ARAB	Ledanon,	GR
Ciste, Lademifere,	FR	Ladunum,	LAT

This resinous substance which was considered by old writers cephalic, pectoral and nervine, is now only used in the preparation of certain plasters It is not unknown to the mahomedan medical practitioners of lower India, and has a place in the Materia Medica of the Arabians amongst their Munzigat (Suppurantia) Ladanum, is sometimes written Labdanum, but incorrectly as it is the *Λήδανον* of the Greeks and the Ladun of the Arabs It is first mentioned by Herodotus (in, 112) as procured in Arabia, and used by the Arabs for fumigation The word is not Greek, but an Arabic word with a Greek termination, the Greeks also use the word *Λήδος* to indicate the shrub which produced the Ladanum — *Ans Mat Med, p 23* See Ladanum

LADURI, HIND *Nyctanthes arborescens*

The Bottle gourd, is commonly cultivated by the natives, to whom it is of some importance as food, of easy culture, but is seldom eaten by Europeans, being very coarse. In Tenasserim, the bottle gourd grows luxuriantly, and several varieties may be seen about the Indian cabins. One species grows abundantly in southern Asia. It is used for making the stunged musical instrument called the sitar. When dried it becomes hard, of a pale bay colour, and is used to contain water, and as floats and buoys and swimming aids when crossing rivers. In its wild state, this plant, or a variety of it, produces a poisonous fruit, and Dr Royle states that a very intelligent native doctor informed him that cases of poisoning have occurred from eating the bitter pulp. Some sailors also are said to have died from drinking beer that had been standing in a flask made from one of those gourds. Don says that the poor people among the Arabians eat the edible kind boiled with vinegar, or fill the shells with rice and meat, and so make a kind of pudding of it. The pulp of the fruit is often employed in poultices, it is bitter and purgative, and may be used instead of colocynth. The seeds, "Doodie seed," yield a bland oil, and they are given in headaches — *Jaffrey*, *Mason*, *O'Shaughnessy*, *Powell's Hand-book, Prod*, *Punjab*, pp 263-264, *Eng Cyc*, *Dr J*

LAGERSTRÆMIA, a genus of plants of the natural family of Lythiaceæ, growing in the Peninsula of India, along the foot of the Himalaya to the northern parts of India, and from the Malaya Archipelago into China and Japan. The species are few in number, but most of them highly ornamental. Speaking of this genus, as they occur in China, Mr. Williams remarks that few trees in any country present a more elegant appearance, when in full flower, by far the most beautiful plants met with on the low ground, are the different species of Lagerstræmia. There are two or three varieties, having red, white and purple flowers, and in the summer months, when they are in bloom, they are quite the hawthorns of China, surpassing in their gorgeous flowers even that beautiful family. He generally met with them in a wild state, very near the sea shore. The whole of the species may be propagated by seed or cuttings in any garden soil. In the island of Hongkong, the most beautiful plants met with on the low ground, generally in a wild state, very near the sea shore, are different species of Lagerstræmia. There are two or three varieties, having red, white and purple flowers, and in the summer months when they are in bloom, they are quite the hawthorns of China, surpassing in their gorgeous flowers even that beautiful family. A little higher up is the beautiful *Ixora coccinea* flowering in profusion in the clefts of the rocks, and its scarlet heads of bloom under the Hongkong sun are of the most dazzling brightness. The ravines are crowded with ferns and creeping shrubs of different kinds, not however of much interest to the lover of ornamental flowering plants. Here, however, under the ever-dripping rocks, grows the beautiful *Chiata sinensis*, a plant with elegant foreglove lilac flowers, which is now in many of the gardens of England. The Tinoy forests are adorned with a smaller species of Lagerstræmia than the *L Indica*, but the flowers are equally elegant and quite as large. The *Pymma* or *Pec-ma*, *Burur*, is a very large and useful species tree, sometimes twelve or fifteen feet in circumference, and preferred for some parts of ship building to teak. The fruit is very small, firm, like a lemon, and very soni, wood, reddish, hard, tough, and durable. From the bark constantly exudes a yellow gum, resembling gamboge. The whole of the species may be propagated by seed or cuttings in any garden soil — *Eng Cyc*, *Fortune's Wanderings*, p 20, *Williams' Middle Kingdom*, p 285, *Riddell*, *Mason*, *Malcom's Tr in S E Asia*, Vol 1, p 185

LAGERSTRÆMIA, *species* Kuen-mou-nee or Pu-ma, BURM, is a Tavoy tree, wood used in building

LAGERSTRÆMIA, *species* Pyimma, BURM, is a splendid tree, abundant throughout British Burmah, wood used more extensively than any other, except teak, and used generally for the fittings of boats, sometimes for the hulls of canoes, for house posts, planking, beams, scauthing for roofs, euts, and a variety of other purposes. Large quantities are now employed for ordnance purposes. The wood of the light-coloured variety is less heavy and is said to be less durable. A cubic foot weighs 37 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot — *Dr Brandis, Cal Cat Ex of 1862*

LAGERSTRÆMIA, *species* Pyeu-maphoo, BURM, is a tree of Moulmein, wood used for making oars and for rough house-building — *Cal Cat Ex of 1862*

LAGERSTRÆMIA, *species* Pyeu-mazoot-gyee, BURM, a Moulmein tree, with a soft wood, used in the ordinary purposes of a building material — *Cal Cat Ex of 1862*

LAGERSTRÆMIA, *species* Thit-py-oo, BURM, is a light, but comparatively strong wood of British Burmah, colour white and pinkish, probably a valuable wood for furniture. Used for planking, breaking weight 153 to 179 lbs. A cubic foot weighs 30 to 38 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 80 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 4 annas per cubic foot — *Dr Brandis, Cal. Cat Ex of 1862*

LAGERSTRÆMIA GRANDIFLORA, *Hooker*

Dua-banga, HIND

In the Terai, east of Sihgootee, Bombay, Erythrina, and the Lagerstræmia grandiflora were found by Dr Hooker in full flower, and with the profusion of Bauhinia, rendered the tree-jungle gay, the two former are leafless when flowering. The Dua-banga is the pride of these forests. Its trunk, from eight to fifteen feet in girth, is generally forked from the base, and the long pendulous branches which clothe the trunk for 100 feet, are thickly leafy, and terminated by racemes of immense white flowers, which, especially when in bud, smell most disagreeably of asafœtida. Dr Hooker, is the sole authority for this tree, the Lagerstræmia grandiflora. — *Hooker, Him Journal, Vol. 1, p. 401*

There are three varieties (a) rosea, (b) lilacina and (c) alba, of this small pretty shrub, which is common in gardens in Maulmain, and of easy cultivation. It has one of the most beautiful flowers in our Indian gardens, grows to the height of seven or eight feet, the flowers hang in bunches at the extremity of the branches, and are of a beautiful lilac colour. The white flowering species of the China melind, is a common shrub in gardens, and used for border hedges, it bears a small reddish flower and grows easily from cuttings at the commencement and during the rains — *Drs Mason, Ann Mat. Med, p 164, Riddell, Roxb, Voigt*

This is a tree of the western side of India, common in Wynnad and on the western ghauts, very common in the Bombay forests, but less so to the north of the Savitree than to the south of that river. It is of large size with a long straight stem, and, for common purposes, where timber of inferior quality is sufficient, is very useful, being easily worked. It only bore 290 lbs, and on a second trial, it sustained 374 lbs. If stronger and more durable, the length and straightness of the stem would adapt it for spars. But, Dr Gibson thinks this wood is very fit for many household purposes, and for the decks of ships, &c, and it is much used in the Bombay dockyards, which forms a good presumptive proof that the wood cannot be very inferior. In the Madras Gun Carriage Manufactory, it is made use of for a variety of purposes. It has great "stiffness," and wooden bridges have been built of it. In Wynnad, it is prized for making coffee cases. It is said to be a tree of Moulmein, commonly known under the name of jarool, but this is doubtful — *Drs Wright, Gibson and Cleghorn, Mr. McIvor, Madras Catalogue Exhibitions of 1851 and 1862, Col Martland in Madras Cat. Ex 1862, Madras Exhibition Jury Report 1855, Voigt, 132.*

This tree grows in the Northern Circars, in the Godavery forests, on the Neilgherries, at Courtallum, in the Dehra Dhoon, and in the Tavoy forests. Is common in Wynaad and on the western ghats, but is not common in the Punjab Suwalik tract. Dr Gibson says it is most common in the Dandele forest above, also not uncommon below, and reaches a large size. Wood prized for making coffee cases, for house-building, and masts for the dhow, pattamah, and other country vessels. It grows to ninety and one hundred feet long, and from twelve inches to three feet in diameter, it is perfectly straight and without branches, excepting at its top, the leaves are small and very thick. This wood is not so durable as the poon, but it may be considered of the same texture, although it is very much lighter in colour, and in this respect much resembles the American red oak. Its wood is tough and valued for its qualities in standing water. It is greatly in use for beams, rafters and boat timber. In the Nalla Mallai it has a light-brown, compact, hard, serviceable wood, and used generally. As a wood of British Burmah, it is not much used. A cubic foot weighs 40 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 15 feet, and average girth measured at 6 feet from the ground is 5 feet. It sells, there, at 8 annas per cubic foot. Its timber is yellowish, elastic, and tough, and is valued for agricultural implements, &c. In the N W Provinces it is reckoned one of the best woods for buggy-shafts, &c. — *Roxb, Voigt, Edye, M & C, McIvor, Drs Gibson, Wight, Brandis, Mason, J L Stewart and Captain Beddome, Mr Latham*

LAGERSTRÆMIA PUBESCENS, Wall

La-izah, BURM

A very large tree of British Burmah, stem not always perfectly round, and inclined to form buttresses, timber valued for bows and spear handles, also used for canoes and cart wheels. A cubic foot weighs 53 lbs. In a full-grown tree on good soil the average length of the trunk to the first branch is 100 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot. — *Dr Brandis, Cal Cat Ex 1862*

LAGERSTRÆMIA PYMMAH, McCl

Pymmah nee,	BURM	Red pyymmah,	ANGLO-BURM
Pymmah,	"		

This common and valuable timber is found all over Pegu, in the Mayagie forests, and on the Choungs Kayoo, Thabyed and Thenat in abundance, but ceases a little below Tounghoo and Piome. At all the lower stations from Piome and Tounghoo downwards, it ought to supersede the use of teak. It stands without a rival in strength. It is a red-coloured wood, strong, and adapted for house-building, and valuable in ship-building and next to teak, it is in greater request than any other description of timber, as it is not injured by white ants. The Burmese gun carriages are made of this wood. Its fault is its liability to shakes. It is a different species from *Lagerstræmia reginæ*, but the posts of an old wharf at Tavoy, which were of this Pymmah wood, stood erect for twenty or thirty years, though house-posts often decay in the ground in a much shorter period. Capt Dance says Pymmah Nee or Red Pymmah, is very abundant all over the Tenasserim and Mutaban provinces, and found of maximum girth 6 cubits, and maximum length 30 feet. When seasoned it floats in water, and is a tough wood, very good for helves, and already used for such, and for other ordnance purposes. He says that the great fault of pyymmah is its liability to shrink and warp when exposed to the heat and sun, but it has not been killed and left standing as teak has been, otherwise the tendency to warp might disappear. Dr. McClelland seems to regard the white wood tree as *L. reginæ*, and the red wood as *L. pyymmah*, which Dr. Brandis treats as two varieties of *L. reginæ*. — *Dr McClelland, Capt Dance, Select Records Govt of India, Foreign Dept, No 19, pp 10 and 42*

This is a large tree of Ceylon, the peninsula of India, Coimbatore, Cauana, Sunda, in the mountains north-east of Bengal, in the Jynteah hills, in Pegu and Tenasserim, Amherst, Tavoy and the Meigui Archipelago, and when in flower, is most conspicuous. In full blossom, in the morning, a tree looks as if mantled with roses, but the flowers change through the day to a beautiful purple, making it appear at evening, if seen from a short distance, like a bower of English lilacs. It is not uncommon in the warm, moister parts of the western and southern parts of

Ceylon, up to an elevation of 1,500 feet. In Canara and Sunda, it grows near the banks of rivers below, and reaches a large size. It is common in the jungles, below the ghats, south of the Savitree river, but is hardly found north of that and never in the inland Bombay jungles. In Ceylon its wood is used for water casks and buildings, in Coimbatore and in Hyderabad, this tree is more celebrated for its large handsome flowers than for its timber, which last, however, is used for common purposes. Its timber from the Bombay forests, is reckoned rather good, and is used, being generally crooked, for the knees, &c of native boats. In the Madras Gun Carriage Manufactory it is used for light field cheeks, felloes, cart naves, framing and boards of waggons, limbers, platform carts, ammunition box boards and heavy field cheeks — *Voigt, Thwaites, Dis McClelland, Riddell, Wight, Brandis, Mason and Gibson, Mr Mendis, Captain Dance, Major Benson, Col Martland in Madras Cat Ex of 1862; Dr Hooker's Him Jour, Vol II, p 327, Roxb, II, 505*

LAGETTA LINTEARIA, HIND Daphne cannabina

LAGG ^{Sokota} is the capital of Lagg and Wasta, in Abyssinia and is a place of considerable size. — *James Paul Paper*

LAGGAN, or Lakkeu, ARAB A dish, which is sometimes placed under a candlestick to intercept any wax that might fall on the carpet, the lower part of a lantern or dish, the paste or dough of bread is often kneaded — *Ouseley's Travels, Vol I, p 247*

LAGHAR or Hobby, and her mate the Jaghai, is the only long-winged hawk generally used in the Sindh country, she is large, and black-eyed with yellow legs, black claws and a tail of a cinereous white colour. She is a native of Sindh, moults during the hot months from April to October, and builds in ruined walls and old mimosa trees. The Laghai is flown at quail, partridge, curlew, bastard-ousterd and hares, the best sport is undoubtedly afforded by crows, only she is addicted to carrying the quarry, and is very likely to be killed by her angry enemies. Carrying is the technical word for walking off with the wounded bird — *Burton's Falconry Valley of the Indus, pp 13 to 16*

LAGOMYS BADIUS On entering Tibet, Dr Hooker found the ground burrowed by innumerable marmots, foxes, and the "Goomchen," or tail-less rat, Lagomys badius, sounding hollow to the tread, and at last becoming so dangerous that he was obliged to dismount and walk. Other tail-less rats, as Lagomys hodgsoni, are plentiful, and Lagomys togli, common on the Cashmere ranges. One or both may be the Pharaoh's mouse mentioned by Marco Polo. The lagomys is said to be eaten by certain tribes in Tartary — *Hooker, Him Jour, Vol II, p 156, Adams.*

LAGOMYS NEPALENSE, inhabits Nepal

LAGOMYS RUFESCENS, Gray, a little quadruped found on the mountains of Afghanistan, and perhaps onward to the Hindu Kush, but which is very unlikely to inhabit the Indian side of the passes — *Cal Rev*

LAGOON Many shallow salt water lagoons known as back waters, run close around the shores of the Bay of Beugal and of the Arabian Sea, some of them from twenty to fifty miles long, — they afford great facilities for a safe traffic along the coast line, the violence of the mousoons and the few sheltered harbours on the eastern coast of the Peninsula, rendering navigation perilous at all times and often impossible. The Marine Lagoons or backwaters of the coast of India, are quite dissimilar from those of the Coral islands. In the latter, the surf beating loud and heavy along the margin of the reef, presents a strange contrast to the prospect beyond — the white coral beach, the massy foliage, and the embosomed lake, with its tiny islets. The colour of the lagoon water is often as blue as the ocean, although but fifteen or twenty fathoms deep, yet shades of green and yellow are intermingled, where patches of sand or coral knolls are near the surface, and the green is a delicate apple shade, quite unlike the usual muddy tint of shallow waters. "These garlands of verdure seem to stand on the rims of cups, whose bases root in unfathomable depth. Seven miles east off Cleimont Tonnere, the lead ran out to eleven hundred and forty-five fathoms, (six thousand eight hundred and seventy-feet) without reaching bottom. Within three-quarters of a mile of the southern point of this island, the lead had another throw, and, after running out for a while, brought up for an instant at three hundred and fifty fathoms, and then dropped

off again and descended to six hundred fathoms without reaching bottom. The lagoons are generally shallow, though in the larger islands sounding gave twenty to thirty-five, and even fifty and sixty fathoms"—*Gosse's Natural History*, p 94, *Cheever's Sandwich Islands*

LAHORE, the chief city of the Panjab, is built on the left bank of the Ravi river, and has about a hundred thousand inhabitants. It was annexed to the British Government on the 16th Dec 1845, and was occupied by the British, 22nd Feb 1846. The treaty of Lahore was dated 9th Mar 1846. Arrian states that the first city taken by Alexander after leaving the confluence of the rivers was inland 400 stadia, or 46 miles, distant from the Akesines, and that it was captured by assault, and General Cunningham infers that this city was Kot Kamalia. Old coins, found in great numbers, show that Depalpur was in existence as early as the time of the Indo-Scythians, and General Cunningham is inclined to identify it with the Dardala of Ptolemy, which was on the Sutlej to the south of Labokla and Amakatis, or Lahore and Ambakassi. Lahore has been the capital of the Panjab for nearly nine hundred

years. It is said to have been founded by Lava, or Lo, the son of Rama, after whom it was named Lohawati. Both Jay Pal, and his son Anand Pal, the successive antagonists of Mahmud, are called rajas of Lahore by Ferishta. This Hindoo dynasty was subverted in A D 1031, when Lahore became the residence of a mahomedan governor under the king of Ghazni. Upwards of a century later, in A D 1152, when Bahram was driven from Ghazni by the Afghans of Ghori, his son Khusru established himself at Lahore. But this new kingdom lasted for only two generations, until A D 1186, when the sovereignty of the Ghaznavi was finally extinguished by the capture and imprisonment of Khusru Malik, the last of his race. Milton notices Lahore as one of the towns in the far east, when indicating the various nationalities, thus,

the flow'r and choice
Of many provinces from bound to bound,
From Arichosia, from Candaor east,
And Margiana to the Hyrcanian cliffs
Of Caucasus
From Samarchand by Oxus, Temir's throne
To Agia and Lahore of Great Mogul,
Down to the Golden Chersonese—
And utmost Indian Isle Taprobane

Bernier, marching from Delhi to Lahore with the camp of the emperor says, he never saw a town or village all the way. The revenue of the province of Lahore, in the reign of Aurungzeb, was, according to Bernier, £2,500,000 per annum. Lahore has within its walls numerous wells. It is surrounded with a substantial brick wall, some twenty-five feet in height, and sufficiently broad for a gun to traverse on it. It has many circular towers, and divers sided bastions, at regular intervals. There are many gates, as the Murchi Daiwaza, the Lohai Daiwaza, the Delhi Daiwaza, the Atak Daiwaza, &c. The last is also called Daiwaza Tanksala, or the Mint gate, an appellation that led the Jesuit Teisenthaller into the error of supposing that in his time one of the city gates retained the name of Taxila. At the Lohai Daiwaza was a large piece of ordnance, called the Baughli. In the neighborhood of Lahore are many large and delightful gardens, the fruit trees, flowering shrubs and plants, are, however, those common in Hindustan. About three miles north-east of Lahore, is the renowned and once delightful garden of Shalimar. There are still the marble tanks and fountains. Amritsar, however, has become the great mart of the Panjab, and the bankers and capitalists of the country have taken up their abodes there. As men, physically speaking, the natives of the Panjab are superior to those of Hindustan proper. Their

limbs are muscular and well-proportioned, and they have a stoutness of leg and calf, seldom seen in Hindustan. Instances of very tall stature may be rare, the general standard being a little above the middle size. The Sikh are certainly a fine race of men, particularly the better classes. Their females, are seldom permitted to go abroad. They wear extraordinary high conical caps, producing a curious effect, with trowseis. The dress of the men is peculiar, but not inelegant, consisting of the Panjab pagri for the head, a vest, or jacket, fitting close to the body and arms, with large bulky trowseis, terminating at the knee, the legs from the knee being naked. About the middle of the nineteenth century, chiefs began to wear full trowseis, but at one time the maharajah and his court could scarcely be said to wear trowseis at all. Over the shoulders, a scarf is usually thrown. Generally speaking, these articles of dress are white. The Sikh are cleanly in their linen, in which particular they advantageously differ from their mahomedan compatriots. Their scarfs are usually trimmed with a coloured silk border, and sometimes scarlet shawls, or other showy fabrics, are employed. The Sikh allow the hair of their heads to attain its full growth, and gather it up into a knot at the crown, agreeably to the old Jetic fashion. By pressing it tightly back from the forehead, they somewhat elevate the upper part of the face, which imparts a peculiar cast to the countenance. The country between Ferozpur and Lahore is for the most part cultivated, and covered with fields of wheat and groves of date, mango, acacia, peepul, &c. The famous old mussulman city of Kussoi is worth a visit, were it only to examine its fallen grandeur. Among its old temples, ruined walls, and broken aqueducts, are to be traced, the remains of a once important town, which the great Runjeet Singh levelled with the ground when employed in consolidating the Khalsa dyuasty. The Cheuab river at Wazeerabad has little of the majesty and appearance observed in its course through the Himalaya, the roaring mountain torrent is transformed into a muddy river, whose banks are often almost level with the plain, especially in the neighbourhood of the city above-mentioned, where annual inundations leave great swamps in which wild-fowls congregate during winter. The Masjid of Padshahi and Vazir Khan mosques are particularly splendid. The Sona, or Golden Masjid, also claims attention, from the attraction of its gilded minarets and cupolas. The manufacture of armour, swords, guns and the like, once had its grand centre at Lahore, but when the Sikh rule passed away, the

demand ceased. The artisans have recently all gone into the Gujrat and Gujranwalla districts, where they develop their art in works of peace, and now, instead of Sikh armour, inlay caskets and studs, vases, paper-cutters, letter weights and other fancy articles are produced. There are still persons at Lahore who can work magnificently in inlaid armour, and do so occasionally at the call of the collectors of articles of vertu, but in Lahore it is almost impossible to get the articles above enumerated as made at Sealkot, Gujrat, or Nizamabad—*Cunningham's Ancient Geography of India*, pp 197, 198, 206 to 214, *Milton's Paradise Lost*, *Mason's Journeys*, Vol 1, pp 408, 411, 415, 433, *Cunningham's History of the Panjab*, Vol 1, p 31, *Powell's Hand-book, Econ Prod, Panjab*, p 9, *Adams*. See India, Inscriptions, Jat, or Jet, or Jut, Kabul, Khetri, Khyber, Panjab, Shawlgat, Sikhs.

LAHOREE-SUBOO, BLNG Chenanthus chemi

LAHORI BANDAR is called by Ibn Batuta, Lahari, also Laharya, probably Lari, from Lai, the local name of the southern portion of the province of Sind. Lahori Bandar, or Lari Bandar, succeeded Debal as the seaport of the Indus. Debal was unknown to Ibn Batuta A.D. 1333.

LA HOUL-O-LA-QOOWUT, &c, ARAB, meaning there is no power or strength but in God, are the commencing words of a mahomedan invocation—*Heikh*

LAHSAN, GUZ, HIND, DUK Garlic. Lahsan-ka-tel, HIND Garlic oil

LAHSUNA, SANS Garlic

LAHUL is a British province in the valleys of the head waters of the Cheuab, the bed of which is nowhere below 8,500 feet of elevation. It is everywhere surrounded by lofty mountains, except towards its north where it is coterminous with Kishtwar. To the south it is bounded by the mountains north of Kulu, where it is crossed by the Rotaug pass, elevated 13,200 feet, an exceptional depression, the rest of the chain being very lofty. To the west, a portion of the Himalayan axis divides it from the Tibetan province of Spiti and is crossed by the Kulzum pass, elevated 14,850 feet, and to the north a continuation of the same axis separates it from the Tibetan province of Zaskar and is crossed by the Baralacha pass, elevated 16,500 feet. Lahul is the southern district of Ladak, comprises the valleys of the Chandra and Bhaga Rivers. It belongs to the British. The peaks of the mid-Himalayan range, are in height from 16,203 to 21,786 feet, and its bases from 13,000 to 16,700 feet, and the snow line is at 16,665 feet. The

great mass of the Lahul range is granite. The people of Lahul are said to be of mixed origin. Mrs Hervey says she never saw an uglier race than the Lahul people of both sexes, and she did not even see one pretty child. The Lahuli seemed, however, (ugly and dirty though they are,) to be a simpler and better race than the Kulu people. Their features are essentially Tartar. They speak a language not intelligible to the natives of the neighbouring talooqa of Kulu. The Lahul coolies will only carry most absurdly small burthens, women and children are much more employed in this capacity than the grown men. Lahul is divided from Kulu by a range of snowy mountains. It comprises the upper course of the two streams, Chaudin and Bhaga, which uniting under the common name of Chaudabhaga, form one of the principal rivers (the Chenab) of the Punjab. The country is rugged and inhospitable. For six months, snow covers the ground. The inhabitants descend to the more genial temperature of Kulu, and return with the commencement of summer. The soil yields only one crop a year, and the grains produced are buck-wheat and barley peculiar to the country. Spiti is a region almost similar, except perhaps the cold is still more severe and the people less civilized even than in Lahul. It is surrounded on all sides by lofty mountains inaccessible for half the year, and the mean elevation of the valley (along the river Spiti) is not less than 10,000 feet above the level of the sea. The people belong to a kindred race with those of Lahul. The language is almost identical, but the customs and religious institutions are not analogous. Here also the resources of the land are locked up for more than six months in the rigorous winter. The inhabitants are obliged to remain during this inclement season, to the lower and more genial latitudes in the valley of the Sutlej. The produce of the land in Lahul and Spiti does not suffice for the wants of the population. The people of Lahul import grain from Kulu, and the valley of the Sutlej supplies the additional demands in Spiti. The crops in both taluqa are the same. The barley of Spiti is hexagonal or six-sided, and the grain large and succulent. In Lahul, there are few indigenous trees. That which gives character to the district is *Juniperus excelsa*, or pencil cedar, the Shukpa of Lahul, and Lewar of Kunawar. It forms small forests, especially on the southern slope of the hills at an elevation of 9 to 12,000 feet. The tree seldom attains 30 feet in height and 6 feet in girth, but Thomson mentions one perhaps 40 feet high, and Cleghorn measured one below the monistay at Kyelang, 13 feet in girth. The

back is red, separating into laminae like birch, and apparently a good material for brown-paper. The wood is used for house and bridge building, and is adapted for ornamental cabinet work, it is fragrant, hard, and less odorous than W. Indian cedar, of this tree Jacquemont wrote, (*Voyages, tom p 373*), "C'est là qu' on fait avec le bois de *Juniperus* mboien les vases de toute espèce, qui servent à contenir l'eau et le lait en Kunawar, et qui s'exportent en Ladak et à Gao." The ground below the trees is generally rocky, bare, or covered with a strong smelling Artemisia, large thistles, or various species of rose. A wild yellow Persian rose, *R. eglan-terina*, here finds its eastern limit. The Kail or Som-slung, *Pinus excelsa*, is the largest tree in Lahul, but is less frequent than the pencil cedar. On the left bank of the Chaudin, about three miles above the junction, there is a forest of this tree, and a small patch occurs above Kaidang, from which the Moravian mission house was built—Mrs Hervey's *Adventures of a lady in Tartary, Vol 1, pp 124-25*, *Powell's Hand-book, Econ Prod, Punjab, pp 229-230*, *Hooker and Thomson's Flora Indica, Vol 1, pp 208, 209*, *Cleghorn, Punjab Report, p 150*, *Thomson's Travels, p 257*, *Jacquemont's Tr, p 373*. LAKE, Lord, commander-in-chief in India, in the beginning of the 19th century gained the famous battle of Laswari over the Marhattas

LAKES are comparatively rare in British India, but large "Jhils" are occasionally to be seen, especially in the river streams of the Ganges and Brahmaputra. For the most part

they are not very deep, but their surface is very variable. Artificial lakes or tanks are frequently met with, their numbers throughout the country testify the importance attached to them by the natives. In the Himalaya, also, there are but very few lakes. That of Namtal, in Kamaon, (6,520 feet), the Vullai lake, in Kashmir (5,126 feet), and the Chin lake, near Simaggen, at about the same height, suffice to exhaust the category of those deserving mention. Glacier lakes, which are accumulations of water formed by one glacier obstructing the outlet of a higher one, are of much more frequent occurrence. At times, the wall of ice breaks away before the pressure of the swollen waters, when the lower lands become suddenly inundated, and the torrent rushes on with uninterrupted violence for miles, exercising a marked influence even down to the lower parts of the rivers. Two of the most elevated glacier lakes are the Deo Tal, in Garhwal (17,745 feet), and the Namtso, or Yunam, in Lahul (15,570 feet). The following are lakes of western Tibet and Turkistan —

Aksae Chin	ft. 16,620	Tsomoriri	ft 15,130
Tso Gyagar	15,693	Nimr kar	15,100
Tso Kar, or Khauri		Hanle	14,600
Talau	15,684	Tso Gam	14,580
Mure Tso	15,517	Tso Rul	14,400
Kiuk Kiol	15,400	Tso Mitleil	14,167
Mansaraur, or To		Upper Tsomogna	
Mapan	15,250	lari	14,050
Rakus Tal, or Tso		Lower Tsomogna	
Lanag	15,250	lari	14,010

Throughout British India, there are few natural inland lakes or seas deserving of note, none, certainly, which could be used for purposes of commerce, and most of them only fit for purposes of irrigation—the largest natural waters in the country are equalled, and in many cases, surpassed by the magnificent lakes which have been formed in several places by throwing embankments across great valleys, there are, however, extinct basins of lakes in the Deccan. Marine Lagoons or Back waters occur along all the coast of the western peninsula of India.

Lake-ab-Istada, literally Standing water is between Hamoon and the Kabul river, and is a receptacle for the waters of Affghanistan. It varies greatly in size at different seasons.

Chilka Lake, in Ganjam, is 35 miles long and about 8 broad with numerous islets.

Colair Lake, is a marine lagoon in the northern Circars of Madras Presidency.

Lake Debur, is in Udipin.

Issyk-Koul Lake is amongst the mountains bordering between Central Asia and China.

Kashmir Lake is near the capital. Its shores have an unrivalled loveliness. The gardens on the northern aspect have been there from the time of Jehangir, and to the south is the Takht-i-Sulman with the

fort of Sinuggur on its summit. The lake is everywhere shallow, its water of a brilliant blue colour and great purity with numerous long waving water plants and grasses waving beneath the surface, and on its surface are numerous "lahd" or floating gardens consisting of wood rafts fixed by poles and covered with earth, and cultivated with flowers.

Lonai Lake, about two miles in circumference, is a body of water low down in the crater of an extinct volcano.

Munchar Lake, in Sind, was described by professor Orlebar, Postans, Knight.

Pulicat Lake, is a marine lagoon, skirting the bay of Bengal, north of Madras, in the Nellore collectorate.

Oodi-Sagur Lake. The Banis river issues from the Oodi-Sagur lake of Rajputnah and passes within a mile of Cheetore. There are two grand reservoirs within six miles of each other, the Peshola, or internal lake, having an elevation of eighty feet above the external one, and the Oodi-Sagur, whose outlet forms the Banis. The Peshola may be called the parent of the other, although it is partly fed by the minor lake at the villa of Suhalea-La-bur. Both are from twelve to fourteen miles in circumference, in some places thirty-five feet deep, and being fed by the perennial streams from the Aravalli, they contain a constant supply of water. From the external lake to Cheetore, the fall is so slight that few locks would be required, and the soil being a yielding one throughout, the expense of the undertaking would be moderate.

Samber Salt Lake, in lat $26^{\circ} 53'$, and long $73^{\circ} 57'$, is twenty miles long, and one and a half broad.

Tso-Gam Lake, in eastern Ladakh in Tibet, is a salt lake, 14,580 feet above the sea, and in lat $33^{\circ} 10' N$, and long $78^{\circ} 34' E$.

Manasarawara Lake, or Tso Mapan, is a salt lake, $30^{\circ} 28'$, $81^{\circ} 26'$ in Guani Khozum, about 15,250 feet above the sea — *Strach*.

Tso-Mutal Lake, in Pangkong, in Tibet, is a salt lake in lat $33^{\circ} 25' N$, and long $78^{\circ} 40' E$, and is 14,167 feet above the sea.

Tso-Mognala Lake, in Pingkong, in western Tibet, is a salt lake, in lat $33^{\circ} 39' 48'$, and long $78^{\circ} 38' 30' E$, and 14,010 feet above the sea. It is about 120 miles long from E to W.

Tso-Moriri Lake, in Rupchu in western Tibet, is in lat $32^{\circ} 45' 24' N$, and long $78^{\circ} 16' 36' E$, and 15,130 feet above the sea.

Utal Lake, see Khiva Kharat.

Walar Lake is in the vale or Cashmere — *Burst's Catalogue*. Col Dixon, *Land As Trans Vol III*, p 181, *As Jour*, Vol XVII, p 372, *Tod's Rajasthan*, Vol II, p 627.

LAKH, HIND. A hundred thousand, a

vaguely great number, a multitude, as expressed by our word millions, is expressed by the Hindi term Lakh, Crore. The Tibetans, to express a multitude, use 84,000 Khag-Ching, a hundred thousand millions. The Chinese, Wan, or 10,000.

LAKH, HIND. Lac derived from the word lakh, a hundred thousand, from the multitude of insects that congregate together. It is sold in the form of chapra-lakh, shell-lac, fused-lac, dami or seed-lac, and kham-lac, lac gathered in a crude state.

LAKHIA, see Jell.

LAKHIA, HIND. Rhus acuminata.

LAKHIA RANA, by assassination, mounted the throne of Cheetore in S 1439, (151373). His first act was the entire subjugation of the mountainous region of Merwara, and the destruction of its chief stronghold, Benatgurh, where he erected Bednore. But an event of much greater importance than settling his frontier, and which most powerfully tended to the prosperity of the country, was his discovery of the tin and silver mines of Jawana, in the tract wrested by Khantsi from the Bhils of Chuppan. Lakha rana has then existence is superstitiously alluded to so early as the period of the founder. It is said the "seven metals (haft-dhat)" were formerly abundant, but this appears figurative. Their is no evidence for the gold, though silver, tin, copper, lead and antimony, were yielded in abundance (the first two from the same matrix), but the tin that has been extracted for many years past yields but a small portion of silver.

Lakha Rana defeated the Sankh Rajpoots of Nagaichul, at Amber — *Tod's Rajasthan*, Vol I, p 274.

LAKHIA-BAG'HAR, HIND of N India, Hyena.

LAKHI, HIND. Red leather dyed with "lakh" at Nimpur, &c.

LA-KHIRAJ, ARAB. A term applied in India to land, free from rent or public taxes, cut free-land.

LAKHON, see Laos.

LAKHNOU'I. This is the well-known city of Gau called by Humayun, Jannatabad, and supposed by some to be the Gaugu Regia of Ptolemy. It stood on the left bank of the Ganges about twenty-five miles below Rajmahal — *Cal Rev*, Jan 1871, *Rennell*, p 55.

LAKHTEI, HIND. *Conium maculatum*.

LAKREHAN, a river near Nujeebabad in Bijnour

LAKRI, HIND Wood Medrakri, HIND, is Tetianthea monopetala, and Tiorakri In India, rhyming doublets are of common occurrence and are not confined to proper names, to a certain extent they may be made colloquially at will upon a variety of substantives Thus chauki-auki means "chairs," simply chauki or, at most, "chairs and tables," lakri-akri, "sticks and stakes"

LAKSHA, SANS Lic

LAKSHMANA, the faithful brother of Rama See Meghnad, Meharun, Rama, Vishnu

LAKSHMANA, HIND Diptera torakri

LAKSHMI This sea-born goddess of beauty and prosperity, the consort, or sakti of Vishnu, was obtained by him at the churning of the sea She is painted yellow, sitting on the lotus or water lily, and holding in her hand, sometimes the kamala or lotus, at others, the shell or the club of Vishnu At her birth she was so beautiful that all the gods became enamoured of her, but Vishnu at length obtained her She is considered as the hindoo Ceres, or goddess of abundance Lakshmi has various names—among which are Sri or Sris, the goddess of prosperity, called Padma or Kamala, from the lotus or nymphæa being sacred to her, also Rembha, the sea-born goddess, Varahi (as the energy of Vishnu in the Varaha avata), Ada Maya, the mother of the world, Narayani, Vidgami, Kamali, &c The goddess was the daughter of Bhrgu, but, in consequence of the curse of Durvasa (an incarnation of Siva) upon India, she abandoned the three worlds, and concealed herself in the sea of milk, so that the earth no longer enjoyed the blessing of abundance and prosperity Lakshmi as the consort of Vishnu is the sakti, or active energy, of the preservative power She is considered as the goddess of riches, and would be invoked for increase of wealth by a desiring hindoo rather than Kuvera, the Pluto of their pantheon she might, therefore, be naturally considered as the appropriate consort of the deity of wealth, but Major Moor did not see her represented in that capacity The followers of Vishnu esteem Lakshmi as the mother of the world and then called her Ada Miya, and such Vaishnavas as are Saktas, that is, adorers of the female energy or nature active, worship her exclusively as the symbol of the Eternal Being As Rembha, the sea-born goddess of beauty, she sprang as one of the fourteen gems from the ocean, when churned by the good and evil beings for the

amrita, or immortal beverage She then assumes the character of the Venus Aphrodites of the Greeks, who, as Hesiod and Homer sing, arose from the sea, ascended to Olympus, and captivated all the gods "It may be contended," he continues, "that although Lakshmi may be figuratively called the Ceres of Hindustan, yet any two or more idolatrous nations, who subsisted by agriculture, might naturally conceive a deity to preside over their labours, without having the least intercourse with each other, but no reason appears why two nations should concur in supposing that deity to be a female, one at least of them would be more likely to imagine that the earth was a goddess, as, indeed, is the case with the hindoos in the existence of Prithivi, and that the god of abundance rendered her fertile Besides, in very ancient temples near Gaya, we see images of Lakshmi with full breasts, and a cord twisted under her arm, like a horn of plenty, which looks very like the old Grecian and Roman figures of Ceres" Sir William Jones has addressed a hymn to Lakshmi, "the world's great mother," that cannot be perused by an oriental student without great profit, nor by any one without unqualified admiration In the argument he calls her Lakshmi or Sri, the Ceres of India, the preserving power of nature, or, in the language of allegory the consort of Vishnu, or Hari, a personification of the divine goodness Some represent her as the daughter of Bhrgu, a son of Brahma but, in the Merindeya Purana, the Indian Isis, or Nature, is said to have assumed three transcendent forms, according to her three guna or qualities, and each of them to have produced a pair of divinities, Brahma and Lakshmi, Mahesa and Saraswati, Vishnu and Kali After whose intermarriage, Brahma and Saraswati formed the mundane egg, which Mahesa and Kali divided into halves, and Vishnu, together with Lakshmi, preserved it from destruction A third story supposes her to have sprung from the sea of milk, when it was churned on the second incarnation of Vishnu, who is often painted reclining on the serpent Ananta, the emblem of eternity, and this fable, whatever may be the meaning of it, has been chosen as the most poetical The other names of Sri, or prosperity, are Hempriya, Pedmalaya or Pedma, and Camala, the first implying the wife of Vishnu, and the rest derived from the name of the lotus In the Siad'ha or obsequies in honour of deceased ancestors, Lakshmi is, among most other deities, earnestly invoked, particularly when a votary, by gifts to brahmins, is "desirous of obtaining celestial bliss for the defunct." A donation of a milch cow

is attended by many appropriate ceremonies, finishing with prayers, the acceptor holding during the recital the sacred animal by the tail. The boon-granting cow, so honoured in the preceding extract, is called Surabhi, and her descendants are much revered by all classes of hindoos above those that may be denominated base. It is common for brahmins and others, to feed a cow before they take their own breakfast, ejaculating as they present their food, "Daughter of Surabhi, framed of five elements, suspicious, pure, holy, sprung from the sun, accept this food of me, salutation unto thee!" Or, if he conduct the line to grass, "May cows, who are mothers of the three worlds and daughters of Surabhi, and who are beneficent, pure and holy, accept the food given by me." In marriage ceremonies a cow is one of the actors. "The hospitable rites are conducted by letting loose a cow at the intercession of the guest, a barber, who attends for that purpose, exclaims, 'the cow! the cow!' Upon which the guest pronounces this text—release the cow from the fetters of Varuna. May she subdue my foe, may she destroy the enemies of both him (the host) and me. Dismiss the cow, that she may eat the grass and drink water. When the cow has been released, the guest thus addresses her, 'I have earnestly entreated this prudent person, saying, kill not the innocent harmless cow, who is mother of Rudras, daughter of Vasus sister of Adityas, is the source of ambrosia, &c.' "It is evident," continues Mr. Colebrooke, "that the guest's intercessions imply a practice, now become obsolete of slaying a cow for the purpose of hospitality." In the *Hitopadesa*, p. 110, the earth is called Surabhi, and the learned translator (Wilkins) notes the name to be not usually so applied, although the earth may well be called the cow of plenty. Many writers have noticed the superstitious veneration that some sects of hindoos have for cows and calves. The custom, so universal in India of using cow-dung for floors and walls, can, however, scarcely be considered as a superstition, for it is used for floors by all sects, as well as hindoos, as the most cool and cleanly article. Once a week, perhaps, it is common to rub over earthen floors with fresh cow-dung mixed up with as much water as will render it easy to spread, this is done, not only in tents and temporary houses of gentlemen, but sometimes over the floors of the out-houses of Europeans as well as natives. This smell, which is not at first unpleasant, quickly goes off, and no floor is so cool and comfortable, nor so obnoxious to fleas and vermin. Cow-dung is plastered over the cooking-place before the meal of a per-

son of a high class be cooked in camps, or on journeys, a space of 10 or 12 square feet is so purified, and is easily polluted by the approach of impure persons or things, in which vexatious case the food becomes unholy. The ashes of cow-dung are also of a very purifying nature, and hindoos, of almost all ranks and degrees, men and women, occasionally, or frequently use them, mixed sometimes with other ingredients, to mark their forehead, necks, arms, &c. Sometimes men, especially religious mendicants or penitents or those having some claims to sanctity, are rubbed all over with these ashey mixtures, and make a curious sky-blue appearance. Mahadeva is frequently painted blue, or rather of an ashey colour, and the classes just noticed perhaps imitate that deity, or Krishna, also a deity of a blue or black hue. The ceremony of Kai-hagni is obtained from the use of the cow-dung—on one occasion of its performance it happened, according to a legend, that a crow, named from her friendly disposition, Mitia-caca, was present, and immediately flew and imparted the welcome news that a hindoo who performs the kaihagni, goes to heaven. This expiation consists in the victim covering his whole body with a thick coat of cow-dung, which, when dry, is set on fire, and consumes both sin and sinners. Until revealed by the crow, this potent expiation was unknown and it has since been occasionally resorted to, particularly by the famous Sancara-charya. The friendly crow was punished for her indiscretion, and was forbidden and all her tribe to ascend to heaven and were doomed on earth to live on carrion. The crow is reckoned a bird of ill omen in India, still Malabar females are sometimes named Kaka, the name in that dialect, as well as in Sanscrit, for the crow. The females of Malabar are, more than others, called after animals. Mani, the alligator, is a name among them. But the greatest, or, at any rate, the most convenient, of all purifiers, is the urine of a cow. Hindoo spirits of impurity abhor this sin expelling sanctifying liquid. Images are sprinkled with it, no man of any pretensions to piety or cleanliness would pass a cow in the act of striding without receiving the holy stream in his bedewed fingers, marking and crossing his forehead, shoulders and breasts. If the animal be retentive, a pious expectant will impatiently apply his finger, and by judicious tickling excite the grateful flow, if heedless, however, he may perhaps, by super-excitation, receive a greater boon than the descendant of Surabhi was implored to yield. The name of this goddess is also given to the last stalks of grain which the hindoos, as the

Scotch, carry home from the field and preserve until next harvest. With all who desire that prosperity attend their Lakshmi, of whom the Roman prototype is Ceres, it receives their adoration. The Mahiatta cultivators are attentive to her worship, and when the rabbi crops are well above the ground, they proceed to their fields, where they place five stones around a tree, on which they set pots of vermilion and some wheaten flour which they worship as the Panch-Pandu. In the evening they take a few stalks of Sorghum, with a lamp surrounded by a cloth, to their homes, which ○ ○ ○ ○ ○ they

regard as Lakshmi. It is an interesting sight to see the wives of the cultivators each returning to her home with her lit-up basket of Sorghum. The ceremonial is performed on the 28th day of the moon, "amas," which, in 1867, fell on Christmas day.

In Rajputana in one festival, Lakshmi is depicted by the type of riches, evidently the beneficent Anupurna in another garb, and the agricultural community place a corn-measure filled with grain and adorned with flowers as her representative, or, if they adorn her effigies, they are those of Padma, the water-nymph, with a lotus in one hand, and the pushu (or fillet for the head) in the other. As Lakshmi was produced at "the churning of the ocean," and hence called one of the fourteen gems, she is confounded with Rembha chief of the apsaras, the Venus of the hindoos. Though both were created from the froth (sua) of the waters (ap or up), but they are as distinct as the representations of riches and beauty can be. Lakshmi became the wife of Vishnu, or Kan'ya, and is represented at the feet of his marine couch when he is floating on the chrotic waters. As his consort, she merges into the character of Saraswati, the goddess of eloquence, and here we have the commutation of Minerva and Apollo. As of Minerva, the owl is the attendant of Lakshmi, and when we reflect that the Egyptians, who furnished the Grecian pantheon, held these solemn festivals, also called "the feast of lamps," in honour of Minerva at Sais, we may deduce the origin of this grand oriental festival from that common mother-country in Central Asia, whence the Dewali or festival of lamps radiated to remote China, the Nile, the Ganges, and the shores of the Tigris, and the lamps and fireworks of the Shab-i-burat of the mahomedans of Islam is but "the feast of lamps" of the hindoos. In all these there is a mixture of the attributes of Ceres and Proserpine, of Plutus and Pluto. Lakshmi partakes of the attributes of both the first, while Kuv'ia, who is conjoined with

her, is Plutus, as Yama is Pluto, the infernal judge. The consecrated lamps and the libations of oil are all dedicated to him, and in Rajputana, "torches and flaming brands are likewise kindled and consecrated, to burn the bodies of kinsmen who may be dead in battle in a foreign land, and light them through the shades of death to the mansion of Yama." In some parts of northern India, Lakshmi is a personification of the luni solar year, in the same manner as Durga is that of the Solar one, but this allegory is rejected by the pundits of the Canonic, who likewise deny what some pretend, that she lends occasionally her name to the Moon, and even to Jupiter. The representative of Ceres, amongst the hindoos, is Lakshmi. Amongst the Rajputs, Gouri seems to be the analogue of Ceres, and the festival of the Aha'ia or Muhoorat ka Shikai,—the slaying of the wild boar, is in honour of Gouri or Ceres—*Ind's Rajasthun*, Vol. 1, p. 597, *Cole Myth Hind*, p. 60, *Works*, Vol. xiii, *Colebrooke's As Res*, Vol. vii, pp. 276-293, *Moor's Pantheon*, p. 143, *Wilford*. LALLY, Count de, arrived in India in
1758 as commander-in-chief and commissary
of the king for all the French possessions
in India The father of count Lally, Follandil,
was an Gerard O'Lally, an Irishman, who hav-
ing defended Limerick, took service with the
French He formed the "Irish Brigade," and
his son, Thomas Arthur, at the age of
one (1702) was a private in the French
army, and at the age of forty-three (1745)
saved France at Fontenoy His charge and
that of his brigade, the command of which he
had inherited from a grand uncle, Count Dil-
lon, decided the day, which had been won by
the stolid, unmovable English advance Lally
served in Russia with credit, in the force
raised to assist the Jacobite rebellion, and
under Marshal Saxe, who regarded him as a
future Marshal de France, and on the 31st
December 1756, when fifty-four years old, he
he was appointed commander-in-chief of the
French possessions in the east He was then
in the vigour of his powers, a perfect disci-
plinarian, a general by instinct, and by train-
ing, a statesman Full of genius, and knowl-
edge, and thoughtfulness, his wonderful ca-
pacities were, however, all neutralized by that
stingy spirit which Garibaldi once denominated
"the disease of militarism," which in all ages
has betrayed itself in the French army Lally
was unable to comprehend the existence of a
state of things such as forced itself upon his
attention immediately after he had landed in
India The institution of caste appeared to
him to be simply an excuse of which men

availed themselves to escape toilsome occupation. He at once reversed the policy of Dupleix. That able administrator had been careful to respect native prejudices, his whole policy in fact had been a policy of conciliation. But Lally, confident in his strength, tried to ignore the existence, as a nation, of the millions of Hindustan. When men whose caste forbade them to labour refused to act as coolies, they were at once impressed, and driven to their tasks. The native inhabitants of Pondicherry were, in this way, condemned without distinction to all sorts of labour. Brahmins were compelled to carry the loads then caste forbade them to touch, and were yoked with the pariah and soodia to draw carts. The result was an universal panic in Pondicherry. When de Leyrit and the Council remonstrated, they were treated as accomplices who had been bribed. When he returned from the conquest of Fort St David, he returned to a city, the European and Native inhabitants of which were alike struck by a paralysis of terror, and imbued with a feeling of savage hatred. Of these two feelings he himself was at once the cause and the object. His officers petitioned that Bussy should command them in the field. When before Madras his officers shrank from an assault out of hate for him, and at last, deserted by his fleet, with a mutiny in his army, and an object of active hatred to every officer under his command, he was compelled to raise Bussy to the active command. After the battle of Wandewash, in which colonel, afterwards sir Eyre Coote, totally defeated him, he was compelled, with mutinous troops and hostile population, to defend Pondicherry. Without reinforcements, or supplies, or forage, detested by his officers and so hated by the population that they tried to kill him, he defended the town for months against a superior army, compelling even the admiration of the besiegers, who could not comprehend how a man so detested could have held the reins so long. By the 1st May 1760, the French Army was confined almost to the limits of Pondicherry, and the place was virtually invested by sea and land. Even then, Lally never for a moment showed the slightest sign of despair. For the nine months that followed, though thwarted by intrigues and opposition within the walls, by the discontent of some of his troops, and the faithlessness of others, he still maintained a lofty mind in difficult circumstances. All this time he was surrounded by those whom he had made his enemies, he was ill, harassed and opposed. The regiment of Louiane had been reduced to 327 men, that of Lally to 230, whilst the enemy had received large reinforcements. Finally, all

resources having been exhausted, and having but four ounces of rice left for distribution to each soldier, he agreed on the 14th January to capitulate, but the English refused to grant him terms, and he was compelled to surrender at discretion (16th January 1761). The following extract from the letter of an English officer who was present at the siege, will show the straits to which Lally was reduced before he gave in. 'Our Artillery,' he says, 'performed wonders, but the want of every necessary within was what chiefly wrought in our favour. The inhabitants had subsisted for a long time upon their elephants, horses, camels, &c. I can assure you for a truth that a dog sold for 24 rupees, of this miserable provision, there did not remain enough for one day longer, when the English took possession of the place.' Again referring to Lally, he says, 'it is a convincing proof of his abilities, the managing so long and vigorous a defence, in a place where he was held in universal detestation.' As he marched out of the citadel of Pondicherry, he was saluted with a loud and general hiss, and was loaded with the most abusive and opprobrious epithets. The Intendant of his army who followed him, an old half blind man, upwards of seventy years of age was killed on the spot. Lally himself would have shared the same fate but for the opportune appearance of some English hussars. He returned to France, and found himself an object of suspicion to the Government he had served so zealously. For twelve months he occupied himself in prayers for an inquiry, but obtained only an investigation, was condemned on two charges,—insolence to His Majesty's other officers, which was true, treason to His Majesty, which was false,—was haled forth in a dungeon to his execution, and cognizant to the last of his one misfortune, died exclaiming, "'Tell my judges that God has given me grace to pardon them, if I were to see them again, I might no longer have the forbearance to do it'." An English officer, writing of him at the time he was a prisoner at Madras, says—'Monsieur Lally is arrived amongst us; notwithstanding his fallen condition he is now as proud and haughty as ever. A great share of wit, sense, and martial abilities, obscured by a savage ferocity, and an undistinguished contempt for every person that moves in a sphere below that of a general, characterize this odd compound of a man.'—*The Career of Count Lally, a Lecture by Major G. LAMA, correctly blama, is the Tibetan word for a superior. The Dalai Lama, literally ocean superior, is the highest in rank of the Tibetan lamas. He resides at Lhasa. He is viewed as an incarnation of the Dhyano Bodhisatwa Chenesi, who is supposed to effect his re-embodiment by a beam of light which issues from his body and enters the individual whom he selects for his re-descent. The honorific title of Lama, (*blama*) strictly belongs only to the superiors of convents but is applied also to ordained priests. The Tibetan priests are ordained to celibacy, but as they live under the same roof with nuns, this prohibition is probably not followed out. The Khanpo is a head Lama, and these are the superiors of the larger monasteries. The Dalai Lamas are selected by the clergy, but, since 1792, the Chinese government influence the election, to obtain the sons of families known for their loyalty. In Bhutan the Khanpo have made themselves almost independent of the Dalai Lamas, and the ruler of Bhutan, the Dharma Rinpoche

or Dharma Rajah, yields but a loose obedience. Lamas are very numerous, at Lhasa and its vicinity, Dr Campbell gives a list of 12 principal monasteries, inhabited by a total of 18,500 Lamas. In Ladak, there are about 12,000 Lama in a population of 158,000. There has been some misapprehension regarding the Buddha and Bodhisatwa, the regeneration of the Grand Lama being considered as an exceptional case of a Buddha returning amongst mankind. Mr Hodgson, (pp 137, 138,) truly calls the "divine Lamas" of Tibet, Arahants, but he believes "that a very gross superstition has wrested the just notion of the character to its own use," and so created the "immortal mortals, or present palpable divinities of Tibet." Fra Oriazio says that "Lama sempre sana coll' istessa anima del medesimo (any-c'ub) oppure in altri corpi." Remusat was not aware of this fact when he stated "Les Lamas du Tibet se considerent eux-mêmes comme autant de divinités (Bouddhas) incarnées pour le salut des hommes." But the explanation which Major Cunningham received in Ladak, which is the same as that obtained by Fra Oriazio in Lhasa, is simple and convincing. The Grand Lama is only a regenerated Bodhisatwa, who refrains from accepting Buddhahood, that he may continue to be born again and again for the benefit of mankind. For a Buddha cannot possibly be regenerated, and hence the famous epithets of Sathagata. "thus gone," and Sangata "well gone," or gone for ever. The ordinary monk or priest in Tibet is the Gylong, above whom are the Llama or presidents, and below whom are the Tshaba and Tuppy. The Tuppy is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10 and receives instruction accordingly. At 15, he becomes a Tshaba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gylupka, who dress in yellow, and the Shammai in red, the Shammai Gylong being allowed to marry. So also the Great Lama of Tibet is regarded as immortal, though his spirit occasionally passes from one earthly tenement to another.

Tepa is the "Lama Yungjung," the private guru, or high priest of the "Grand Lama." He is also appointed by order of the emperor, and is sometimes an avatara Lama, but not always. His office is to teach and train the Grand Lama in childhood and youth, and lead him, if he can, afterwards. He is indeed an important personage in the Buddhist world, being no less than the keeper of the Grand Lama's conscience. The nomination to this post being in the hands of the emperor,

furnishes an interesting clue to the extent of the imperial power over the church of Tibet.

The Che Kap Kempu Lama is a churchman of great influence in the Government. He appears to represent the Grand Lama in the council of state and in the deliberations of the Shapée. He may be called Secretary or Minister for the church, and the Shapée may, correctly enough, be called the Financial, Judicial, Revenue and Home Secretaries, or ministers.

The Tibetan Treasury is managed by two officers named Jhassa, both are Lamas, and act conjointly, although one of them is Treasurer on behalf of the "Grand Lama," and the other on behalf of the Noume-ben or temporal estate. They are assisted by two Sub-Treasurers styled Shangjotes. Four officers designated Da-puns, are the commanders of the Tibetan Troops, and act as Civil and Political Commissioners on occasions of frontier or other disturbances, they are Thibetans, and not Lamas. The ordinary course of official promotion is from a Da-pun to a Shapée, of equal rank, to the Da-pun is the Che-pun, who is, however, a civil officer and acts in all departments as Deputy to the Shapée. Shate Shapée, was the energetic Commander-in-Chief of the Tibetan army which opposed the Nepalese under Jung Bahadur. The Shapée is often employed as Commissioner on deputations in civil affairs either Judicial or Fiscal, and all the cases sent up by the Police for trial before the Shapée are forwarded through this officer. All appointments to the offices above noted, require the confirmation of the emperor.

A religious exercise much practised by the Buddhist, is that of going round the convent, prostrating himself at every step. Sometimes an immense number of devotees will be going through their act of devotion at the same time, one after the other, and they will include all the neighbouring buildings in their prostrations. The feat must be performed all at once without any interruption, even that of stopping for a few moments to take nourishment, and the prostrations must be perfect, that is to say, the body must be extended its whole length, and forehead must touch the earth while the arms are stretched out in front, and the hands joined. Before rising also the pilgrim must describe a circle with two lam's hooves which he holds in his hands. Some content themselves with taking a walk round the convent, rolling all the while between their fingers the beads of their long chaplet, or giving a rotatory movement to a kind of praying mill, which turns with incredible rapidity. This instrument is called a Chn-Koi, that is, "turning prayer," and it

is common enough to see these fixed in the bed of a running stream, as they are then set in motion by the water, and go on praying night and day, to the special benefit of the person who has placed them there. The Taitais also suspend these convenient implements over their domestic hearths that they may be put in motion by the current of cool air from the opening of the tent, and so twirl for the peace and prosperity of the family. Another machine which the Buddhists make use of to simplify their devotional activity is that of a large barrel turning on an axis. It is made of thick pasteboard, fabricated of innumerable sheets of paper pasted one on another, and upon which are written in Tibetan character the prayers most in fashion. Those who have not sufficient zeal or sufficient strength to place on their backs an immense load of books, and prostrate themselves at every step in the mind, adopt this easier method, and the devout can then eat, drink, and sleep at their ease, while the complaisant machine does all their praying for them. As a penance, or under a vow, a Lama will open his belly, take out his entrails and place them before him, and then return, immediately to his former state. This spectacle, atrocious and disgusting as it is, is very common in the Lama convents of Taitai. The Bokte who is to display his power, as the Mongols say, prepares himself for the act by long days of fasting and prayer, and during the whole time he must maintain the most absolute silence, and refrain from all communication with men. In Tibet, the remains of the sovereign Lamas are deposited entire in shrines prepared for their remains which are ever afterwards regarded as sacred and visited with religious awe. The bodies of the inferior Lama are usually burnt and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony—some are carried to lofty eminences where there are left to be devoured by ravens, kites, and other carnivorous animals. But they also have places surrounded by walls where the dead are placed. The Mongols sometimes bury their dead, often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lama. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road. In Spiti, in the north-west Himalaya, when a

person dies, the body is sometimes buried, or buried or thrown into the river, or cut into small pieces and burnt, admonitions are made over the body to the departed spirit, such as do not trouble yourself, you cannot enter it (meaning the dead body,) in summer it quickly becomes corrupt, in winter it freezes and is too cold for you—*Fra Orazio in Novu Jour Asiat*, t xiv, p 408, n, , *Jour des Savantes*, Mar 1831, p 263, *The Bhilsa Topes*, by Major Cunningham, p. 67, *Lubbock's Orig of Civil* p 236, *Huc's Recollections of Journey*, pp 117, 125, 126, *Timhowski's Journey to Peking*, Vol II, p 312, *Moorcroft's Travels*, Vol II, p 12 See Koko-khotou, Kouien, Kuuawei, Ladak, Sakyn muni, Skardo, Sikh, Tibet

LAMB, HIND Eragrostis, sp

LAMB The vegetable curiosity known as the Tatarian Lamb, is thus apostrophised by Dr Daiwin —

Cradled in snow, and fanned by Arctic air,
Shines, gentle Brometz thy golden hair,
Rooted in earth each cloven hoof descends,
And round and round her flexible neck she bends,
Crops the gray coral-moss, and hoary thyme,
Or laps with rosy tongue the melting rime
Eyes with mute tenderness her distant dam,
Or seems to bleat, a Vegetable Lamb

The plant about which these fables have gathered seems now to be referred to the fern genus Cibotium, formerly to Aspidium The English Cyclopædia says, "The Rhizoma of Aspidium brometz presents a rude resemblance to an animal It is covered with a silky down, and when cut into has a soft inside with a reddish, flesh-coloured appearance, sufficient to account for the origin of the fables with regard to its animal nature—*Yule Cathay*, Vol I, p 145

LAMBAR, or Lambardai, HIND The village head-man who collects the revenue from the proprietors of his village, and pays it into the tahsil—he is a sort of middleman

between the officials of Government and the body of proprietors and rent-payers he is called in Hazara, &c, mustajin, and in other parts, as also generally before British rule in the Punjab, mukaddam It is an Anglo-Indian word from number and du, and in Bengal, is a farmer who settles with the Government In the Mahatta country this work is taken by the potail

LAMD-DOR, HIND Cold from fibre of Calotropis gigantea

LAMBOK, an island east of Bali island, and only differs from Bali in the circumstance of the natives professing the mahomedan religion The town of Bali Labogee, on the east side of the island, is more frequently visited by British ships than any other native port in the Archipelago, as vessels from New South Wales often call here on their voyage to China for the purchase of rice In 1829 some Dutch cruizers visited this island and that of Bali, in order to buy slaves, which were required to recruit their army, and about one thousand were procured, at the rate of twenty dollars a head They are, also, visited occasionally by French vessels from Bombon for the same purpose The natives of both islands devote their whole attention to agriculture, and large quantities of rice are exported to China and the Archipelago Hides, tobacco, cocoanut oil, and coffee, are also exported, the cotton produced in the island is of an excellent quality, being considered the best in the Archipelago It is manufactured into calico, but the tedious process of cleaning and spinning the raw material renders it very expensive British and Indian calicoes, therefore, meet with a ready sale Lambok strait, is formed by the island of Bali to the west, and that of Lambok to the east The rajah of Lambok has the title of Anak Agong, which means son of heaven The indigenous inhabitants of Lambok, are called "Sassak" The people of Lambok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies The Sassak indigenes of Lambok, are a Malay race, hardly differing from those of Malacca or Borneo, and have been converted to mahomedanism, but the ruling race are brahminical and from Bali The men are jealous and strict with their wives, infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies Even a married woman accepting a flower, or betel, from a stranger, has been punished by death with the kris, and any one found without leave within the grounds of a house, is kneeled and his body thrown out to the street The

people frequently do amok, but it seems to be deliberately done. On one occasion, a person doing amok killed 17 people before he could be killed. In war, a whole regiment will agree to amok, and then run on with such desperate resolution as to be very formidable to men less excited than themselves — *Wall*, pp 161, 173-174, *Mr Earl*, pp 89-91

Cetonia nigritarsis, *Hope* | *Cetonia mutabilis*, *Hope*

Inhabits Landour, its favourite resort is wild indigo

(6) *H. hopei*

Syn

H. bengalensis

This resorts to the wild indigo. *H. bengalensis* is supposed by Dr Benson to be the female

(7) *H. anthracina*, *Westw*

Inhabits upper India, length 10½ lines

(8) *Bombodes urasus*, *Westw*

Inhabits the Himalaya

(9) *Peperonota harringtonii*, *Westw*

Inhabits the Himalayas

(10) *Parastasia rufo picta*, *Westw*

Inhabits Sylhet and Assam

LAMES DE ECORCE DE CITRON, Fr. Lemon peel

LAMIACEÆ, *Lindl*, the Mint tribe of plants, the Labiate of Jussieu, comprising 11 Gen, 299 species, viz, 80 Ocimeæ, 38 Menthaeæ, 8 Monardeæ, 4 Satureiæ, 7 Melisseæ, 12 Scutellariæ, 25 Nepeteæ, 93 Stachyæ, 11 Prasieæ, 18 Ajugeæ. Dr Royle recommended the introduction of the pepper-mint plant, with the essential oil of which the natives are well acquainted from its common use in cholera. Species of Anisomela, Diospita, Elscholtzia and Pogostemon are used as substitutes for their European allies. The only plant of this family much cultivated in India is the *Diaccephalum toyleanum*, or Balungoo, the seeds of which, Tukhm bilungoo, are very generally used in India for the preparation of mucilaginous drinks. *Colens barbatus* is a very aromatic plant of India, of the family Labiate. The strongly scented *Plectranthus rugosus*, the Punu or Pismu, is a plant of Kaghlan — *Royle*, p 303, *O'Sh*, pp 91-192

LAMGHAN, see Kolistan

LAMINARIA SACCHARINA, *sp*

Gillar Patti, Gillur ka Patti, Hind

Is officinal at Lahore and in Cashmere. The fronds are procured from Thibet, where they are reported to grow in a salt lake, but some maintain that they are brought from the Caspian Sea. The plant probably grows in all the salt lakes of High Asia, also it is probably brought from the sea through China. It is imported from Yarkand and via Kashmir. It contains much iodine, and acts as an alterative in scrofulous affections and enlargement of the thyroid gland or goitre (gilla or gal) a common disease in many parts of the Himalaya. It washed and hung up, a saccharine substance exudes. It consists of long ribbon-like pieces. Dr Cayley states that 16 seers of this were imported from Yarkand to Le in 1867. It is highly esteemed in Japan, where it is extensively used as an article of diet, being first washed in cold water and then boiled in milk or broth. — *Hornberger*, p 297, *Powell's Handbook*, Vol 1, p 384, *Dr J L Stewart's Punjab Plants*, p 269, *Simmond's Comml. Product*, p 379

LAMJAK, Hind. *Andropogon iwarancus*, *Cymbopogon iwarancus*

LAMLUM, see Chaldea, Mesopotamia

LAMMA ISLAND, lies off the S W side of Hong-Kong

LAMMAY, Burm. In Amherst, a timber used for house posts, it is a red, light, but useful timber, like sandal wood, and is free from attacks of insects — *Captain Dance*

LAMMERGEYER or Bearded-vulture,

the *Gypaetus barbatus*, is without doubt, the "Roc" of Arabian Nights and the "Nisser" mentioned by Bruce in his Travels in Abyssinia — *Adams*

LAMMSFELLE, GLR Lamb-skins

LAMOCH ISLANDS, four in number, on the South Coast of China

LA-MOO, BURM A small tree, like a willow, twelve or fifteen inches in diameter, growing only near salt water, and generally on the very edge. The blossom is very beautiful, a little like a thistle, very fragrant, pale-green, large umbrella-shaped pistil, innumerable stamens, no corolla, but a thick calyx, which remains, and holds the fruit like a dish. Monkeys are fond of the fruit, and are often seen in the tree. The natives use it in curry — *Malcom's Travels, Vol 1, p 181*

LAMP

Dipa,	BENG	Fanus Charagh,	PRRS
Lampe,	FR, GLR	Lampadu,	RUS

Lucerna,	IT	Lampara,	SI
Pahlakandillumpa,	MALAY	Vallak,	TAM

Lamps are formed of various material and shapes, in them liquid inflammable bodies are burned, for the purpose of producing artificial light. Those in most common use in India are Argand lamps. Lamps are arranged for burning materials which are fluid at ordinary temperatures, in order to produce light. Such are the oils. A feast of lamps was held by the Egyptians in honour of the goddess of war. The Jews had a feast of lamps. The Hindoos have a feast of lamps, at the same period of the year as that of the Jews, in honour of Kartakeya, or Scanden, the god of war, and the Rujputs, in honour of Lakshmi. The Parsi religionists have a feast of lamps. The Chinese have a feast of lanterns, on which occasion are many inscriptions on the lanterns, a usual invocation is Tien-tee, Sau-sheei, Vaulin Chin-tsai, Oh! heaven, earth, the three limits, and thousand intelligences, hail! — *Roberts, p 17, Faulkner*. LAMP BLACK

Kohl,	AR	Arang-para,	MALAY
Noir de fumée,	FR	Kajal shahi,	PERS
Kienuss,	GER	Negro de humo,	SP
Kajal,	HIND	Mai,	TAM
Nero di fumo,	IT	Katike,	TEL
Negro-fumo,	It		

Lamp-black is obtained by burning the impurities left in the precipitation of tar and pitch, and collecting the deposit in the form of soot. The finest kind is procured by collecting the smoke from an oil-lamp. It is used in the arts, particularly in the manufacture of painter's ink. The mahomedan women of Arabia,

Egypt, Persia and India stain their eye-lashes with it. Mahomedan men use antimony for this purpose — *McCulloch, Herklotz*

LAMPE, FR, GLR Lamps

LAMPEAN or Laban a wood of Java, light but durable, and affords materials for the handles of the spears or pikes borne by the natives

LAMP-OIL,

Charagh khatel, HIND | Vallak venuru, TAM

The kind of oil used in different parts of the world for burning in lamps varies with the sources of supply, and these are numerous. In Great Britain, whale oil, boiled from the subcuticular fat of the whale, was long used, and still is to a certain extent, although the general introduction of coal gas has lessened the demand for it. Oils obtained from seeds by pressure are used for artificial illumination in different parts of the world. In Paris, oil of rape-seed and oil of poppy-seed are clarified for lamps by filtration through cotton wool, and other processes. In the south of France and in Italy an inferior kind of olive-oil is used, as also the oil of *Arachis hypogæa*, or earth-nut. In Italy, lamp-oil is expressed from the stones of the grape. In Piedmont, walnut-oil is used, in India, coconut, castor, poppy, sesamum and ground-nut oils are in use, on the eastern and southern coasts of the Mediterranean and in China, oil of sesamum seed, and in tropical countries, coconut oil (which at the temperature of Britain is a white solid-like tallow) is burnt often in lamps made of the shell of the coconut and of bamboo. Much of the lamp-oil used in China is expressed from the seeds of *Cimelia oleifera*, cultivated for the purpose, as is also a shrub, *Croton sebiferum*, from the fruit of which a solid oil is obtained by expression. Seal oil is used by the Esquimaux. The essential oils are too volatile for lamps. Petroleum and naphtha from fossil vegetable matter are used in localities which produce them. Naphtha, the most liquid of the oils, is also prepared by distilling fossil vegetable matter, and is well-adapted for burning. In Genoa, the streets are lighted with naphtha from the adjacent territory of Amiano, and some years ago it was obtained by the distillation of pit coal, for the purpose of burning in the street-lamps of London. Alcohol, or spirits of wine, is often used as a source of heat, on account of its clean flame, no soot being deposited — *Tomlinson*

LAMPONG The size of these districts of Sumatra is about 12,926 square English miles. Their maritime boundaries are formed on the south by the Indian Sea and the Straits of Sunda, and on the east by Java, whilst the rivers Masuji and Pisang bound it on the

north and west Tobacco is planted here and there, but it does not constitute an article of export The leaves do not grow very large, but have a fine flavour The inhabitants of the Lampoung deem then tobacco better than that of Java and will not buy or use the latter It is probable that the difference consists more in the preparation of the produce than in the plant itself In the markets, tobacco is sold according to the weight of the copper money The pliable rattan and the cane are found in considerable quantities, and are exported to Singapore and Batavia The cane (*Calamus rotang*, *L*) is called in the Lampoungs "semambu" The country is very rich in species of these, and allied genera The inhabitants of Tarabug enumerated besides the semambu, the following species —

Rottan	Rottan	Rottan
Bubuwarorbu-	Suti,	Peledes,
war buwar,	Uring,	Sesak,
Bunku,	Balk,	Tungal,
Kommoran,	Kuyu,	Bobris,
Semuly or Je-	Lakki,	Minu
mang,	Sabuk,	

Calamus diaco, *L*, is only first found further to the north-west, in the plains of Palembang, "Dammai kacha," also called "Dammai mata kuching," for some years maintained a high price in the European market Other sorts are used for candles and flambeaus, as scarcely any oil is burnt in the interior Some periods of the day are even named according to the time of lighting the resin flambeaus In Tarabug are the following kinds of dammai —

Dammai kacha or mata kuching, from a high tree which grows in the vicinity of the southern coast

Dammar kuyung used for flambeaus	
„ Assem,	„ Hulu tupay,
„ Bainti,	„ Bunu,
„ Sebutu,	

Kauwing or bangbang, is probably the thick oil, tough and quickly drying of the *Heinandia sonora*, called "buka" by the Bugis

Dammar tahala

Dammai Selunay, from the Mengmawan tree, which is the wood most sought after in the Lampoungs for building

Dammai tambikat,	
„ Sah-siep,	
„ Kenbutul,	
„ batu or serem for flambeaus,	
„ dagin mena, which runs of itself from the trunk,	
„ Mahalu, makes a good cement	

The Lampoungs possesses three species of ape which are not found in Java The Orang-utan appears to be even less native than on

Java Besides tigers and panthers, two smaller species of cats also occur, which are strangers to the island of Java, as also another kind of *Viverra* and *Mustela* The Malayan bear and the elephant are also wanting on Java In place of the rhinoceros of the last we find there the *Rhinoceros sumatrensis*, and in place of the *Cervus tusa* we find there the *Cervus equinus* The tapir probably has its habitat towards the frontiers of Palembang, and on the other hand, the bunteug (*Bos sudaicus*), which is spread over the whole of Java, is wanting The bear is called "gemol" in the Lampoungs The beautiful *Argus pheasant* occurs, which it is difficult to export, because it easily sickens and dies on the voyage Its eyes are first affected, afterwards follows a complete blindness, then a swelling of the whole head and throat, and shortly afterwards it dies The natives call the bird ku-wau Its manner of living agrees entirely with that of the peacock Of the foreigners the Bugi are most numerous, and they principally reside at Telok Betong, Meugala and Sung Kebo The Lampoung people differ little from the Sundaes on Java, and clearly belong to the same race They are not larger and are less muscular than the latter In particular we do not find amongst any of them the round broad faces, short legs, and the coarse large feet, which are so frequently met with amongst the Sundaneses The difference is most marked in the women who are favourably distinguished in the Lampoungs by finely formed feet and hands, by a fairer colour of the skin and a softer and slightly pensive expression of the eyes That the colour of the skin is less dark-brown, may be ascribed to the circumstance that the women pass the greater part of their lives in well-closed houses The dress of the men is exactly the same as in the west of Java The Lampoungs far ones delight much in fire, which, however, they only wear so long as they remain unmarried As wives they do not make any further use of their ornaments They wear bands for the forehead, which consist either of resin-beads strung together and covered with silver or gold and are called jelemu, or are made of a thin strip of bamboo, to one end of which their gold leaves are sewed while the other remains loose This kind is called kembany pandan A circlet of gold leaf in the form of a hoop is called Kandu Keda The bracelets which consist of the before-mentioned beads, are called piko those of gold or silver leaves, gale pepe, those of resin rings covered with gold, gelang Necklaces, of gold leaf or silver leaf, gold and silver thread, tah gula

Bangles, or ankle rings of gold or silver, galo chalu

Em-needles, with gold or silver crowns, chundok

A girl who would be fully adorned, must affix silver nails to her fingers. There are very short ones called singan, and very long ones, which look like claws, called tanggan, which are principally used in dancing.

All the houses in the Lampongs stand on high posts. They are built so beautifully, so strongly and so fitly, especially in the interior of the country, that we cannot sufficiently admire the patience, activity and art of the inhabitants, particularly when we consider what small mechanical means the builders have at their service and how few and rude are the instruments which they employ. The houses consist altogether of wood with the exception of the floor, but including the roof, which is made of good shingles (singap).

Exports from the Lampongy Districts in the year 1843

The Lampongy nation, which occupies the portion of the south western side of Sumatra which lies opposite to Java, derived from it only by the Straits of Sunda, have a peculiar alphabet, which consists of 19 substantive letters with double or triple consonants making them up to 44. It has a great deal of that angular form and irregular form which characterizes the other Sumatran alphabets.—*Journal of the Indian Archipelago, Vol. —, No. 12*

LAMPYRIFORMIS CYANIVLETRIS, Blyth, Syn L. nitens apud Ruppell, from Abyssinia, nec nitens (L.) of S. Africa, from which it differs in having a conspicuously shorter bill, and various details of colouring. In L. nitens (sciss), the whole plumage is glossy aeneous or steel-green, brightest on the wings and mingled with steel-blue on the head and neck. The abdominal region being of the same hue as the back, but an admixture of steel-blue is observable on the tibial plumes, axillaries, and under wing-coverts, shoulder of the wing (under the scapularies) bright steel blue or purple, tipped with amethystine, which forms a distinct band.

LAMPYRIDES, are a tribe of the Malicoedermones Coleoptera, including the glow-worm and fire-fly. The fire-fly is the name given to species of *Photinus* and *Luciferus*, of the order Coleoptera, and to the *Eulagria* of the tropics. *E. lateralis* is of South America, *E. caudellum* of south east of Asia. The latter resort to moist places. The *Lampyrus* fire-fly is the *Mouche lumineuse* of the French. The Romans styled the luminous insects by the common names noctilucæ and luciola. Glow-worms are common in all parts of India. The glow-worm of Ceylon is the female of the *Lampyrus*, and attains a size of nearly three inches. Mr. Moir reports that he found phosphorus in glow-worms, as well as a system of prisms in transparent lenses, above the luminous matter. The fire-fly is a little luminous beetle, a species of *Lampyrus*. The lower part of its body has some apparatus for emitting a bright phosphorescent light.

Usually it is emitted in flashes at intervals of a second, and it is interesting to guess where the creature in its flight will next show itself. But occasionally the light is continuous. A splendid species of *Lampyrus*, was observed by Mr. Adams at Sarawak, when placed around the finger, it resembled a superb diamond ring.

LAMTENG in Sikkim. Here birds are scarce, with the exception of alpine pigeons (*Columba leuconota*), red-legged crows, (*Corvus graculus*, *L.*), and the horned pheasant (*Meleagris satyria*, *L.*)—*Hooker's Him Jour*, Vol. II, p. 37.

LAMUJA, *Cucurbita citrullus*, *Linn*

LA MUSCADINE, Fr. *Diy 10t*

LAMUT, MALAY Ant

LAMYIT ISLANDS, consist of one large and many small, on the east coast of China. The small islands lying N E of the large, are called the Eighteen Yit islands.

LAN, BURN Fathom

LANA, IT, LAT, SP Wool

LANA, HIND *Ballota limbata*, also *Auratum muricatum*

LANA, HIND of the Panjab, salsolaceous plants used for camel feeding and soda burning *sajji*, *barilla*. The chief of these plants are

LANANG, HIND of Kanawai *Vitis vinifera*

LANAS, MADURESE *Ananas sativus*, *Schult*

LANAULI, in lat 18° 45', long. 73° 26', in the Dekhan, east of the Bhor ghat. The mean height of the village is 2,307 feet eastward.

LANCA, in Hindoo cosmogony, one of the four imaginary cities which are supposed to lie under the equator at 90° distance from each other, viz, 1st, Yavucoti, 2nd, Lanca, 3rd, Romaca, and 4th, Siddhapuri. Bo-nacoti is stated to be the 3rd, but the pundits have rejected that spelling. Lanca is considered by all manner of Indian Astronomers, to lie under the first meridian, to which all computations should be referred, though several, and particularly the Telugu people, refer to that of Rameswara. Towards the north, and under the same meridian

as Lanca, the Sastha states that there are two other cities and a great mountain, viz, Avanti (supposed to be the same as Ujam or Oogem), Rohitaca, the mountain, and Sannihita sarah, which in former, or rather fabulous, times, were the seats of colleges and observatories. The meridian of Lanca lies in 75° 53' 15" (5h 3' 33") east of Greenwich, and 73° 33' (4h 54' 12") east of Paris, Warren-Kala Sannihita.

LANCAVA This group of islands, off the Malay Coast, consists of three large and many smaller, extending nearly N W and S E; from lat 6° 8' N. They are high bold islands, particularly Lancava, the centre one, which has on it a high peaked hill. The Laddas which form the east and south parts of the group are high barren islands.

LANCEROTA, see *Polyandry*

LANCEWOOD a commercial name, in use in most countries to indicate a light, elastic wood. The Lancewood of Tenasserim, is from a tree which produces a timber possessing the properties of Lance-wood. It is not uncommon in the Tenasserim provinces, but it belongs to the dog-bane tribe, and is not at all related to *Guatteria virgata*, the Lancewood of commerce. The Meenaban or Pavetta Indica?, one of the Cinchonaceæ, is called Moulmein Lance-wood, but it is not equal to Lance-wood in elasticity, and beyond being useful for handles of tools, and such purposes, Major Benson thinks its qualities have been generally overrated, besides, it is susceptible to the attacks of insects. The *Guatteria virgata* of Jamaica, is much valued as a Lance-wood on account of its exceeding even ash in lightness, strength and elasticity. It is chiefly used for shafts of carriages. Lancewood of Australia, is the *Backhousia australis*, a myrtaceous tree. Lancewood of commerce, is the *Guatteria virgata*. Lancewood of Maulmain, is from a tree found all over the Provinces which yields a wood that the residents at Maulmain sometimes call lance-wood tree. The Karen make bows of it, but prefer *Cassia fistula*. Dr. Mason never met with the tree in flower, but thinks it a species of *Dalbergia*, one of the Apocynaceæ, though it may possibly be a *Cassia*—*Dr. Mason, Faulkner*.

LAND-CRABS, see *Gecarcinus*, Crustacea

LAND According to Manu, "cultivated land is the property of him who cut away the wood, or who cleared and tilled it," and this ordinance is binding on all the hindoo race which no international wars or conquests has overturned.

LANDGA, HIND *Canis lupus*, *Linn*. A wolf

LANDOUR, a town in the Merut district of the N W. Provinces. The height of

Landom above Mussoorie is 300 feet, and the difference of temperature 3°. On the ascent from Rajpoot at the foot of the hills to Landom, the traveller passes through a vegetation which graduates insensibly from the tropical into that of temperate regions. The Dhoo contains numerous forms which are strictly tropical, such as among forest trees the *Acacia elata*, which extends up along the Tairai from the banks of the Irawadi. The *Saul* or *Shorea robusta* and species of *Pterospermum*, &c &c, while the slopes of Mussoorie and Landom are covered with forests of oak and rhododendron together with the other temperate forms generally associated with them. The pine and the deodar forests which constitute the characteristic features of Simla, and add so much to the beauty of the station are nowhere seen at Landom and Mussoorie. This is chiefly owing to their lower elevation, and partly to their situation on the outermost ridge of the Himalaya overhanging the Dhoo.

LANDSE, the term applied by the Singhalese to anything English or European. It is a corruption of Hollandische, Dutch — *Ten- nent's Christianity in Ceylon*, p 103

LANKEEKA WANLOO, in Tehngana, a caste of Sudras

LANE TSURU, HIND *Xanthium strumarium*

LANGA, or Lunga a piece of cloth used by the men of several Indian races, as a lower garment, applied like a petticoat. Where the langa or petticoat is not worn, pajama or trousers take their place. These are sometimes worn loose, as in Oude and Bengal, and elsewhere as tight as they can be made. The cutting out of these tight trousers is no easy matter, for they have several gores on the inside of the thigh, and are contrived so that they are flexible, however tight, and do not hinder the wearer from sitting cross-legged. With the trousers, which are tied at the waist, are worn the angia or cholee bodico, the koortni or shirt, and the dopatta or scarf.

LANGA-CHO, see Kunawu

LANGAET, see Jangam

LANGAHA, a tribe following mahomedanism, proselytes from the Solanki Rajpoots, one of the four Agnicula races. Probably they inhabited the district of Lumghan, west of the Indus. It is curious and interesting to find that the Solanki gotia acharya, or 'genealogical creed,' claims Lokote as their settlement. The use of the word Pathan by no means precludes their being hindoos.

LANGALI, SANS. A name of several plants, *Gloriosa* and *Commelina* and the cocoanut tree.

LANGAN TREE, *Nepheleum longanum*,

Cambess. Its fruit is occasionally imported into England from China.

LANGAR, AR, PERS, HIND Anchor. *Langh kharassi*, HIND Cable.

LANGAR NIKALNA, HIND Literally to take out an anchor. This is a ceremonial performance of a vow by mahomedan men and women, usually given effect to on the fifth k'hun, i.e., the tenth day of the mohurrum. Wealthy mahomedans take out an anchor annually whether for a vow or not.

LANGARU, TEL Anchor.

LANGE PFEFFER, GER Long pepper.

LANGAR KIANA, HIND An almshouse.

LANGHEE In Hongkong, bees are useful in producing honey, and in Afghanistan they are semi-domesticated as in Europe. The Langch bee of Borneo, and one of smaller size called Nuang, produce valuable honey. They generally place their nests underneath the larger branches, and the Dyaks to remove the honey and honey-comb ascend the trees by means of a rail of bamboos.

LANGHIA The musicians in Sindh are of two kinds. 1, the Khalwat or respectable singers, 2, the Langha, or Musai, the bards of the country — *Burton's Sindh*, p 302.

LANGKWA, MALAY Galangal.

LANGOOR MONKEY, is the *Semnopithecus schisticus* and is usually seen in herds in pine and oak forests. The animal is common in the Choi forests and similar situations on the western ranges. It is dark-slaty above, below, pale-yellow, tail, long and tufted, hump on the crown of the head, short and diverging. There is considerable variety of coloring, the young incline to brown, and the old become more or less hoary. The bandar, *Macacus rhesus*, is the most common monkey. The Entellus monkey, *Semnopithecus entellus*, is ash-gray on the upper parts, darker on the shoulders and lower part of the back, tail, grayish-brown, hands with a slight shade of black, body slight, limbs long and slender, tail lengthened. This species and the langoor are mistaken for each other.

LANGOTA, HIND A cloth passed between the thighs and fastened to a string before and behind. Langota-dost, a friend from infancy, from the days when they wore the Langota.

LANGSAB, or Langsat, or Langsch, a species of *Lausium*. See Duku, *Lausium*.

LANGSHU or Langshui, HIND *Juniperus communis*.

LANGTAM, a range of mountains covered with perpetual snow, in lat 28° north, and long 97° to 98° east.

LANGTANG or Langthang, HIND *Scopolia pæalta*.

LANGUAGES of eastern and southern Asia are very numerous. The number of words in the languages of civilized races is no doubt immense. Chinese, for instance, contains 40,000, Todd's edition of Johnson, 58,000, Webster's dictionary, 70,000, and Flügel's, more than 65,000. The great majority of these words, however, can be derived from certain original words, or roots which are very few in number. In Chinese there are about 450, Hebrew has been reduced to 500, and Professor Max Müller doubts whether there are more in Sanscrit. But the number of words used in the conversation or writing of any persons, is very limited. M. D'Oisey assures us that an ordinary agricultural labourer has not 300 words in his vocabulary. When Labillardiere inquired of the Friendly islanders, the word for 1,000,000, they seem to have thought the question absurd, and gave him one which apparently has no meaning, when he asked for 10,000,000, they said 'loole,' which is left unexplained, for 100,000,000, they replied 'nonsense,' and for higher numbers, they gave him certain coarse expressions, which he gravely published in his table of numerals. The principal languages, from the Fin and Hungarian in the west to the Japanese in the east, have many phonetic characters in common, particularly that of vocalic harmony. But with all the Oriental languages those who would acquire them, encounter their first difficulty in the variety of writing characters in use, and a second difficulty in the discordant manner in which, when a foreign character is used, or indicated by foreigners, the powers of the letters are employed. Dr John Borthwick Gilchrist's attempt to form a universal writing character, in his "Missionary's portable christmas-box and cosmopolitan's seasonable new-year's gift," did not succeed, and up till this time, it continues a matter of discussion whether in the efforts to diffuse knowledge by means of printed books, the writing characters in use by the peoples of the south and east of Asia should be continued, or whether the Roman letters should be employed to represent them. In this Cyclopædia, in which the Roman letters have been used, there has not been any system of spelling rigidly followed. The book is one of reference, to which all nations may resort, and as even those who use the Roman characters give widely dissimilar powers to different Roman letters, the attempt to follow a uniform system of spelling Asiatic words has even been avoided. Also, where the orthography of a word has been so generally adopted, that it may be said to have become a European word, no attempt has been made to disturb it, as 'Tinnevely,' not 'Tu na-

véléi,' 'bamboo,' not 'bambu.' Undoubtedly, a great difficulty to the English reader arises constantly from the discordant and inconsistent methods of spelling Native words and names, by means of the Roman characters, and practical utility requires that that system should be adopted, which is most widely received by English Orientalists, and employed in the most valuable works. Two modes have been proposed and largely followed, of indicating by the Roman letters, the characters in use for the vernacular tongues of India. The one put forward by Sir William Jones, about the year 1788, was an analogous classification of the letters, the other proposed by Dr John Borthwick Gilchrist, in the early part of the nineteenth century was the representation of the sounds of the vernacular letters by equivalents of similar enunciation according to the powers of the letters as given by the English people, in other words the one principle is analogy, the other pronunciation. The latter principle is well adapted for expressing the Oriental characters in English letters in such a manner that English readers unacquainted with the Oriental characters would be enabled to articulate the words with a very near approach to their correct pronunciation, but it is for the most part unsuitable for all other of the European nations who use the Roman letters. The principle of analogy adopted by Sir William Jones retains the original letters with certain distinguishing marks and permits the learned men of all Europe to follow the word to its source, and it has been generally followed by the learned. The most recent writer on the subject was professor Horace Hayman Wilson in his Glossary, and he considers that the characters in the English alphabet have enabled him to represent letters in nine alphabets of thirteen different languages of British India. But, to do this, he has, by diacritic points and marks, and by compound letters, increased the English alphabet from 26 to 70 characters, nineteen of the English letters having two to six forms, *b, c, e, i, j, o, p* and *u*, each two, *g, h* and *l*, each three, *d* and *k*, each four, *a, r, s, t* and *z*, each five, and *n* has six forms, and he has even recommended other additions. Dr W. W. Hunter does not follow out any plan.

The subjoined vowel-system which is that substantially of Sir W. Jones, H. H. Wilson, Shakespear, and Wilkins, has simplicity and authority in its favor. The short vowels are unaccented, the long have an acute accent or a straight line above them—

a as in 'about'	i as in 'thin'
ā as in 'mast,' (in Urdu and Bengali as in 'ball')	ī as in 'pique'
e as in 'hen'	ē as in 'not'
ē as in 'fete.'	ō as in 'note'
	ū as in 'full'

u as in oo in 'fool'
ai as i in 'thine'

ei—n somewhat narrower
sound
ou as in 'bough'

Consonants are recommended to have the same powers as in the ordinary English alphabet, and double letters are each to be pronounced distinctly, as in Italian

y sounds as in 'you' | gn as in 'poignant,' 'Spag
g " as in 'go' | noletto,
j " is in 'join' | ng as in 'thing'

h to have always a separate sound, except in *ch* as in '*church*,' *sh* as in '*she*,' *dh* as *th* in '*though*,' *c* whether for *h* or *s*, being superfluous, need not be used, nor *x* for *ks*. But, although the three consonants, C, Q, X, are called superfluous in English grammars, Q, historically represents the Hebrew ק, and Arabic ق, hence it has been generally so employed by the learned. The English always have *u* after Q. In Qâl (قال) the Q is a deep soft K, formed at the root of the tongue.

Some writers, the latest of whom is H. H. Wilson, advocate the propriety of each language having its own natural alphabet, as if a new alphabet had been born with every tongue. But the single alphabet of Phœnicia has been modified for all the languages of Northern Africa, except that the Tuarek of the Great Western Desert have an alphabet of native growth. The Roman, Grecian and Hebrew have together all the consonants needed for Arabic, except three. The Greek type, now in use, has not the forms which alone were known to Demosthenes and Æschylus. Moreover, Mahammed did not write with the very characters of the modern Arabic, and the Roman characters may serve for most tongues. When, in Europe, they began to print Greek, they copied all the contractions of the manuscripts. After that, it was customary in dictionaries to give Anglo-Saxon quotations in type which was copied from the hand writing of the Anglo-Saxon MSS.—German quotations in the modifications of Gothic type used in Germany, Danish in that used in Denmark and so forth. Gradually these trammels have been thrown off, all but the Greek type. With proper care in selecting letters, almost every word of any tongue could be distinctly articulated according to the English pronunciation, independently of the terms that precede and follow it, but the English pronunciation would not correspond with that of the Dutch, Italians or Spaniards, &c.

As to the original of the Chinese characters, it is known that, in transacting business before the commencement of the monarchy, little cords were used, with sliding knots, each of which had its particular signification. These are represented in two tables by the Chinese called Ho-tu and Lo-shu. The first

columns who inhabited Se-chwen had no other literature besides some arithmetical sets of counters made with little knotted cords, in imitation of a string of round beads, with which they calculated and made up all their accounts in commerce.

Dr Pritchard, Professor Max Müller, Professor Steinthal and Prof. of Farnal have each attempted to classify the languages in use, and the writings of Chevalier Bunsen, of Pietet, of Burnous, Rask and Hunter have aided much towards the general arrangement. In Dr Pritchard's classification he has four groups or dynasties of language, three of which are confined to Europe and Asia, a fourth being common to Africa and those parts of Asia which are near that continent. The first of his four groups is the Indo-European, sometimes termed Indo-Germanic, and by late writers the Arian or Iranian languages. He considers that the Indo-European languages and nations may be divided into many different groups, in the order of their affinities for instance, but he regards the most obvious division to be a geographical one, and he styles his first, the eastern group, which, by many writers has been termed exclusively the Arian family of tongues. It includes all the idioms of the ancient Medes and Persians, who named themselves Arian, and their country Eriene or Iran, and likewise the Sanscrit with all the Prakrits, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the cuneiform inscriptions was written. This dialect was so near the Sanscrit that the inscriptions have been interpreted through the medium of that language.

The Zend lays claim to a still higher antiquity since the Zend is said by Burnous, Professor Wilson and others who have studied it most successfully, to be more nearly allied to the very ancient dialect of the vedas, which preceded the classical Sanscrit, than it is to this last more cultivated speech. How this claim is to be reconciled with the comparatively recent date of all extant compositions in the Zendish language, remains, he considers, to be explained. But that the high castes or "twice born" classes of the Indian race, as they term themselves, the brahmins, the chetia and the vaysia hindoo, were of the same stock as the ancient Persians, may be regarded as a fact established by the affinity of their languages.

Chevalier Bunsen's names differ from those of Dr Pritchard. He classes one group as the great Asiatic-European stock of languages, which he sub-divides into eight families, viz, 1, Celts, 2, Thracian or Illyrian, 3, Arme-

man, 4, Asiatic-Iranian, 5, Hellenico-Italic, 6, Slavonic, 7, Lithuanian tribes, and 8, Teutonic. His fourth or Asiatic-Iranian, or the Iranian stock as represented in Asia, he again sub-divides into

1 The nations of Iran proper or the Arian stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zend Avesta the younger Pehlevi of the Sassanians and the Pazend, the mother of the present or modern Persian tongue the Pushtu or language of the Affghans belongs to the same branch

2 The second sub-division embraces the Iranian languages of India, represented by the Sanscrit and her daughters

His Semitic stock of languages he constructs from the following nations who form another compact mass, and represent one physiologically and historically connected family, the Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who spread their language, through their colonization, as that of the Carthaginians, the Aramaic tribes, or the historical nations of Aram, Syria, Mesopotamia and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east, finally, the Arabians, whose language is connected (through the Himyaritic) with the Æthiopie, the ancient (now the sacred) language of Abyssinia. He calls this second family, by the name now generally adopted among German-Hebrew scholars, the Semitic. Chevalier Bunsen further remarks as the first lesson which the knowledge of the Egyptian language teaches that all the nations which from the dawn of history to our days have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning. He adds that the researches of our days have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity. Those researches have made it more than probable that the Tartar, the Mantchu and Tungusan belong to one great stock, that the Turkoman, as well as the Tshude, Fin, Laplander and Magyar (Hungarians) present another stock closely united, and that both these families are originally connected with each other.

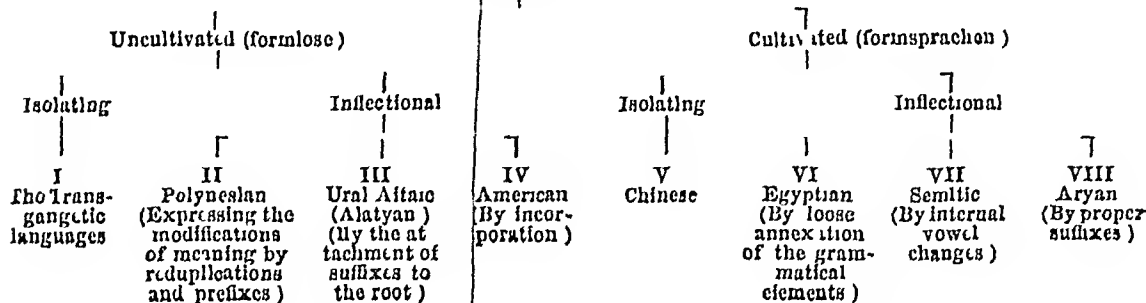

The Iranian family of language seems to be called Arian, by Mr Fariai, it is the Indo-European and Indo-Germanic of some philologists. Pictet and Burnous called it Arian from the Sanscrit word Aīrya meaning noble, Rask called it Japhetic. According to Mr Fariai, it has 8 divisions,

Hindu,	Greek,	Lithuanian,	Teutonic,
Persian,	Latin,	Sclavonic,	Celtic,

Of these it is uncertain, whether Celtic or Sanscrit represents the older phase. But it is known that all of them are the daughters of a primeval form of language which has now ceased to exist, but which was spoken by a yet undivided race at a time when Sanscrit and Greek had as yet only implicit existence.

A simple symmetrical and precise classification of languages has been elaborately established by Professor Steinthal in his *Charakteristik der hauptsächlichsten Typen des Sprachbaues*. He proposes to divide them all into two great classes, viz, culture-languages and uncultivated languages, and, each of these he would divide into two classes, viz, the isolating and the inflecting. Taking the uncultivated first under the isolating class he proposes to place the Transgangeitic, and under the inflecting he would place three divisions: 1, the Polynesian, which expresses all the minor modifications of the meaning, all distinctions of declension and conjugation, by reduplications and prefixes, 2, the Ural Altaic (which Fariai calls the Alaitan), which expresses them by annexing separate words after the root, and 3, the American, which expresses them by amalgamation. The cultivated languages are similarly divided: 1, into the isolating, represented by Chinese, 2, into the inflectional, under which head he places, i, the Egyptian, which achieves a sort of inflection by a loose addition of grammatical elements, ii, the Semitic, by internal modification of the root, and iii, the Aryan, throughout which the formal elements have been reduced to mere conventional suffixes, such, for instance, as the letter S, which is our all-but-universal sign for the plural number. The table of the two classes may be expressed as follows —

Languages

In illustration of the tongues spoken, this is Our Lord's Prayer in nine of the languages of Southern Asia

[illegible]

Our Father, which

art in heaven,

Hallowed be thy

name Thy king-

dom come Thy

will be done in earth,

as it is in heaven

Give us this day our

daily bread And

forgive us our debts

as we forgive our

debtors And lead

us not into tempta-

tion, but deliver us

from evil For thine

is the kingdom, and

the power, and the

glory, for ever

Amen

The Lord's Prayer was published in 1518 in fourteen languages, by Bibliandio, in 1591 in twenty-six languages, by Rocca (Bibliotheca Apostolica Vaticana, a finitæ Angelo Rocca Romæ, 1591, 4to) in 1592 in forty languages, by Megiseius ("Specimen XL Linguarum et Dialectorum ab Illeonymo Megiseio à diversis auctoribus collectarum quibus Oratio Dominica est expressa" Francofurti, 1592), in 1593, in fifty languages, by the same author (Oratio Dominica L diversis linguis," cura H. Megisei Francofurti, 1593, 8vo) The Bible has been printed and distributed in India in twenty-five different languages, in ten of which between six and one hundred thousand copies have been printed, and in Tamil 1,560,950 have been issued since 1706, when the Bible was printed in that language The Bible was printed and issued in Bengalee in 1796 and in Malayalam in 1816 The whole of the copies printed in the twenty-five Indian languages is 4,772,621

The languages in use in the south and east of Asia have been thus classified —

- 1 *Reflecting types* — Arabic, Sanscrit
- 2 *Compounding types* — Bask, Finnic, Magyar, Turkish, Circassian, Georgian, Mongolian, Mantshu, Javanese, Ngoko-Javanese, Kiama, Malay-Javanese
- 3 *Isolating types* — Chinese of Nankin, Amoy, Pekin, Shanghai and Canton, Japanese
- 4 *Chinese frontier and Thibet* — Gyami, Gyarung, Takpa, Manyak, Thochu, Sokpa, Hoipa, Tibetan
- 5 *Nepal (West to East)* — Serpa, Sunwai, Gurung, Muimi, Magar, Thaksya, Pakhya, Newai, Limbu
- 6 *Kinanti Group, East Nepaul* — Kiantai, Rodong, Rungchenbung, Chingtangya, Nachheireug, Waling, Yakha, Chouiasya, Kulungya, Thulungya, Bahungya, Loholong, Limbiehlong, Balali, Sangpang, Dumi, Khaling, Dungmah
- 7 *Broken tribes of Nepaul* — Daihi, Denwar, Pahi, Chepang, Bhiamu, Vayu, Kuswar, Kusunda, Tharu
- 8 *N E Bengal* — Lepcha (Sikkim), Bhutani or Lhopa
- 9 *Eastern frontier of Bengal* — Mumpu, Mithan Naga, Tablung Naga, Kham Naga, Angami Naga, Namsang Naga, Nowgong Naga, Tengsa Naga, Aboi Mui, Sibsagor Mui, Deoria Chutia, Singpho
- 10 *Aiakan and Burmah* — Burman written and spoken, Khyeng or Shou, Kami, Kumi, Miu or Toung, Sak
- 11 *Siam and Tenasserim* — Talam or Mon, Sgau Karen, Pwo Karen, Toungh-

thu, Shan, Annamitic, Siamese, Ahom, Khanti, Laos

12 *Central India* — Ilo (Kol), Kol (Singlibum), Sautali, Lhumij, Uiaon, Mundala, Rajmahali, Gondi, Gayeti, Rutluk, Naikude, Kolumi, Madi, Madia, Kumi, Keikadi, Khond, Savala, Gadaba, Yeu-kala, Chentsu

13 *Southern India* — Tamil, ancient and modern, Malayalam do do, Telugu, Kannataka, ancient and modern, Tuluva, Kuigi, Toduva, Toda, Kota, Badaga, Kurumba, Iula, Singhalese

The inhabitants of Mesopotamia consist of the Arab, Osmanli, Turk, Kurd, Turkoman, Syrian, Jew, and Christian Arabic is the general language, Turkish, Kurdish, Chaldee, Syriac, and Syro-Chaldean dialects being the exceptions The sunni muhammedan religion is prevalent, but in Upper Mesopotamia there are many christians of the creed of Nestorius, (some of whom have become Roman Catholics), and Jacobite as well as Roman Catholic Syrians The races that have ruled in Mesopotamia have been many and from the most remote times and remnants are still to be traced of former dominant peoples in the varied languages still spoken Professor Rawlinson believes that Chaldea was a part of the great Mesopotamia plain, bordering the Persian Gulf on the south, with Arabia on its west, and the limit between lower and upper Mesopotamia on the north

Modern Arabic is written in the same dialect, in Egypt, in Syria, in Bagdad, in Constantinople, at Algiers and at Zanzibar, whether it be a mercantile letter, a State proclamation, an advertisement, or a letter in a newspaper, and it is understood by every body The learned men who write novels or other books of Belle's Lettres may be aiming to bring back a classical style, but their dialect is less trustworthy as actually modern Poetry also, may be ever so antique, just as in the decline of Greece the learned wrote poetry in Homeric dialect Similarly to Italy which has local dialects strongly distinguished, though the language of literature is but one, so is it with Arabic The local dialects of Algiers, of Cairo, of Aleppo, of Bagdad, have marked diversities, as those of Sicily and Milan, but Mecca seems to set the law in Arabic literature, as Florence in Italian The writing characters anciently in use in these regions are known from the sculptures which remain The Arrow headed character was that used on the sculptures of Nineveh and is still occasionally used in writing Arabic, as also is the Cufic or Kufic which had its origin in the town of Kufa, but the Nashk, and Talik characters are now usually employ-

ed The Nashk-tahk and the Shafia and Shakastah forms are also used for the Persian language and largely for the Urdu or Hindustani tongue, which for nearly three hundred years, up to the latter part of the 19th century, was, amongst all the military classes, the lingua franca or camp tongue of what is now called British India. There are, still, however, on sculptures near Aden, inscriptions in the Himyaritic and other characters. The Sanskrit and Pali languages have ceased to be spoken in any part of India, but both of them are in use as the sacred languages of the brahminical hindoos and the buddhists. The characters which have been used for Sanskrit, as seen inscribed on sculptures, have been the Kutila as at Vijayamunder, in Udayapuri and on a stone slab from a temple at Ranode and at Oojein. An old form of character is engraved on the Allahabad column, and that on one of two bronze tridents found at Gopendara in Garhiwal was in this old character, the other being in nearly modern Deva-Nagari. The latter has been largely employed in writing Sanskrit in somewhat differing forms and as it is now used, but another form of it is known as Kanouj-Nagari. The character on the Allahabad column is Deva-Nagari in transitu, identical with that of the Gaya inscription, and also, like Mr. Wathen's inscriptions from Gujarat and those of Mahabalipuram. The character of the Gaya inscription, is known to be of the eleventh century. A seal was found at Aseerghat in Kaudesh, engraved with a Deva Nagari, resembling the Gaya or Gouri, approaching the Allahabad. That on the Bhutan Lat or pillar at Ghazipur, is not pure Sanskrit, nor easily intelligible, but its character is the same as Allahabad No 2, or Kanouj Nagari, with numerous mis-spellings. At the ancient village of Maguta, district of Bhushan, on a stone slab, is an inscription in Sanskrit verse, the language and poetry superior to anything seen by the Bengal Asiatic Society's Pandit, Kamalakanta. The character used in the inscriptions, is called the Kolda, and is midway between the Deva Nagari and the Gauri. Some of the vowel inflections wanting. The inscriptions at the Buddha Gaya vaulted cavern, or Nagarjun, are in old Pali, of date, B C 280 to B C 247, and the character used in the inscriptions, old Lat. Those at Mathura near Bettiah, at Bahar, and at Rediah, are in Pali, of date, 315 B C, and the character used in the inscriptions is old Pali.

The characters used in the Inscriptions found on ancient sculptures in Southern Asia and India, may be briefly named as under —

Allahabad Lat
Allahabad Gupta,
Amravati,
Aramean,
Arian or Bactrian,
Bengali,
Bhilsa,
Chridæo Pehlvi or Parthian

Western Caves,
Zend

Mr H T Prinsep gives the following list of transitions of the Indian Alphabet from the time of Asoka, with some of the most marked local varieties at present in use, viz, those used in the sculptures of

Asoka's edicts of the 3rd century B C	Nerbudda,
Western caves,	Kistna,
Sah inscription at Girnar,	Teluga, modern,
Gupta inscription at Allahabad,	Tibetan, modern,
Vallabhi Plates from Gujarat,	Square Pali,
Kutla inscription of the 10th century A D, at Bareilly,	Gujarati,
	Punjabi,
	Kashmiri,
	Bengali,
	Devanagari,

and he gives the following ten modifications of the Sanskrit alphabet from B C 543 to A D 1200, viz,

Fifth century B C, Rise of Buddhism
Uncertain, Western Caves
Third century B C, Sanskrit inscriptions of Asoka, Junagiri
Second century A D, Gujarat dated Plates
Fifth century A D, Allahabad inscriptions of the Gupta dynasty
Seventh century A D, Tibetan alphabet formed from Sanskrit
Ninth century A D, Kutla inscriptions from Bareilly, A D 992
Eleventh century A D, Bengali alphabet as now modified Adisui, 1065 A D
Modern Devanagari alphabet
Old Pali alphabet of the Burmese, compared with A D, 200

N W India — The languages spoken in the western border of India, between it and Affghanistan, and of India adjoining Affghanistan, are dialects of Hindi, but sufficiently distinct to be called Sindhi, Panjabi and Kashmiri. The late Lieut Leech indeed has given vocabularies of seven languages spoken on the west of the Indus. The western border tribes are still mostly under patriarchal governments. In the south are the various Baluch tribes in the territories to which they give their name and whose language is said by Captain Ravey to be a mixture of Persian, Sindhi, Panjabi, Hindi and Sanskrit. The Brahmin tribes in Saharwan and Jhalawan, whose great chief is the Khan of Khilat, ethnologists consider to be of the same Scythic stock as the Dravidian races in

the south, and infer from this that the passage of Dravidian tribes from Turan was along the valley of the Indus

The Persian language of Persia, is met with all over Affghanistan, the great families speak it, and most of the correspondence is carried on in that tongue, the people are acquainted with it, but they prefer speaking the Pushtu, the language of their nation, which is a mixture of ancient Persian, Arabic and Hindustani. They have a few works in this language, but they read Persian authors by preference, and have, through them, formed imperfect ideas of geography, astronomy, medicine and history, but these works, full of fictions and deficiencies, have not materially assisted in developing their faculties. According to Captain Raveity, the people who dwell about Kabul and Kandahar, Shorawak and Pishin, are designated B'i-Pushtun or Upper Affghans, and those occupying the district of Roh, which is near India, are called L'i-Pukhtun or Lower Affghans. Persian is the official language of Affghanistan, but the Pushtu is alike the common tongue of the uneducated people, of the families of the Sadozi kings, and of the dwellings of the amir. There are, however, two divisions of the Affghans, termed Pushtun and Pukhtun, who speak Pushtu and Pukhtu respectively. The Pushtu being the western dialect with affinity to Persian, and the Pukhtu the eastern with many Sanskrit and Hindi words. The Pushtu is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin south of Kandahar to Kafiristan on the north, and from the banks of Helmand on the west to the Attock Sudhu or Indus river, on the east, throughout the Sama or plain of the Yuzufzye, the mountainous districts of Bajawar, Bannikora, Snwatt and Buner to Astor on the borders of Little Tibet, a tract of country equal in extent to the entire Spanish peninsula also, throughout the British districts of the Derajat, Bann Tak, Kohat, Peshawar and the Sama or plain of the Yuzufzye, with the exception of Deira Ghazi Khan, nine-tenths of the people speak the Affghan language. Since the invasion of Mahmud of Ghazni, in the eleventh century, there has been a constant influx into India of Affghans, as conquerors and settlers, and this has been so great from particular districts that some tribes have altogether disappeared from Affghanistan. In some localities in India, the Affghan settlers are said to have preserved the Pushtu almost in its purity up to the present day, having from the outset mixed amongst themselves. In some parts of Bundelkund and in the territory of the nawab of Rampur, whole towns

and villages may be found in which the Affghan language is still almost exclusively spoken and is the medium of general communication. Captain Raveity considers that although, on numerous points, the Pushtu bears a great similarity to the Semitic and Iranian languages, it is totally different in construction, and in idiom also, from any of the Indo-Sanskrit dialects.

The Arabic language of Arabia, is known to the learned mahomedans of Affghanistan and India, Sanskrit to the learned brahmins, but in India, neither of these tongues are spoken. The few Affghan zemindars settled in the north of the province of Sindh, still use the Pushtu of their forefathers, but the dialect is not sufficiently diffused among the people to be included in the languages of Sindh. The same is the case with pure Panjabi, it is confined to the small number of Sikhs who are settled in the different cities and towns. The generally known tongues of Sindh are, the Beluchi, the Jataki, the Persian, the Sindhi and Brahuiki.

The Beluchi is a rude mountain dialect, spoken throughout the country called Beluchistan, and by those hill tribes who have migrated to the plains of Sindh. It belongs to the Indo-Persian class of languages, and though uncultivated, is said to be very ancient. It is remarkable for its similarity to modern Persian, one-half of the words appear mere corruptions, or possibly similar forms of the polished tongue. Like its neighbouring dialects, Brahuiki and Pushtu, the vocabulary contains a few Sanskrit and Arabic roots, together with a considerable proportion of other words. The latter, however, appear not to be the remains of an aboriginal tongue, otherwise they would be those expressing primary ideas. They are probably a new element, introduced by isolated position and the want of a standard of language. As must happen among a people divided into clans, and separated from each other, the dialect abounds in diversities of words and idiom, and being naturally poor, it borrows many vocables from the neighbouring countries. Its literature is confined to a few tales, legends, war songs, and the productions of the bhat or Beluch bards. Few Europeans have hitherto been tempted to learn Beluchi, easy as it would be to any one acquainted with Persian and Sindhi, and this is the more to be regretted as a critical knowledge of it might be valuable to students of the old and obscure Iranian languages, such as the Zend, Pehlvi, Dari, the dialects of the Dsatu, and others known only by name. It has been said of the Paisee sacred volumes, that in them "there is scarcely a single radical of any importance,

which may not be traced to a corresponding term in some living dialect of Persian" The Jataki, also called Siraiki, from Siro, or Upper Sindh, where it is commonly spoken by the people, and Beluchki, on account of its being used by several of the Beluch clans settled in the low country, is a corrupted form of the Multani, itself a corruption of the Panjabi tongue. It is extensively used throughout the province, and is spoken by probably one-fourth of the inhabitants. As usual it abounds in varieties of dialects and contains little or no original literature, except a few poetical pieces, and short tracts on religious subjects. The Langha or Sindh bards seem to prefer it to their own language, and many well-educated natives, especially Beluchi, have studied it critically, and composed works in it. The celebrated Arabic hymn, generally known by the name of Dua Suiyani, the Syriac or Syrian prayer, from which language it was borrowed by Ali, or, as is more generally believed, by Ibn Abbas, has been translated into Jataki, and is learned by heart as a talisman against accidents and misfortunes. The Jataki dialect is usually written in the Nastalik, and sometimes in the Nashki character. In the former, the system of denoting the cerebral and other letters which do not belong to the Arabic alphabet, is the same as in Urdu. The Persian is, in Sindh, the language of literature, ceremony, office and epistolary correspondence. The origin of the Sindh dialect appears to be lost in the obscurity of antiquity, but there are ample reasons for believing it is as old as any of the vulgar tongues of modern India. It belongs to the Indian class of languages, and is directly derived from the Sanscrit, yet is a perfectly distinct dialect, and not, as has been asserted, a mere corruption of Hindustani. It is spoken with many varieties from the northern boundary of Kattyawar as far as Bahawalpur, and extends from the Brahui mountains to the desert which separates Sindh from the old western frontier of British India, and these limits well agree with the mahommedan accounts of the extent of empire belonging to the Rasis or hindoo rulers of Sindh. The classical or literary language is that of Lari, or Southern Sindh, the other principal dialects are,

1st The Siraiki, or language of Siro, Upper Sindh, admitting a mixture of Jataki and Beluchi words.

2nd The Kachi, spoken in Cutch, and made to approach the Guzerathi.

3rd The Thareh or Jesalmeri, the language of the people about Omerkot, the Thari and Jesulmeri, also used by the

Shikari, Dedhi, and the other outcaste tribes of Sindh. It borrows largely from the Marwari, and has its own written character and religious compositions.

4th The Takkaiawa-j-i-boli, or dialect of the hill people to the west of Sindh, corrupted by a mixture of Brahui and Beluchi terms, as well as possessing many names of things and idioms unintelligible to the people of the plains.

The Sindh is superior to most of the dialects of Western India in various minor points of refinement and cultivation, as, for instance, in the authorized change of terminations in poetical words, the re-duplication of final or penultimate letters to assist the rhyme, and many similar signs of elaboration.

The Brahui language, according to Dr Caldwell is mainly Punjabi with a Dravidian element. According to Mr Campbell is mainly Arian (Indo-Persic) with a Turanian element. The typical Brahui are certain tribes in Saharawan and Jhalawan. The higher classes of Brahui are sunni mahomedans, are stout, squat, have short thick bones, with round faces and flat lineaments, with brown or even red hair and beards. They have, both in feature and speech, indications of a Turanian element. They are hardy, often migratory. Their political chief is the khan of Khilat.

The Rind and Mughsee are settled in Kutch Gandava, to which fertile plain they have emigrated at different periods from the province of Mekran, and have become incorporated with the Jut, or cultivators of the soil, as the subjects of the khan of Khilat, a few of these likewise reside in the hills to the north-east of Kutch Gandava and skirts of the desert north of Khilat. The sub-division of the Brahui tribes amount to about ten, and those of the Rind and Mughsee each amount to double that number.

The Brahui are divided into an indefinite number of tribes and khel, and are an unsettled and wandering race, always residing in one part of the country, during summer, and emigrating to another for the winter season. They likewise change their immediate place of resort many times every year in search of pasturage for their flocks—a practice rare among the Beloochi. They differ so much from the Beloochi in external appearance that it is almost impossible to mistake one for the other. The Brahui, instead of the tall figure, long visage, and raised features of their fellow-countrymen, have short, thick bones, with round faces and flat lineaments, and Lieutenant Pottinger had not seen any Asiatics to whom they bear any resemblance, for numbers of them have brown hair and beards. The Kamburane, the

chief tribe, are divided into three distinct gradations of rank called Ahmedzye, Khanees and Kumbhanees. The first supplies the khan, the Khanees are of the secondary rank of chiefs. The word Kumbhanees includes all the remainder of the tribe, but in common is applicable to the whole body. They receive wives from, but do not marry their daughters into other tribes. Writing of the original settlement of the Belooch and Bihuni tribes in the country, it is said, that when Mahomed, the successor of Subaktagin the first sultan of the Ghaznavi dynasty, turned his arms towards India, he subjugated the whole of the level district west of the Indus, to the very foot of the Bihuni mountains. His son, Mussood, extended these conquests still more westerly into Mekran, he adhered, however, to his father's plan of not ascending the lofty ranges, and all subsequent invaders of Sind, seem to have been guided by their example. The Beluchi ascribe their origin to the earliest mahomedan invader of Persia, and are very desirous of being supposed to be of Arabian extraction. They spin the idea that they are derived from one stock with the Affghans. The affinity of the Beluchikee to the Persian language affords of itself strong evidence in favor of this position, (viz that they came from the westward) to back which, we still see that the majority of the Beluchi nation still dwell on the western frontier, but neither their features, manners, nor language, bear the slightest similitude to those of the Arabs. In the beginning of the fifth century of the Hejra, the Seljuk Tartar appeared in Khorasan, and in the short space of ten years, wrested that kingdom from the house of Ghaznavi. It was ceded to Alp Arslan, and constituted a part of the Seljukide dominions, until the extinction of that race, about 150 years posterior to Toghril Beg having assumed the title of emperor. In the lapse of time, the Beluchi are alluded to both by that general term and particular tribes, and as dwelling in the very districts which they people it this hour. We learn from Greek and Asiatic historians that, as invading armies became dismembered, either by the death of their generals or a defeat, the barbarians who composed them wandered over the country until they found an advantageous place to fix themselves, or entered the services of some more fortunate chieftain than their own as mercenaries. Such in his opinion, were the Beluchi, and various circumstances go to prove that they are of Turkoman lineage. Their institutions, habits, religion, and in short, everything but their language, are the same, this last anomaly is easily explained. The Seljuk rulers had long settled in Persia,

where they naturally adopted the colloquial dialect, and brought it with them on their expulsion by the Khwarizm kings. The unrelenting enmity of these kings forced vast hordes of them to fly from Persia after they had been colonised there for many years. The fugitives are said to have gone to Scistan and the neighboring countries, which are those of Sind, Scistan, and the Bihuni mountains.

The languages of India from the Himalaya to Ceylon, belong to two essentially different stocks, viz the Tamulian, such as Kannatic, Telugu, Malayalam, Tulu, and Tamil, and languages of undoubted Sanskrit origin or the Arian or Sanskrit stock. The affinity between the Telugu and Kannatic is so great that in order to make the correspondence complete it frequently suffices to change in initial or an inflection, and Ellis shows both these languages to be cognate with Tamil. Again the Tamil-speaking inhabitants of the Coromandel coast can make themselves intelligible when they get into the districts on the western coast of the peninsula, where Malayalam is vernacular. So the language of Tuluva on the coast of Canara, has a strong resemblance to that of Malayala, though the Tuluva speaking race are unable to understand their Malayalam neighbors. The languages or dialects of the aboriginal mountain races occupying the Neilgherries, are Tamulian, and the Kodagu of the mountains of Coorg is a dialect of Tulu. On the crest of the high range, extending from Cochin to Cape Comorin, and reaching to 8000 or 9000 feet above the sea, Francis Buchanan found that the rude tribes spoke a dialect differing only in accent from Tamil. The language of the mountaineers of Rymahil dividing Bengal from Bihar, abounds in terms common to the Tamil and Telugu, and Mr Hodgson, after comparing the vocabularies of seven languages now spoken by rude tribes in Central India, pronounced all of them to belong to the Tamulian stock, while the Bihuni, on the mountains of Sind, are said to have a language very like that of the Toda. Thus a closely allied family of languages extend over all Southern India, cropping out on the hill tops in Central India, on the mountains in the west, and perhaps also traceable on the southern slopes of the Himalaya. According to Bask, Singhalese belongs to the same family, and Lassen states that the languages of the Laccadives and Maldives come within the same category. In the North, however, we meet with languages of a different family, springing from those Arian conquerors who during the thirteen centuries preceding the Christian era, migrated from Central Asia,

in eating, drinking, chewing of snuff, and praying, about the middle of the space before the house. At four o'clock in the afternoon, men brought out the body of the gusti wrapped in fine linen, and placed it on the left of the two central platforms. A priest of Mataiam removed the cloth from the body, while young persons hastened to screen it from the public gaze. They threw much water over the corpse, washed it, combed the hair, and covered the whole body with champaka and kananga flowers. They then brought a white net. Women brought out the wife of the gusti with her arms crossed. She was clothed with a piece of white linen only. Her hair was crowned with flowers of the *Chrysanthemum indicum*. She was quiet, and betrayed neither fear nor regret. She placed herself standing before the body of her husband, raised her arms on high, and made a prayer in silence. Women approached her, and presented to her small bouquets of kem-bang spatu, and other flowers. She took them one by one, and placed them between the fingers of her hands, raised above her head. On this the women took them away and dried them, on receiving and giving back each bouquet, the wife of the gusti turned a little to the right, so that when she had turned quite round, she prayed anew in silence, went to the corpse of her husband, kissed it on the head, the breast, below the navel, the knees, the feet, and returned to her place. They took off her rings. She crossed her arms on her breast. Two women took her by the arms. Her brother (this time a brother by adoption) placed himself before her, and asked her with a soft voice if she was determined to die, and when she gave a sign of assent with her head, he asked her forgiveness for being obliged to kill her. At once he seized his kris, and stabbed her on the left side of the breast, but not deeply, so that she remained standing. He then threw his kris down and ran off. A man of consideration approached her, and buried his kris to the hilt in the breast of the unfortunate woman, who sunk down at once without uttering a cry — *Journ Ind Arch*, No ix, Vol v, p 537, No viii, August 1858, *Keppel's Ind Arch*, Vol ii, pp 144, 145, *Wallace*, Vol i, pp 73, 156, 161, 172, 174, *The island of Lombok by K Zollinger, Esquire*.

LOMPEN, DUT —?

LOMRI, also Loomi, Noomi, DUK *Vulpes bengalensis*, *Shaw*. A fox.

LON, HIND Salt hence Loni, the saline inflorescence on damp walls.

LONA, PORT, SP Canvas.

LONA, SANS *Portulaca oleracea*, also *Stipagrostis plumosa*.

LONAR, a salt pit.

LONCHURA, a generic name given by Colonel Sykes to some birds of Java, now arranged by authors into the genera *Erythrura* and *Munia*.

LONDON CLAY, see Clay.

LONG, DUK, HIND *Caryophyllus aromaticus*, *Linn* Cloves.

LONG CARDAMOM, ENG *Elettaria cardamomum*, *Wh and Mat*.

LONGEE or Lungi, HIND Long pieces of cloth, made of silk or silk and cotton, used as sashes or turbans, or as a scarf thrown over the shoulders and upper parts of the body, or are wrapped around the lower part of the body. Some of them, the manufacture of Sind, are very beautiful and rich where the loom-made goods, consist of turban, dhoti, loongee, kamiband and sarree — *Pottinger's Travels, Beloochistan and Sinde*, p 28.

LONG-EET, see Ling-eet.

LONGEVITY Rabbits live 7 years, squirrels and hares, 8 years, a fox, 14 to 16 years, cats, about 16 years, a bear lives rarely more than 20 years, a wolf likewise 20 years, hogs the same, the rhinoceros lives but 25 years, cows live to about 25 years. A horse has been known to live 62 years, but the average duration is about 25 years. Elephants are said to live upwards of 100 years. Of the longevity of snakes nothing is known. The races occupying British India are short lived compared with those of Britain and advance more rapidly to old age, both physiologically and pathologically. Thomas Cain died 28th January 1858, aged 207, was born in the reign of Richard II, in 1381. He lived in the reigns of ten sovereigns. There died, in 1801, a Russian soldier who had served in the "thirty years' war," and who was nearly 200 years old. Saunt Mungo, otherwise called Kentigern, founder of the Bishopric of Glasgow, a Scotchman, died aged 185 years. Others died as under —

Peter Crarten,	Hungarian, 185
Henry Jenkins	English, 169
Joseph Surrington	Norwegian, 160
Thomas Damme	English, 155
Thomas Parr	English, 152
Drakenborg	Dane, 146
J Essinghym	English, 141
George Wunder	German, 136
Douglas Gorgen	Swede, 120
Mittelstadt	German, 125
Maria Williams	Russian, 115

Joseph Surrington retained till his death the free use of all his senses, and of all his intellectual faculties. He left at his death a young widow and several children, of whom the eldest was 103 years of age, and the youngest 90 years. Of old Parr everybody has heard, though why he should commonly be cited as the most notable example of longevity it is not easy to say, seeing, as we have indicated, that not a few

have lived to a much greater age than he did. Paul had seen nine kings succeed to the throne of England. At 103 years he attended to his occupation, and threshed in the barn. He was married at 120. At 152 the king called him to London, and treated him magnificently, but he succumbed in the midst of his triumph. The "post-mortem," made by the celebrated Harvey, showed that all the organs were perfectly sound, and that the death of the old man was but accidental, and the result of an indigestion. Douglas Guigen took a wife at the age of 85, and had eight children. Mittelstadt married at 110 years, and had likewise several children. Maria Williams lost, for the first time, a tooth at the age of 100 years, but another came in its place. At 103 she lost a second, which was likewise replaced. In recent times a soldier at Berlin, the first to have conferred upon him the decoration of the Cross of St. George, was living in 1870, aged 130 years.

Piper longum,	LAT	Pippallu,	TEL

This kind of pepper is the produce of *Piper longum*, a perennial plant, a native of Bengal, Siam, &c. The fruit is hottest in its immature state, and is therefore gathered whilst green, and dried in the sun. It is met with in entire spikes about an inch long, possessing a darkish brown, or gray colour. It has a weak aromatic odour, an intensely fiery, and pungent taste, and its properties correspond closely with those of black pepper. — *Faulkner*

LONG-PEPPER ROOT

Pih poh mu, CHIN | Pih-pul, HIND

In China deemed to be stimulant, tonic and peptic. — *Smith*

Syn of *Caprifolium sempervirens*

LONICERA XYLOSTIUM

Jim tung, CHIN | Kin yin hwa, CHIN

Its flowers, stalks and leaves are valued by the Chinese as a dis-culent application to carbuncles, abscesses, swellings, sores. Its dried flowers, smell like tobacco. — *Smith*

LONKA, a distinct sect of hindoos who worship the 'One' alone, and 'not in temples made by hands,' which they never enter. The mountain top and sylvan solitude are deemed by them more fitting places to pour forth their homage. They credit the missions of the twenty-four tirthankara of the Jains, considering them as superior mortals, whose sanctity and purity of life gained them the divine favour and the reward of "moolkt," or beatitude. — *Tod's Travels*, p 357

LONTAR, MALAY *Borassus flabelliformis*

LONTAR, the largest of the Banda group of islands. The Banda group consists of ten islands, the largest of which is Lontar or Great Banda. It is crescent-shaped, and Pulo Pisang, Banana Island, Pulo Kapal, and Ship Island lie in the hollow of the crescent and form the arc of a circle. Within this arc are three other islands, the highest of which is Gunong Api, next Banda Nena, N. E. of which is Pulo Kiakka or old woman's island. Di Abieu, a Portuguese commander, was the first European who visited them. This was the nut-meg group, and for nearly a hundred years the Portuguese monopolized the trade. In 1609, the Dutch attempted to take these islands, but the war lasted 18 years, and the natives who survived all fled to the neighbouring islands. The Dutch had to cultivate these islands with slaves, and when slavery was abolished, with convicts, of whom in A. D. 1865 there were about 3,000. Almost all the island is covered with nut-meg trees, grown under the shade of the *Canarium commune*. Banda and its three islands enclose a secure harbour, and the water is so transparent, that living corals and minute objects are seen below. The inhabitants are much mixed, and about three-fourths are

mixed races, Malay, Papuan, Arab, Portuguese and Dutch. But the aborigines, doubtless were Papuans, and a portion of them still exists in the Ke islands, to which they emigrated when they first took possession of Banda. Of the birds, is a very handsome fruit-pigeon, *Carpophaga concinna*, which feeds on the mace and is found also in Ke and Matabello, and a small fruit-dove, *Ptilonopus diadematus* — *Bikmore*, p 221, *Waldace*, Vol 1, pp 289 to 291

LOO-CHIN, Gong

LOO-CHOO or Liu-chu Islands, lie to the N E of the Patchu group and consist of one large island surrounded by smaller ones, the large island being of considerable size and well-peopled. It extends from lat 26° 3' and 26° 53' N, and long 127° 34' and 128° 25' E, being 58 miles long and about 10 or 12 miles broad. In language and physical form, the Luchu islanders resemble the Japanese, their buddhism being more imperfect and their manners more simple. The people in the small islands between the Luchu group and Formosa, are Japanese rather than Malay. Dr. Collingwood speaking of the Kebalan, of Formosa, to whom he showed a copy of the 'Illustrated London News,' tells us that he found it impossible to interest them by pointing out the most striking illustrations, which they did not appear to comprehend — *Dr Latham's Ethnology*, *Dr Collingwood in Trans Ethn Soc, N S, Vol vi*, p 139, *Lubbock, Orig of Civil*, p 29

LOOHOO Before Macassar, or Bone, had so much as a name, Loohoo was the most powerful, and the largest kingdom of Celebes. For in addition to Loohoo proper, most part of Bone, and Bolee Bolee, were under its sway. The Macassar empire, including Tello, and Sanderebony, before it was conquered by the Dutch, extended from Bolee Bolee, in the bay of Bone, to the point of Lassem, and thence to the point of Torathea or Tanakeke, also thence along the west shore to Tanete, or Aganouchce — *History of Celebes*, pp 3 and 4

LOOCIAN, a race occupying the country between China, Siam, Cochin-China and Birmah. They are arranged into the Thaug Dam

or black bellies, whose men at the age of fourteen to sixteen years, have their bodies tattooed over with four needles with figures of men, flowers, elephants, tigers, serpents and other animals. Sometimes a person falls sick or even dies under the process, but a young man cannot obtain a wife till he is tattooed. The Thaug Khao or White Bellies retain their skin untouched. Their boundaries are, on the north, the frontiers of China, on the south, the kingdom of Siam, on the east, they reach to Cochin-China and Tong King, and on the west, they touch the Burman empire

LOOM

Aba Aba Kudu, MALAY

The hand-loom is in use in most parts of the South Eastern Asia and the Archipelago, but the fly-shuttle is rarely used. Both cotton and silk fabrics are woven

LOOMRI or Noomri, or Looka, is a grand sub-division of the Baluch race, and is mentioned by Abul Fazil as ranking next to the Kulmani, and being able to bring into the field three hundred cavalry and seven thousand infantry. Gladwin rendered the name Nomuidy, and was followed by Rennell. The Noomri or Loomri also styled Looka, a still more familiar term for fox, and are affirmed to be of Jit origin — *Tod*.

LOONA, BLNG *Anona squamosa*

LOONAR LAKE, in the circle of Marker, south of Beiar, about 45 miles north-west of Hingohie, in lat 20° N, is at the bottom of a crater-like depression, about 510 feet below the level of the surrounding country, and is 3 miles in circumference with a depth

varying from 5 feet to 14, according to the season of the year. Former observers could not discover scoria or lava, but Dr. Bradley in 1851 is said to have found both. The Sichel hills terminate in the neighbourhood of Lonar, near what appears to have been a vast crater in the centre of the great basaltic district. It is the only instance of a volcanic outburst discovered in this immense plutonic region of the Dekhan, and it is a nearly circular or oval depression, in a country composed of tabular and nodular basalt. From Lonar the basaltic district extends to the south as far as Beder, to the west, 200 miles to Bombay, and northward, to the banks of the Nerbudda, near the ancient cities of Indoor and Mhyssur, reported to have been buried at a remote period under volcanic eruptions. To the east, the great basaltic country of Berar extends to near Hyderabad and as far as Nagpore, and the Sichel range passes in a south-east by east direction to the confluence of the Wurdah and Godavary, and towards the eastern ghats. Hot springs and streams, loaded with carbonate of lime, occur along the line of elevation of these mountains at Mahoor, Ujannah, Kun, Bynah, and at Badiachellum, a short distance above the pass through which the Godavary reaches the alluvial plains of the coast. The lake is about 510 feet below the level of the surrounding ground, in a crater of 5 miles in circumference, the bottom being about 3 miles in circumference and surrounded by luxuriant vegetation, springs of clear soft water occur close to the lake, which has evidently been extending its bounds lately, as numerous dead trees are standing within its margin, and a well of sweet water, protected by a wall, is now completely surrounded by the water of the lake. An intolerable stench of sulphuretted hydrogen is emitted by the lake during the heat of the day, and its waters prove destructive to vegetable life, though flocks of duck and teal dot the surface of the lake. There are two saline springs near the centre of the lake, and about $\frac{1}{2}$ a mile apart. These never become dry. It is supposed that the murate of soda from this source, coming in contact with the carbonate of lime which abounds in the vicinity causes the deposition of the carbonate of soda or natron salt in a greater or less state of purity. The depth of the lake near the salt springs varies from 6 feet during the hot months to 12 or 14 feet during the rains. The salt is raised by divers, who bring it up in their hands. It is much prized and finds a ready sale in both Berar, Nagpore, Kandesh, and Poonah, to which places it is carried in bamboo baskets and retailed by dealers. The lake was regularly worked up to 1856, in which year 2,136 candies of the different salts were raised, valued at Rs. 60,081. In 1853, Major Johnston raised 35 candies, valued at Rs. 1,161-4-0. The sulphuretted hydrogen, especially during the heat of the day, rises in millions of bubbles to the surface. The carbonate of soda or natron salt deposit is raised by diving, the purest being found close to the springs, and the following are the names of the principal varieties: 1, Dulla, carbonate of soda containing 83.8 per cent of soda, 2, Nimuk Dulla, nearly pure salt, containing 92.8 per cent of chloride of sodium. Dulla and Nimuk dulla are used for dyeing silks, fixing colours, as medicine, and in the manufacture of bangles, of which there are two manufactories near the lake, where 600 or 700 are made by each man daily, 3, Kharpani, contains 72 per cent of carbonate of soda, is used in fixing the red dyes of cloths, 4, Pappur contains 72 per cent of carbonate of soda, is used in making bangles, in baking the cake called papun, and in medicine as an antacid, 5 and 6, Bhoolat are neutral carbonates of soda containing 29 and 27 per cent of it is a deposit on the margin of the lake, and used in the manufacture of soap. The average quantity is 213 candies per annum, valued at Rs. 608. — *Carter's Geological Papers on Western India*, p. 53, *Dr. G. Smith and J. E. Mayer in M. F. J. R. of 1857*, *A Paper by Dr. Buist in Trans. Bombay Geogr. Society*.

LOOND, Loondkhor, see Khyber Pass.

LOONKE, literally salt water river, is a term applied to several rivers in British India. One of the Loonke rivers rises in the Aravalli mountains, near Pokan, in lat. 26° 37', and long. 71° 46'. It runs west, nearly parallel with Aravalli range and enters the Rann of Cutch, by two mouths, the principal of which is in lat. 24° 12', long. 71° 11', after a course of 320 miles. It receives the Rutee, 88 miles, Sokree, 130 miles, and about 19,000 square miles are drained. The river, notwithstanding the great width of its bed, in some parts of its upper course, appears to be scarcely anywhere continuously navigable, being full of micaceous quartzite rock, banks low, and little above the surrounding level. The Kigga, which rises in the Siwalik, passes Humsa Hissar, and flows under the walls of Bhutran, at which place they yet have their wells in its bed. Thence it passed Rungmahal, Bullah and Phoolah, and through the flats of Khadal (of which Dera-wal is the capital), emptying itself according to some below Ootah, but according to Abubakat (whom Colonel Tod sent to explore in 1809, and who crossed the dry bed of a

stream called the Kaggai, near Shahguth), between Jessulmer and Rori Bakker. If this could be authenticated, it might be said at once that, united with the branch from Dura, it gave its name to the Sangia, which unites with the Looni, enlarging the eastern branch of the Delta of the Indus. Perhaps the most remarkable features in the desert, is the Looni, or Salt river, which, with its numerous feeders, has its source in the springs of the Aravalli. Of Marwar it is the barrier between the fertile lands and the desert, and as it leaves this country for the Thul of the Cholamrace, it divides that community and forms a geographical demarcation, the eastern portion being called the Raj of Sooe-Bali, and the western part, Parkin, or beyond the Khai, or Loomi. — *Report, Royal Commission*

LOONGEE, a pheasant? of the Himalayas

LOONGI, HIND. A silken girdle, in use in Sindh or a scarf are worn by men. Loongies are of cotton, of silk, and of silk and cotton. Many of the borders of the loongies, dhotees, and sarees are like plain silk ribbons, in some instances corded or ribbed, in others flat. The Snee, Boonee, Batta, Joie, Ekpatta, Gomcha, &c., of Dacca, are now entirely made of imported British yarn.

LOONIA also Loomika, also Loomya, BENG. Small purslane, Portulaca oleracea

LOO POO, CHIN. The government of China is conducted by the Nuy Ko, or Interior Council Chamber, in which there are four chief councillors, two of them Tartars and two Chinese, who bear the titles of Choung-thang and Ko-laou. The Tartar minister presides. The Loo-poo are six boards for the conduct of government business, and the provinces of the country are each under a governor, or, where two provinces are united, a Governor General.

LOORY, but correctly Nuri in Malay, and Noi in Javanese, is the generic name for "parrot." The sub-family of parrots, to which naturalists have given the name of Lorius, is not found in any island of the Archipelago west of New Guinea, nor at all in the Philippines. The loories of naturalists are, in fact, confined to New Guinea and its adjacent islands. — *Crawford's Dut*, p. 222

LOOSE FLOWERED ALPINIA, ENG. *Alpinia galanga*, Suz

LOO SHAI, a race dwelling south of the Kookee, and south-west of the Komnaga in the Tipperah territory, in lat 23° 30' N, and long 92° 30' E. They dwell at the sources of the Kunnaphoola or Chittagong river. In the beginning of 1871, the Looshai made a prolonged raid on the

North-East Provinces of British India, but were driven back by a large force of native soldiers.

LOOT, HIND. Plunder

LOOTEE BAZAAR, literally signifies "plundering the bazaars or shops," but it implies no more than a general rising of the inhabitants. This ancient usage is still preserved in Persia. — *Malcolm's History of Persia*, Vol II, p. 6

LOPHIANTUS RUGOSUS?

Ho-hung, CHIN. | Ho ken, CHIN.

Its rough leaves are used by the Chinese to scour metallic vessels, and are given in infusion, in disorders of the stomach and bowels. — *Smith*

LOOT PUTIAH, HIND. The leaves of the garden cress, *Lepidium sativum*

LOPA. The Lepcha of Sikkim and Lopa of Bhutan are buddhist Tibetans. The Lepcha are a dirty, good-natured people, resembling in character the Mongol, beyond the Chinese wall. — *Campbell*, 148

LOPEZIA CORDATA, a genus of pretty plants, annuals and biennials, their colours are purple and red, raised from seed and grown in any good soil. — *Riddell*

LOPHIADÆ, a family of fishes which includes the Anglers, Fishing Frog, or Sea-Devil, and the Frog-Fishes

LOPHOBRANCHII, an order of fishes, comprising,

1 Solenostoma,	7 Hippocampus,
1 Pegasus,	14 Syngnathus

LOPHOTIDÆ, a family of fishes of one genus Lophotus

LOPHOPHORUS IMPEYANUS, the monal pheasant of the Himalaya, is double the size of the pheasant of Great Britain. The male has a crest of great beauty, head and throat has metallic green wings and plumage, steel-blue, and tail, reddish brown. The hen bird is smaller, of a dull brown and white throat.

LOPHOSPERMUM SCANDENS, a beautiful climbing plant with large, purple, or rose-coloured bell-shaped flowers. This plant is of fast growth, and well-adapted for covering trellis work, easily grown from seed at the commencement of the rains, and lasts throughout the year, the soil should be rich and light. *L. scandens* and *L. hendersonii* are herbaceous climbing plants with pink bell flowers, raised from seeds and cuttings, require sandy soil, or they will not flower freely, natives of Mexico. — *Riddell*, *Jaffrey*

LOPHYRUS CORONATUS, see Colum-bida

LOPHYRUS GIGANTIA, see Agama

LOPISIP BARK, a dye-wood of Celebes

and other islands of the Eastern Archipelago. Specimens of *Lopisip* bark, bunchong bulu wood, and the gaju gum (from undescribed plants), have been introduced into England. They are said to furnish excellent dyes in the Asiatic islands. Native dyes from Annam have also been imported, viz, thittel and the-dan, yielding red dyes, ting-nget and ieros, affording dark-purple dyes, and thit-nan-weng, a chocolate dye.

LOQUAT

Eriobotrya japonica, Lindl | *Mespilus japonicus*, Thunb
Lu kuk, CHIN | Yang ma, CHIN
Yung mai, " | Loquat, HIND

This small tree of Japan and China, is now introduced all over the Deccan and in the Punjab. It also grows in great perfection in New South Wales. It bears fruit twice in the year, and is highly esteemed both for deserts and preserves. The finest fruit is produced at the second crop, at the end of the cold season, and requires protection day and night, from birds in the former, and flying foxes in the latter. The fruit is of a yellow colour, with thin skin, a sweet acid pulp, one or two seeds in the centre—sometimes more. The seeds grow easily, and the fruit appears to be capable of great improvement. In Ajmere, it is cultivated in gardens but does not thrive well. It is very common in China and is often mentioned by Fortune, who found it growing at one place, along with peaches, plum, and oranges, and at another, with the Chinese gooseberry "*Averrhoa caribæhola*," the wanghee "*Cookia punctata*," and the longan and leeches. In China, the fruit of *Citrus olivæformis*, *C. madagascariensis* are also called Lu-kuh.—*Fortune, Tea Districts*, pp 7, 30, *Dis Riddell, Irvine, Med Top*, p 195, *Voigt, Cleghorn, P R*, p 81.

LOR, HIND *Ehretia aspera*

LORA, see Kakei

LORAH, a river about 80 miles long, rises in the Shawl table-land, in lat 39° 49', long 67° 20', and runs south-westerly, until lost in the sands of the desert of Khorasan. In April the water which is briny is 7 or 8 yards wide and 2 feet deep. It is crossed on the route from Shawl to Kandahar.

LORANTHACEÆ, Lindl. An order of plants comprising, 1 genus and 2 species of *Loranthus*. Dr Wight gives in *Icones*, however, *L. amplexifolius*, *L. capitellatus*, *L. elasticus*, *L. euphorbiæ*, *L. lageniferus*, *L. longiflorus*, *L. loriceoides*, *L. memecylifolius*, *L. neilgherensis*, *L. tomentosus*, *L. wallichianus*. In Tenasserim many of the trees are covered with different species of the parasitical genus *Loranthus*, so abundant in most tropical climates, and the numerous small red flowers of one or two species in four forests

are quite ornamental. One species of *Loranthus* is called Kyee-honng by the Burmese.—*Mason*

LORANTHIUS FALCATUS

Wotu, Ceylon | Voh, badamke, Tet
Badamke, Vadamke, Tet

Natives of Mysore sometimes use its bark in place of betel nut in conjunction with chnum, it tinges the saliva and mouth red.—*Buchanan, Mysore, Ann Med Med*, p 269

LORANTHIUS LONGIFLORUS, Desf

Pand, Beng, Kymara | Pand, Beng
Bunda, Panjab | Amut, Sathaj

A handsome parasite with branches sometimes 6 or 7 feet long, large broad leaves, and orange-coloured flowers. It is found in the Punjab Himalaya, chiefly on the eastern rivers, from 1,500 to 3,000 feet, and occasionally higher.—*Dr J L Stewart*.

LORCHA, a vessel in use in the Chinese seas, sometimes employed in war.

LORD, Dr P B, Author of Medical Memoirs on the plain of the Indus, in *Bom Geo Trans*, 1836, 1838, Vol 1, 293. On the medicines found in the bazars of Sind in *Bom Med and Phys Trans*, Vol 14, 127. He was a Bombay medical officer, and was killed in battle at Pinwandum, in 1841.

LORD NORTH ISLAND, on the N W of New Guinea, in lat 3° 24' N, long 131° 20' E, small, low and woody.

LORD OF THE WHITE ELEPHANT, a title of the king of Burmah.

LORD OF THE OXEN, or Shorn Pati, a title of the king who drove Serimanns back across the Indus.

LORDS OF RELATED BEINGS. Mann describes these as being produced by one of the hindoo triad, but in a legend they are ascribed to the joint powers of the three great personified attributes of Brahma, Vishnu and Siva. They are, in places called Mann, in other passages they are considered as Brahmachari, or Prayapati, and as Rishi.—*Moore*, p 91.

LORD'S PRAYER was published in 1548 in fourteen languages, by Bibliandio, in 1591 in twenty-six languages, by Rocca (Bibliotheca Apostolica Vaticana, a letter Angelo Rocca Rome 1591, lto) in 1592 in forty languages, by Megiserus (*Specimen XI. Linguarum et Dialectorum ab Hieronymo Megisero à diversis autoribus collectarum quibus Oratio Dominica est expressa* Francforti, 1592), in 1593, in fifty languages, by the same author (*Oratio Dominica L diversis linguis*, cum H. Megiseri Francforti, 1593, 8vo). The Bible has been printed and distributed in India in twenty-five different languages, in ten of which

between six and one hundred thousand copies have been printed, and in Tamil 1,560,950 have been issued since 1706, when the Bible was printed in that language. The Bible was printed and issued in Bengalee in 1796, and in Malayalam in 1816. The whole of the copies printed in the twenty-five Indian languages is 4,772,621.

LORI, or Ground Parakeets, the sub-family Platycercinæ of the family Psittacidæ, and order Scansores or climbers, which may be thus shown

Order I — Scansores or climbers

Fam. Psittacidæ

Sub-Fam. Cacatunæ, 2 gen., 5 spec., viz., 1 Calyp torhyncus, 4 Cacatua.

Lemur tardigradus, Schreb

Stenops gracilis, Vander Hoeven

Nama theivanga, SINGH | Tha-vanga, TAM
Thei-vanga, TAM

The LORIS gracilis inhabits India and Ceylon. It is a species of a genus of mammals, belonging to the family Lemnidae. Its Tamil name thavangu, means "thin-bodied," and hence a deformed child or an emaciated person has acquired in the Tamil districts the same epithet. The light-coloured variety of the loris in Ceylon has a spot on its forehead, somewhat resembling the "nāmam," or mark worn by the worshippers of Vishnu, and, from this peculiarity it is distinguished as the Nama-tha. Its eyes are extracted by the Singhalese as charms and for love potions — *Tennent, Horsfield*

The lotus is a very sacred flower among the hindoos, it enters into all the ornaments of brass vessels used in the temples, it is alluded to in the most popular poems, and the poets say, that the lotus was dyed by the blood of Siva, that flowed from the wound made by the arrow of Kama, the Indian Cupid, as in *Midsummer-Night's Dream*, Act II

Yet marked I where the bolt of Cupid fell

It fell upon a little western flower —

Before, milk white, now purple with Love's wound
And maidens call it love-in-idleness

The lotus flower is also considered an emblem of beauty, and in the Ratnavali, or, the Necklace—a Sanscrit play written in the twelfth century, Vasantaka says to his lady-love My beloved Sagatika, thy countenance is as radiant as the moon, thy eyes are two lotus-buds thy hand is the full-blown flower, and thy arms its graceful filaments. In hindoo

theogony, the lotus floating on the water, is an emblem of the world the whole plant signifies both the earth and its two principles of fecundation Lotus is, however, a name given to three plants, the *Nelumbium speciosum* or Egyptian Lotus figured on the ancient monuments of Egypt and India It is now extinct in Egypt but grows in the south of Asia and in the islands of the Archipelago One lotus of the ancients was the *Melilotus officinalis*, and the lotus of the lotophagi is by some thought to be the fruit of the *Zizyphus lotus*, *Desfontaines*, but by Munby, supposed to be that of *Nitaria tridentata* Pliny and Sprengel say the lotus of the lotophagi is the *Celtis australis*, *Linnaeus* Lotus leaves and fibres are supposed to be of great cooling efficacy in allaying the fever of passion

Nymphæa lotus of India, the nenoufa of the hindoos and nufai of the Arabs is that usually called the lotus, its stem is extensively used as an article of food among the Kashmirians When the plant has come to maturity, and the leaf has begun to decay on the water, the stem is tender, and when well-boiled is said to be palatable and nutritious The plant or plants referred to by classical authors under the name of lotus is however a subject which has engaged the attention of numerous commentators as well as of botanists To the difficulty of ascertaining the identity of a plant but imperfectly described, has in this case been added that of the same name having been applied to several very distinct plants Fee, in his 'Flore de Virgile,' enumerates no less than eleven to which the name Lotus was applied Among the herbaceous, are the *L. sativa* and *L. sylvestris* of Dioscorides, the first, he states, is also called *L. trifolium*, it is supposed by some botanists to be *Melilotus officinalis*, and by others to be *M. cœrulea* Di Sibthorp has fixed upon *M. messaneensis* as the plant The *L. sylvestris* of Dioscorides, also called *L. libyon*, a native of Libya, and about two feet high, with leaves like those of *L. trifolium*, and fruit like that of feengreek, is thought to be the *Trigonella* relation of Sibthorp, which he found in Asia Minor and in Cyprus Both kinds are described by the Arabs under the names of Haudachocha, or Hundkooke, *Garch and Thusf*

The celebrated D lotus, a native of Africa, and now common in the south of Europe, bears a small yellow sweetish fruit about the size of a cherry, and has by some been supposed to be the famous lotus of the lotophagi, but this is more likely to have been the jujube, called by botanists *Zizyphus lotus* Lotus of the ancients is also supposed by Mr Munby to be the *Nitaria tridentata* of Desfontaines,

and is called Damouch by the Arabs of the desert of Soussa near Tunis Its berries have intoxicating qualities The fruit of the *Zizyphus lotus* is dry and unpleasant, and that of the *Celtis australis* is unlikely to have been the article used by the Lotophagi

The Lotus flower on the ancient monuments of Egypt, is that of the *Nelumbium speciosum* It is now however extinct there, but Speke found the Nympha thickly covered with them The Nile was a sacred river many of its plants, as the *Faba ægyptiaca*, a species of bean, and the lotus, were sacred also, and the former on account of its resemblance to a boat, and the latter from its well-known quality of always floating above the surface of the water, were adopted very generally as symbols of the ark The Egyptian priests were accustomed to crown themselves with the lotus From Iamblichus we learn, that a man sitting upon the lotus, surrounded with mud, was an emblem of the sun, and from Plutarch, that the sun was represented by the symbol of an infant sitting upon the same plant "It is manifest," says Faber, notwithstanding the physical refinements of Iamblichus and Plutarch upon these hieroglyphics, that something more must be meant by them than the mere natural sun, and I apprehend that in both cases, the person, who sits upon the lotus, is the great solar patriarch Noah, and that, in the latter, he was represented as a child, in allusion to his mystical second birth In the Japanese mythology we find the same symbol the goddess Quannwon is represented sitting upon the same aquatic plant In China, the deity upon the lotus in the midst of waters, has been long a favourite emblem and the god Vishnu, in the hindoo mythology, is still represented in the same manner In connexion with this diluvian emblem, Drina is mentioned by Strabo, Artemidorus and Pausanias, by the title of Limnatis or the maritime deity, in an ancient inscription in Crete she is also called regina undarum, the queen of the waves, and Orpheus invokes her under the appellation of the preserver of ships The Lily, of I Kings, vii, 26, the emblem of the Israelites is supposed to be the lotus Lotus is the symbol of buddhism The mystic lotus, with the hindoos is sacred to Likhsum the wife of Vishnu, hence called Kannali — *Wilson's Hindoo Theatre*, p 296, *Hind Theat*, Vol ii, p 276, *Chow Chow*, p 199, *Eng Cyc*, *Heliodorus*, l, x, p 457, *Lamb de Myst*, sect vii, p 181, *Plut de Iside*, p 355, *Faber, Myst of the Cabiri*, Vol i, p 311, *Kœmpfer's Japan*, p 595, *See plates of the first and third Avatar in Maurice's Hist of Hind*, Vol i, *Strabo's Geog*, lib 8, p 361, *Ar-*

LOUKADA, TEL Bigelowii lasiocarpa, *W & A*, 1344, *Spermacoce stricta*, *R* 1, 370

LOUK-KA The green dye of China, the "louk-ka," "lo-kao," or "king-lok," was first made known to Europe in 1845, since which time, scientific men have prosecuted inquiries regarding it. Its price in China has continued steady at 24 dollars the cattis. In China, the green cloths dyed by this material, are called hou-sai, but are known to the trade as so-lo-pou, green colour cloth, when dyed by the bark ughou-lo-se (green nymphæa colour,) and nghou-lo-pou (green nymphæa cloth,) that is, cloth dyed with the lo-kao of the colour of the leaves of the nymphæa. Each piece of hou-sai, is one foot or one foot one inch broad, and in 1848, cost from 50 to 53 cents. In addition to the lo-kao, the French Consul, M. Montigny, sent one green dye stuff called pih-chou-elle, ten cattis of which cost 4,920 sapeques and another called toug-loh, green paint said to be prepared from the no-me, fifty cattis of which cost 20,800 sapeques. Lo-kao or loukao, in Chinese signifies green glue or green lac, and all who have sent samples of the green dye itself, call it lo-kao or lo-kiao. In Canton it is louk-ko, in Fokien, lok-kor and lek-ko. The first considerable consignment of the green dye was received in Paris in 1853, since which date, it has become an article of trade. At the Universal Exhibition held at Paris in 1855, samples of green dye were exposed, and Dr Royle subsequently stated that there are three kinds of the green dye of China or green indigo. The first from China, the second from the Burman empire, and the third from Assam. That from the valley of the Brahmaputra, in Assam, is called roum, and is extracted from a species of *Ruellia*. This plant, the specific name of which is not known, or a nearly allied species is cultivated with the same object in Pegu and Burmah. It is altogether different from the bila-roum, the product of the *Wrightia tinctoria*, *R. Brown*, which by some is supposed to be the *R. comosa*, *Wall*, the *Ebermareria axillaris*, *DeCand*. Others point to the *R. comosa*, *Roxb*, which is the *R. encoma*, *Steudel*, and the *Buterea ulmifolia*, *DeCandolle*. MM Edan and Remi, in 1854, reported that they had procured a

very fine green from the fruit of the lo-za, but were unsuccessful in regard to the bark. Mr Fortune informed Mr Edan that without doubt the bark of the lo-za was employed to furnish the stuff with which to dye cloth green, and that the fruit was used in the preparation of green paint for paper. These points were repeated by M Remi in 1855. All the experiments hitherto made with the bark and the leaves of the *Rhamnus chlorophorus* and *Rhamnus utilis*, have not been decisive. M Persoz has succeeded in extracting a yellow dye from the bark of *Rhamnus chlorophorus* and the berries of the *Rhamnus utilis*, but he could not discover a trace of the green dye in the extracts prepared from the berries of both kinds, which were sent to him by the Agri-Horticultural Society of India. Nevertheless, the united testimony of Fathers Helot and Aymen, MM Annand-tizon, Edkins, Fortune and Remi, is to the effect that it is the bark of the branches, and perhaps also of the roots of the *Rhamnus chlorophorus* and *Rhamnus utilis*, but especially of the former, that gives to the green dye that brilliant colour which it assumes under the influence of artificial light. The fruit, at least that of the *Rhamnus chlorophorus*, probably yields a green colouring matter analogous to the bladder green, and differing from the true green dye both in colour and properties. The Chinese declare that other species of the same genus have dyeing properties. The Pe-mu lo-chou, is the *Rhamnus chlorophorus*, *DeCausne*, and the hong-pi-to-chou, the *Rhamnus utilis*, but, until some European chemist shall have discovered traces of the green dye in some of the parts of the plants, the flowers, the berries, the seeds, the leaves, the bark or the root, it cannot be asserted that the plants are really those the Chinese use to dye their cottons with or from which they prepare the lo-kao. There are some European plants which dye a green colour, the blue-flowered Scabious, is used for that purpose in Sweden. The *Melissa officinalis* yields under the action of spirits of wine, a permanent green dye, and the *Mercurialis perennis* yields a permanent blue-green. The green dyes from the *Ruellia*, *Justicia tinctoria*, *Lour*, *Adeuostemma tinctorium*, *Cass*, *Sansevieria laete-virens*, *Ham*, *Asclepias tingens*, *Roxb*, *Melissa officinalis*, *Linn*, have not yet been examined. Various plants stated to yield a green dye, colouring matter have been examined, but in vain for the green dye of China, these are the *Arundo phragmitis*, *Linn*, the artichoke, deadly night shade, wild cherivil, ash tree, lucerne, *Lycopersicum esculentum*, *Mill*, *Mercurialis perennis*, *Linn*, *Ronabea arborea*, *Blanco*,

the groundsel and the common field clover. M Michel obtained tolerable greens from the berries of *Rhamnus catharticus*, *Linn*, and *Rhamnus alaternus*, *Linn*, but not improving by artificial light. He found that cloth taken out of the bath with a light nankeen dye, and plied at night on the grass, had assumed towards morning and long before it was exposed to the rays of the sun, a deep green colour. A damp atmosphere and dew were found to increase the intensity of the tint. The lower side near the grass was scarcely at all colonised, and a cloth left all night in a dark room was found in the morning to be unchanged. M Perroz found the fruit of a buckthorn to yield a pretty lilac or silk. The green fruit of the *Rhamnus infectiorius*, *Linn* (Avignon berries, *R saxatilis*, *Linn*), Persian berries of *R alaternus*, *Linn*, and *R amygdalinus* *Desf*, afford a yellow colour. The fruit of the *R fiangula*, *Linn*, gathered in July and August before they are ripe, yield according to Dambourney and Lenchs, a fast and brilliant yellow, according to Buchoz, a green, and when they are ripe, in September and October, they dye a purplish blue without any mordant, and green, violet and blue-violet, or blue according to the nature of the mordant employed. Dambourney obtained on wool, from the juice of the ripe berries fermented, very fine and fast greens, varying from an apple to a dark-green. The colouring matter of the berries of the *R. infectiorius*, is yellow before they are ripe, and dark-purple-red so soon as they have attained maturity. Buchoz notices similar peculiarity in the fruit of the *R catharticus*, before ripening it yields a saffron-red, after maturity, a green, known as a bladder-green, and still later a scarlet. According to Waldstein and Kitaibel, the green berries of *R tinctiorius* have dyeing properties similar to those of the fruit of *R catharticus*, but more esteemed by the dyers. The inner bark of *R infectiorius* dyes yellow, when fresh brown-red, when dry. The dry bark of the *R fiangula* yields a brown or dark-red, and the fresh a yellow dye, and its root as well as the bark and seeds of *R catharticus*, a yellow and volatile colour named Rhamno-xanthine, which is dissolved by the alkalis and converted into a magnificent purple. The bark of *R catharticus* and *R alaternus* dye yellow, the wood of the latter species dyes dark-blue, and the root of *R infectiorius* a brown. The leaves of *R alaternus* yield a yellow colour, and those of *R fiangula*, a greenish yellow. A mixture of the cuttings of *R alaternus*, which yield a dark-blue, with the fresh bark of the same buckthorn and of *R catharticus*, *R fiangula*,

and *R infectiorius*, which contain a yellow colouring matter, ought to produce a green. The European *Rhamnus* contain a volatile principle, and nearly the same changes take place in the colouring matter of the several species, from red to violet, to blue, to green, and to yellow. The lo-kao possesses similar qualities, and it is possible that the green dye, so remarkable when exposed to light, is a compound of blue and yellow having separately the same property and united in the bark of *R chlorophorus*. But M Rondot suspects that the supplementary yellow requisite to produce the green of lo-kon is not obtained from one of the *Rhamnus*, but from the hong-chi, the fruit of *Gudenna*, or the hom-ho, the flower bud of the *Styphnolobium japonicum*. In 1855 when Mr Robert Fortune was sent to China by the E I Company to procure tea plants for the nurseries in the Himalaya, he was particularly directed to give his attention to plants of that country stated to produce a green dye. Accordingly he sent seeds and samples to the Agri-Horticultural Society of Bengal, from which numerous plants have been forwarded to all parts of India. It seems established that the trees from which the green dye is prepared are two species of *Rhamnus*, one wild, called by the Chinese white skin, and which grows in abundance in the vicinity of Kiating and Ningpo. The other is called yellow skin by the Chinese, is cultivated at Tsoh-kron-pang, where some thirty men are employed in the preparation of the dye stuff. The flowers, leaves, roots, bark and fruit have all been indicated as the part of the plant from which the lo-kou was prepared. Mr Fortune sent to India and to England plants of both the cultivated and wild species. The wild species is a shrub and is called hom-bi-lo-za, from the circumstance that when its bark is boiled in water, a white scum is formed, which subsequently passes to rose-hom-bi, meaning red-scum bark. The *pe-pi-lo-chou*, or *Rhamnus chlorophorus*, is cultivated between 25° and 36° of N L, but more especially about the 30° and 31° of N Lat. The *hong-pi-lo-chou* or *Rhamnus chlorophorus*, is mentioned as high as N L 39 and down to N L 30°. This seems the hardier buckthorn and capable of withstanding the severe frosts of Tchi-li, but it is evident that both species exist in abundance in the northern parts of the province of Tche-king, over a space of 45 square miles — *Report on the Green dye of China*.

LOUNG-KIO, a bird of Chinese Tartary described by M Hue. It is about the size of a quail, of an ash colour, with black spots, its eyes of a brilliant black, and surrounded

with a bright sky-blue rim. Its legs have no feathers, but are covered with long rough hair, and its feet are not like those of any other bird, but resemble those of the green lizard, and are covered with a shell so hard as to resist the sharpest knife. This singular creature, which seems to partake at once of the character of the bird, the quadruped, and the reptile, is called by the Chinese Loung-kio, that is, Diagon's Foot. They generally arrive in great flocks from the north, especially when much snow has fallen, flying with astonishing rapidity, so that the movement of their wings is like a shower of hail. When caught they are extremely fierce, the hum on their legs bristles up if you approach them. — *Huc's Recollections of Journey*, p. 92

LOUR, a river near Mattee Cottah in Syliet

LOUR, the inhabitants of Luristan, a Persian province joining the pashalik of Bagdad on the east, and extending to the Bachtayan mountains — *Baron de Bode's Travels in Luristan*, *Sir H. Rawlinson's Memoir Trans. Geog. Soc.*, 1839, *Ferriar, Caravan Journeys*, p. 8. See Lur, Luristan

LOUREIRO, J. de Father Loureiro, a native of Portugal, author of the *Flora Cochim-Chinensis*, 1 vol., 1790, resided for thirty-six years in the kingdom of Cochim-China, whither he proceeded as a missionary, but finding that Europeans were not permitted to reside there without good cause, he entered the service of the king as chief mathematician and naturalist. The *Flora Cochim-Chinensis* was published at Lisbon, in two volumes quarto, in 1790, and a second edition edited by Willdenow, with a few notes, appeared in octavo, at Berlin, in 1793. In the herbarium of the British Museum there are several small collections, which are of great importance to the Indian botanist, especially one containing many of Loureiro's plants, which are not readily recognizable, at all events as to species, by the descriptions in the *Flora Cochim-Chinensis*. There are also considerable numbers of specimens forwarded to Sir Joseph Banks by Roxburgh, Hamilton and Russell, which are occasionally of use in determining the species described by Roxburgh. The British Museum also contains König's collections and manuscripts, Kämpfer's Japan and other plants, and Hermann's herbarium. — *Hooker and Thomson's Flora Indica*

LOUZAN, MALAY *Amygdalus communis*

LOUZ UL MUER, AR *Amygdalus communis*, *Linn.*, Bitter almond

LOVE-APPLE, or tomato, the *Lycopersicon*

esculentum, is a native of South America and of a genus of the same family as potatoes. There are two sorts, single and double. They may be sown immediately the rains commence, in beds, afterwards transplanted in rows, two feet apart, and trailed upon sticks of a strong description. If the soil is good, they will grow to seven or eight feet in height. The double, which are the finest, if sown in June, ripen in October. The lower branches should be pruned, and a succession of crops may be kept up until April. The small single tomato, with a slight protection from the dry winds, will continue until the rains. — *Jaffrey*

LU, HIND *Symplocos eaiatagoides*

LUA, COCHIN-CHINA Rice

LUANG PHRA BANG, a Laos district on the Mekong which has largely extended its powers towards the north and carries on trade with Siam, Cochim-China and a Chinese race called Lo-Lo. See India

LUAR, HIND *Tecoma undulata*

LUBAN, in lat $13^{\circ} 44' N$, $101\frac{1}{2}$ miles long, is the largest island of a detached group fronting the south-west end of Luzon and the north-west end of Mindoro. It is high in the middle but low at each extreme

LUBAN, ARAB, DUK, GUZ, HIND, MAL, PERS From Greek Libanos, Benjamin,

Olibanum, resin of *Boswellia thurifera*, frankincense, *Styrax benzoin*

LUBANAH, HIND A caste of agriculturists, also grain carriers, settled in Bagui and Kantul, they live in villages, sometimes mingling with other cultivators, and sometimes having a village exclusively to themselves. They are sudra hindoos, originally from Guzerat, and are a quiet and inoffensive race, differing widely from the Banjara, though engaged in the same trade. The Lubanah are also cultivators, but follow no other occupations—*Malcolm's Central India, Vol. II p. 152*

LUBANI AOD, DIK Benjamin

LUBECK ISLAND or Bawean, one of the Carimon islands, is in lat $5^{\circ} 19' S$, long $112^{\circ} 46' E$, and is about 30 miles in circumference. See Lubek

LUBAR, HIND *Phytolacca decandra*

LUBBAT-UT TUARIKH, see Abdul Latif

LUBBAY are in large numbers on the Eastern Coast, chiefly between Pulicat on the north, and Negapatam on the south, then head-quarters being at Nagor, near Negapatam, the burial place of their patron saint Nagor Meer Sahib, to whose shrine numerous pilgrimages are made by the tribe. They are believed to be the descendants of mahomedans and hindoos, and are by some supposed to have come into existence during the mahomedan conquest, when numbers of hindoos were forcibly converted to the mahomedan faith, but the prevailing belief is that, like the Moplah of the Western Coast, they are descendants of Arab merchants and the women of the South of India. They are mahomedans and practice circumcision. Physically, they are good-looking, tall, well-made, and robust, are sometimes inclined to obesity, of light complexion and well-developed limbs, not unlike the Moplah of the Western Coast in their general configuration. The cranium is singularly and strikingly small, the eyes are slightly oblique and not wanting in expression, cheek bones prominent, lower jaw, large and heavy, beard in some instances full and long, but in most cases decidedly sparse. They generally wear the Loongee, a cloth loosely wrapped round the wrist and extending below the knees, they also wear bright-coloured jackets, occasionally turbans, the most frequent head-gear being a skull cap, fitting closely to a shaved head. Like muslimans they live freely on animals and vegetables, making use of all kinds of flesh meats, saving pork for which they have a religious abhorrence. Their language is Tamil, though some talk a little Hindoostanee. They are exceedingly industrious and enterprising in

their habits and pursuits, there being hardly a trade or calling in which they do not try to succeed. They make persevering fishermen and good boatmen. They are lapidaries, weavers, dyers, mat-makers, jewellers, gardeners, businessmen, grocers, boat-makers and owners, and merchants. As regards the leather and horn trade, they excel as merchants, in short, there are few classes of Natives in Southern India who, in energy, industry, and perseverance, can compete with the Lubbay. The Lubbays of Tinnevely are said to be descendants of Arab traders, who settled on the sea coast towns some three or four centuries ago, and formed connections with the lower caste Tamil women—*Dr. Bilderbeck and Wilson in Mad Gort Pro*

LUBEK of Avicenna, *Cordia myna*, *Linn*

LUBEK, the old name of the island of Bawean, forming a portion of the residency of Sonmbiya, lies about sixteen Dutch (forty-eight English) miles to the north of Ujong Pangka, in $5^{\circ} 90'$ South latitude, and $112^{\circ} 38'$ W longitude (Greenwich), and contains about 36 square (Dutch) geographical miles, 44 English miles. It is one of the common islands and is about 30 miles in circumference. The country in general is very mountainous, and it is only near the sea that some plains are found, on the largest of which, about $3\frac{1}{2}$ miles in circumference, the principal village Singkapur is situated. The Bawean race are probably descendants of the Madurese, whose language with a few modifications prevails, though they differ from them in dress, but in this respect agree closely with the Bugi. The inhabitants of the dessa Dipanga employ the Javanese language—*Journ Ind Arch., Vol. V, No. 7*. See Bawean, India, Jiti, Lubek

LUCIOCEPHALIDÆ, is a family of plants of one genus Luciocephalus

LUCK, is the past tense and past participle of the Anglo-Saxon "læcean," to catch, and means anything caught. Thus the haul of the fisherman would be his "luck." At times almost fruitless, at times, so successful that the nets seem ready to break, such strange results are inexplicable to him except on the ground of some mysterious fate working in particular places at particular seasons. Thus to the fisherman, luck does not mean mere chance. His use of the word is not so far off the way in which it has been used in the early translation of the Psalter given in the Book of Common Prayer. In the last verse of the 129th Psalm it is said, "The Lord prosper you we wish you good luck in the name of the Lord." Nevertheless his superstition comes out in the way he watches for omens of this good luck. Sometimes at the beginning of a voyage a turbot will leap out of the net upon the deck. Immediately the crew gather round it, intent upon watching it as it lies fluttering, gasping for breath. Should it manage to throw itself quite over, the anglers are delighted, they will make a hundred pounds by the voyage. If by some extraordinary effort of nature it throws itself over again, then joy knows no bounds. An old fish-wife sells her first lot of herrings and the purchaser gives her a silver shilling. She spits upon both sides, and puts it away in the deepest recesses of her innermost pocket. That silver shilling was an omen of good luck, but it is not wise to parade her happy fate, lest some Nemesis should meet it in a moment, so she appears to treat it with contempt and hides it out of sight. The word used by the hindoo, for luck, is the name of the goddess Luchmi or Lakshmi, or from the Sanscrit word Luchmee. The hindoo phrase, she is the Lutchmee to her man, signifies that she is the source of good luck to her husband — *Great Yarmouth and its Fishermen in Golden Hours, The Hind, Vol II, p 344*

LUCKAIREE, a small river of Banda

LUCKIAH, a river near Moraparah in Dacca

LUCKMUNA, BLNG Atropa acuminata, *Royle*

LUCKNOW, the chief town of Oudh. It is about 50 miles from Cawnpore. Its population is estimated at 300,000. It was taken by the Indian rebels in 1857. It was entered

on the 25th August 1857 by generals Havelock and Outram and was relieved by general Havelock on the 25th September 1857. The second relief of Lucknow was effected by Sir Colin Campbell on the 17th November 1857, its final capture occurred on the 19th March 1858. Lucknow was so named by Rama, in compliment to his brother Lachshman.

LUCKPUT, a fort $2\frac{1}{2}$ miles in circumference on the bank of the Koreo river, at the western extremity of Cuch. The stones from which it was built, have been taken from Wagam-chaoia-ka-Ghad, a ruined city of the Chaoia Rajputs.

LUCON, or Luzon, the great group of the Philippines, although contiguous to the proper Indian Archipelago, differs materially in climate and the manners of its inhabitants. It extends over fifteen degrees from near lat. 5° to 20° north, and consists of many islands to which only Lucou and Mindanao are of great size. The bulk of the people are of the same tawny-complexioned, dark-haired, short and squab race, as the principal inhabitants of the western portion of the Indian Archipelago. The focus of the aboriginal civilization of the Philippines, as might be expected, has been the main island of the group, Lucou. This is a corruption of the Malay and Javanese word *lasung*, meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly. In the Philippines are many separate nations or tribes speaking distinct languages, unintelligible to each other. The principal languages of Lucou are the Tagala, the Pampanga, the Pangasman, and the Iloco, spoken at present by a population of 2,250,000, while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people. Mr Crawford tells us that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala, with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language, or languages sprung from a common parent, and only diversified by the effects of time and distance, and that an examination of the Bisaya Dictionary gives similar results. There are negroes in several islands of the Philippine Archipelago, especially of the principal island, Lucou, and in Negros, said to take its Spanish name from them — *Crawford's Malay Gram and Diet, Vol I, p 163*. See Archipelago, India, Luzon, Monsoon, Typhoon.

LUCRUBAU, SEEDS

Ta fung tsze, CHIN

Karambu, MALEAL | Bun lubunga, BENG

This plant grows in Bengal, the peninsula of India, and is common in stagnate water, in Tenasserim. It is used in medicine — *Mason*

LUZU COUNTRY, extends westward beyond the Noulung, and is inhabited by a tribe of that name. Their village consists of a dozen log houses. The Luzu are barbarous in their habits and mode of life. Except the christian converts, who have adopted the ordinary Chinese costume, and whose pursuits are those of industrious and peaceable cultivators, the rest of

the tribe are a terror to their neighbours, against whom they carry on a continual warfare. In religion they sacrifice fowls to propitiate the evil spirit. In appearance they are darker than any others of the neighbouring tribes and wear their hair long. Their costume, consists of a girdle of cotton cloth or skins—at least, the warriors of the tribe, on their way to fight in Yunnan, had no other garments except a few of the leaders who wore cloaks of leopard, goat, or fox skins hanging from their shoulders. Their arms, like those of the other tribes consisted of knives brought from the Khamti country, on the borders of Assam, spears and cross-bows. They owe no allegiance and pay no tribute to the Chinese authorities, but occasionally serve as voluntary allies for the sake of plunder and could muster about 1,200 fighting men.

LUFFA, a genus of plants belonging to the natural order Cucurbitaceæ, which owes its name to the Arabic word for Luffa egyptiaca, viz, "louff," "loof"

LUFFA ÆGYPTIACA

L pentandria, *Roxb*, W | Momordica luffa, *Wild*
and A, W Ic

A remarkable kind of gourd when quite ripe, within, it has no pulp but is dry and filled with netted fibres, very much interwoven. It is used in Turkish baths as a scrubber. It is a useful product, and if cultivated would probably find ready sale. It is of easy culture and should be trained on a raised mudwa, or platform, similar to the snake-gourd, &c — *M E J R*

LUGAR, HIND *Hordeum hexastichum*

LUGGUN, HIND A large flat hollow utensil in the form of a basin

LUGGUR or Laghai, the female, Juggui or Jaghai, male, a large sparrow-hawk, native of Sind, with dark eyes, trained for the season, and then let loose

LUGHAN, see Kaffi

LUGHAR, a loyal and well-affected tribe of Affghans who live near the Kosah tribe, partly in the hills and partly in the plains. Their country extends from Fidoie southwards about 30 miles. In these hills is situated the town of Sukkee Luwai, a place of some sanctity, and venerated by both hindoos and mahomedans. An annual fair is held here. The pass which runs by this point is one of the chief thoroughfares to Kandahar, and the route traverses the Khutian country to the westward. The Khutian and the Kosah were greatly favored by the government of Sawun Mull, who desired to use them as a counterpoise against other tribes. See Jellalabad, Khyber, Kabul, Kohistan.

LUGHMAN Within the last three centuries there were people called Ghabai in the Kabul countries, particularly in Lughman and Bajui, and in the days of Baber there was a dialect called Ghabai. We are also told that one of the divisions of Kafiistan was named Ghabiak. But it does not follow that the people called Ghabai then professed the worship of fire

LUHEA PANICA'FA In Brazil the bark of this evergreen climber is used for tanning leather

LUHUD-CHURNA, lit, filling the grave, a mahomedan ceremony

LUHUPPA, a rude tribe near the source of the Iravadi. See India

LUH-YING, of China, are the troops of the green standard. Accustomed as we are in other countries to see armies employed either in attacking foreign states, or in defending their own against invasion, the list of responsibilities imposed on the Luh-ying, as a police force, it is to be regarded in the light rather of an immense constabulary than of a fighting army. Some small bodies of it are detached on the west frontier to assist the Banner garrisons in maintaining the Imperial authority over regions subjected to it at a comparatively recent period—*Wade's Chinese Army, p 73*

LUI-CHEW-FU, see Tonking

LUI, HIND Flannel

LUI-SHIN According to the Chinese, Lui-shin is the spirit that presides over thunder, the Jupiter of the Chinese. This figure has the wings, beak and talons of an eagle. In his right hand he holds a mallet, to strike the kettledrums with which he is surrounded, whose noise is intended to convey the idea of thunder, whilst his left is filled with a volume of undulating lines, very much resembling those in the hands of some of the Grecian Jupiters and evidently meant to convey the same idea, namely, that of the thunderbolt, or lightning—*Baron Macartney's Embassy, Vol 1, p xxxiii*

LUJJALOO, BENG Sensitive plant, *Mimosa pudica*

LUK, HIND *Typha angustifolia*, also in Peshawar, &c, coarse rice, and also used to make reeds and flags in a river, also in Bunnoo, coarse grass. See Lukh

LUK, Rus Onion

LUK, is the Belooch word for a pass or defile, called Kohtul in Persiau—*Pottenger's Travels in Beloochistan and Sindh, p 151*

LUKAT, HIND The "loquat" or fruit of *Mespilus*, or *Eriobotrya japonica*

LUK-CHAR, see Dyes

LU-KEU The Sanghin river, is also

called Lu-ken and Yung-ting. It flows a few miles to the west of Peking, over which stood the bridge which Marco Polo describes. The Venetian calls the river Pul-i-sangan, which, as Marsden suggested, looks very like the Persian Pul-i-sanghin or stone bridge, but as the name Sangkan-ho, (said to mean river of mulberry trees) is also recognized in Chinese books, the origin of the latter part of Marco's appellation seems doubtful—*Kl and Pauth, Marco Polo, i, 31, in Yule Cathay, Vol II, p 261*

LUKII, HIND *Typha angustifolia*, a reed or flag, which is much used to make floor-mats, resembling the matting made out of *Typha elephantina* in the plains—*Poull's Hand-book, Vol I, p 517* See Luk

LUKHEER, also Koot Lukheer, red dye wood or bark of Hindustan

LUKIMPUR, see India

LUKKEE, a range of hills in Sindh, length about 50 miles, runs S E from Jutted towards Hyderabad. The centre of the range is in lat 26° N, long 67° 50' E. Highest part 1,500 to 2,000 ft. Between Lukkee and Schwan the mountains have a nearly perpendicular face, towards the Indus, above 600 feet high. They are of recent formation, and contain a profusion of marine exuviae. Inge fissures traverse this range, and hot springs and sulphureous exhalations are of frequent occurrence.

LUKKEER, see Hot-springs, Khyber

LUKMUNA, also Lukmani, BENG, HIND *Atropa acuminata* and *A. inindragora*

LUKOOCHIA, BENG Bread fruit tree, *Artocarpus lacoochia*

LUKSHMI, a hindoo goddess, the Sakti or female energy of Vishnu, as the goddess of prosperity, she is styled Kamala

LUKSHMI-CHARA, SANS The latter word means deserted

LUKSHMANA, SANS The beautiful, from Lakshma, a fortunate sign

LUKUT is the chief tin-producing basin in the south of the Malay peninsula. It has a large population of Chinese, Malays and Binua, and its importance has induced the king of Salangor for some time to reside there. From Lukut, good Malay paths lead to the Langat on the one side, and Simujong on the other—*Journ Ind Arch, December 1850, p 754*

LUMBANG-NUT TREE, A gro-Malay *Alenites trilobis, Forst*

LUMBARI, also Lumbadi, and Lom-bah, chiefly migratory grain merchants, spread all over India, from the Panjab to Cape Comorin. The Lumbahs are Carriers. In some districts they are addicted to thieving and robbery, and are believed to practice witchcraft, human sacrifices, secret murders, witchcraft, sorcery. Their religion is a mixture of hinduism and mahomedanism, and their priests control the bands. Their dress, language, habits, and customs are peculiar. They are sworn to secrecy as to their habits, manners, doings and ceremonies, and do not let strangers into their secrets. The Lumbah grain carriers pursue all the avocations of the Brynni, with whom, however, they do not enter into intimacy. The language of Baria is a notorious plunderer. In the rainy season they make ghunny cloths, and engage in field labour. Their language is said to be intermediate between the Hindi of Malabar and the Malabar. They do not enter into intimacy with the Lumbah. The Lumbah speak a dialect of the Hindi.

LUMBILLA, see Kunawer

LUMBERDAR, HIND Corruption of Numbardar

LUMBODURA, a name of the hindoo god Ganesa, from Sans, lumbi, long, and oodari, the belly

LUMBOO ?—Buchanania latifolia

LUMGUM, see Kuki

LUMINOSITY of Sea water, which in the deep, is of a deep violet-blue, but often in the ocean are luminous sparks or points of light, also a soft liquid, general, and wide-spread, effulgence. Occasionally are moon-shaped patches of steady light and instantaneous recurrent flashes, and a milky sea is often seen. There are many minute ocean creatures, Entomostheia and others, which are luminous at night. Often the globular noctiluca are to be seen, they are $\frac{1}{16}$ to $\frac{1}{32}$ of an inch in diameter, and pyrosoma are also supposed to be causes. The cause of the milky sea is not known, but a bucket of water brought from onchada small Entomostheia, Megalopas, minute Medusæ, small Pteropods, Annelids, Globigerinae, &c, and all night the crustacea give forth bright spots of luminous light. It is the small Crustacea (Entomostheia) and small Medusæ (Medusidæ) which seem to exhibit the more prominent luminous properties—the larger Medusæ (Lucernidæ) as Aurelia, Pelagia, Rhizostoma, &c—the Physophoridae, the Pteropoda or Velella, nor the Physalia, or Portuguese man-of-war. The

Protozoæ, Noctiluca, however, retain their luminosity so long as they retain organic contractility. In the majority of cases of luminous Annelids, the light manifests itself in scintillations along the course of the muscles alone, and only during their contraction. With the glow-worm (*Lampyrus*) there is neither combustion nor phosphorus, but the light is the product of a nervous apparatus and dependent on the will of the animal. The *Squalus fulgens* of the south seas gives forth a bright phosphorescent light, resembling that of the *Pyrosoma*. The *Geophilus fulgens* is a luminous centipede. A species of *Agaricus* of Australia emits light sufficient to show the time on a watch. The tunicated mollusc, *Pyrosoma*, gives forth a livid greenish phosphorescent glow. The *Salpæ*, *Cleodora* and other points of dots are luminous. On the night of October 30th, 1772, Dr Foster saw a very beautiful exhibition of this sort of sea-light, off the Cape of Good Hope, at a few miles distance from the shore, and while a fresh gale blew. Upon examining, like Mr Forskal and Mr Niebuhr, a bucket of the water on which it was displayed, he was convinced that it proceeded from living animalcules. Dr Sparmann observed, in the years 1772 and 1775, that the *Mollusca* and *Medusæ*, both phosphorescent animals, were diffused in such masses near the surface of the ocean, and moved with such a rising and falling motion, as seemed perfectly adequate to the production of the phenomenon. The *Noctiluca* of the Ocean are so minute, if seventy of them ranged in a line would only make an inch, and millions could be contained in a wine glass—*M de Quatrefages, Kolliker* quoted by *Collingwood, Bennett's Gatherings, Niebuhr's Travels, Vol 1, p 441, Hartwig*.

In Asiatic countries, lunatics are numerous. St Luke viii, 27, mentions that there met him out of the city a certain man, which had devils long time, and wear no clothes, neither abode in any house, but in the tombs. A deranged person at liberty in the streets is almost a singular object in Britain, but it is a very common sight in India, where such unfortunate beings wander about in all manner of dresses, frequently without any dress at all, some perish while wandering from place to place.

LUNAK or Luniya, a pot herb, *Portulacca oleracea*, also *P quadrifida*, *Chenopodium album*, and *Suaeda fruticosa*.

LUNAK DYNASTY, the Rajput races, sprung from the moon, Soma, or Chandia, through Yadu or Jadu, are called Yadu or Jadu. It has eight branches, of which the Jhaleja and Bhatti in Cutch and Jeysulmu are the most powerful. The dynasties which succeeded the great beacons of the Solar and Lunar races, are three in number, 1st, The Suryavansa, descendants of Rama, 2nd, The Induvansa, descendants of Pandu through Yudishtira, 3rd, The Induvansa, descendants of Jaisandha, monarch of Rajgriha. The Bhagvat and Agni Poojana are the authorities for the lines from Rama and Jaisandha; while that of Paudu is from the Raj-Taim-gim and Rajaoli. The existing Rajput tribes

of the solar race claim descent from Lava and Cush, the two elder sons of Rama, and Col Tod does not believe that any existing tribes trace their ancestry to his other children, or to his brothers. From the eldest son, Lava, the rana rulers of Mewar claim descent, so do the Buggujai tribe, formerly powerful within the confines of the present Amber, whose representative now dwells at Anupsheli on the Ganges. From Cush, descended the Cushwaha princes of Niwai and Amber, and then numerous clans. Amber, though the first in power, is but a scion of Nirwar, transplanted about one thousand years back, whose chief, the representative of the celebrated prince Nala, enjoys but a sorry district of all his ancient possessions. The house of Maiwar also claims descent from this stem, which appears to originate in an error of the genealogists, confounding the race of Cush with the Causika of Canouj and Causambi. Nor do the solar genealogists admit this assumed pedigree. The Amber prince in his genealogies traces the descent of the Mewar family from Rama to Sumitra, through Lava, the eldest brother, and not through Cush, as in some copies of the Poonians, and in that whence Sir William Jones had his lists. Whatever dignity attaches to the pedigree, claimed by the Amber prince, whether true or false, every prince and every hindoo of learning, admit the claims of the princes of Mewar as heirs to 'the chain of Rama', and a degree of reverence has consequently attached, not only to their person, but to the seat of their power. When Madajee Sindia was called by the rana to reduce a traitorous noble in Cheetore, such was the reverence which actuated that (in other respects) little scrupulous chieftain, that he could not be prevailed on to point his cannon on the walls within which consent established 'the throne of Rama'. The rana himself, then a youth, had to begin the attack and fired a cannon against his own ancient abode. Bryant, in his Analysis mentions that the children of the Cushite Ham used his name in salutation as a mark of recognition, and 'Ram, Ram,' is a common salutation in the hindoo countries, the respondent often joining Seeta's name with that of her consort Rama, 'Seeta Rama'. In the early ages of the Solar and Lunar dynasties, the priestly office was not hereditary in families, it was a profession, and the genealogies exhibit frequent instances of branches of these races terminating their martial career in the commencement of a religious sect, or gotra, and of their descendants reassuming their warlike occupations. Thus, of the ten sons of Ikshwaku, three are represented as abandoning

worldly affairs and taking to religion, and one of these, Caun, is said to be the first who made an agnihotri, or pyreum, and worshipped fire, while another son embraced commerce. Of the Lunar line and the six sons of Purohita, the name of the fourth was Rech, "from him the fifteenth generation was Harita, who with his eight brothers took to the office of religion, and established the Causika gotra, or tribe, of brahmins." In the very early periods, the princes of the Solar line, like the Egyptians and Romans, combined the offices of the priesthood with kingly power, and this whether brahminical or buddhist. Many of the royal line, before and subsequent to Rama, passed great part of their lives as ascetics, and in ancient sculptures and drawings, the head is as often adorned with the braided lock of the ascetic, as with the diadem of royalty. Feishta, also, translating from ancient authorities, says, to the same effect, that "in the reign of Mahiraj, king of Canouj, a brahmin came from Persia, who introduced magic, idolatry, and the worship of the stars" so that there is no want of authority for the introduction of new tenets of faith. Even now the rana of Mewar mingles spiritual duties with those of royalty, and when he attends the temple of the tutelary deity of his race, he himself performs all the offices of the high priest for the day. In this point a strong resemblance exists to many of the races of antiquity — *Tod's Rajasthan, Vol 1, pp 27-46*. See Pandu dynasty, Chapdia Vansa, Magadha, Mlechha, Solar race.

LUNA RASA, SINGH. Muriatic acid.

LUNAWARI, in Guzerat, its chieftain is of the Bagela race. See Koimarpal.

LUNCTA, see Kuki, Lunkta.

LUNDI RIVER. Babar Khana, is the name of the tract of land lying between the Lundi Nala on the north, and the Tabia-nala and Gau Nala on the south. It includes Kachakot, and extends about one mile on each side of it to the east and west, embracing the great mound of Serik-i-Pind on the north-west, and the Gangu group of topes and other mounds on the east — *Cunningham's Ancient Geog of India, p 116*. See Khyber.

LUNG, a piece of cloth, generally of silk and cotton mixed, sometimes of silk and gold, used as waist-cloths, and supposed to be the Zonæ of the Pempus — *Burton's Scinde, Vol 1, p 101*. See Loongi, Lungi, Dhoti.

LUNG, BENG, HIND. *Eugenia caryophyllata*.

LUNGA, HIND. In Kangra, a method of rice cultivation by sowing seeds.

LUNGAMU, SANS. Dabba chettu, TEL. Citrus medica, L. "The citron," but Heyne calls it the clove orange, and the citron he

makes Likucha, but Wight and Brown make Likucha a syu of Lakucha

LUNGAR, HIND Salt-makers, qu luniyai

LUNGEH, PERS, HIND Waist-cloth

LUNGGA, see Daood-puti

LUNGGAR, HIND, (lit anchor), a string of flowers or leaves, Lunggar-uikalua, a mahomedan ceremony

LUNGGOI, Lunggota, or Lunggoti, a strip of cloth worn on the lower part of the body it passes between the legs See Lungoti.

LUNGGREE, a large shallow pan

LUNGHOTI JOGI, or Juggai jogi See Jogi or Yogi

LUNGI, HIND Aigis pheasant

LUNGI, HIND A cloth worn by mahomedans on the lower half of the body, a petticoat, a scarf It is the dhoti of the hindoos

LUNG-KHA, the dialects of the Lung-Khe and Shindu, have special affinities with the Kyu, Khy-eug and Kumi The Kun language also pertains to this group The more eastern tribes, such as the Lungkha (perhaps the Luukta, a branch of the Kuki) of the upper Koladan, and the Heuma or Shindu, and the Khon or Kun who are amongst the feeders and beyond the Koladan, are too little known to be referred with certainty to any particular branch of that family, although it is probable that the latter are allied to the Kuki, Kumi, &c The Lung-kha are said to be composed of an offshoot of the Heuma of the Shindu (Shentu, Tsendu or Shiamdu) and two tribes called Lung Khe and Bowug jwe which it subdued Captain Tickell says that the feeders of the Mi-Khyoung, the principal eastern affluent of the Koladan, descend from masses of high hills about lat 21° 50' N, inhabited by the Kun See India

LUNGNAOUHEANG, CHIN, or dragon's brain perfume Borneo camphor, product of Dryobalanops aromatica of Borneo and Sumatra

LUNGOTI, HIND A narrow piece of cloth worn in India by hindoos and mahomedans, which is passed between the thighs and tucked in, before and behind, to a waist string It's object is to conceal the parts, and it is worn by the men and boys of all the races in British India, whose habits of life necessitate then appearing uncovered in public The women and girls of British India, however poor, never wear the Lungoti, but girls wear, suspended from a string, a silver or gold ornament, shaped like a leaf of Ficus religiosa

LUNGU, BENG Clove tree, Eugenia caryophyllata

LUPUS AUREUS, Kämpfers, Syn of Canis aureus, Linn

LUR The Lur of Luristan are a great family, their principal divisions being the tribes of Koghlu, the Lek and the Kurd. They are not of Arab or Turkish descent, but seem to have always occupied the hilly country which runs from the south-east to north-west of Persia. See Loui, Luristan, Mamaseri.

LURAH, HIND of Kuhrt, an inferior land.

LUREN WOOD, of Java, resembles the naugha, but is rare, though in some tracts it furnishes the only timber. It is used in the neighbouring islands, particularly in Sumatra.

LURI, or Lur tribes. See Gipsies, Luristan, Zingari.

LURI BAZURG is occupied by the Bakhtiari.

LURISTAN extends westward for about 270 miles, from the borders of Fars, in 31° $51'$ N latitude to those of Kermanshah, about 34° $5'$, with an ordinary width of about 70 miles, and a superficies of nearly 19,500 square miles. Being along the Bakhtiari range, it is chiefly mountainous, although there are some plains toward the opposite side, which are well-watered by the numerous affluents of the Karun, the Dizful, and the Keiklah rivers. The province is divided into Luri buzurg and Luri koehuk, the latter being westward of the river Dizful, and the former near the plains of Khawm and Ahshai on the borders of Assyria. The Wali (anciently the Atabeg) resides in Khorramabad, which is the seat of this government. Here a fort occupies the crest of an isolated rock, which rises in the centre of a precipitous pass, and the town is on the south-western face, near the commencement of the rich plain. This place probably represents the Diz Siyah, or Koh Siyah, which originated the title Cossæan. The latter, or Luri Buzurg, is generally known as the Bakhtiari country, which, like the other portion, was subject to the atabegs, whose fastness, Mungasht, occupies a detached mass of scarpèd rock which is deemed impregnable. This part of the country contains two grand fire-temples, one near the ruins of Manjik, (probably that of Manu, and the story of Abraham and Nimrod is traditionally with this spot,) and the other called Masjid-i-Sulmani Buzurg, on the river Karun, one of the temples of Diana. It contains also the ruins of several cities, such as Manjanik (near Mungasht,) probably representing Selencæ, Mil Amir, or Eidy, and Susan, on the Karun (Shushan, and also called Dimeh-i-Akbar), and among the ruins is in abundance of arrow-head inscriptions. The last-mentioned town is supposed to represent Elymais, or Sosirate, the capital of the province from whence the hardy Cossæi spread their conquests over Susiana and the dis-

tricts eastward. The Elymæans inhabited mount Zagros, which is on the southern confines of Media, and overhangs Babylonia and Susiana. The mountainous region extending from the Turkish frontier on the west, to the dependencies of Behbahan on the east and south-east, is known by the name of Luristan, (the country of the Lur tribes) which is divided into the greater and the lesser, or Luristan-Buzurg and Luristan-Kuehuk. According to ancient writers, it would appear that since the remotest ages of the world, these mountains have constantly been the seat of an uncouth and warlike race of men, who set at defiance the authority of the Medes and the Persians, and in whose fastnesses, Alexander of Macedon on the eastern extremity, and, at a later period, Antigonus on the western boundary, met with such unforeseen impediments and strong opposition at the hands of the mountain clans. So far at least we know, that we must look to this region for the site of ancient Elymais. The first pages of the Holy Scriptures teach us that the land of Elam was a powerful and warlike kingdom under Chedorlaomer, in the early period of the world. It is in the fastnesses of the Elymites that Diodorus Siculus, Justin, and Pliny place the rich temples dedicated to the goddess Anaitis, which tempted the cupidity of the Seleucids and of the Parthian monarchs. Luristan-Buzurg, or what the Persians call the Fars-i-Kadim, is occupied by the strong tribe of the Bakhtiari, and one may infer that the Bakhtiari are the ancient occupants of the soil. Their dialect, with some modification, is said to be common to all the tribes of the Zagros range. The principal tribes are the Lur (of whom the Bakhtiari form part,) the Lek, and the Kurd. At the time of the Affghan invasion of Persia, in the beginning of the 18th century, Kassim-Khan was a Bakhtiari chief. The two principal tribes of the Bakhtiari are, the Ch'hai-lang and the Haft-lang. The Faiteh, a tribe of the Ch'hai-lang, is subdivided into three or four shifts. These wild tribes profess outwardly the muhammedan creed, and are of the Shi'ah sect, like many other Persians, and as indifferent to matters of religion as the generality of the nomadic tribes of Persia. The Bakhtiari bear a very bad reputation among the Persians. The chief occupation of the Bakhtiari, like those of all nomadic tribes, consists in tending large flocks of sheep, which form their chief support and greatest source of wealth. These flocks, during the winter season, retire to the warm plains of Arabistan, and on the approach of spring are driven by slow marches over the mountains into the plains of Fereidan and Ch'hai-Mahal.

Independently of the advantages, which the Bakhtiyan together with the Kashgai, a powerful Turkish tribe from Fars, reap from the wool and the milk of their flocks, the sale of their sheep is an abundant source of income to them in summer. The Bakhtiyan have a hardy race of horses, of a middle stature, about the usual size of the Arab horse, and a good deal of the blood of the latter runs in their veins. They are exceedingly fleet, sure-footed, and soft-mouthed, very manageable also, and capable of climbing up mountains with the agility and fearlessness of mountain-goats. Among the richer Bakhtiyan are many Chab-Arab horses, which are taller than the Nejd Arab, and resemble more those of the island of Bahrein. The Chab-Arab horse is justly prized in Persia, and Baron de Bode never witnessed a greater display of beautiful Arab-blood horses than on the plains of Mal-Amu at the camp of the Bakhtiyan chief Muhammed Taghi-Khan, for at the Court of the Shah of Persia the Turkoman horses are preferred to the Arab, and among the former the Tekeh breed is the most esteemed for its size, power, and faculties of endurance. In appearance the Bakhtiyan look rather fierce, owing, probably to the mode of life they lead, the features of their face are cast in a rough mould, but although coarse, they are in general regular. Their black eyes look wild and expressive. The complexion of their face, as well as the other parts of the body which happen to be exposed to the sun, is exceedingly dark, with some nearly of a mahogany colour. The two black tufts of hair behind their ears give them, if possible, a still darker appearance. The Bakhtiyan are muscularly built, and are chiefly of a middle stature. It will have been seen from the above that Luristan, or the land of the Lur, embraces the greater portion of the mountainous country of Persia, extending from the Turkish boundary on the west, to the limits of Isfahan and Fars on the east and south-east. These mountains are occupied by an uncouth and wild race of men, bearing different appellations, but apparently springing from one original stock,—the old Zend. The low country, lying to the south of this chain of mountains, with the towns of Shushtar, Dizful, and others, together with the land of the Cha'b-Arabs, is denominated Khuzistan or Arabistan. Shushtar is greatly fallen from its former importance. Ahvaz, the winter capital of the Arsacidae or Parthian kings, is a heap of ruins. The plough is levelling with the soil, the only remaining mounds which point to Jondi-shapur, while Susa, the rival of Babylon and Ecbatana, the vernal residence of the King of Kings, hides

its ancient ruins under thick grass and waving reeds as if ashamed that common mortals should see how low it has fallen from its pristine greatness. Even prior to the dawn of profane history, before the sun of Nineveh and Babylon had risen in the east, Elam, as Scripture tells us, was already a nation, whilst in later days, the same country, under the name of Elymais, attracted towards its rich temples the cupidity of the Greek and Parthian conquerors. Luristan is divided into two provinces. Luri-buzurg and Luri-kuchuk, or the greater and the lesser Luristan. The former is the mountainous country of the Bakhtiyan, stretching from the frontiers of Fars to the river Dizful, the latter is situated between the river and the plains of Assyria, being bounded to the north and south by Kermanshah and Susiana. The province of Luri-kuchuk is again divided into two districts, Pesh-koh and Pusht-i-koh, the country before and behind the mountains, Cis and Trans-Alpino Luristan referring, of course, to the great chain of Zagros, and Pusht-i-koh thus represents the Massabadan of the geographers, except that perhaps at present its northern frontier is somewhat curtailed. The Luristan mountains west of Link, between Shuster and Isfahan, and from Shuster to near Kermanshah, are occupied by the Bakhtiyan tribe who often wander to other parts. The Mehmasani have branches in Seistan, and the hills of Luristan. Luristan-kuchuk is bounded on the north by Burujird and Kermanshah, the river Dizful separates it on the east from the Bakhtiyan of Luristan Buzurg, but the boundary line on the south and west is much more uncertain, is the Lur tribes, in their winter migrations, disperse with flocks over the plains of Dizful, lying to the southward of their mountains, and meet with the wandering Arabs on the Turkish frontier on the west in the vast Assyrian plains. Luristan-pesh-koh, lies east, and Luristan-pusht-i-koh, west of the Great Zagros chain. Luristan-kuchuk is, thus, divided into Pesh-koh and Pusht-i-koh.

The four principal tribes who occupy the former are the

Silasile, {	Lek tribes {	Amrah, {	Lur tribes
Dilfun, {		Bala gheriveh, {	

The Silasile and Dilfun, who belong to the Lek race, amount to about 30,000 Khanah or families, of which the latter constitute the greater half, although the former are reckoned the more powerful of the two, probably also the more unmanageable. The Amarah were formerly very numerous, but have been much reduced since Agi Muhammed Khan, the founder of the present Kajar

dynasty, transplanted them into Fairs. After his death, it is true, the greater part returned, but their force was broken. A portion of the Amalah Iljat was found by De Bode encamped at the foot of Mount Istakli, in the plains of Peisepolis. They are styled worshippers of violence, who always submit tamely to any sort of authority, good or bad, whereas the other Lur tribes cannot easily brook oppression. Their number is held to be between 2,000 and 3,000 families, but it appears to be rather underrated. The Balagh-eiveli, although not strong in a numerical point of view, as they do not exceed 4,000 families, are reckoned a very troublesome tribe. The Pusht-i-koh tribes who bear the name of Ferli, are less numerous than those of Pesh-koh; Mr Rawlinson estimates them at 12,000 families. They consist of the Knid, Dinaived, Shahnou, Kalliu, Badiai, Maki. Independently of the tribes mentioned in Pesh and Pusht-i-koh, there live in the plains of Huin, between Buzard and Khoiremad, the Bajilan and the Baur-e-vened, who belong to the Lek family. The Lur, or Luristan, as they are sometimes called, like their Bakhtiyar neighbours, are greatly addicted to plunder.—*Baron C. A. De Bode's Travels in Luristan and Arabistan*, Vol II, pp 4-7, 61-4, 69-71, 76-88, 90-93, 270, 286, 289, 290, 293, *Ferri's Journ*, p 498, *Rawlinson*, Vol IX, part I, p 86 of *the Royal Geographical Journ*, *Strabo*, XI, pp 522, 524, and XVI, p 744, in *Euphrates and Tigris*, by Col Chesney, p 206.

LURKA KOL, see Kol

LUS, is not much higher above the sea, than Sind. Its population may amount to twenty-five thousand souls, of which nearly one-third are wandering families, who change their places of residence as convenience or inclination prompts: they are all of one tribe, though known by the four different appellations of Numu, Judgal, Jokhya, and Jethi, which latter is the most commonly used term, and literally applies to a husbandman: the habits of these people are indolent in the extreme, and they are fond of smoking bhang (cannabis sativa) and other intoxicating drugs, and loitering away their time in idle amusements.—*Pottinger's Travels in Beloochistan and Sindh*, pp 29-30. See Kelat, Las.

LUSBAH, see Khuzistan, or Arabistan

LUSCINIA, a genus of birds, the species of which, *L. philomela*, and others are known as nightingales. In southern Asia, the birds familiarly known as 'Bulbuls' must not be confounded with the Persian Bulbul, which is a species of true nightingale (*Luscinia*), a genus very closely related to some of the small thrushes of America. There are no

true nightingales wild in India, but the 'Shama,' *Cereotrichas macrourus*, undoubtedly the finest song-bird of this part of the world, is not unfrequently designated the Indian Nightingale, a misnomer which only leads to confusion. It is common to India and the Malay countries, there is a second species (*C. luzoniensis*) in the Philippines, and a third (*C. erythropterus*) in Africa. The *Otocetes cinclenchyna* is also termed Shama in the Madras Presidency. The esteemed Indian songster is le Mele tricolor de longue queue of Levaillant, *Oiseau d'Afrique*, pl 114.—*M. Blyth*. See Birds.

LUSHANNO, HIND *Oxalis sensitiva*

LUSHINGTON, General Sir James Law, G C B, died on the 29th of May 1858. Was the son of the Rev James Stephen Lushington, vicar of Newcastle-upon-Tyne, and prebendary of Carlisle Cathedral. He was brother to the Right Honourable Stephen Rumbold Lushington, who was for many years chairman of "ways and means" in the House of Commons, and subsequently Governor of Madras. He was born at Bottesham, Cambridgeshire, in 1779. He was in the military service of the East India Company as colonel of the 3rd Madras Light Cavalry, and was made a general in the army in 1854. He was elected a director of the East India Company in 1827, and was deputy chairman in 1836-7, and chairman in 1838-9. He represented Petersfield, Hastings, and Carlisle at various times in the Commons House of Parliament.

LUSTRAL CEREMONIES are deemed very important by Brahmins, and are attended to, as prescribed in their books, with a degree of minute particularity that cannot but appear ridiculous to those not interested or informed on the points to which such lustrations are supposed to have reference, indeed there is no end to lustral ceremonies, to which the Romans also gave the greatest attention. Images are frequently bathed with water, oil, &c. Lingas are constantly washed. It may be matter of opinion, whether the goddess Nandina of the Romans, who presided over the lustral purification of infants on the ninth day of their age, has any probable connection

with Nandi, a hindoo attendant on the Linga and Yoni—objects peculiarly connected with lustral ceremonies,—or with Nandina, a cow Nandina, was, from her office, a form of Diana, who appears identified with Devi, whose relation-ship to Nandi is known in some ceremonies dedicated to her, the ninth day is particularly marked. In a great many hindoo ceremonies, lustrations make a part. Spoons and the aigha are therefore in extensive use. The aigha in a circular form, is called Patia, and is an attribute to Devi. It is sometimes called pana patia, and is seen in many drawings borne by her and others of her family, apparently both as a drinking and ceremonial utensil. The lustral spoons are called Siuva and Diuvā, in Sanscrit by the Mahattas and other hindoos, Pulaphi and Achwan, and have different forms according to the rites or objects of adoration. One of the spoons represents Naga, the holy serpent, overspreading Ganesha, on the other, the Naga overspreads the image of a deity, and on another, the spread hood of the snake appears to cover Hanooman. The aigha, is a vessel shaped like a boat, used by the hindoos in lustrations, it is of spout-like form, so that liquids may be poured from it. Lustral ceremonies are deemed very important by brahmins, and are attended to as prescribed in their books, with the most minute particularity. The hindoo Sth'nanam, after child-birth, is performed on the 16th day. In this purificatory rite the mahomedans adhere to the Hebrew forty days. Amongst the hindoos, the Sth'nanam is the religious rite of purification, and ordinarily performed once daily, in the early morning. Their evening ablution not involving the head, but from the neck. The Abhirangana Sth'nanam, is that, generally twice a week, in which the head is anointed with oil, and corresponds to the anointing of the Jewish ceremonial, and to the Indian mahomedan's Sai-Nahana, or head-washing, of which perhaps the initiatory, head-washing rite of certain craftsmen in Britain is a remnant. As, possibly may, similarly, be the feet-washing of the British marriage ceremony. In Britain, the bride's feet are washed, and in the south of India, the engaged son-in-law performs the ceremony palil-kal-kazhu-viṇadu (TAM) of washing his intended father-in-law's feet. The lustration of the Jews, is described in Mark vii, 2-4, where he mentions that when the Pharisees saw some of the "disciples eat bread with defiled, that is to say, with unwashed hands, they found fault, for the Pharisees and all the Jews except they wash their hands oft, eat not, holding the tradition of the elders. And when they come from the

market, except they wash, they eat not, and many other things there be, which they have received to hold, as the washing of pots and pans, brazen vessels and of tables." And, up to the present hour, the hindoo ritual is almost identical. Along the banks of the Ganges, at every large place, crowds of men and women are to be seen at certain hours of the day, bathing close together in a state of nudity. In Japan, there are bathing houses, in which, at Hakodadi, both men and women of the lower ranks assemble. Mr Hodgson tells us that on one occasion at Yedo, the bathers of both sexes indiscriminately sallied out to see them pass, from some twenty of their common cells, in all the natural simplicity of our first parents' costume before their expulsion. On another occasion when Mr Alcock went, preceded by a band of music, to the Governor's Yumun, all the bathers of both sexes came out, unabashed and without the slightest idea or reflection that they were naked, to gratify their curiosity by a good long gaze on the novel spectacle. But, latterly, if a European attempt to draw the curtain before the bath-house, he is received with storms of abuse, and told very plainly to go about his business.—*Moore, p 394, Wanderings of a Pilgrim, p 265*

LYCOPERDON, one of the Fungi. *Polyporus oblectans*, *Geaster limbatu*, *Geaster mammosus*, *Erysiphe taurica*, a *Boletus* infested with *Sepedonium mycophilum*, *Scleroderma verrucosum*, an *Æcidium*, and a *Uromyces*, both on *Mulgedium tataricum*,

about half-a-dozen agaves, one at an altitude of 16,000 feet above the Nubra river, a *Lycoperdon* and *Morchella semilibera*, which is eaten in Kashmir, and exported when dry to the plains of India, make up the list of fungi in the Punjab

LYCOPERSICUM, the Tomato, or Love apple, the produce of South America, a genus of the same family as potatoes, a delicious vegetable, cultivated in many gardens. There are two sorts, single and double, may be sown immediately the rains commence, in beds, afterwards transplanted in rows, two feet apart, and trailed upon sticks of a strong description. If the soil is good they will grow to seven or eight feet in height. The double, which are the finest, if sown in June ripen in October. The lower branches, should be pruned, and a succession of crops may be kept up until April. The small single tomato, with a slight protection from the dry winds, will continue until the rains—*Riddell* See Love apple

LYCOPERSICUM ESCULENTUM, *Mill*

The tomato is used as a vegetable

LYCOPODIACEÆ, *DC* The Club moss tribe of plants comprising 2 Gen, 7 sp, viz, 6 *Lycopodium*, 1 *Isotes*

LYCOPODIUM, an inflammable powder used in fire-works, obtained from a common moss-like plant—*Hatterston*

LYCOPODIUM, or Club moss. A genus of plants belonging to the natural order Lycopodiaceæ. It has 1-seeded 2-valved capsules, or 3-valved containing powder. The green woods of Tenasserim southern provinces are often carpeted with the club moss, or ground pine. Mr Fortune, when travelling on the hills of Hong-Kong, a few days after his first arrival in China, met with a most curious dwarf Lycopodium, which he dug up and carried down to Messrs Dent's garden, "Hm-y th," said the old compradore when he saw it, and was quite in raptures of delight. All the other coolies and servants gathered round the basket to admire this curious little plant. I had not, says Fortune, seen them evince so much gratification since I showed them the "old man Cactus," *Cereus semilis* which I took out from England, and presented to a Chinese nurseryman at Canton. On asking them why they prized the *Lycopodium* so much, they replied, in Canton English, "Oh he too much a handsome, he grow only a leete and a

leete every yen and suppose he be one hundred yen ould he only so high,' holding up then hands an inch or two higher than the plant. This little plant is really very pretty, and often naturally takes the very form of a dwarf tree in miniature which is doubtless the reason of its being such a favourite with the Chinese"—*Mason, Fortune's Wanderings, page 95*. *L. aristatum*, *cernuum*, *Hookeri*, *imbricatum*, *phlegmarium* and *Wildenowii* occur in India. See *Ferns, China sinensis*.

LYCOPODIUM CLAVATUM, of the British moor, grows at Chakoong in the Lachen Lachooing valley, Sikkim, and amongst mosses, the superb Himalayan *Lyelha eripa*, with the English *Lumina hygrometrica*—*Hooker, Him Jour, Vol. II, p. 19*.

LYCOPODIUM WILLDENOVII, see *Edgeworthia chrysantha*.

LYDIAN, and other languages of lesser Asia, and perhaps also the Thracian and Macedonian tongues were altered to the Hellenic or Pelagic Greek. See *India, Ind*.

LYDD, the Diospolis of the Greeks.

LYE BRAHUI, the turkish.

LYELLIA CRISPA, grows at Chakoong in Sikkim, in the Lachen Lachooing valley, it is one of the most remarkable mosses in the Himalaya mountains, and derives additional interest from having been named after the late Charles Lyell, Esquire, of Kinnordy, the father of the eminent geologist—*Hooker, Him Jour, II, p. 19*.

LYGODIUM SCANDENS, one of the most elegant climbers on the Tera-serim coast is a terrestrial species of fern, easily recognized by its habit of running over other plants, and by the fringed margin of its leaflets, from which it is sometimes called "fringed fern." An allied species is found in the United States—*Mason, Travoy*.

LYLAT-UL-QADAR, *Arabic*. The Night of Power, occurs on the 27th night of the month Ramzan. Mahomedans sit up all night, burning frankincense-pastiles, repeating a particular prayer called "Nafil," reciting in praise of the Almighty, reading the Koran, and proclaiming the Azan. It is a period of great solemnity—*Herkl*.

LYLA, a wolframium fluoride.

LYL-O-NUHAR, see *Tasbeeh*.

LYLAT-UL-MOOBARAK, the blessed night.

LYMNÆA HOOKERI, *Reeve*. The waters of the Lachen in Tibet contain many shells of this species of *Lymnæa*. This is the most alpine living shell in the world, many specimens being from nearly 17,000 feet elevation—*Proceedings of the Zoological Society, No. 204, Hooker, Him Jour, Vol. II, p. 156*.

LYMO, *Chinese*. Printing, in China, is by a system of stereotype, the types being made from the pen tree wood, called by them *ly-mo*. Then paper is made from refuse paper, rags of silk and cotton, rice-straw, the liber of a species of morus, but principally of bamboo.

LYN-WAAT, *Dutch*. Linen.

LYNX. The Caracal, or Indian lynx, called the *Sinh-gosh* or black-ear, his immense speed, runs into a hare as a dog into a rat. It often catches crows as they rise from the ground, by springing five or six feet into the air after them. It is in eastern custom of great antiquity of naming certain feline animals, as the Chita and the Caracal or *Sinh-gosh*, the Lion, too, as it would appear, was named in ancient times, and in Britain the Otter is still abundantly employed in fishing for its master, as *Comorants* are in China. On the plains of Chinese Tartary or *Tchimgaria*, Mr. Atkinson passed what he designates "large flocks of wild Turkeys," by this term, of course, *Bustards* he meant, and doubtless the European *Otiscunda*. Elsewhere, whilst among the Kalmuk of the border of the Oulam-koum desert, he remarks—Noticing it no great distance several flocks of large birds feeding on the plain, a Cossack and myself started in pursuit, accompanied by two Kalmuk leading horses. The Kalmuk gradually approached the birds by going round in a circle, and we were all well sheltered by the horses. At length the men stopped, the Cossack and myself lay flat on the ground, and having obtained a good sight, two of the flock were presently stretched dead on the plain. As the others did not fly far, our pieces were re-loaded, and we again approached the birds with equal success, but this time the flock went far away. We now gathered up our game and ascertained them to be four fine *Bustards*. Next morning the party were still more successful, for two Deer and eight *Bustards* were added to the haul. In the same vicinity "Pheasants" were obtained, probably the true *Phasianus colchicus*, or perhaps the kindred race of the *Hindoo Kush*. See *Felis*.

LYNX-STONE, *Eng*. Amber.

LYN-ZAAD, *Dutch*. Linseed.

LYPODIUM SCANDENS, see *Ferns*.

LYRIOCEPHALUS SCUTATA, see *Agam*.

LYSIAS, see *Greeks of Asia*.

LYTHRACEÆ, *Lindley*. The Loosestrife tribe, comprising 11 genera, 21 sp., viz.,

1 <i>Rotala</i>	2 <i>Lythrum</i>	1 <i>Grisler</i>
2 <i>Amelchia</i>	1 <i>Cuphea</i>	5 <i>Jagerstrœmia</i>
3 <i>Ammannia</i>	1 <i>Gloria</i>	1 <i>Dunabanga</i>
3 <i>Nesaea</i>	1 <i>Lawsonia</i>	

LYTHRUM FRUTICOSUM, *Linn Syn* of *Gislea tomentosa*, *Rorb.*

LYTHRUM HUNTLERI Hunter's Loose-strife, is a native of the East Indies. The leaves are opposite, the calyx tubular and 6-lobed, the stamens 12, and the style subulate. The petals, six in number, are of a very beautiful red-colour, and are used for dyeing in India. The hardy perennial species of *Lythrum* are handsome garden-flowers,

they grow in any common soil, and are easily propagated by dividing at the root. The seeds of the annual kinds require to be sown in most situations in the spring—*Don* *Dichamydeous Plants*, *Babington*, *Manual of British Botany*.

LYTTA GIGAS, see Cantharides.

LYTTA VESICATORIA, see Cantharides.

M This letter of the English alphabet has representative letters in Arabic, Persian, Urdu, Sanscrit, Hindi, Mahatti, Gujarati, Bengali, Uriya, Telugu, Tamil, Kannata and Malyalim. Some nations, however, are unable to sound the letter M, and in its place they use a B. On a mummy from Memphis and on the sarcophagus of Amymtæus we find the name of the god Ammun Ra written Oben-Ra and this is the spelling used on a plate of ivory found among the ruins of Nineveh, to which distant city the Egyptian style of Art had made its way two centuries earlier—*Shurpe's History of Egypt*, Vol I p 200

MA HIND Mother, a respectful address to a woman

MA-ABAR, mentioned in Briggs' *Fenisha*, Vol I p 373, means the place of crossing over, a place of passage or ferry, and has very generally been supposed to be Malabar, as well from the resemblance of the names as from the position of the latter country in reference to Arabia but there is no doubt that the appellation really applies to the tract on the Eastern coast of the peninsula extending north from Rameshwari

It is possible that this Arabic name was originally a corruption of Marawa, the name of the hindu state which adjoined Adam's Bridge, and the chief of which state was called Setu Pati, "the lord of the bridge" Ritter puts Malabar on the west coast, and Lassen (iv 838) says that the name with Ibn Batuta signifies the southernmost part of the Malabar coast, but both learned authors are certainly wrong. Kunstmann, again, says "it has been recently pointed out that the name applies neither specially to the south-west coast nor to the south-east, but to the whole southern apex of the peninsula." It is, however, clearly used for the south-east coast, as Abulfeda precisely says, it commences from Cape Comorin—*Elphinstone's History of India*, Vol II p 47 *Gilde-meister*, pp 56 and 185 quoted in *Yule's Cathay*, Vol I p 80, 81. See Maissen's Marco Polo, p 626 note

MAAJUN, any intoxicating confection made of hemp, butter, charas, or dhatura seed, mixed up with sugar and sweetmeats. Maajun is used by the natives, generally of the higher classes, for the three purposes of Kaif (intoxication), Kuwwat (aphrodisiac tonic) and Imsak. *Burton's Sindh*, p 170. See Majoon

The common Macac, "	

MACAO

This monkey occurs in the Nicobar islands, Tenasserim and all over the Eastern Archipelago. It is intelligent, good natured, docile and easily trained to the performance of amusing tricks. In advancing age it becomes sullen, morose and mischievous. There are many varieties of it, and Dr S Muller regards *Macacus* of Belanger, and *Macacus* of F Cuvier as varieties of this Macac.

<i>Macacus nemestrinus</i>	LINN
<i>Simia nemestrina</i> , LINN	<i>Inuus nemestrinus</i> , ERNL

Bonneted monkey, ENG	

When young, this monkey is wild and inoffensive, and soon acquires a knowledge of various feats of agility and tricks. It is the most inquisitive and mischievous of its tribe and its powers of mimicry are not surpassed by any other. With age it becomes more sullen and less amenable to discipline.

Macacus Rhesus AUDER

<i>Cynocephalus rhesus</i> , LATR	Rhesus, AUDER
Papio rhesus, OGILBY	Mannon, BUFFON
Bandar, HIND	

A native of Bengal, Nepal, Assam. It is docile and affectionate — *Jerdon's Mammals of India*, p 12 *Horsfield and Moore's Mammalia Catalogue*.

MACKOE, HIND *Solanum nigium* qu Makai?

MACAO city, called Gaou or Ou-Moon by the Chinese, is in lat $22^{\circ} 11\frac{1}{4}'$ N and long $113^{\circ} 33'$ E, 18 miles east of Canton. It is regularly built on a high peninsula, which terminates the island of Macao to the southward. There are several forts

MACARANGA TOMENTOSA

on the hills round the city. It is a salubrious locality and under the Government of the Portuguese. Macao stands upon a promontory belonging to the island of Sheang-shin, a narrow isthmus separating them. At one period the Chinese had a fort, most carefully guarded, at this spot, to prevent foreigners from visiting the interior. The town is built upon two hills, which meet at right angles. In the sixteenth century, Macao was given up to the Portuguese by the emperor of China, as a reward for services performed by them, when they joined their forces with those of the Chinese, against some daring pirates, who then, infested the neighbouring islands. It seems that they had temporary shelter on shore. The most interesting object now to be seen at Macao, is the cave of Camoens, the author of the *Lusiad*, Camoens wrote this exquisite poem at Macao, where it is asserted by contemporaneous authors he had been banished for some political offence. The cave, in which folks say the poet wrote the *Lusiad*, is situated at the summit of a rock, over which is erected a very elegantly tasteful temple, in which is placed a fine bust of Camoens, on the walls are inscribed some of his choicest lines in the original, to which is also added, a Chinese translation. Some of these lines are descriptive of the boundless sea lying beneath and the visitor is at a loss whether most to admire the truthfulness of the description, or the sublimity of the prospect — *Horsburgh Davies' Chinese Sir's China and the Chinese*, Vol I, p 127.

MACAQUE Fr the Macac monkey. See *Macacus Simiæ*.

MACARANGA INDICA — R W

Vutta thamai, TIM | Putta thamai, MALEAL

This tree grows on the Neilgherries and is common in Travancore. It produces a light crimson coloured gum which is used in medicine, and for taking casts — *Drury's Useful Plants*.

MACARANGA ROXBURGHII — Wall

Osyris peltata, Roxb W Ic | Boddichettu, TEL

This is marked by Voigt as a shrub of the Cincars. The Telugu name indicates it as a tree. All the young parts of this plant are covered more or less with soft resinous adhesive matter, smelling strongly of turpentine — *Voigt*.

MACARANGA TOMENTOSA — W Ic

Kanda gas, SINGH

This tree is very abundant in Ceylon, up to an elevation of 3,000 feet. It grows, also in Travancore and exudes a gum of charac-

MACARONI

Bugha, PERS | Siwin, HIND, Sun, HIND | Siman, "

The macaroni in use by the people of Persia and India, is prepared by themselves. That used by most European households in India is imported—though cooks also make it for ordinary use

MACASSAR The Macassar race differ from the Bugi or Wugi, in having larger and more open features, as well as in the peculiar ruddiness that is mixed with the brown tincture of his skin. The hair is suffered to fall down and float loosely upon the shoulders, and has a red tinge, oftentimes, by way of correspondence with the rest of the person. The truth of this circumstance has been questioned, because red hair and a dark complexion were thought incompatible with each other. Such an opinion is, however, not affected by this instance, for here the hair is not yellow nor orange, but its ends have a deep red hue, while the rest is black. The little boys and girls of the Macassar race seen running about in troops, are often very handsome, while the lineaments of the latter are sometimes not only faultless in design, but they have withal a shade of thoughtfulness and melancholy, which is rightly esteemed to be the last touch and finishing stroke of personal beauty. These promises of future loveliness vanish before maturity, perhaps for the want of education, which, while it bestows unfading charms upon the mind, tends to model and perpetuate all the perfections of the body. In some of their productions of skill, as in the manufacture of gloves and baskets, the workmanship for delicacy and fineness cannot be surpassed. Their writing character is the same as the Bugi, with a deficiency of three or four letters. Many can read and all would learn, if they had books. They value themselves as being of a more ancient and noble stock than the Bugi, but they esteem it creditable to understand that language, so that a translation of the Scriptures in this admired and far-famed dialect, would serve for almost the whole of the humanized portion of Celebes. It is said that Dr Leyden translated a Gospel into the Bugi. The more curious plants of Macassar, are the *Muabilis jalapa*, and the *Damasonium indicum*. The gomuto is very common — *Journal of the Ind Arch*, October 1852, p 575, Vol VI, No 10 *Voyage of the Hummaler in 1857*, By the late G Tradescant Lay, Esq Singapore Free Press 1837

MACE

MACASSAR STRAIT is about 354 miles in length, from the south end of Great Pulo Laut, to Point Kammungan, and generally from 135 to 105 miles wide — *Hoersburgh*

MACASSAR OIL, this is supposed to be the oil of the *Carthamus tinctorius* seed, the safflower. See Oil

MACASSAR POISON *Hernandia sonora*

MACAW TREE, is the *Acrocomia scolopampa*, Mart. The value of the Macaw tree of the West Indies is chiefly owing to its fruit, which yields an oil. In the process of extraction the fruit is slightly roasted and ground to a paste, first in a mill and then on a levigating stone. This paste, having been heated, and mixed with 3-10ths of its weight of boiling water, is put in a bag, and pressed between two heated plates of iron, it yields about 7-10ths or 8-10ths of oil. The oil, if discoloured, can be purified, when melted, by filtration. It is then of the consistence of butter, of a golden yellow hue, has an odour like violets and a sweetish taste. If well preserved it will keep several years, if spoiled, it loses its golden hue and delightful aroma. It is frequently sold in the shops as 'palm oil' and enters largely into the composition of toilet soaps. It might be usefully introduced into the East Indies — *Seeman*

Mace is the aril or arillus of the nutmeg and forms around the shell of the nutmeg. It has a pleasant aromatic smell, and a warm bitterish pungent taste, it is a favourite medicine of the hindu physicians, who prescribe it in the slow stages of fever, &c. It is imported into India from Singapore, Batavia, and the Banda Islands. Mace is fleshy, branching, and when recent of a bright scarlet colour, but in the process of drying it changes to yellow, orange yellow, or what is considered best, golden yellow, and becomes transparent and horny. It is prepared by drying in the sun for some days. The aril is sometimes flattened out, and dried in a single layer, but frequently it is pressed together, in which case it forms two layers. The Dutch sprinkle mace with salt water prior to packing it in sacks. As

MACHA-RANG.

there are two kinds of nutmegs, so are there two kinds of mace, the produce of the same plants, thus, there is true or cultivated mace, and false or wild mace, but London dealers distinguish three sorts of true mace

Penang Mace is flaky and spread and fetches the highest price The annual quantity produced in Penang is about 130 piculs (of 133½ lbs each)

Dutch or Batavian Mace, is a fleshy sort, scarcely fetches so high a price as the Penang mace

Singapore Mace, is a somewhat inferior kind

Wild or false mace—The mace of the male or false nutmeg is distinguished from the true mace by being formed of three or four regular bands united at the summit The chemical properties of this article are analogous to that of the true mace, but the oil is so inferior in proportion, that the male mace is but of little commercial value Owing to its comparative cheapness, false mace is used in India only among the poorer natives It is procurable in most bazaars under the name of "Ramputi," is of a dark red colour, and deficient in flavour and aroma Under the microscope, mace presents a structure very distinct from that of the nutmeg itself Much difference is observed in the quality of samples The duty on genuine mace is 2s 6d the pound The imports into Great Britain between 1847 and 1851 ranged from 16 to 34 tons, of which only 8 or 9 tons were retained for home consumption—*Faulkner M E J R Food and its Adulteration*, p 412 *McCulloch's Commercial Dictionary*, p 770, *Mason's Penassem* *Pouell's Hand Book*, Vol p 302 *Poole's Statistics of Commerce*, p 221

MACHIN, or Maha-china, "Great China," the name by which Hindus anciently styled the Great Empire of China, and still vernacularly used by them But it is often used pleonastically coupled with Chin to denote the same thing, "Chin and Machin," a phrase having some analogy to the term Sind and Hind, used to express all India, also similarly to Gog and Magog, applied to the northern nations of Asia The use of a double assonant name, sometimes to express a dual idea but often a single one, is a favourite oriental practice As far back as Herodotus we have Crophi and Mophi, Thym and Bithym, the Arabs have converted Cain and Abel into Kabil and Habil, Saul and Gohah into Talut and Jalut, Pharaoh's magicians into Risam and Rejam, of whom the Jewish traditions had made Jaanes

MACKINTOSH

and Jambies, whilst Christian legends gave the names of Dismas and Jesmas to the penitent and impenitent thieves in the Gospel. Juga and Nalgah was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing, e.g. Zabulistan and Kabulistan, Koli Akoli, Longa Solaŋga, Ibn Sibi, Kessin and Owan, Kunia Muria, Ghuz and Mighuz, Mastia and Cistia (Edisi), Aitag and Kartag (Abulghazi), Khanza and Muiza (Rashid), Iian and Tuian, Cit and Mecit (Rubin-quis), Sandor and Caudor (Marco Polo), etc.

The name of Achin in Sumatra appears to have been twisted in this spirit by the mahomedan mariners as a rhyme to Machin, the real name is Ateheh. In India, such rhyming doublets are not confined to proper names to a certain extent they may be made colloquially, at will, upon a variety of substantives. Thus chauki-anki means "chairs" simply (chanki), or, at most, "chairs and tables," lakhi-aki, "sticks and stakes"—*Quatremere's Rashid*, pp 213—246, *D'Averac*, p 534, *Piarres d'Or*, I p 399, in *Yule Cathay*, p cxix and cxx.

MACROPIPER METHYSTICUM, its root, or rhizome, is used, in the south Seas, in the preparation of the ava' drink It is chewed spat in a bowl, and allowed to ferment and drunk In the Samoan islands, the large ava-bowl is made from the tamanu, *Citrophylum inophyllum*, and occupies a conspicuous place — *Capt Elphinstone L-shane Islands of the Western Pacific*, p 46

MACTRA a species of *Mactra*, or sand clam, is fished up near Macao

MACROPODUS PUGNAX *Cantor*, Plakat of Siam, occurs numerously at the foot of hills at Penang Like the rest of the family it is capable of living for sometime out of water The Siamese inhabitants with whom a variety of this species is a great favourite, keep the fishes in jars with water, where the larvæ of musquitos is their food, and denominate them 'Pla kat,' Pla, fish, kat, a fighter The real fighting fish, however, the exhibition of whose combats is a popular amusement with the Siamese, appears to be a variety of the present species, produced by artificial means, like the varieties of the golden carp of China, and Dr Cantor names it *Macropodus pugnax*, *Fur*. When the fish is in a state of quiet, with the fins at rest, its dull colours present nothing remarkable But if two are brought within the sight of each other, or if one sees its own image in a looking glass, the little creature becomes suddenly excited, the raised fins and the whole body shine with metallic colours of dazzling beauty, while the projected gill membrane, waving like a black veil round the throat, adds something grotesque to the general appearance In this state it makes repeated darts at its real or reflected antagonist But when taken out of each other's sight, both instantly become quiet A gentleman at Singapore was presented with several by the king of Siam They were kept singly in glasses with water, fed with larvæ of musquitos, and lived for many months The Siamese are as infatuated with the combats of these fishes as the Malays are with their cock fights, and stake on them considerable sums and sometimes their own persons and their families The license of exhibiting fish fights is farmed, and affords a considerable annual revenue to the king of Siam — *Cantor* See Fishes

MADALA, MALEAL Madalam Pallam, TAM *Punica granatum*

MADAN a race of Arabs, well known along the banks of the river. They are fixed, not migrating like other Arabs, they exist upon the produce of their immense herds of buffaloes which, with a few sheep and cows, form all their property. They live in huts formed of split reeds, along with the animals that form their support, and which they scarcely exceed in intellectual endowments. It is from the notorious un-

coarseness and brutality of their habits that the other tribes of Arabs give the name of Madan, that is, ignorant, from two Arabic words, signifying not wise—*J B Fraser*, p 79

MADAN a village with turquois or fiozah mines, in the declivity of a mountain, two miles from the village. The fiozah striatum was not plentiful in this mine, it appeared in some places in very narrow seams. There are many different minerals intermixed with the fiozah and most part of the rock contained none ore, which sparkled when broken. The fiozah is cut by means of a small wheel, which is turned by one hand while the stone is applied by the other, till sufficiently polished. It is then fixed to the end of a small piece of stick, with sealing-wax and exposed for sale—*Mohan Lal's Travels* p 174-175

MADANA, a name of Kama, the hindu god of love. In the hindu religion, festivals are held on the 13th and 14th of the month Cheyt, in honour of Kama, the god of love. Madana, he who intoxicates, with desire, Kama, are both epithets of the god of love. The festivals on the 13th and 14th are called Madana tiodasi (thirteenth) and chatridasi (fourteenth). On these days, the rajpoots of Oodiyapur sing hymns handed down by the bards, "Hail! god of the flowery bow, hail! warrior with a fish on thy banner, hail! powerful divinity, who causeth the firmness of the sage to forsake him. Glory to Madana, to Kama, the god of gods, to him by whom Brahma, Vishnu, Siva, and India, are filled with emotions of rapture." There is no city in the East where the adorations of the sex to Kama deva, are more fervent than in Oodiyapur, the city of the rising sun—*Tod's Rajasthan*, Vol I p 577

Madder is the product of the long slender roots of the *Rubia tinctorum*, a plant of which there are several varieties. The principal supplies of it are obtained from Holland, Belgium, France, Turkey, Spain, and the Balearic Isles, the Italian States, India and Ceylon. The best soil for it is dry, fertile and deep sandy loams, the roots are long and fibrous. It is propagated by dividing and transplanting the roots, but it grows from seed, and between the years 1847 and 1851, the imports ranged from 8000 to 13,000 tons, valued from £25 to £55

MADDI CHETTU

the ton, and it requires three years to come to maturity. It is, however, often pulled in eighteen months without injury to the quality, the quantity only is smaller. When the soil is impregnated with alkaline matter, the root acquires a red color; in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this color, but in France the red sells at two francs per cwt higher, being used for the Turkey-red dye. Madder does not deteriorate by keeping, provided it be kept dry. It contains three volatile coloring matters, madder purple, orange, and red. The latter is in the form of crystals, having a fine orange red color, and called Alizarine. This is the substance which yields the Turkey red dye. A field may be planted with madder, and fed off by cattle for three or four years, without any detriment to the roots which are afterwards as good for dyers' uses as those cultivated in the ordinary way. The flesh, milk and bones of animals fed upon madder, become tinged. The dyers of India use the chay root (*Hedyotis umbellata*) and the Aal root (*Morinda citrifolia*) and the Munjeeth *Rubia cordifolia* as substitutes. *R. cordifolia*, the munjit of India is a variety of *R. tinctorum*. It has white flowers, is a native of Siberia, but is cultivated largely about Assam, Nepal, Bombay, Sind, Quetta, China, &c. A small quantity is exported from China and India, about 338 Indian maunds were shipped from Calcutta in 1840, and 2,328 in 1841. It fetches in the London and Liverpool markets from 20s to 25s and 30s per cwt, duty free, 405 tons were imported into Liverpool from Bombay and Calcutta in 1846, and 525 tons in 1850, but none was imported in 1851 and 1852. It was remarked in 1851 by the Jury at the great Exhibition, that this is a valuable dye-stuff, and hitherto not so well appreciated as it deserves, for some of the colours dyed with it are quite as permanent as those dyed with madder, and even more brilliant. Its use however is gradually increasing, and it is unquestionably well worthy the attention of dyers.—*Simmonds McCulloch's Commercial Dictionary* p 771 *Home News Poole's Statistics of Commerce* See Dyes.

MADEBA, the Medaba of the Scriptures where Joab gained a great victory over the Ammonites and Syrians (1 Chron xix 7-14) *Robinson's Travels Vol II* p 190

MADDI CHETTU or Muluga chettu TEL (*Morinda tinctoria*?) The roots are sold in the bazaar as a red dye, and were sent to the Madras Exhibition of 1855, so named, from Rajahmundry, Masulipatam,

MADHURNAKAM or (V Bappayi), TEL. *Carica papaya*, L

MADEGA TEL Kar a pedial slave race in the Peninsula of India, the Chakili or Chaklai of the Tamil people and the Mhang of the Mahatta nation. They are leather manufacturers, shoe-makers, executioners. They are very humble people, regarded as out castes, dwell in the outskirts of villages and in many places are almost slaves. They are, in general, black with slender lower limbs. They are largely addicted to robbery. They eat the creatures which die of disease. They have certain territorial rights in the soil and are beggar coolies. Their right to dead carcasses is often disputed by the Dher or Pariah and continued litigation results. In the years 1866 to 1868, the Dher or Pariah and the Madega or Mang of the village of Dongopia, 25 miles west of Bede were litigating on this point and none of the men would come as beggar till it was settled. Col Tod tells us that the bhangi or scavengers of Ramkhana mortgaged their rights in the dead carcasses of their town to a professional brother of Jaisiawun—*Tod's Rajahstan*, Vol I, p 624

MADEIRA WINE So called from the island bearing that name, where it is made. Madena, once on every table, has now ceased to be used in India. The character of this wine, famous for centuries, was first damaged during the wars with France at the close of the 18th and opening of the 19th centuries when the high prices tempted many merchants of Funchal to throw inferior wines into the market, and this long continued. It has been said that the island never produced more than 70 pipes of first kind of wine but in 1825, 14,432 pipes left the island. In the Autumn, of 1852, the vine fungus, the *Oidium Tuckeri*, appeared. It settles on the leaves in the form of fine white powder drying up the leaves, preventing them inhaling carbon and exhaling oxygen, the leaves are thin and the plant falls and dies. In 1861, only 2035 pipes were exported and in 1865 probably not

MADHU SANS Honey, anything sweet, anything intoxicating. Madhu is one of the poetical names of Krishna, viz, the intoxicator, (from Madhua strong drink, and Madhu, the bee, perhaps originating our mead) Amongst the Hindus, a new born infant has a little honey put into its mouth as a ceremonial rite called Madhu prasana. Several of the drinking races of India and Asia still use the cup or piala to welcome the coming guest. Colonel Tod tells us regarding the love of strong drink and indulgence in it to excess, so deep rooted in the Scandinavian Asi, and German tribes, and in which they showed their Celtic origin, that the Rajpoot is not behind his brethren either of Scythia or Europe. Though prohibited by ordinances which govern the ordinary Hindu, the Rajpoot welcomes his guest with the munnai peala, or 'cup of request,' in which they drown ancient enmities — The heroes of Odin never relished a cup of mead more than the Rajpoot his madhva, and the bards of Scandinavia and Rajwana are alike eloquent in the praise of the bowl, on which the Bardai exhausts every metaphor and calls it ambrosial, immortal, "The bard, as he sipped the ambrosia in which sparkled the ruby seed of the pomegranate, rehearsed the glory of the Rajput race." Even in the heaven of Indra, the Hindu warrior's paradise, akin to Valhalla, the Rajpoot, has his cup which is served by the Apsara, the twin sister of the celestial Hebe of Scania. "I shall quaff full goblets amongst the gods," says the dying Celtic warrior, "I die langlung," are sentiments which would be appreciated by a Rajpoot. Cups in use with the Tibetans are made of maple knots produced on the maple by the Bralanaphora — *Tod's Rajasthan*, Vol I, p 377 *Wilson's Glossary*

MADOOWA, a temporary building. Amongst the superstitious ceremonies of the races in Ceylon are a variety of forms for the recovery of the sick, 1 daana, 2 or "the food offering," the harvest-home of the Singhalese and horn-pulling, a rite in honour of Pattue, performed to drive away pestilence. But the principal ceremony is the Dewal madoowa, which is celebrated on a larger scale, and frequently performed on behalf of a whole village or district which has been afflicted by cholera or the fever so much dreaded by the natives. It takes place in a "madoowa," or temporary building constructed of branches, and decorated with white cloths and garlands, and it generally lasts throughout seven days, on each of which offerings are made of wild flowers and fruit, together with rice and money — *Tennent's Christianity in Ceylon* p 234-35

MADORIUS, RUPEH *Calotropis gigantea*

MADRA, also cheiru narianji, Citrus aurantium *Linn*

MADRA, the ancient name for Bhootan. MADRAS, a town on the Coromandel Coast, lat $13^{\circ} 1' N$, lon $80^{\circ} 14' E$, and the principal town of the Presidency which bears its name. It is a large town on the sea board with a fortress called Fort St George, the population is estimated at 450,000 and is composed of British and their descendants, mahomedans and hindus of various races, and nations. It is high water at full and change 7h 34m and the rise of the tide at the springs is $3\frac{1}{2}$ feet nearly. In January 1844, a light house was erected with a flashing light. The flag staff in the Fort is in about lat $13^{\circ} 4' 10'' N$, and the Observatory in long $80^{\circ} 17' 21'' E$. The N E monsoon prevails with heavy weather from the middle of October till the beginning of December and violent gales sometimes occur in May. Cyclones also occur, and do immense damage. Those of 1807, 1828, 1836, and 1847 were very violent. Underlying the sands and clays of Madras and all along the sea coast, is a bed of dark blue tenacious clay, containing numerous fossils of existing species. The language spoken at Madras is, the Tamil, which is the tongue of the people southwards to Cape Comorin, westwards to the ghât leading into Mysore, southwards through Coimbatore, and in the southern parts of Travancore. In the Madras presidency, the languages spoken

are Tamil, Telugu, Canarese, Malayalum. The Telugu language begins a few miles north of Madras, as far as the eastern boundary of Mysore which it follows up to that of the Malhatta country, thus including, in its extent, the Ceded Districts, Kurnool, the greater part of the Hyderabad dominions and a portion of the Nagpore country and Gondwana.

In 1864-5, there were 15,838,828 acres under cultivation, the land revenue was £1,181,645. In 1868-9, the area under cultivation, was about 16,202,696 acres, and the population 26,089,052 of whom 1,502,134 are mahomedans and 414,096 christians. The Madras Presidency is recognised to consist of the Northern Circars, on the coast of the Bay of Bengal, from the Chilka lake to the Kistnah river, The Carnatic from the Kistnah river to Cape Comorin. The Balaghat, or more elevated region in the interior of the peninsula composed of the Bellary and Cuddapah Collectoriates and Canara and Malabar are alluvial tracts on the western coast. These are ancient political divisions, but indicate also differences of race and languages. The Madras Presidency for revenue purposes is arranged into twenty districts, there are 3,227,726 farmers and subtenants, holding 2,297,158 single or joint farms, each district ranges from 4,000 to 12,000 square miles in extent. Under the ryotwari system, the peasantry pay an average of Rs 2½ per acre. Of the ryots on the rent roll only 420 pay upwards of £100 a year of rent to Government, only 1,627 from £50 to £100 only 5,641 from £25 to £50, and only 77,408 from £10 to £25. Of all the rest, forming about 90 per cent of the whole, 118,672 pay less than £5 a year, 431,569 less than £3 and 1,197,157—the great majority—less than one pound a year. Only one country of Bengal—Chittagong—presents a parallel to it, and there Government has long tried to induce the miserable peasantry to accept a fee simple tenure. Mr Maltby, Acting Governor in a minute on Sir W. Denison's proposal to remove the poverty and agricultural ignorance of the ryots by model farms and imported machinery observed that the surest way of promoting improvement is to render land valuable and attract capital to it by such methods as fixing a light and permanent assessment, giving security of title, enlarging the means of irrigation and facilitating the conveyance of produce. Mr. Percott, with similar wisdom, said—"the main remedies are the lowering of the land assessment where unduly high and placing it on a permanent footing, security of tenure develop-

ment of internal communication, extension of irrigation, reduction of the interference of subordinate revenue officials, cheaper and more prompt administration of justice and diffusion of education."

The area is estimated at 110,726 square miles, and the total population including that of the town of Madras at 26,539,052. By the quinquennial census taken on the 1st March 1867, the population of the Presidency, exclusive of the city of Madras, was found to be 26,089,052 thus classified—
Hindoos 21,172,822 | Christians 414,096
Mahomedans 1,502,134

The population of the city of Madras is supposed to be about 150,000, thus classified—

Races	No.	Death rate per 1000	
		1866	1867
Europeans and East Indians	17,219	35.1	28.8
Hindoos	365,576	30.6	27.2
Mahomedans	67,205	29.9	26.5

The approximate area and population of the Madras Districts including the city is

Districts	Square miles	Population
Madras city	27	150,000
Ganjum	4,157	1,245,790
Vizagapatnam	18,955	1,931,568
Godavery	7,339	1,427,472
Kistnah	7,227	1,296,652
Nellore	15,160	1,168,664
Cuddapah	9,177	1,114,759
Bellary	11,191	1,304,998
Kurnool	5,470	779,857
Madras	2,183	801,281
North Arcot	15,116	1,787,134
South Arcot	4,779	1,261,846
Tanjore	3,735	1,731,619
Tichinopoly	1,565	1,006,826
Mduai	8,790	1,916,489
Tinnevely	5,116	1,521,165
Coimbatore	8,470	1,430,735
Salem	7,601	1,619,234
South Canara	1,206	839,685
Malabar	6,259	1,856,378

The water supply of the several districts is somewhat varied. The average annual rainfall during a period of five years ranged from 17.57 inches in Bellary to 116.31 inches in South Canara.

The total area of the Presidency may be estimated as 130,000 square miles, being thus more extensive than Great Britain and Ireland and about the same size as the present kingdom of Prussia.

Ryotwari lands.. 16 million acres (actual)
Inam lands.. 4½ million acres (actual)
Zemindary lands 5½ million acres (estimated)
Malabar & Canara 2½ million acres (estimated)
exclusive of Madras city, there are 184 souls to each square mile, while only one thirty-third part of the vast area of 130,885 square

miles is cultivated. The proportion of the irrigated land applies to the production of any crop, but rice is very limited.

The Madras Districts range from 4,000 to 19,000 square miles in extent. The Districts of Ganjam, Vizagapatam, Godavery and Kistna are on the north-east coast, to the east of the Central Provinces and Hyderabad. The other east coast districts are Nellore, Madras, Chingleput, South Arcot, Tanjore, Madurai and Tutuvelly, the last named being situated in the extreme south of the peninsula. To the west of Madurai and Tutuvelly, and on the west coast of the peninsula, are the Travancore and Cochin territories governed by feudatory rajahs. North of these states, on the same coast, are the Madras districts of Malabar and South Canara. The central districts of the presidency are those of Coimbatore, Trichinopoly and Salem, between Malabar and Madras, and those of Bellary, Kurnool, Cuddapah and North Arcot between Hyderabad and the Mysore country, which intervenes between Canara and Bellary and Nellore.

The Madras Presidency may be described as of three parts—the Telugu country of the North, extended northwards from, and including, Nellore, the Tamil country of the South, and the Canarese and Malayalam districts of the Western or Malabar parts of the peninsula.

In the Southern division, where the mahomedan influence had been very weak, the land was held by cultivating village communities who paid rent direct to the old hindu sovereigns.

In the third or Western division, the village or communal gives place to the individual right to land free of all rent to the State, known as Jamm or birth-right. Malabar was prosperous, owned chiefly by wealthy capitalists, but Canara had been over-assessed, prior to British occupation. The extent of land under cultivation in those portions of the Madras Presidency held on ryotwary tenure, has risen from about ten million acres in 1855, to sixteen millions acres in 1865. In 1868-69 the area under cultivation increased by 202,696 acres.

Mr. Dalryell, Secretary to the Madras Government, estimated that there is produced an annual supply of 129 million cwt of grain for the support of the population, or more than 5 cwt for each person, being more than $1\frac{1}{2}$ lbs per diem, whereas a family of five can subsist upon 7 lbs per day, without difficulty, and three acres of superior land, supposing one acre to be irrigated, or four acres of unirrigated land would support such a family for a year.

Its soil is chiefly silicious, and the cultivation is carried on by a multitude of little tanks.

The produce of an acre of the best rice land varies from 1080 Madras measures (= about 30 cwt) in the Southern districts to 1,200 measures (= about 33 cwt) in Godavery and Kurnool, and the worst rice lands yield 8 to 14 cwt. The revenue in 1868-69 was £7,507,081 and the expenditure £6,598,163.

In the Military administration of the South of India, the Madras army holds all the Madras civil provinces, also the feudatory states of Mysore, Travancore and Hyderabad, also the Central Provinces, parts of the Sagar district, all British Birmah, the Andamans, Straits Settlements, Labuan and Hong-Kong. The Madras Presidency is ruled by a Governor in Council with a Commander-in-Chief, a member of the Council. In its earlier years the Madras government underwent many violent changes. In 1774, the governor, Mr. Wyndham, was deposed by orders from the Court of Directors. In 1775, Lord Pigot was appointed, but in 1776 he was deposed by his Council and confined—He was restored but in April 1777, he died. In 1770, Sir Thomas Rumbold was appointed governor of Madras, but dismissed in January 1781. In the beginning of the present century much agitation occurred whilst Sir George Hilario Barlow was Governor, and in 1860 Sir Charles Edward Trevelyan was removed from the Governor's office. India has furnished from amongst its Civil and Military servants many who have risen to distinction as statesmen, soldiers and financiers, amongst those of them from Madras may be named the great Lord Clive, Governor-General of India, Sir Thomas Munro, Governor of Madras, and Sir John Malcolm, Governor of Bombay. As botanists the missionaries—Rottler and König, and Dr. Roxburgh, and Wight laboured in the Madras Presidency, Dr. Jordon author of the Birds of India and of the Mammals of India was a Madras medical officer, and Dr. Russell and Dr. Day described the fishes of the coasts. Its chief hills are the Neilgherries, the Shevaroyes and Palneys and its chief rivers, the Godavery, Kistnah, Tumbudra and Cavery.

MADU KARRE MARAM, TAM Randeacumetorum

MADURA, a revenue district in the south of the peninsula of India, in the Madras Presidency, containing 1,756,791 inhabitants. It has the Pulney hills rising 6,000 to 8,000 feet high, the Sittou-maller between Madura and Dindigul 3,500 feet in height. In this district are the two large zemindaries of Shevaganga and Ramnad, and to the latter belongs the island of Ramisseram to which hindoo pilgrims largely resort. Madura town was the chief seat of the ancient Pandyan kingdom. This city was also once famed as a seat of biaminical learning, and the Pandyan palace with a hundred granite pillars built by Timul Naek is still standing. It formed the southern part of the Regnum Pandionis of Ptolemy, the Pandi Mandalam of the modern Indians, its capital was the Madura of Ptolemy, and was the royal residence of the ancient monarchs.

Pandiya, probably a word of Sanscrit origin is the Pandion, the Oi Pandiones, of the Greeks, and was the titular name of the dynasty of Madura, the race were styled Pandya, Pandiya, the king, the Pandyan or Pandiya Deva. Two embassies were sent by the Pandyan king to Augustus, the first of which he received at Tanragona, the second is mentioned by Strabo. The friendship of the Romans was sought by only one other hindu prince, O Kerobothros, the king of Chera or Kerala, who was also a Diavian. The city and district were the scene of many operations during the competition for India in the middle of the 18th century between the British and the French.

Its chief streams are the Omiaoti and the Vijay. The slopes of the Pulm hills and Cumbum valley contain valuable timber. South of the great granite tract of Bellary and Mysore about Trichinopoly and Madura, are limestone beds, both

MADURA ISLAND

fossiliferous and non fossiliferous and it is from these volcanoe, plutonic and aqueous rocks that building stones are drawn. In Tinnevely and Madura, are valuable marbles. In Madura was a dangerous sport called "jalicut" it consists in making a bull infuriated and then letting him loose with cloths or money tied to his horns which become the property of any person who can succeed in removing them. Since the year 1855 a prohibition existed against the sport being indulged in, and in 1859 certain village servants were dismissed by the late magistrate for permitting it within the limits of their jurisdiction — *Our Friend of India Dec 17 Tennant's Hindoostan, Vol II p 7*

MADURA ISLAND, is of an even appearance and moderately elevated, its N W point is in lat $6^{\circ} 55'$ N long $112^{\circ} 51'$ E and its east point in lat $6^{\circ} 59'$ S long $114^{\circ} 11'$ E. It is the most important of a line which runs along the northern and eastern coasts of Java. It is the principal of a group composed of more than seventy-five, and is separated from the great island by a strait, not more than a mile or a mile and a half wide which serves to form the capacious harbour of Surabaya. It has the appearance of being a continuation of Java, a point to which Malay manuscripts refer and has usually passed into the hands of its most powerful sovereigns. In length it is about ninety one miles, in breadth thirty-one, with a regular outline. Its formation is calcareous, though the lower districts are marshy, and covered with woods. In great part uncultivated, it offers a remarkable contrast with the extensive agricultural country in its neighbourhood. The chief products are, salt, which is to be obtained more abundantly than anywhere else in the Archipelago, the edible nests of the sea-swallow, cotton, tobacco, coffee, pepper, and mace. Scarcely sufficient rice is grown to support a population of 300,000, which is somewhat dense in comparison with other parts of insular Asia. Few animals are found, and none peculiar to Madura. The island is famous, however, for its breed of cattle, and supplies from its rich pastures provisions to many of the agricultural and seafaring communities of the neighbouring regions. The meat, when cured, resembles, but is far superior to, the jerked beef of South America. The people are similar to the hill-men of Java, and from them the Dutch recruit the line of their native army with the best troops in their service — *Horsburgh Raffles History of Java Earl, Eastern Seas Temminck. Coup d'Œil, sur les Possessions*

MAGADHA, a class of bards of Central India, who recite history. The bards and Charan of Rajputana and Guzerat are a peculiar race. The Bhat or bard of India are of three sorts, the Magadha or historians, the Sata or genealogists, and the Bandi or court minstrels, whose duty, in older times, it was to salute the king or chief, in the early

morning, wishing him long life and prosperity. These are the bards and minstrels of Central India. The bards from their sacred character were often employed as convoys of travellers and their property, in tandahs or caravans. Throughout Rajputana they are regarded as a sacred order, and as the hereditary guardians of history and pedigree. They chant their own verses, or legends from the mythology of India — *Hindoos*, p 75

MAGADHA, the territory of which this is the ancient name, corresponds with that part of the present Bahar which extends along the south of the river Ganges, in power from B C 350 to A D 450. The country is now known as Bahar. The capital was Rajagriha. The kings of Magadha were of six dynasties, viz that of Bahadriatha, of the line of Pandu, the first of which was Jaisandha, a co-temporary of Yudishtira and Krishna, according to Sir William Jones, B C 3101, according to Professor Wilson in the reign of Sahadeva, B C 1400, Fakhshita was born and the great war ends, and in the reign of Ripunjaya, B C 915, a Buddha was born.

The Sunaka dynasty, kings of Bharatkanda of Magadha kings, reigned 128 years

The Saisunaga or Sesnag, reigned 360 years, and we find amongst them, B C 415, Nanda, Mahapadma, (B C 1602 Jones, 360 Wilson) regarding whom it was said he will bring the whole earth under one umbrella, he will have eight sons, Sumalya and others, who will reign after Mahapadma. He and his sons will govern for 100 years. The Brahman Kanhlya will not root out the nine Nanda

The Maurya dynasty, governed 137 years, the first of whom, according to Wilson, B C 315, and 1502 Jones, was Chandragupta, the Sandracottus of the Greeks

The Sunga dynasty, reigned 110 years, the first of whom Pushpamitra, (B C 178) put his master, the last of the Maurya, to death

The Kanwa dynasty, reigned 45 years. The first was B C 66 Wilson, Kanwa named Vasudeva, who usurped his master's kingdom

Magadha is mentioned so early as in the Atharvan Veda, and is met with so late as the seventh century when Chinese pilgrims speak of it under the scarcely intelligible name of Mokra-to. The present appellation of Behar is from Vihara or a monastery of the buddhists whose most reputed convent was at Behar the place where Buddha obtained the law

The Anga race had then abode about Bhagnapore and the Maghadra race in the South Behar. At the time the Atharvan Veda hymn was composed the country beyond the Sonm was considered not strictly Indian. Our present knowledge of the languages belonging to the Arian class does not enable us to determine whether they are developments of some tongue, of which the Sanscrit is the cultivated representative, and of which Magadhi and Pali is the cradle of Asoka, and the introduction of buddhism into Ceylon, was a spoken form, or whether Sanscrit has been superinduced upon some aboriginal tongue, as it has been demonstrably though in much smaller quantity upon the Tamiloid languages of the South, and as French has been introduced into Anglo-Saxon. Certain it is that in every Arian tongue, a considerable and apparently primitive element is found which is not traceable to Sanscrit and which in Gujarati is reckoned at one-third of the whole language. *Tr. of Hind. Vol. I p. 218. Elphinstone's History of India Vol. I p. 393. Thomas Prinsep's Antiquities, Vol. II p. 210, 165. India in the 15th Century.*

MAGADOXA in Lat 2° 2', L. 15 15, E. See Mnkdeesha

MAGAH A tribe of agriculturists in Bahar, probably a vernacular form of Magadhi, or native of Magadhi.

MAGALLANES FERDINANDO-de, more generally known by his Spanish designation Magellanes, in the year 1520 set out on a voyage of eastern discovery, passed through the straits which bear his name, discovered Mindanao, and died in Mactan, on 26th April 1521, from wounds received in action. Only one of his fleet, the Victoria commanded by Elcano, a Biscayan returned to Spain. Magellan had become disgusted with the Portuguese service, and he offered to Charles V. to discover a passage to India by the West, in order to divide the rich traffic of the Spice Islands. He passed the straits in S. America, which have since gone by his name, in 1520, and entering the south Pacific Ocean, arrived in a few months at the Philippine Islands, of which he took possession in the same name of the Spanish monarch. Barbosa fell three days after Magellan, and in twelve days more, the people waylaid and murdered twenty-four of his companions.—*Bukmore, 308. Chatfield's Hindustan, p. 37.*

* MAGAR, a Bhot race occupying the lower levels on the banks of the Kali in Nepal. They use a monosyllabic language, like the Tibetans, Chinese, Burmese and Siamese

with an alphabet of Indian origin, they abstain from beer, drink to excess, and have an Indian priesthood. They are divided into twelve tribes, supposed to be descendants of 12 different male ancestors. They do not marry in their own tribe. This practice occurs in Australia, North and South America, Africa and Europe. They reside in the valleys.—*Dr. Latham's Lithology.*

MAGAR-BANS, Hind. Bambusa arundinacea, a solid bamboo, called a mile bamboo.

MAGDAR, Hind. Peta. Wooden clubs, or Dumb-bells, known in England as Indian clubs, used in India for exercise in developing the muscles of the arms and chest.

MAGHATA or Rosaline Punjab dyes call these dyes "shishi ka rang," literally 'beetle color,' because the crystals are imported in little phials.

MAGELLAO ? *Vitex altissima.*

MAGH, the tenth month of the Hindu year when the sun enters Capricorn.

MAGHASSI, See Jell.

MAGH, PERSIA, a fire worshipper, also a wine drinker or tavern keeper.

MAGH commonly applied by Europeans to the natives of Arakan, particularly those bordering on Bengal, or residing near the sea, and to the people of Chittagong. The Arakanese however disclaim the appellation, and restrict it to a class whom they hold in utter contempt, the descendants of the Arakanese who were settled at Chittagong and Dacca, by Bengali mothers, the origin of the word is unknown but it is also written Magh, Mug or Mugh.—*Hilson.*

MAGHA, an Indian sage, the offspring of the sun, *Purusha.*

MAGABIRA or Moga bira, Anisomela malabarica, *R. B.*

MAGHADAM-POO, Tam. Flower of Miransops clengi.

MAGHADI ? *Cucurbita lagna-naria.*

MAGHAT, Hind. *Populus balsamifera.*

MAGHIZ, Hind. the briar, *Cha. maghiz Juglans regia.*

MAGHAVAN, another name for India. See Veda.

MAGHAZZI There are numerous Baluch tribes east of the Indus, and those in Bhawalpore and the Punjab, are said to be Rhind. The question of the original countries of these tribes is still undecided. The Baluch and Brahui, are sub-divided into an infinite number of tribes, who take their names from the chiefs under whom they serve, the district or country to which they belong, or the traditions whence they derive their descent.

Lt Pottenger mentions that the Baluch putakes considerably of the idiom of the Persian and at least one-half of its words are borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. The Brahuiki, on the contrary, is so dissimilar in its sound and formation, that he did not recollect to have marked in it a single expression in any way approaching to the idiom of the Persian.

There are two languages spoken in Baluchistan, the Baluchiki, a Hindi tongue of the Aryan or Sanskrit stock in which the Persian, Sindhi, Punjabi, and Sanskrit words occur, and the Brahui, which belongs to the Seythic or Turanian or Tamulian stock. The Brahui language, spoken by the mountaineers in the kharship of Kelat, in Beluchistan, contains some Dravidian words and a considerable infusion of unquestionable Dravidian forms and idioms. Considered as a whole Dr Caldwell regards this language as derived from the same source as the Punjabi and Sindhi, but it unquestionably contains a Dravidian element, derived from a remnant of the ancient Dravidian race having been incorporated with the Brahui. The discovery of this element beyond the Indus river, proves that the Dravidians like the Aryan, the Græco-Seythian and the Turco-Mongolian, entered India by the North West route. The Brahui state their forefathers came from Halb, Aleppo. The Butani is a clan of the Baluch Maghazzi tribe, which has been located in Kachi for a long time.

The contour of the people of these two classes is as unlike, in most instances as their languages, provided they be descendants of a regular succession of ancestors of either; but the frequent inter-marriages which take place amongst them have tended in some degree to blend together the peculiar characteristics of both, that in many families, and even whole tribes, such have ceased to exist. The Baluch, in the first instance, branch from the original class of that name, into three principal tribes, called Nharooi, Rind and Maghazzi. The Nharooi, principally inhabit that portion of Beluchistan, which lies to the westward of the desert, and there are likewise khel of them at Noosky and in Seistan.—*Dr Caldwell's Comparative Grammar*

MAGHIDAM MARUM TAM Mimusops elengi

MAGH-MELA HIND a sacred fair held at Allahabad. Every twelfth year, an unusually great gathering takes place at the Magh Mela of Allahabad which is then called the Koombh Mela. So great is the crowd

of people that the rolling stock on the East Indian and Delhi lines has been found insufficient for their conveyance, and numbers of pilgrims are detained at railway stations.

MAGHRAB AR the West applied to Western Africa and its people, the common plural is Maghrabin, generally written 'Mogrebyn'. The form of this word in the singular seems to have given rise to the Latin 'maurus,' by elision of the Ghain, to Italians an unpronounceable consonant. From maurus comes the Portuguese 'moro,' and the English 'moor'. When Vasco de Gama reached Calcut, he found there a tribe of Arab colonists, who in religion and in language were the same as the people of Northern Africa,—for this reason he called them 'Moors'. This was explained long ago by Dr Vincent (*Periplus*, lib 3), and lately by Pichard. Maghrabin or Westerns, then would be opposed to Shaikyin, Easterns, the supposed origin of 'Saracen'. The word Saracens came to us through the Greeks (Ptolemy uses it), who have no such sound as sh in their language, and the Italian which, hostile to the harsh sibilants of Oriental dialects, generally melts sh down into s. So the historical word Hash-sha-shiyun-hemp-drinkei, was civilized by the Italians into 'assassino'. The Maghrabi dialect is known to be the hardest and most guttural form of Arabic. It owes this unenviable superiority to its frequency of 'Sukun,' or the quiescence of one or more vowels 'Klab,' for instance, for 'Kilab,' and 'Msik' for 'Amsik'. Thus it is that vowels, the soft and liquid part of language, disappear, leaving in their place a barbarous sounding mass of consonants.—*Burton's Pilgrimage to Meccah*, Vol I, pp 274, 293. *Natural History of Man*

MA-GHWAY A pagoda called the 'Emerald Couch' standing in the town of Maghway on the Irrawaddy, is reputed to contain a relic of the bed of the last Boodh, Gaudama.

MAGI were the priests of the Persians, Bactrians, Chacismians, Arians and Sakæ. In Burmah, Annam, Ceylon, and Siam, the sacred language of Buddha is called Maga

MAGNESIA

The Magians were considered as gods, according to Diogenes Laertius, (in Proem, p 2, Lond 1664) who notices their reverence for Fire, Earth, and Water,"—*Ous κα πυρ ειναι, και γην, και υδωρ* But Herodotus had, before him, mentioned sacrifices offered on mountains to Jupiter, by the ancient Persians, and their worship of the sun and moon, of the earth, of fire, water, and of the winds, he adds, also, that they learned from the Assyrians and Arabians, to adore Venus, Urania, or 'celestial,' which the Persians called *Μίτρα* Strabo, like Herodotus, declares that the Persians neither erected statues nor altars, "they regard," says he, "the Heavens as Jupiter, and reverence the Sun, which they call Mithra The Moon, also, and Venus, Fire, the Wind, and Water" Yet in a previous passage of the same book, if the text be correct, he had affirmed that Mithra alone was worshipped by the Persians What they called Jupiter, says Herodotus, was the whole compass or circuit of heaven, which Strabo, as above quoted, confirms From both authors, it appears that the Persians did not attempt to embody, under the human form, an object of such materiality as the celestial expanse But Clemens Alexandrianus, gives us reason to believe that some of their idols resembled human beings, and the statue of Venus, *Tanais της Αφροδιτης ταναϊδος* mentioned by him, represented, without doubt, the female divinity more correctly named Ananias than Venus, we may suppose, whom the Persians learned to worship from neighbouring nations, as Herodotus had already declared

The Magism of the Chaldees as it prevailed about B C 2234, when a Median dynasty sat on the throne of Babylon, was a modification of the doctrines of Zoroaster — *Herod, Lib I, 131 Shub Geog Lib XV, ed Xyland, p 847 Basil, 1571 Protrept, Sect V in Ouseley's Travels, Vol I, p 108 Bunsen, III, 583*

MAGNET ENG GLR Native Loadstone Magnetic iron ore, of which there is an abundance in the peninsula of India It is largely used in the manufacture of iron, or wootz steel

MAGNETIC NEEDLE More than a thousand years before our era, a people living in the extreme eastern portions of Asia had magnetic carriages, on which the moveable

aim of the figure of a man continually pointed to the south, as a guide by which to find the way across the boundless grass plains of Tartary, nay, even in the third century of our era, therefore at least 700 years before the use of the mariner's compass in European seas, Chinese vessels navigated the Indian Ocean under the direction of magnetic needles pointing to the south. The Greeks and the Romans knew that magnetism could be communicated to iron, and that that metal would retain it for a length of time. The great discovery of the terrestrial directive force depended, therefore, alone on this, that no one in the west had happened to observe an elongated fragment of magnetic ironstone, or a magnetic iron rod, floating by the aid of a piece of wood in water, or suspended in the air by a thread, in such a position as to admit of free motion.—*Humboldt's Cosmos*, Vol I *Curiosities of Science*, p 194

MAGNOLIA, a genus of plants of the Natural Order, Magnoliaceæ. The *Magnolia conspicua*, called by the Chinese "yu-lan," has been cultivated by the Chinese since A D 627. It attains a height of 30 or 40 feet in its native country, but reaches only 8 or 10 feet in English gardens. It is a very showy tree, having white flowers sometimes suffused with purple, which give out a most delicious perfume. It blossoms in England during the dreary months of February and March, and is distinguished from the other species by the flowers appearing before the leaves. It is not quite so hardy as the American species.

M. grandiflora, The Great-Flowered Magnolia, or Laurel Bay, is an ever green tree, reaching sometimes a height of 70 feet. It has been introduced into China from America and promises to be a very ornamental tree.

M. purpurea, the Purple-Flowered Magnolia, an ornamental shrub, is a native of Japan, and seldom attains a greater height than 10 feet. The bark when bruised has an aromatic odour. The flowers are more or less purple without, and always white within. The genera *Talauma* and *Magnolia* have the very singular property of dropping their seeds out of the back of the seed vessels when ripe, allowing them to hang down, each suspended by a long extensible elastic cord, composed of deheated spiral vessels.—*Fortune's Tea Districts*, p 16 *Eng Cyc*

MAGNOLIA DISCOLOR, D C VENT

M. purpurea, Curr | *M. obovata*, Rox

This species of Magnolia grows in Japan and China. It is a shrub with large dark, purple rose coloured modious flowers.—*Rorb Voigt*

MAGNOLIA EXCELSA WALL the white-flowered magnolia. A native of Nepal and Sikkim. Near Darjeeling, it forms a predominant tree at 7,000 to 8,000 feet, and in 1848 it blossomed so profusely that the forests on the broad flanks of Stuchul and other mountains of that elevation, appeared as it sprinkled with snow. The wood is highly prized in the neighbourhood of Patna for all sorts of joinery work, it being at first of a fine greenish colour, but changing to a fine yellow and the grain very close. It is sold at Patna under the name of 'Champ'—*Hog, Vegetable Kingdom*, p 25 *Hooker Him Jou*, vi p 125

MAGNOLIA CAMPBELLII, HOOKER The purple-flowered magnolia hardly occurs in Sikkim below 8,000 feet, and forms an immense, but very ugly black-barked, sparingly branched tree, leafless in winter and also during the flowering season, when it puts forth from the ends of its branches giant rose-purple cup-shaped flowers, whose fleshy petals strew the ground. On its branches, and on those of oaks and laurels, *Rhododendron Dalhousiae* grows epiphytically, a slender shrub, bearing from three to six white lemon scented bells, four and a half inches long and as many broad, at the end of each branch. In the same woods the scarlet *Rhododendron (R. arboreum)* is very scarce and is outvied by the great *R. argenteum*, which grows as a tree forty feet high, with magnificent leaves twelve to fifteen inches long, deep green, wrinkled above and silvery below, while the flowers are as large as those of *R. Dalhousiae*, and grow more in a cluster. Few plants exceed in beauty the flowering branch of *R. argenteum*, with its wide spreading foliage and glorious mass of flowers.—*Hooker Him Jou* Vol I p 125

MAGNOLIACEÆ The Magnoliad tribe, a natural order of plants which occur in America, China, Japan, N Holland and N Zealand. Fine trees or shrubs with large, beautiful, often strongly odouriferous flowers. The Indian species are ranged under five genera, viz *Michelia*, *Manghetia*, *Aromadendron*, *Sphenocarpus* and *Talauma*. The first of these numbers 22 forms or, if Wallich's *Magnolia punduana* be no *Michelia* only 21, viz, 7 from Nepal, 5 from Java, 3 from Ceylon, 2 from the Khassya Mountains, 1 from the Neilgherries, 1 from the Pulney Mountains, 1 from Malabar, 1 from Pegu, 1 from Amboyna, and 1 from Chilmon. *Manghetia* has 3 species, 1 from Nepal and two from Java, *Aromadendron* and *Sphenocarpus* each 1 species, the first Javanese, the latter Kassyan, and *Talauma*, 2 Javanese. *Moluca* forms. The genus *Bucklandia* is

interesting in a physiological point of view, from the woody fibre being studded with those curious microscopic discs so characteristic of pines, and which when occurring on fossil wood are considered by geologists conclusive as to the natural family to which such woods belong. But not only does the whole natural order to which *Bucklandia* belongs, possess this character, but also various species of *Magnoliaceæ* found in India, Australia, Borneo, and South America — *Hooker's Himal Jour* Vol II p 185 *Voigt* p 11 *Royle Mat Med*

MAGOG, one of the alliterative words, in Gog and Magog, applied in Scripture to the northern nations of Asia. The Arabs and Persians write these two words, Yuj-o-Majuj and like the names Urjan and Surjun, Duid-Duehria, are instances of the alliteration of which eastern races are so fond. "Chin and Machin" used to indicate Chinese countries, is a phrase analogous to Sind and Hind, used to express all India, though Sind and Hind are capable of divorce. The use of a double assonant name, sometimes to express a dual idea but often a single one, is a favourite oriental practice. As far back as Herodotus we have Crophu and Mophu, Thyni and Bithyni, the Arabs have converted Cain and Abel into Kabil and Habil, Saul and Goliath into Talut and Jalut, Pharaoh's magicians into Risan and Rejam, of whom the Jewish traditions had made Jaanes and Jambres, whilst Christian legends gave the names of Dismas and Jesmas to the penitent and impenitent thieves in the Gospel, Jaiga and Nargah was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing, e.g. Zabolistan and Kabulistan, Koli Akoli, Louga Solauga, Ibi Sibii, Kessan and Owau, Kuia Muir, Gluz and Maglinz, Mastia and Castia (Edisi), Artag and Kartag (Abulghazi), Khanzi and Mauzi (Rashid) Iian and Turan, Cit and Mecrit (Rubiquis), Sondor and Condoi (Marco Polo), etc. The name of Achin in Sumatra appears to have been twisted in this spirit by the mahomedan mariners as a rhyme to Machin,—the real name is Atcheli. In every day conversation in India such alliterations occur as Choki Oki, a chan, Kuisi-Guisi, a chan, Chavigavi, a key, Kili-Gili, a key — *Quatremerie's Rashid*, pp 243—246, *D'Arveac*, p 534, *Pearson's Ori* p 399

MAG'R, HIND Crocodile

MAGRAHDI, high lands from which water runs off quickly, equivalent to Thalh

MAGRABA, HIND Hemidesmus Indicus *Rheele*

MAGRILA, HIND *Nigella sativa*

MAGURA, a fish in the Colombo lake, said to grunt under water when disturbed. Bishop Pallegoix in his account of Siam speaks of a fish resembling a sole, but of brilliant colours with black spots, called by the natives dog's tongue, which attaches itself to boats and gives out a very sonorous and even harmonious sound — *Jenn*, u 470

MAGYAR, a race dwelling in Hungary, in Europe. The Tartar, Manchu and Tungus races belong to one great stock. The Turkoman, the Tshude, the Fin, the Laplander and the Magyar present another stock closely united, and both these families are originally connected with one another. These nations, who may probably be reduced to

two families, one centering in the Altai and the pasture land towards the Himalaya and the other having its centre in the Ural Mountains, have acted in the history of civilization a most powerful episode by conquest and destruction. They appeared in the fifth century as the Hun, a scourge to Romans and Germans. They produced Chengiz, Timur, and Mahomed II. They destroyed the Persian empire, subdued Hindustan and they still sit upon the throne of Byzantium and upon that of China. They seem destined to partake only by conquest in the higher civilization of the surrounding nations, older or younger ones, the Chinese presenting the one extreme, the Iranians the other. Little disposed to learn from them as neighbours or subjects, they become more or less civilized by being their masters, they cannot resist the inward force of the civilization of their subjects although they repel it as an outward power. These tribes appear also as the once subdued substratum of Indian civilization. So in the north of Europe, where the Finnic race preceded the Scandinavians. See Chengiz Hun India Timur.

MAHABALESHWAR, in lat $17^{\circ} 55' 4''$ N, long $73^{\circ} 38' 7''$ E, a lofty group of mountains in the northern portion of the Western Ghats, 4,600 feet high, and a sanitarium for Bombay. Rain fall has 250 inches. Mahabaleshwar hill has a traveller's bungalow. In India there are many plateaux, which, for the most part, lie in the Dekhan, Mysore, and Malwa, they are well defined, but of low elevation, and very limited in extent as compared with those of the Andes or Turkistan. Among the most important are Mahabaleshwar (4,500 feet), Amarkantak (3,590 feet), and Kondikonda (3,070 feet).

The following are the heights on Mahabaleshwar

Bangalo Clifton	4,292 ft Schl, Ad

MAHABALIPURAM, or Seven Pagodas between Covelong and Sadias, south of Madras, have been described by Dr Babington in Vol XI, Trans B A S, p 256, by

Messrs Chambers and Goldingham in A R Vol I, p 145, and V p 69, by Mr Charles Gubbins in Bengal As Soc Journal, and these reports have been compiled by Major Carr. The Mahabalipur caves are entirely brahmanical, and have been excavated after all the other series were finished. They are seven monolith temples and consist of chambers cut out of the solid rock, and with figures and inscriptions in an ancient character, only one of them is now on the land. In an ancient legend, relating to the destruction of the city of Mahabalipuram, and the Seven Pagodas, on the coast of Coromandel, by an earthquake and inundation during an early period of hindu history, it is stated that Huancheren, a gigantic prince or demon rolled up the earth into a shapeless mass and carried it down to the abyss whither Vishnu followed him in the shape of a hog, killed him with his tusks, and replaced the earth in its original position. Its pillars show a remnant of the cushion capitals of Elephanta. The inscriptions are in Sanskrit of the eighth to tenth century. The character used in the Inscription is Kutila or Gami. Siva is mentioned. The inscriptions are little more than names applied to the figures in the sculptures. They are described in the Transactions of the Royal Asiatic Society—Vol II p 617 *Fergusson's Rock Cut Temples of India*, Vol III, p 499.

MAHABAN, a celebrated peak or mountain in the Pu Panjal or Mid Himalaya is supposed to be Aornos of the Greeks. The Himalaya mass of mountains from the crest of the Karakoram range to the plains of the Punjab, has an average breadth of 250 miles. The Mahaban, or Black mountain is forty miles up the Indus from Attock. Around it, the Beizoti and other Afghan tribes gathered and fought against the British from 1860 to 1868. The Mahaban mountain is at least fifty miles in circuit and from 7,000 to 10,000 feet high. There are few school-boys who have not read, in the easy Greek of Arrian, the story of the invasion of India, the last of the Persian provinces, by Alexander the Great. Leaving a corps of ten thousand infantry and four thousand horse, to stand fast, in the spring of 327 B C he led an army of 120,000 foot and 15,000 horse, composed of Asiatic mercenaries and Greeks, through the Hindoo Koosh to Cabul. Despatching thence a strong division by the Cabul valley to the Indus to prepare a bridge, he marched by the upper road into the Yuzulzar country, according to his usual policy of leaving no enemy behind him. Driven out of their other fastnesses the

highlanders took refuge in Aornos which was fabled in the Greek camp to have thence defied Herakles himself. Winter was at hand or had actually come on, but, discovering the one difficult path which led to the fort at the top, Alexander and Ptolemy at the head of two divisions, each following the other, drove out the enemy in four days, by making a mound across a broad and shallow hollow which separated them from the besieged. Leaving all the hill country subdued behind him the invader crossed the Indus probably in March 326 B. C. Three theories as to the locality of Aornos have, however, been held, and defended with no little ability, by General Court and the late missionary Loewenthal, by Genl. James Abbott and by General Cunningham. The Mahabun most nearly corresponds in height and in its position on the Indus with the ancient description. The height was from 11 to 16 stadia, or from 7,000 to 10,000 feet, Strabo represents its base as washed by the Indus near the spot whence that river issues from the Himalayas. The Mahabun, too, supplies best the very object—shelter with wood and water—sought by a comparatively large population, such as Ranee-gat would have failed to accommodate, fleeing from a resistless invader. The Chinese pilgrim, Hwen Thsang, who visited it, makes no mention of a fort on the top. But he was there nearly a thousand years afterwards or in 630 A. D. Hwen Thsang's account is interesting in itself. He describes the Mahabun as a great mountain which derived its name from the Mahavana monastery in which Buddha, under the name of Sarvada rajah, had dwelt in a former life. Thence the pilgrim descended to the Masua monastery, now the large village of Suia in the Chamba valley, ten miles to the north-west of the Muchale peak. Whether Mahabun be Aornos or not it has had a curious history, from the day when Hwen Thsang all the way from China worshipped Sakya-Muni.

MAHA-BANOO, daughter of Yezdegird, became a fugitive and Colonel Tod supposes she may have found a husband, as well as sanctuary, with the prince of Saurashtra. He thinks, however, she may be the Soobhagana, mother of Silladitya, whose mysterious amou with the 'sun' compelled her to abandon her native city of Kana.—*Tod's Rajasthan Vol I p 239*

MAHABARATA, an epic poem, or a collection of ancient lays, of different dates, in the Sanscrit language. The Puranic legends tend to show that the language of the Mahabharata, is not in its older form, but, as it has come down to us, has been the subject of

various rescensions, the latest of which can scarcely be fixed later than the third century B. C. The two great Epopœia, the Mahabharata and Ramayana are generally believed to have been composed no wide interval after the laws of Manu. It is doubtful whether either of them was composed as a whole, and the Mahabharata was undoubtedly a compilation of popular lays on national events. The main story in each belongs to a post-Vedic, or rather Upa Vedic age, when the Arians had pressed far into the Peninsula. That of the Mahabharata describes the internecine war of two closely allied tribes the Kuru and Pandu, for the supremacy of the holy land of the Doab, with Hastinapura, the modern Delhi, as its capital. The war fought by the Kaurava and Pandava kinsmen to gain possession of the lands near Hastinapura, lasted 18 consecutive days and terminated in the complete destruction of the Kaurava. The war was conducted by a series of challenges and personal combats, which would seem to have been described in ballads, and then subsequently gathered together and embellished by a Vaishnava hindu. The Pandava family were supported by the advice of their Yadava kinsman Krishna, who was brought up as a worshipper of Vishnu, and seems to have actively opposed the worship of Siva and of Indra, and the Vaishnava compilers of the Mahabharata have interwoven the story of the battle with innumerable legends regarding Krishna, whom they deify as an incarnation of Vishnu. In addition to falsifications, exaggerations and embellishments, geographical, religious, moral, mythical, legendary, scientific and physiological dissertations, are interpolated, interwoven and forcibly intermixed. The book is very large, and has never been translated but extracts from it were discovered by Mr. Wheeler in the library of the Bengal Asiatic Society, and formed the foundation of his history of India, which is an interwoven commentary on the war. Portions of the interwoven materials seem to relate to the life of Christ, portions are taken from the Koran, and buddhist elements also are found in it. The war celebrated as the "Maha Bharat" a contest between the lines of Pandu and of Kuru, two branches of the reigning family was for the territory of Hastinapura probably a place on the Ganges, north-east of Delhi, which still bears the ancient name. The family itself was of the lunar race, but the different parties were supported by numerous allies, and from some very remote quarters Krishna, who was an ally of the Pandu section, though born on the Jamna,

had founded a principality in Guzerat among the allies on each side are chiefs from the Indus, and from Kalinga in the Deekan, some, the translators are satisfied, belonged even to nations beyond the Indus, and the Yavana, most orientalists consider to apply, in all early works, to the Greeks. The Pandava were victorious but paid so dear for their success that the survivors, broken-hearted with the loss of their friends and the destruction of their armies, abandoned the world and perished among the snows of the Himalaya, and Krishna, their great ally, is known to have been killed in the midst of civil wars in his own country. Some Hindu legends relate that his sons were obliged to retire beyond the Indus, and as those Rajputs who came from that quarter in modern times to Sind and Kuch are of his tribe of Yadu, the narrative seems more deserving of credit than at first sight might appear. The more authentic account, however (that of the "Maha Bharat" itself), describes them as finally returning to the neighbourhood of the Jamna. The story of the "Maha Bharat" is much more probable than that of the "Ramayana." The date of the war was probably in the fourteenth century before Christ.

In this epic poem the original traditions of the Pandava appear now and then, and show that the races among whom the five principal heroes of the Mahabharata were born and fostered were by no means under the source of the brahmanical law, as in the case of Draupadi whom the five Pandu brothers took as their one wife.

This poem is interesting to astronomy, because it records the first eclipse of the sun mentioned in any of the Sastias. Modern European commentators suppose that it was written in the year 786 of the Christian Era, and that the date of the Eclipse which it records is the 25th October in the year 945 before Christ, and therefore anterior to that transmitted to us from the Chaldeans, which was observed on the 19th March A. A. Christianum 720 — *Wheeler Hist of India*, Vol I passim. *Elphinstone's History of India* Vol I pages, 173, 174, 390, 391 and 392. *Muller* p 47.

MAHABHARA-VACHA Sans Alpima galanga, Su.

MAHA-BRAHMANA, S. A great brahman, but applied contemptuously in Bengal to a low class of brahmins who officiate at funeral rites, and are the first feasted after the period of mourning, also a brahman who performs religious ceremonies for sudras and mixed castes.

MAHADEO-KA-PHUL, HIND Daphne cannabina

MAHA'DEO or MAHADEVA, hills in the Hoshiangabad district, the finest in the whole Satpura range, and at one point rise to a height of 4,500 feet above the sea. It is in this cluster that the very remarkable group of rocks known by geologists under the name of the Mahadeo sandstones attains its greatest development. Here the sandstone mass presents a thickness of 2,000 feet, and the finest of all those striking vertical escarpments which characterise this formation is seen on the south face of the Mahadeo block, where it rises from the flat ground of the Denwa valley. The summits of the Pachmarhi hills, as seen from the Nerbada valley, present a huge grotesque outline, which bears marked contrast with the ordinary contour of the basaltic range. These hills are entirely isolated from the main Satpura range by steep and precipitous ravines, and are almost encircled by the Denwa and Sonbhadra, which rise in the valley to the south of the range, and unite on its north side. Nothing can be prettier than the plateau itself varied like a park with glades and clumps of trees, watered by a stream that runs winding down nearly its whole length, and curiously sheltered from the winds and storms by a rim of low rocks that bound it wherever it borders upon the outer face of the hills. Mr. Dübucg compiled a very complete grammar and vocabulary of the Mahadeo dialect of the Gond language, and the dialect of the Saonee Gonds was noticed in a paper by Mr. Mangeri Chouragad, the highest summit of the Mahadeva hills rises to an altitude of 4,200 feet above the sea, the usual height of the range, which, entering the Nagpur territory from Gawilghur, passes by Dewaghur towards Shiwani, is not above 2,000 feet, though in the east of the same chain, where it goes under the name of the Langi Hills, some of the peaks attain an elevation of 2,300 and 2,400 feet. At Nagpur the country has fallen to a level of 1,000 feet. On the west, however, it immediately rises by 200 or 300 feet in a succession of eminences. The Mahadeva group of rocks consist of a series of sandstones, often ferruginous, generally speaking irregularly though strongly bedded, and of great thickness. These form the lofty and boldly scaped range of the Puchmuri or Mahadeva hills, and to this group Dr. Oldham gave the name of Mahadevas. In one or two places they

seem to pass upwards conformably into sandstone holding remains of large mammalia, and probably of Sewalik date. This group is markedly separated from the coal-bearing group below, and as compared with it is also characterized by the comparative absence of trap dykes or other exhibitions of igneous rocks. Upon these, in parts of the district, rest the great spreading sheets of trap rocks forming the continuation of the immense basaltic field of the Deccan. Four and five distinct flows could readily be traced in places. And adverting to the occurrence of the beds containing shells (Physa, Paludina, Unio, &c) which are found between these flows (the intertrapean lacustrine formation, of Carter) the evidence derived from the Nerbudda district proves that this alteration was entirely due to the subsequent overflowing of the heated mass of the trap above, and to the disturbances consequent on the exhibition of such powerful force as must have accompanied the production of these immense flows of lava. These shelly beds seem to have been formed by tranquil deposition during the intervals between the successive flows of igneous rock, and to have been broken up indurated and baked by the succeeding outbreak. The following gives a summary view of these groups in descending order, omitting all the more recent divisions —

	Groups	Mineral character	Age, &c
Vindhya	Mahadewa group	Sandstones, with a few shaly beds, for the most part pebbly, often striped with ferruginous bands	Geological age unknown, a few vegetable fossil stems, &c
	Damoodah group	Shales, sandstones, coal, for the most part thinly bedded and regular, often greatly cut up by trap dykes. In Cuttaek, however, there are no trap rocks	Age not thoroughly decided, probably Jurassic, fossils chiefly vegetable, none taken from the locality where series is most fully developed
	Bundun, Rewah,	Sandstones & shales	Age unknown, probably very ancient, seen all along Vindhya range, into Behar and to the Ganges at Monghyr. Probably also in the Khisia Hills possibly only two subdivisions
	Kymore,	Limestones, shales and sandstones	
		Sandstones & limestone	

Sub Kymore, group

Crystalline limestone pseudo gneiss (name proposed by H B Medlicott, Esq.) micaceous schists, and quartzites, red and green and white

Highly probable, though not yet thoroughly proved, that these are only the continuation downwards of the Vindhya groups subsequently altered

Granite, gneiss, hornblende-rock, greenstone, &c. In the bituminous shales of the Mahadewas we have the following fossil plants *Trypogya speciosa*, *Vertebraria indica*, and a species of *Phyllothea*, a fragment of which is figured by Dr McClelland as *Poacites minor* (Geol Surv Tab XVI f 4). In the carbonaceous shales of Umret, besides the *Phyllothea* now alluded to, is another stem, but unmineralized, which seems to resemble McClelland's *Poacites muricata*, (Tab XIV, f 6). In the laminated sandstone of Kampitee, in addition to *Vertebraria* and the two *Poacites* as above, *Tremopteris*, perhaps of the same species, as at Rymahal, and McClelland's *Pecopteris affinis*, (Tab XII, f 11 b) which is a well marked species with a tripinnate frond.

In all these localities the genus *Glossopteris* abounds. Nagpore seems to have outstripped North Eastern India in *Cyclopteris* and several other vegetable remains, but is decidedly behind in regard to the *Cycadeaceae*. The only specimen, procured is a small fragment from the sandstone of Kampitee, the leaflets of which are narrower than a minute blade of grass — *Carter's Geological Papers on Western India* p 218.

MAHADEVA, an appellation of the hindu god Siva, which means the supreme god, and Siva is often styled Eshwara or lord. The worship of Siva seems to have been introduced into India, about the beginning of the Christian era, and apparently came from the west and embodied the sun-worship and the physiological philosophy of Baal. Colonel Tod tells us that there are numerous temples in Rajasthan of Baalim, and that Balpoor (Mahadeo) has several in Samashtra, all representing the sun. It does not appear that the saiva sect, worshippers of Siva, ever persecuted the vaishnava, worshippers of Vishnu, but its followers in India far outnumber those of the vaishnava faith. Saivism is almost a polytheistic creed, and its sect go to any vaishnava temple while on no consideration would a

vaishnava sectarian enter a saiva temple Mahadeva is frequently painted blue or rather of an ashy colour Obelisks and pillars are symbols of Mahadeva, as of Horus of the Egyptians, more especially pyramids and anything conical Mahadeva's vehicle, is Nandi, a white bull, on which he is frequently seen riding In his temples it is represented, sometimes of vast dimensions, couchant It is very commonly met with in brass, &c, with and without the other symbols of Siva Mahadeva has a blue throat, hence named Nilakantha, and, in one sculpture, leans on his Sanyasi's crooked staff, with half-closed eyes musing and listening to the divine minstrelsy of the six gandharva, playing and singing before him They are called Apsaras, and Devangana Their band is composed of a tambourine (tamma) cymbals, or castanets, (tal,) not visible, being behind the person of the tamma player, a vina, or lute, and a stranga, played with a bow like a violin The other two females hold a fan of feathers, (pankha,) and a chowrie of peacock's feathers similar to that borne by one of the female attendants behind Mahadeva

Mahadeva has Parvati, the mountain nymph, as his sakti, or female energy and in the figures of Mahadeva and Parvati, commonly called "Gouri Sunkur," Parvati is seated on Mahadeva's knee with the bull Nandi at his feet, and the Sinha or lion at her feet The lingaet, are a vira-saiva sect, whose sole object of worship is the lingam Benares is a great site of the saiva worship and there is a celebrated temple of Mahadeva at Kankal four miles south of Hardwai

MAHA DEVI Devi, the goddess, is a title given to Lakshmi, Suraswati and Parvati, but the latter is commonly called Maha-Devi The mythological origin of these three goddesses is thus described in the Varaha Purana, translated in Colonel Vans Kennedy's researches on the mythology of the hindus, &c In consequence of the oppressed situation of the gods from the oppression of the Asura, Brahma hastened to Kailasa to Siva Siva in thought summoned Vishnu, who instantly stood between them, and the three gods viewing each other with delight, from their three refulgent glances sprang into being a virgin of celestial loveliness, who bashfully bowed before Brahma, Vishnu, and Siva. They said "who art thou? lovely one! and why art thou thus distinguished by the three several colors of black, white and red?" She replied, "from your glances was I produced, and do you not know your own omnipotent eneiages?" Brahma then praised her, and bestowed on

her this blessing "Thou shalt be named the goddess of the three times, Morning, Noon, and Evening, the Preserver of the Universe, and under various other appellations shalt thou be worshipped, as thou shalt be the cause of accomplishing the desires of thy votaries But, oh, goddess! divide thyself into three forms, according to the colours by which thou art distinguished" On hearing these words she divided herself into three forms of a white, a red, and a black colour The white was Saraswati, the sakti of Brahma, the red was Lakshmi, the beloved of Vishnu, and the black, Parvati This account differs widely from other accounts of the origin of these goddesses, but consistency is out of the question in hindu mythology Parvati is now generally understood by the appellation of Devi, or Maha Devi Nevertheless, by the vaishnava sect, Lakshmi is also thus called, to whom they attribute, as the saivas do to Parvati, the production of Kali, Kali Ratnee, Chandika, &c — *Cole, Myth Hind*, p 95 *Moor's Hindu Pantheon*, p 65

MAHANA a river in the Hazaribagh district in the Bengal Presidency

MAHA-NAMA, See Sripada

MAHANUDDY river rises near Aaring in the native state of Nowagudda, in lat $20^{\circ} 20'$ lon $82^{\circ} W$, 30 m, N E 110 m, S E, 300 m, into the Bay of Bengal by numerous mouths. Length 520 m. It receives the Hutsoo, 130, Auring 117, Tell, 130, Bang Nudee, 60 m. About 46,000 sq miles are drained. The Mahanuddy river in the rainy season is about 56 feet above the sea in L $34^{\circ} 37' N$, L $88^{\circ} 19' E$. From July to February, navigable for boats for 460 miles. The Mahanuddy river collects a great body of water. Its course is through countries containing the diamond mines of Sumbalpool and extensive trap and gneiss formations. It is one of the largest and most important rivers in the Central Provinces, it rises about twenty-five miles south of Raipur, in a mountainous region which bounds the Chattisgarh plateau on the south and divides it from the Bastar country. Then again, struggling through masses of rocks, the river flows past Sambalpur. There its course is less obstructed, but it is occasionally interrupted by mighty rocks—the terror of boatmen—standing up in mid-stream, and realising the exact notion of Scylla and Charybdis. Thence it passes by Binka and Sonpur, at which latter place it is joined by the Tel. Below Sonpur the Mahanadi, taking an easterly course, pursues a tortuous way, cribbed, confined, and tossed about between ridges and ledges, and crags of rocks for many miles, yet still

MAHANANDA

struggling and rushing onwards with some velocity, till passing Bod (the capital of a state of that name) it reaches a place called Dholpur. After this its troubles and vicissitudes among the rocks come to an end, and rolling its unrestrained waters along, it makes straight for the range of the eastern gnat mountains. There it pierces the mountains by a gorge, about forty miles in length, slightly inferior in grandeur, but equal in beauty, to the gorge of the Godavari. Amakantak, a great plateau, forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nerbudda. The rivers, though large and full of water even half way from their mouths are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that, owing to these impediments, increased still further by the rocky character of the river beds or their banks, navigation is limited for the most part to the lower portions of their course. Cocanadi and False Point harbours are nearly similar, the only difference is, in the entrance to the latter which has been blocked up by the silt of the Mahanuddy and sand banks. The internal harbour is small, but is like a perfect lake. Both Cocanada and False Point harbours have been formed by the action of the S W monsoon driving along, towards a north easterly direction, the waters of the Godavery and the Mahanuddy, when they are saturated with silt during that season of the year.—*Ann Ind Ad*, V XI p 349 *Carter's Geological Papers on Western India*, p 2

MAHANADI A stream of comparatively small importance, which must not be confounded with the larger river of the same name, that rises in the southern hill-ranges of the Raipur district. The Lesser Mahanadi rises in the Mandla district, and flows into the Son after a course of about one hundred miles, during a portion of which it forms the boundary between Rewa and Jabalpur. Coal is found on its banks near Deori, where there is also a warm spring.

MAHANUDDY, a river of Malwa, runs near Huzroopoor, Nawabgunge in Purneah

MAHANANDA, tributary to Ganges. Near Darjeeling, in the Sikkim hills, lat $26^{\circ} 57'$, long $88^{\circ} 20' S$, 40 miles, S W, 60 miles, S E, 50 miles, S, 20 miles, S E, 40 miles, S, 30 miles—Length, 240 miles. It is navigable during the dry season for craft of 8 tons as far as Kishengunge, for those of much larger burthen during the rains. The Ganges receives as tributaries, the Ramganga, Gumti, Ghogra, Gundak, Kosi and Mahananda, from the left bank, and, from the right bank the

Kali, the Kali Nadi, Jamna and Sone. Another dividing stream of the Ganges is the Matabhanga. In its course of sixteen hundred miles through the plains, the Ganges receives eleven rivers, some of which are equal to the Rhine, and none smaller than the Thames, besides as many others of lesser note. It is owing to this vast influx of streams, that the Ganges exceeds the Nile so greatly in point of magnitude, while the latter exceeds it in length of course by one-third.

MAHAPUTRA JIVI or putrajivi TEL Putrajivi roxburghii, R

MAHA SAKSHI or Maisakshi or Meshakshi-kusuma, a gum-resin found in druggist's shops which is said by Ainslie to come from Arabia. The word means buffalo's eye and is said by Wight to be a kind of bdellium. In the bazaars at Madras the Pansari or druggists, if asked

for maisakshi, will produce gugul, which is the same as the Arabic muql — *O'Sh 287 Mat Med n 216 8vo*

MAHAR, amongst the Mahatta people a helot or predial slave race, small numbers of whom are dwelling on the outskirts of villages, being regarded by hindoos as impure. They are the Dher of India, generally, the Hoher of the Canarese people, and the Paraya of the Tamil race, the pariah of Europeans. They eat the carcases of horned cattle that die of disease, and have small grain allowances from the farmers, whom they help in the fields—being generally part of the balotta or municipality, of which they are the guides, messengers and watchmen. They are wholly illiterate, and though dwelling amongst hindoo sects for two or three thousand years, they are not hindoos in religion, nor have they become mahomedans or christians, but are shamans, fetichists, polytheists, spirit and demon worshippers. They are a free spoken, liberal minded race. They believe in metempsychoses. The word is pronounced M'har, but is written variously M'her, Maho, Mow, Mhai. See India

MAHA RADZA WENG or Radza weng, BURM. Chronicles of kings. These are found in the kingdoms of Burma, Pegu, Arracan, Manipool, the old state of Pong or Magoung, and indeed in all the Indo-Chinese nations, even in such small states as Tavoy and the Shan principalities of Zimme and Laboung.

MAHARAG or Arad Island, is a very low island on the west side of the Persian Gulf — *Horsburgh*

MAHARAJAH SANS. A hindu ruler, also the highest titular honor given to a hindu. The title Maha-Rajah or great king, in the Puranas and Hindu books, was originally applied to the sovereign of a vast monarchy which in the second century, comprised a great part of India, the Malay Peninsula, Sumatra and the neighbouring islands. There are now in the feudatory states in India, several hindoo rulers by whom the title of maha-rajah has been assumed, or been given by the British, the maharajah of Gwalior, of Indore, of Travancore, of Vizianagram, Gwalior is the capital of the maharajah Sindiah — *India in 15th Cent*

MAHA RAJAH, an honorific appellation for the head Gosai or chief priest of a sect of hindus styled the Rudra sampradaya, also Vallabha Acharya also Gokulastha. The sect arose about the fifteenth century from the teachings of Vallabha Acharya, a Tilinga brahman, and his doctrines are best known as those of the Gokulastha gosai, the title of

its teachers, who are usually in Bombay being maharajah. The doctrine of Valabha was that privation was not sanctity, and that the duty of teachers and disciples was to worship the deity not in nudity and in hunger, but in costly apparel and choice food. The followers of this sect are very numerous and opulent, the merchants and bankers, especially those from Guzerat and Malwa belonging to it. Their temples and establishments are numerous all over India but particularly at Mat'hura and at Bindraban, but at Sri Nath Dwar, at Ajmer, is the most celebrated and most richly endowed of all the Gosain establishments. The disciples who are devout, make the three-fold 'Samarpana,' tan, man, d'hau, of body, mind, wealth, to the guru, whom many of the Bhattya race regard as an incarnation of Krishna, whose worship, as the Bala Gopala, they follow. Of the thousands of religious sects which have thrown the pure and Vedic religion of the Hindus into inexplicable chaos, there is none which has been so prominently and so notoriously brought before the public at large as that of the Valabhachari, by the disclosures made by the great libel case of 1862. The major part, both male and female, of the sect who acknowledge the authority of the maharajahs are so completely enslaved by their vile practices, are so dead to their enormity, that nothing apparently can shake their moral torpor. In the present day there are about sixty or seventy maharajahs in India, who are spread over the cities of Hindostan. Of these, the maharajah at Sicejee is said to be the chief, and he has a great temple near Oodeypur. The maharajahs appear to read the Purans and preach sermons to the people, but they are generally engaged in worshipping the sacred images. In other words the people worship the maharajahs and the maharajahs only worship the images. When the people wish to worship a maharajah, they fetch him to their houses, offer him flowers, wave a light round him, present him with money, and prostrate themselves at his feet. The maharajahs on their part worship the gods much in the same way, only that, in addition, they bathe and dress the images, a ceremony which is dispensed with in the worship of the maharajah. Again, on certain occasions it is customary to worship the idol by swinging it, and accordingly at these swinging festivals, swinging the maharajah is a religious ceremony which is performed by the female members of the different families of the disciples. Whilst the maharajah is swinging he throws the red

powder called gulal amongst his devotees, and some of it falls upon the necks and breasts of the women. This appears to be a peculiar privilege of the maharajah, for if any one else threw gulal upon women, it would, excepting on the Holec festival, be regarded as an insult. Besides these rites, nautch dances are occasionally given by the maharajah, but in a different part of the temple to that which the idols are placed. Moreover the female devotees occasionally visit the maharajah's family in a separate zenana in the temple. The maharajahs have temples in Bombay, and sometimes there are several residing in the island. One however, is a permanent resident in Bombay. This man's ancestor, Gokulnathee maharajah, originally visited Bombay, in 1811. On that occasion all the Vaishnava sect of the island collected in a body, and requested His Holiness to settle permanently with his family, 'for the purification of their souls,' offering at the same time to build a temple for him, and to make arrangements to meet his expenses in connection with the temple. Accordingly, to secure a permanent income which should not press heavily upon his devotees, a tax upon articles of trade was determined upon, and all the vaishnava merchants, who in Bombay possess a monopoly in almost every important article of trade, solemnly bound themselves to add to the price of every article they might buy or sell. The result is that about 162,000 Rs are raised every year for six different maharajahs of whom the maharajah of Bombay receives about half a lakh per annum.

According to the doctrines of the Walabhacharya sect, every maharajah is considered as the husband of his female devotees, but as reason and conscience rebelled against the doctrines, and the law of moral and religious progress was fulfilled, in 1855 their followers held a meeting at which it was resolved that none of their daughters or wives should be allowed to resort to the maharajahs for worship, except at certain stated hours, when the maharajahs would be necessarily occupied in ceremonies at the temple. It will be impossible for any respectable Bania or Bhattia to frequent a Wallabacharya temple without exposing the honour of his family to suspicion. Many amongst them no doubt, have been as ignorant as the public in general were before the trial took place of the debauched habits of the maharajahs, or, if they knew what was done, they considered such practices to be sanctioned by their religion. Bold and earnest words fitly concluded Sir Joseph Arnould's judgment — "It is not a question of theology

that has been before us, it is a question of morality. The principles for which the defendant and his witnesses have been contending is simply this—that what is morally wrong cannot be theologically right; that when practices which sap the very foundations of morality, which involve a violation of the eternal and immutable laws of right, are established in the name and under the sanction of religion, they ought for the common welfare of society, and in the interest of humanity itself, to be publicly denounced and exposed. The defendants have denounced and have exposed them. At a risk and at a cost which we cannot adequately measure, these men have done determined battle against a foul and powerful delusion. They have dared to look custom and error boldly in the face, and proclaim before the world of their votaries that their evil is not good, that their lie is not the truth. In thus doing they have done bravely and well. It may be allowable to express a hope that what they have done will not have been in vain—that the seed they have sown will bear its fruit—that their courage and constancy will be rewarded by a steady increase in the number of those, whom their words and their example have quickened with thought and animated to resistance, whose home, they have helped to cleanse from loathsome lewdness, and whose souls they have set free from a debasing bondage.”

MAHARAJPUR A large and populous village in the Mandla district immediately opposite to Mandla, at the confluence of the Nerbada and Banjar. Its ancient name is said to have been Brahmaputra, but in A. D. 1737 Raja-maharaj Sa founded the present village and its name was then altered to Maharajpur.

MAHARAJPUR in L 25° 53' 9" N L 78° 13' 3" E in Bundelkhand, S of Gwalior. The Hill station is 1,097 ft above the sea.

MAHA-RANA, means Great Prince, the title by which the rulers of Odeypoor are always distinguished—*Malcolm's Central India*, Vol I p 342.

MAHARASHTRA, the Mahiatta country. In this province in ancient times Tagara was famed as a commercial mart. Its locality is now unknown but it has been supposed to be Deoghur the modern Dowlatabad now a mean village beneath the fortress. The race now occupying Maharashtra, is known as the Mahiatta. The men are robust, and generally employed as cultivators. The women are not well-featured nor well-shaped. In the 'Sareda Tilaka,' a monologue of later date than the play of Much

chakra which was of the 1st century of the Era but still of comparative antiquity, there is a curious and amusing description of the various women of India, distinguishing each by her nationality.

‘There goes the maid of Gurjara (Guzerat), blooming as with perpetual youth, having eyes like the chakora, of the complexion of the yellow Rochana, and a voice musical as that of the Parrot. She wears anklets of silver, large earrings set with pearls, and her bodice is buttoned below the hips with gems.’

‘The nation of Maharashtra proceeds yonder, her forehead stained with saffron, and with silver chains upon her feet, she wears a coloured veil, and a girdle round her loins.’

A Chola female (south of India) approaches, whose cheeks are tinted with saffron, and whose dress is embroidered with the buds of the lotus.

The bodice which buttons below the hips, is certainly unknown at the present day, either in Guzerat or elsewhere in India, and as no single cloth, as a scarf, or the present ‘Saree,’ could be buttoned, we can only presume that the garment was cut out and sewn in the fashion of a long tight-fitting robe, as in use among Persian women of the present time.

MAHASER A camp, and other rivers of India—*Hookey, Him Jov*, p 398, Vol I. **MAHASEWA, SURATISSA**, in Ceylon. See Inscriptions p 382.

MAHASIAMBALA Sing Tamalind.

MAHA SIVA RATRI One of the greatest festivals in the Hindu calendar occurs about the middle of February. Various legends are given in connection with this festival, but public opinion among the Hindus, is in favour of the following. Ravana, king of Lanka, undertook a pilgrimage to Mount Meru, the residence of Siva, and there put himself through a course of the most rigid penance, and supplicated the god by fasting and prayer. Siva appeared to him and asked him his desire. The king replied that he had only one request to make, and that was that none of the gods should be permitted to invade his country, and that they should not have power either to conquer or slay him. Siva, in reply, gave him a lingam of stone and commanded him to take it to his country, and there build a temple over it to his honor. He further enjoined him not to place it on any carriage but to carry it himself. He was also not to set it down anywhere on the road, for if he did he would never, the god said, be able to lift it off the ground again.

An implicit obedience to these injunctions would obtain for him a favorable answer to his prayers. When Ravenan had started from Mount Meru with the lingam, the other gods supplicated Piliya after this wise — 'This Ravenan has been a constant source of annoyance and trouble to us, and now that he has obtained, from Siva, this lingam as a protection from our power, he will become yet more arrogant and troublesome. You must, therefore, devise some means of depriving him of the lingam before he reaches the country.' Piliya acceded to this request, and summoning Varuna, he desired him to enter into the stomach of the king of Lanka and 'become water, so as to fill him.' This Varuna accordingly did. Ravenan, when the watery element filled him began to feel exceedingly uncomfortable and dropsical, and looked out for some shady retreat where he might rest a while till the waters had subsided. Piliya, at this moment, assumed the form of a brahmin child and appeared to him. Ravenan, on seeing him, asked him to carry the lingam for a few minutes.

MAHASU The ridge and slopes of Mahasu, in the alpine Panjab, which were formerly covered with the finest timber, present localities for planting that are hardly surpassed any where on the hills. Its forest has disappeared and vast terraces of potato cultivation have taken its place. The crest of the Mahasu ridge is, according to Captain Herbert, 9200 feet. On the very summit of the ridge, there are a few trees of *Quercus semecarpifolia*, the alpine oak of the western Himalaya, an European looking and partially deciduous species, and of *Picea webbiana* or Pindrow, the silver fir of the Indian mountains, a dark sombre-looking pine, abundant in the forests of the interior. These trees may be adopted as the characteristics of the sub-alpine zone, in every part of which, from 9,000 to about 12,000 feet, which is the highest limit of tree vegetation in the western Himalaya, they abound. On Mahasu they are entirely confined to the crest of the ridge, and form no part of the forest below. — *H. C. Panj Report*, p. 25. *Dr. Thomson's Travels in Western Himalaya and Tibet*, p. 33, 35.

MAHAVIRA from Maha great, vira a man, the last and greatest of the Jain saints

MAHAWANSO A metrical chronicle in Pali of the dynastic history of the island of Ceylon, from B. C. 543 to A. D. 1750, discovered and translated by Mr. George Turnour. The authorities differ as to the length of Chandragupta's reign, which some make thirty-four years, and others only twenty-four. The Mahawanso gives thirty-four years, the Dipawansa and the Vayu Pimansa give only twenty-four years. This difference may, perhaps, have originated in two distinct reckonings of the date of his accession, the one party counting from the death of Nanda Mahapadma, in B. C. 325 and the other party from the conquest of India, in B. C. 315. Some assumption of this kind is clearly necessary to reconcile the different authorities unless, indeed, we take the only alternative of adopting the one and of rejecting the other. At this period the capital of India was Patliputra or Palibothra, which was situated on the Ganges at the junction of the Girinibhoas or Alao River. The former name has already been identified with the Sanskrit Hiranyabhinanant which has been applied both to the Gandak and to the Son. But the latter name can only refer to the Hienan of the Chinese travellers, which was to the north of the Ganges, and was therefore undoubtedly the Gandak. Indeed this river still joins the Ganges immediately opposite to Patna—that is, "the city," or metropolis as its proper name (Patna) implies, the junction of the Son is some nine or ten miles above Patna. But as there is good reason for believing that the Son once joined the Ganges at Bakipur or Bunkpur, immediately above Patna, it is quite possible that the Girinibhoas may have been intended for the Son, and the Alao for the Gandak. According to Megasthenes, Palibothra was eighty stadia, or nearly nine miles in length, and fifteen stadia, or one mile and two-thirds in breadth. It was surrounded with a deep ditch, and was enclosed by lofty wooden walls, pierced with loop-holes for the discharge of arrows. Arrian, Indica and Strabo xv both quoting Megasthenes — *See J. E. Tennant's Ceylon*. See India, Inscriptions, Sripada.

MAHA YUG See *Yug*

MAHA-WELLI-GANGA, the Ganges of Ptolemy, rises near Adams Peak, in Ceylon, it traverses more than one-third of the mountain zone, and drains upwards of 4000 sq. miles, flows into the sea near Trincomalee, after a course of 131 miles — *See J. E. Tennant's Ceylon*.

MAHLU. HIND. Bauhinia racemosa

MAHMAH KHATUN. The Euphrates rising near the shores of the Black Sea, and in its course to the Indian Ocean, almost skirting those of the Mediterranean, at one time formed the principal link connecting Europe commercially with the East. It has two great sources in the Armenian mountains, and the most northern of these sources is situated in the Anti-Taurus, 25 miles N E of Eiz-Rum. The branch from thence takes at first a westerly direction, and after passing within seven or eight miles of the capital of Armenia it is joined by two small feeders. Its first large tributary however, is the Mahmah Khatun, which runs into it down the plain of Tehran

MAHMAN. In Guzerat is a numerous race, called Mahman, or, in conversation, Mehman. Many families of this sect, live in Bombay, and are a very useful, hard-working, trusty people

MAHMOUDIAH CANAL in Egypt excavated by Mahomed Ali, runs from Alexandria to the Nile

MAHMOOD. Commonly called of Ghazni, a brave, experienced, prudent sovereign, distinguished in war and as a civil administrator. He cultivated learning and promoted architecture. He founded a university at Ghazni. He ruled from A D 997 to A D 1030, in which period he extended his dominions from the Persian Gulf to the Sea of Aral and from the mountains of Kurdistan to the banks of the Sutlej. Mahmood son of Sabaktagin, put aside his elder brother Ismael in A D 997. In A D 1001 he made his first campaign against the hindus of India. In August of that year, he met Jeypala, at Peshawar, with 10,000 horse, and totally defeated him. He then subdued the rajah of Bhatnair a chief under the rulers of Lahore. Mahmood's third expedition was against Daood, governor of Multan, whom Anangpal had instigated to revolt. Mahmood then turned his arms against Anangpal, who formed a coalition with the kings of Ujein, Calinjar, Gwalior, Kanauj, Delhi and Ajmer. It was the largest army that up till then had

opposed the mahomedans, and the armies met at Peshawar. The battle was long doubtful but, at length, Anangpal fled leaving 20,000 dead on the field.

Mahmud, in A. D. 1008, captured the temple of Nagarkot from which he is said to have carried off 1,100 maunds of pure gold and silver plate and jewels. In A. D. 1011, he captured the temple of Thanesur and sent 200,000 captives to Ghazni laden with all the costly idols and wealth. His seventh and eighth expeditions both unimportant were to Cashmir. His ninth was in A. D. 1017, he marched with 100,000 horse, and 20,000 foot. He conquered Canouj and took Muttia, which for 20 days he gave up to plunder and all the idols were either melted down or demolished. His tenth and last expedition was directed against the temple of Somnath, in 1024, which he took, after a severe fight, in which 5,000 hindus fell. He obtained great wealth here. In A. D. 1026 he conquered Persia, from which he returned to his capital where he died A. D. 1030 at the age of sixty. He left two sons, Mahomed and Masood, with whom commenced a period of anarchy. At the time of Mahmud's invasions, India appears to have been divided, and perhaps had been so for centuries before, amongst a host of subordinate chiefs each owing homage to one of four considerable states. These four were, Delhi, under the Chahane, Canouj, under the Rahtore, Mewar under the Gehlote, and Anhilwarra, under the Chaura and Salankhi dynasties. Delhi included the territory westward from the Aravalli to the Indus, and northward to the Himalaya, Canouj extended eastward to Benares, and comprehended a portion of Bundelkund. As he sacked and plundered Muttia on the one hand and Thanesur on the other, had Delhi possessed any importance, it was not likely to have escaped him. It was not until Anangpal II had rebuilt Delhi in 1052 that it was again a populous city and its inhabitants an opulent and luxurious people. Firdusi, author of the Shah Namah, a Persian poem, wrote it at the request of Mahmud of Ghizni, but, disappointed of the promised reward of 30,000 drachmas, he returned to Taos his native city and there died.—*The British world in the East, Ritchie Vol I p 26, Tr of Hind Vol II p 158*

MAHMUD, the 6th of the Kharasmian dynasty, was driven out of Ghazni by Chengiz Khan in 1218 and died in 1220.—*Orme*

MAHMUD, called sultan Mahmud, reigned at Delhi in 1398. He was the grandson of the emperor Feroz and was conquered and expelled by Timur.—*Orme*

MAHMUDAH HIND *Convolvulus scammonia*

MAHMUN, great grandson of Bappa, invaded Cheetore from Khoirassan but after twenty-four engagements was defeated and expelled.

MAHOE See Dyes

MAHOGANY Caoba, of the Spaniards, *Swietenia mahogani*, named after Gerard van Swieten, a physician of Leyden is indigenous in the West Indies and Central America, and naturalized in some parts of India. It is a lofty tree with a large spreading head and glossy pinnate leaves. The trunk frequently exceeds 40 feet in length, with a diameter of 6 feet. The timber is of a rich red-brown, of different shades and markings, capable of a brilliant polish, close grained, very little liable to warp or shrink, and having a semi-resinous juice which preserves the wood from the attacks of insects. The value of the best Spanish mahogany may be judged of by the fact, that the Messrs Broadwood gave £3,000, for three logs of fine mahogany, each 15 feet long and 38 inches square. These logs were the produce of a single tree. The wood was exceedingly beautiful, and when polished, it reflected the light in a varied manner, offering a different figure in whatever direction it was viewed. Generally speaking, the purchase of this wood is a sort of lottery and deals in mahogany often introduce an augur before buying a log, but this does not always enable them to judge with precision respecting the quality of the timber. Honduras mahogany grows mostly upon moist low land, is generally soft, coarse, and spongy. It has, however the advantage of holding glue admirably, and is in consequence, much used as a ground on which to place veneers of the finer sorts of mahogany. The mahogany of Cuba and Hayti, and of the islands in general, is close-grained, dark coloured, and sometimes highly figured. It is known as Spanish mahogany. The colours are brought out by the application of oil or varnish, but much washing or soaking of the wood in water will destroy its beauty and render it of a dingy brown. The colour of mahogany is often artificially deepened by alkaline applications, but the best effect is produced by the use of a colourless varnish, which allows the natural tints of the wood to be displayed unaltered. The first mention of this beautiful timber occurs in 1597, when it was used to repair some of Sir Walter Raleigh's ships at Trinidad. Yet the timber was not brought to England until about the beginning of the eighteenth century when a few planks brought over as ballast in a vessel from the West Indies, were given

to Dr. Gibbons, and would have been used, but for their hardness, by his workmen in erecting a house in Covent Garden. Having been rejected by them, a piece was given to a cabinet maker, named Wollaston, with the request that he would make a candle-box of it. This being done, the candle-box proved so beautiful that it became an object of curiosity, and the despised mahogany came into great request, and was soon established as a valuable material for household furniture. The genuine mahogany tree may be seen in some Indian gardens, where it appears to flourish. The Mahogany grows as well in Bengal as in its native country, and though inferior in fineness of grain to the best kinds, it is at least equal in quality to that of Jamaica. Dr. Roxburgh in a paper presented to the Society of Arts in 1806, on the growth of trees in the Botanic Garden at Calcutta, mentions that two plants (the first introduced into India) were sent by the Honourable the Court of Directors to the Botanic Garden in 1795, and by the end of 1804, above five hundred plants had been reared from these two—*Faullner*, *Tomlinson*, *Mason*. *Soc. of Arts Trans* Vol XXIV p 154. *Royle's Productive Resources of India*.

MAHOMED, the founder of the mahomedan religion, was born on the 10th November 570 and died on the 8th June 632, in his 63rd year. The Arabian prophet, the Apostle, are terms sometimes applied to him in European literature, but his followers only recognize the appellations of Rāsul Allah, the messenger (or prophet) of God, also Paighambar, the bearer of a message. He was of the tribe of Koesh. His great grandfather's name was Hashim, that of his grandfather, was Ab-ul-Mutalib, whose son Abd-Ullah was the father of Mahomed. Mahomed is generally supposed to have been of Ismaelitic origin, of the tribe of Kenanah. In Genesis, Ismael is made to marry an Egyptian woman, but Arab traditions make him marry into the family of Jorhem, a descendant of Kahtan. Probably he had two wives. The Kenanah tribe, from which he sprung, was near akin to that of Kais, and both were descended from Nezar, whose name was the war cry of the northern Arabs, in their combats with the armies of Yemen. The descendants of Kahtan, Arab ul Arab, were held to be the noblest of all Arabia and it is surmised that this alliance was introduced to raise Mahomed into the noble families of Arabia.

The melancholy incidents associated with almost every step of Mahomed's birth and parentage deepened the seriousness and

heightened the sensibility of his character. He was a posthumous child, orphan of both father and mother at five years of age, among a people with whom to be an orphan was a disgrace. How deeply he felt his unprotected state is evident from the earnestness and frequency with which in the Koran he recommends orphans to the care of the Faithful. The life and destiny of his father Abdullah was also peculiar, for he narrowly escaped being offered in sacrifice to an idol, in consequence of a rash vow of Abd-ul-Mutalib, and was only rescued at the price of a hundred camels. Mahomed was born during the period of tears and desolation of his mother, Amma, after the death of her young husband, at the age of twenty-five, on a caravan journey, when born, he was carried by his grandfather before an idol, and received his name. Unable to nurse her own infant, his mother, after Arab fashion, wished to send him to the desert to be reared, but the Bedouin nurse who ultimately took him at first refused to have charge of a fatherless boy. At six years of age Mahomed lost his mother also, and was taken care of by his grandfather, and on the death of the latter three years later, by Abu Talch, his uncle, who as long as he lived gave him his protection. The events known of his youth are few. He appears to have accompanied his uncle to Syria, and on that journey mahomedans place the absurd legend of Sergius, Djeizi, or Bahzia recognising the boy as the future prophet by a mark between his shoulders. During the wars of the tribes known as the wars of the Fidjar, he is reported to have been present at one battle when he was fourteen, and to have picked up arrows for his uncle, at twenty he was keeping sheep for something like a farthing a day—an occupation considered disgraceful by the Arabs and abandoned to slaves and women. But Mahomed always loved to dwell on the fact that Moses, and Jacob, and David had been shepherds before him, and indeed the race of visionaries and prophets has generally been largely recruited among shepherds and herdsmen. Not long afterwards he entered the service of Khadija, a wealthy trading widow with three children, as camel-driver of the caravans which she despatched to the different markets of Arabia and Syria and rose by his good conduct to be master of the caravan, a position of confidence. He was found a good man of business, and to have an acute perception of the market value of the striped stuffs and incense of Yemen, and the leather of Arabia, which he exchanged in the markets of Syria for coin.

and oil, and the silk goods of Damascus, while his long monotonous marches across the desert with his long file of camels were perhaps spent in meditation. His good qualities gained him the title of 'El Amin'—the honest fellow. He was of comely appearance, and Khadija, in spite of being fifteen years older than Mahomed—an immense difference in a country like Arabia—conceived the project of marrying him, and carried it into execution. For such a marriage, Mahomed seems to have been an exemplary husband. He married another wife, it is true, in two months after Khadija's death, but he never ceased to speak of his deceased wife in such terms of praise, that Ayasha declared she was the only one of the prophet's wives of whom she had ever felt jealous. Seven children were the result of this marriage, and throughout the East crowds of green turbans claim to be descended from some one of the three daughters who survived. There were three sons, who all died young—one was called Abd Manaf, after the idol, which proves that Mahomed was at that time still an idolater. The last daughter, Fatima, was born eleven years after the marriage—when Khadija was beyond fifty. Four years after the birth of Fatima he had his first vision, and in connexion with that event some considerations are necessary respecting his mental and bodily constitution. Whatever may have been the superiority of his moral character, it is certain that he was as unlike the most esteemed type of Arab manliness as it is possible to conceive. Nowhere in the world does man reach such a degree of dauntless independence as the Arab, educated in the freedom of the desert, and exposed to its hourly and daily vicissitudes of destiny. The ideal of the Arab was a fiery-souled irresistible warrior, always in sight of his tribe, bold in speech, rapid with song and repartee, indulging in wine, feasting, gambling, and love of women, holding tears to be disgraceful, with limbs as iron as his armour, supporting without suffering the heat of the desert under an Arabian sun, delighting in the beauty and swiftness of his steed or of his camel, impassioned for the chase, a match unaimed for the lion, indefatigable in combat, and routing like Antares whole armies with his single spear and shield. Recent travellers have confirmed the experience of ages, that the Bedouin have the least religious sensibility of any known race—at the present time they are mere mahomedans in name, and never utter a prayer, or if they perform any religious rites at all, these may possibly be some lingering relic of the old Sabæan adoration of the ris-

ing sun. In the days of Mahomed, the people of Mecca upheld the worship of their idols from motives of gain, but Arabs in general had little respect for them, and treated them worse than Neapolitans have ever treated a refractory saint. If the prophecies of their khalim, seers or holy men, did not concur with their wishes, they often put them to death. When Amr-ul-Kais commenced an expedition to avenge the death of his father, he entered, according to custom, the temple of the idol Dhou-l-Kholosa, to obtain his approbation by means of the divining arrow. Drawing the wrong arrows three times in succession, he broke them all and threw them at the head of the idol, saying 'Wretch! if your father had been killed, you would not forbid revenge for his death!' Mahomed was directly the opposite of the Arab ideal, he had inherited from his mother a delicate, nervous, and extremely impressionable constitution. He was gifted with an exaggerated and sickly sensibility, he had a woman's love for fine scents and perfumes, he was melancholy, silent, fond of desert places, solitary walks, and lonely meditations at set of sun in the valleys, full of vague restlessness, weeping and sobbing like a child when he was in pain, subject to attacks of epilepsy, and without courage in the field of battle. In addition to all which he had religious excitability of the most acute character.

Mahomed in the Koran asserts that his religion is that of Abraham. The religion established by Mahomed is termed Islam, signifying safety or salvation and comprises the two essentials, "iman" implicit faith and "din," practical religion. Five points are insisted on namely—Belief in God and Mahomed his apostle—Prayer—Alms-giving—Fasting during the month of Ramazan—Pilgrimage to Mecca. The first of these belongs to "iman", the latter four to "din". Mahomedanism as it now exists, stands upon other foundations than the Koran. This book not furnishing a guide or precept to meet every emergency, a great body of tradition, nominated the "hadees," has been added thereto, and this law, oral as it originally was, is generally considered equally binding with the written law of the Koran. These traditional precepts were derived from Mahomed himself, his companions and immediate successors. Some of them are, however, of doubtful authenticity, and not a few are evidently of more modern fabrication. The Persians reckon four kinds of hadees. At present the followers of Mahomed are styled Mahomedans also Mussulmans also by the following terms,

MAHOMED

Muslim (Sing)	ARAB	Mahomedan,	ENG
	HIND PERS	Mussulman,	"

In India, the people of this religion are of the most varied descent, the offspring of Arabs of every tribe, from the Lianian races of Persia, from the Scythic, Tartar, Mongol, Turk, Baluch and Afghans, with bodies of converts from the Agnicula Rajput, from the Jat and from the prior Tartar tribes who preceded the Aryan immigrants In the northern parts of India, the bulk of the mahomedans are of Tartar or Afghan descent, and recognise themselves by the titles of moghul and pathan, ordinary Arab mahomedans being sheikh It was chiefly to rulers, often merely nominal, of these religionists, to whom the British power succeeded.

The most prominent and numerous of the monotheists of India are the descendants of the various mahomedans, who from time to time as conquerors and camp followers, entered India with Timur, Nadir Shah, Mahmud of Ghuzni, Ahmed Shah and others, and have sought employment in the armies of India or a livelihood by commerce A considerable portion of them are engaged in trade or as petty dealers in towns A few of the humbler are employed as labourers but the majority have hitherto found military employment under rulers of their own faith in Delhi, Hyderabad, Arcot, Lucknow and Rohilkund, or in the native Indian armies of Great Britain A portion of these people are doubtless of Arab descent, and many of them are syeds or descendants of Mahomed The British, however, also come in contact with mahomedans of the Semitic race, the Arabs

MAHOMED

at Aden, many of whom in the first ages of the Hijra spread their power into Africa, and along the shores of the Mediterranean, crossing into Spain which they held for 700 years, overrunning countries to the eastwards and northwards in Khorassan, Merv, Ispahan and Bokhara, to Bagdad where the race of Al Abbas reigned for five hundred years, and to Damascus, where the Oommiah family held sway from A D 661 to 744 On the western frontier of India, in the Panjab, and in the territories lying between the Indus and the Ganges, the mahomedans are chiefly Scythians of Mongol, Turk, Afghan and Baluch descent, with other smaller bodies as to whose origin, information is wanting There are the Multani, Bhatti, and Khunul of the Rechnab Doab in the Panjab the Awan of the Sind Sagor Doab the Dawudputia of Bhawalpor, the Tuwana of the Shahpor district, the Mewatti of Goorgaon and many of the Gooja race, scattered through different parts of Northern India In the northwest Provinces are the Rohilla of Rohilkund and the Kumbh of Meerut, likewise mahomedan There are mahomedans also in Bhopal, Mundisori and Jouna, the late rulers of Oudh were Syeds, the late rulers of Hyderabad in Sind'h were Baluch, and the rulers of Hyderabad in the Dekhan are Syeds The Daood-putia mahomedans trace their descent to the Kalif Abbas but take their name from Daood, the first of the family who acquired a name They are, however, supposed to be Sindian Beluch, or Beluch changed by a long residence in Sind They moved from Bahawalpore and seized land on the Sutlej reducing the remains of the ancient Lungga and Johia, and introducing the Sind system of canal irrigation

Their claim to be descendants of the race of Al Abbas, who reigned at Bagdad from A D 749 to 1258, may however be correct The sur-names met with, Gori, Kirmani, Koieshi, Sherazi, show their possessors views as to their origin and the tenacity with which the families look to their original starting places All Afghans, while in India, carefully distinguish themselves by their tribal names, the Eusofzye, Mehmund, Barukzye &c The Wallajah family, who for a few years, had a troubled rule in the Carnatic, traced their descent from the khalif U'mar, A D 644, and in their conversations would notice the course of their fortunes as having had amongst them a khalif, akazi at Samarcand, and nabobs of the Carnatic, and it will be recognised that races who, as in this instance, can take a retrospective view of their

history for 1280 years, can disregard hundreds of years of obscurity, and can see in that long time only the dignities possessed by three ancestors, a Khalif a Kazi and a Nabob, will readily accept a reverse of fortune as God's hand laid upon them, will regard it as but of temporary duration, and will watchfully await a change

In Peninsular India, there are only small scattered bodies of mahomedan races. The only ruling power in India, of these religionists, of any magnitude, is that of the Syeds of Hyderabad, the Nizam Subahdar of the Dekhan, whose sway has existed for nearly two centuries, themselves strangers, ruling with a mixed foreign soldiery of Arabs, Negroes, Abyssinians and northern hindus, over parts of the Canarese, Tiling, Mahratta and Gond races, and their capital is now the principal resort of mahomedan adventurers. In the extreme south of India, there are three mahomedan races, the Labbi and the Nao Aiti, differing, by very marked characters, from those around them. The Labbi are a tall and large made race, of a deep bronze colour. Their usual dress consists of a wrapper round the loins. They are largely engaged in mercantile business and as pedlars. They use the Tamil alphabet, have a Tamil Koran and speak and read the Tamil language only. Their name is derived from the Arabic word "Labek," "may it please you," and the people are usually supposed to be descendants of trading or sailor Arab fathers with mothers of India, but this alleged origin seems to admit of doubts. Nao-Aiti, a small non-military body of Arabs who but for a slightly tawny tinge, would have an almost English fairness, called Nao-ait, new comers, emigrated from Arabia about three hundred years ago, and are to be found in considerable numbers in southern India. They are slender, fair men with very handsome women, and are engaged in civil avocations, never becoming soldiers. They say that they came from Arabia to the Konkan. The Nao-Aiti are also supposed to have been sea-shore Arabs. Indian mahomedans assert that they are the descendants of women and children from Arabia, whose men were killed on being detected in an attempt to rob the tomb of Mahomed and their wives and children were sent off in a ship which landed on the western coast, but this is doubtless a story got up to vilify, a race.

The Maiman or Mehman are said to be the descendants of a couple, of Sind, long childless, who about six hundred years ago became converts to mahomedanism, in consequence of the prayers in their behalf

by Mahbub Sub'hami at Baghdad, being rewarded by seven children. Their original language is Sindhi. They greatly revere Mahbub Sub'hami. Many families are met with in Guzerat and Bombay, and are a useful, hard working, trusty mercantile people.

The Mopla in the South western coast of India and Ceylon, are said to have had a similar origin to the Labbi, viz, from Arab fathers and Indian mothers and the name is supposed to be derived from the Tamil, ma, mother, and pillai, son. On several occasions since that part of India came into the possession of Great Britain they have required to be coerced, and are known to possess a restless spirit, with much fanatical zeal, but it is generally supposed that agrarian disputes have been a prominent cause of their outbreaks. The Mopla of North Malabar, although, mahomedans, follow the rule, as to property, of *descensus a Matre*, the Maimmak i tayam, having, in this respect conformed to hindu usage, in the times of the ascendancy of the hindus. The Mopla also take the wife of a deceased brother.

The Chulia, Moplah or Labbi are called by the Tihug, Jonangi, Zonangi, Jonagai, Jonakari. The intercourse of Mahomedan merchants and sea-men with the women of western India seems to have been from the most ancient times, Abuzaid writing A. D. 916 mentions that the more devout merchants of Suaf when young men were on board avoided sending their ships to Ceylon, as the women were very licentious and merchants would, when newly arrived make advances to the daughter of a king and she with the knowledge of her father would go to meet him in some woody place.

In Sumbawa, the mahomedans take a high place and they are largely proselytising the mountaineers, who however secretly trust in their idols.

There are many thousands mahomedans in China, who are neither zealous in the propagation of their doctrines nor over-strict in the observances of their religion.

The Abyssinian and Negro races in India are usually known as the Habshi or Sidi. Many of them are slaves, but both as slaves and freemen they are often employed about the households of native sovereigns. Some of them, known as the "Seedee of Janjera or Zanjera," were long a powerful and independent maritime people, occupying the coast a few miles south of Bombay. The Bonia are found on the N. western coast of Peninsular India and in the Rajpoot states, and represent themselves to be the descendants of the followers of the Sheikh-ul-Jabl, or the celebrated old man of

the mountain They call themselves Ismaili, acknowledge an Aichamandite or religious chief they principally follow mercantile pursuits, and are a robust, active, intelligent mercantile race They are scattered all over the country, but are found principally in Guzerat and the adjoining provinces of Cutch, Sind and other parts of the Bombay presidency, and are a peaceable, inoffensive body of men

Another tribe is styled Khajah, which in Persian, signifies a bard, a teacher, and a merchant, but is sometimes, as an honorific appellation prefixed to an individual's name, as Master, or addressed to a person, as we should say "sir" It is the 'Coja' of the "Arabian Nights," which was the French orthography of Khajah It is applied as a titular appellation to a small tribe of strangers settled in Sind, principally at Karaachi, where there are about 300 families, who say that they emigrated from Persia They are Ismaili mahomedans, and are, therefore, heterodox shiahs, — for, while the Ismaili believes only in seven Imams, the Khajah continues the line down to the present day, Aga Khan, lately (1861) a pensioner of the British Government, at Bombay, being then present Imam They reject Abu Bakr, Umar and Usman, and reverence Ali, Hassan, Hussein, Zain Ul Abidin, Mahomed-i-Baker and Imam Jafar-i-sadiq They do not worship in a mosque but in a Kano or house prepared for the occasion They probably fled from Persia, when Ali Khan (Hulukan) treated the Ismaili sect with such severity They are in general illiterate, but have invented a written character for themselves, in which they have transcribed the "Koran" Captain Burton however says, that the Kojah are a small caste in Western India, who appear to have originally come from Sindh or Cutch, and who by their own traditions, which are probably correct, were converted from hindooism about 400 years ago by a Pir named Sudr Din They know but little of their prophet and of the Koran, and their chief reverence is reserved for Aga Khan, whom they believe to be a descendant of the Pir who converted them to Islam" When reading this, however, it must be remembered that the shiah branch of the mahomedan creed, whenever settled amongst anti-religionists, always hold as a tenet, and rigidly adhere to the practice called Takkyah, i.e., the systematic concealment of everything that concerns their faith, history, customs, and in a word any peculiarities the disclosure of which might be attended with unpleasant consequences

The Mehdavi or Ghaur Mehdi are not a race but a small mahomedan sect, though mostly Pathans, who believe that a religious man who was born in Jonepur about three hundred years ago was Mehdi, or the prophet Elias on his second coming, and they are styled Ghaur or "without" Mehdi because he has, in their belief, come and gone

The mahomedan religionists are however of two great sects the Sunni and Shiah, the former being in India, Turkestan, Turkey and Arabia the more numerous, while the Shiah are most numerous in Persia The Sunni hold amongst other points, the succession to the khalifat to have followed in the line of Mahomed, Abu Bakr, Omar, Usman and Ali, the Shiah sect, on the other hand, maintaining Ali to have and by right succeeded his cousin and father-in-law Mahomed There are other points on which their sectarian differences turn, but small numbers of the Shiah religionists, in several parts of Asia as in the west of India believe in incarnations of Ali, and of these the Ismaili body may be instanced The mahomedans of India, of these two great religious sects worship apart, but amongst both sects are to be found mixed together, the people of the various national or ancestral tribes, Syed, Shaikh, Moghul, Pathan, into which the mahomedans are found mingled and as in some christian countries the sons will be found as Sunni and the daughters Shiah The Syeds, the Saadat, or lords, are descendants of Mahomed, through his daughter Fatimah and her husband Ali, and as a rule are quiet, humble minded men not distinguished by other qualities from the Sheikhs they are of Sunni and also of Shiah persuasion, and are met with serving as soldiers, or in civil avocations or following some religious duties The term Sheikh is given to other descendants of Arabian origin, and is applied generally to all of the Sunni sect other than pathans or moghuls The Sheikh therefore is of the most varied origin, and is engaged in all avocations, military and civil, as soldiers, in regular and irregular armies, as police, shopkeepers, and a very few, a mere sprinkling of them, in learned professions or occupations requiring prior education The Pathan is the descendant of the Affghan soldiers who came into India with the armies of Timur, Baber, Nadir Shah, Mahmud and Ahmad Shah Abdallah and carved out principalities or obtained lands for themselves, and their descendants, but there are numerous individuals of the Affghan and

Baluch tribes, large, powerful, fair men scattered throughout India, who are seeking a livelihood in it as soldiers, traffickers and chapmen. The Pathan styles himself by the designation of Khan, but this is never permitted at courts, Khan being one of the honorific appellations bestowed by Indian sovereigns.

Moghuls assume the suffix of Beg. They are comparatively few, in number, are generally fair people, of a larger physical frame than the Arab-mahomedans and are all of unassuming manners. Of all these religionists, few have taken to agriculture, a very small number have fitted themselves for the civil situations available under the British Government, except in entering the disciplined armies of Britain as private soldiers, and forming perhaps one fourth of its Indian forces, very few of them have accommodated themselves to the changes which the British supremacy have introduced. They are essentially a people not belonging to the present time, but dwell on the past and look forward to the future, the religious among them meditating on the transgressions which have brought upon them the great reverses from the British arms and all, perhaps without exception looking forward to the time when it shall be God's will again to give them dominion. As a whole, they are earnest, ardent men, who can be easily excited. As soldiers, they are patient and have an "elan" in warfare which the steady calmer hindus in Southern India do not possess. Their religious feelings, for many years past, have been personal, and though dwelling and ruling in parts of India since eight-hundred years, and though holding an essentially proselytizing faith, they have not made many voluntary conversions from hinduism, either from the Arian family or from the non-hindu servile classes,—perhaps nothing has ever taken place from the efforts of mahomedans like the upheaving, which a few years ago occurred in the Punjab or has for some years past been agitating the races in the extreme South of the Peninsula. In India, as a body, they are illiterate and even as regards their religion, they have acquaintance only with a few formulas, in the Arabic language. Their book, the Koran, has been translated, into Persian, Hindustani, English, Tamil, Burmese and Malay, but in India, the Arabic is deemed the more sacred language, although so very small a number of them can read that tongue, so as to understand it, that in Madras with 70,000 Mahomedans it is supposed only four or five can read and understand the Arabic Koran. The spoken language

of mahomedans in India, is the Urdu or Camp tongue, called in the Peninsula, Hindustani, which, since the beginning of the nineteenth century, under British influence, has become a written tongue and a few books have been printed in it, but the educated of the higher classes all use Persian as their sole means of communication. Living as they have been amongst a body so highly educated as hindus are it is perhaps this want of learning that has blunted their proselytizing efforts, the only great change which their religion has effected having been amongst the Sikhs, whose faith is a modified hinduism and mahomedanism, and it is possible that the huge endeavours now being made by the British to educate the masses in India will in the end have greater success, for christianity, but in so saying it must be remembered that though the Arians have been pressing their brahminical creed upon the Turanian races for the past three thousand years, they have only got from some of them an outward assent to the brahminical forms, and a recognition of the institution of caste, and that everywhere throughout India, there are being worshipped a multitude of idols, of gods, and heroes, and devils and forms and incarnations, of whom the Vedas and Puranas make no mention, and whom the brahmins do not recognise,—the chief success that brahminism has achieved in India being the suppression of buddhism, a purer faith than its own. The Arian hindu is undoubtedly a meditative, reflecting, longing mind. But if the total absence of all extraneous objects could have attracted hindus to enquiry, the presbyterian churches and the mosques in India are all that could be desired. In Egypt, mosques are matted or carpeted, over which is spread the chandni, a carpet of white cotton cloth. But in India, the ordinary flooring is of stone slabs and usually the sole object to be seen is a small pulpit niche, the mihrab, and near to it, the number or two steps built on the wall next to Meccah, on or near which the Kazi, Mulvi, or Imam stand. There is nothing to distract the worshipper's attention and every one seems absorbed in devotion. The Revd Norman Macleod, D.D., (Eastward p 67) alludes to this, and says that the whole service imparts the impression of worship to an unseen God. It is perhaps something in their character, either original or acquired, or in their faith, or, perhaps, to their being accustomed to a more out of door life, that enables them so entirely to abstract themselves from their ordinary avocations and to engage with such reverend earnestness, in prayer. But every traveller

in the East must have seen mahomedans spread their carpets on the ground, or place their staff or sword in front of them, and bend their knee in lowly homage to their Maker, and, in all the bustle of a crowded bazaar or on ship board, remain apparently as much abstracted as if in a desert. Mahomedanism, adds the reverend author, owes its origin to Judaism and Christianity like them is derived from Abraham and is the worship of the one God, and christians, he thinks, are apt to undervalue the good obtained from its divinely reflected beams, which in some degree irradiate spots that would otherwise be in outer darkness. Mahomedanism was perhaps seen in its brighter aspects at Baghdad during the khalifat, and at Cordova, to which christians repaired for a liberal education. But, in India, it has ever been a mere ritualistic worship, with certain dogmatic formulæ in Arabic words the meanings of which are known to very few even of those acquainted with the words themselves. Distributed as these religionists are, from the Atlantic, through Africa, Europe, Arabia, Persia, India and China, to the islands of the Pacific, the acknowledgment of the Koran by all of them gives a certain similarity to their religious observances, but the customs of social life in all these varied nations are as varied as are the nations themselves. In India, there are ceremonies before and after childbirth, such as congratulations to the young wife on the seventh month after her pregnancy. As in the Hebrew law, there are forty days of ceremonial after the birth of a child when the "chahlam" or fortieth day ceremonial is performed, and on the naming of the infant and each stage of his development, in childhood, entrance at school, are all attended with certain forms. There is no time rigidly adhered to for circumcision, and grown up lads have not, unfrequently, remained unattended to, for in India the authorized time is spread over from the seventh to the fourteenth year. The coming of age of a girl amongst the hindus is made known by noisy music, a practice which is imitated by the humbler mahomedans, though educated and noble families abstain from all such rude rejoicings. Very few of the mahomedan women of India can read and still fewer can write. But in towns, amongst the better classes, all boys are sent to school, and their infant education is conducted in such a manner as ineffably to fix their faith. At the age of four years, four months, and four days, each child is taught to pronounce the name of God with much ceremonial,—with more

even than is shown when children of the Episcopal persuasion in England are confirmed, for the ceremony is made to last for days. The boy is then taught the first words that were revealed to Mahomed. They are recorded in the 96th chapter of the Koran which says "Read in the name of thy God, for He it is who hath created all mankind out of a lump of coagulated blood. And He is likewise that Almighty being who has blessed us with the voice of utterance and taught us the use of the pen," and, until the lad has read the Koran (many of them learning it all by heart and then receive the designation of Hafiz) and until they have been carefully instructed in all the books of their faith, the lad is not allowed to read any other tongue. The Reverend John Anderson and the Rev. Mr. Braidwood when in Madras spoke on this subject of the conversion of these religionists and, when made aware of this early education, they felt how almost ineradicably the dogmas of the mahomedan creed, must become fixed in the youthful minds.

In the mahomedan belief, there are five divine commands, (a) the confession of their faith, the creed or the Kulma, (b) Namaz (prayer); (c) Roza (fasting) during the Ramadan, (d) Zukat (almsgiving) to a tenth of their goods and (e) the Haj or pilgrimage. In their marriages the Indian mahomedans are united by the civil and religious rite, the Nikah, similarly with all other of their co-religionists, but to this has been added several days of costly ceremonial rejoicings (Shadi), which they have gathered from the hindus. Divorce, in India, is almost unknown, for at the Nikah, the dower which the bridegroom promises is a fabulous sum, which no one can pay and as, until paid, divorce (tallaq) cannot be concluded, no one in India is ever divorced. The Indian mahomedan of the population lives faithfully to his one wife, and polygamy is almost unknown, except amongst the loose liveis of great towns. The Ramadan month of fast, is very strictly attended to, but amongst the Sunni in the south of India the Maharam is a period of extravagant amusement, in which many non-hindu and many hindu races join. The Sunni, by far the majority, at this period grossly outrage the grief of the Shiah sect and scandalize the learned and devout. In Southern Asia, there is a great reverence shown to saints' shrines and foot marks. Amongst these are the tombs of the Piri-Dastagir, at Baghdad, of Kadirwali at Negapatam, and the foot prints of the prophet at the Kadam Rasul hill near Secunderabad, to which, multitudes annually resort. The great religious festivals, holi-

days, are the Ramzan month of fasting and prayer. The thirteen days of the maharram, a period of festivity amongst the Sunni and grief amongst the Shiah the Shaban feast of Shab-i-Barat on the 14th day of that month, and the sacrificial festival of the Bakī-eed, or Zihaj also known as the Eed-us-Zoha which is held in commemoration of Abraham's sacrificial offering up of his son, of Ishmail, according to mahomedans, and of Isaac according to hebrews and christians. Amongst those who crave for other aids to salvation, some seek the spiritual advice of a holy man, who is reckoned a pir, or religious teacher, and by certain secret words and signs are initiated as his Mauid or disciples. Others, even men of rank, adopt the *Darvesh* or *Fakir* life of the religious mendicant devotee, often attended with solemn rites of investiture, and followed by the severest of ascetic lives, but, the bulk of these mendicants are, in India, idle, dissipated men and a few are of very degraded manners. They arrange themselves into the followers of certain pir or spiritual guides, and those met with in India are the (a) Kadria or Ba-nawa, (b) Chastia, (c) Shutaria, (d) Tabqatia or Madaria, (e) Mallang, (f) Rafai or Guiz-mar, (g) Jalalia, (h) Sohagia, (i) Naksh-bandia and (j) Bawa Piray. All these have their own rules and customs, some of them are ascetic devotees, eating if given to eat, but never begging, some largely use intoxicating fluids and vegetable substances, some, as the Salik, have wives, the Majzub and Azad have no wives, and some of the Calendars marry and some do not. There are among mahomedans in India, good, devout men, leading pure and holy lives, earnestly seeking for the truth, cultivating literature assiduously, but they are compelled by the multitude of ordinary people to retire into the peaceful shade, as the purity of their lives begets for them the objectionable name of Wahabi. The mahomedans in India, when their limited education is considered, are but little superstitious. They believe in Mahomed as an intercessor and in the second coming of Christ. They believe that at death, the soul will be judged, and that the angels Nakir and Mankir will visit it in the tomb to question as to the life on earth. They believe that all must cross the Pul-i-Sirat, a bridge for the good but a sharp sword to the wicked. They believe in a purgatory called Iraf, and in places of future rewards and punishments and they picture the latter as fearful. But the idea of a heavenly place as enunciated in the Koran, is the grossest that any race has ever promulgated or

given credence to. The wild hunter tribes of America have sublime notions of a future life, hebrews were in conflict as to the immortality of the soul, the buddhists believe in absorption or annihilation as a release from all the troubles and trials of a mundane existence, and christians believe the future to be a spiritual life, but the doctrines taught in the Koran as to the occupations in heaven are wholly confined to that book and its believers. For, there, the Koran says (Ch. lv, pp 393-394) "they shall repose on couches the linings whereof shall be of thick silk, interwoven with gold and the fruit of the two gardens shall be near at hand to gather. Which, therefore, of your Lord's benefits will ye ungratefully deny? Therein shall receive them beautiful damsels, refraining their eyes from beholding any besides their spouses, whom no man shall have deflowered before them, neither any genius, (which, therefore, of your Lord's benefits will ye ungratefully deny?) having complexions like rubies and pearls * * * And besides these, there shall be two other gardens * * * of a dark green. In each of them shall be two fountains pouring forth plenty of water * * In each of them shall be fruits and palm trees and pomegranates * * Therein shall be agreeable and beautiful damsels * * having fine black eyes, and kept in pavilions from public view * * whom no man shall have deflowered, before their destined spouses, nor any genius * * Therein shall they delight themselves, lying on green cushions and beautiful carpets."

Such is the mahomedan heaven. Mahomed was a monotheist and an iconoclast. Before the final struggle, lifting up his voice he exclaimed, "May God be far from those who make the tombs of his servants places of prayers." The very last words he was heard to utter as he expired, as if in answer to an unseen visitor, were, "In the company of the blest on high."

Ali the son of Abu Talib, was the cousin and companion of Mahomed, also his son-in-law, he having married Fatimah, Mahomed's only surviving child, he was the first of the family of the Koraish to adopt the new faith. Notwithstanding these claims, and his personal merits and valour, on the death of Mahomed, in his 63rd year in A D 632, and in the eleventh year of Hejra, Ali was not recognized as his successor, but Abu Bakr was so elected, and after a reign of two years was succeeded by Omar who was assassinated in the twelfth year of his reign. He, again, was succeeded by Othman, and then, in A D 656, by Ali.

With Ali's rule severe political convulsions ensued. The earliest arose from the intrigues of Aesha and after such were settled, the governor of Syria, Moawiyah ibn Abi Sofian, threw off his allegiance to Ali and had himself proclaimed Khalif of the western provinces. An appeal to arms resulted in the defeat of Ali, after a desultory war of 102 days, and Ali then retired to Kufa in Chaldaea, on the banks of the Euphrates. The people of Karund in the south of Persia believe Ali to be a god, and they are styled the Ali Illahi. The shah sect of mahomedans consider that Ali ought to have been the first khalif. In Khorasan, Ali is usually styled Shah-i mardan "King of men."

The khajah sect, the entire Ismaili sects all worship Ali as an incarnate deity and the present incarnation (1867) is Aga Mahomed, a pensioner of the British Government at Bombay.

The tombs of mahomedans have usually been of earth, or unbaked brick, but every material is employed, and names are even engraved on the tomb. The tomb stone of a man is distinguished by a raised part in the centre, and that of a woman by a depression. The prevalent form in India of mahomedan tombs of the rich is a dark or black tombstone with verses of the Koran engraved on it, and covered by a cupola. Some of these are very magnificent. Those of the Adal Shahi dynasty at Bijapore and Gogri have attracted much attention, as also have those of the Brahamm dynasty at Gulbargah and Kutub Shahi dynasty at Golkondah. The cupolas at Roza where Aurangzeb is buried have not any display, and that of Aurangzeb is the least ostentatious. His daughter's tombs at Aurangabad is magnificent and many of the tombs at Delhi and Agra are great structures. That of Mumtaz Begum, known as the Taj Mahal is particularly remarkable. The reformers amongst the mahomedans consider that unbaked brick or earth should alone be used. The protestant christian doctrine that man, in all that he can do of good, is still without merit, is not shared in by the mahomedans, the buddhists or hindoos, who consider that a personal merit is gained by their good doing, and a mahomedan passing a funeral turns with it a short way and lends his shoulder to convey the body to the grave, thereby bringing a merit on himself. Mahomedanism has made little progress amongst the Bedouins. They still turn towards the sun, as he is rising and go through certain formulas of adoration and invocation. They despise pilgrimage and the fast of the Ramazan, and they sacrifice sheep and camels at the tombs of their

kinsmen. The northern part of Africa, and a seventh part of Turkey, are mahomedan, most of Turkish Arabia, all Persia, Afghanistan, the Khanats of Khiva and Bokhara, parts of Turkestan, much of N W India, parts of the Archipelago. The manners of the Bedouins are those of extreme licence, and community would better express their relaxation of the mahomedan law, than polygamy. Mahomed himself, in the Koran, acknowledged that he could make nothing of them, they are beings movable as water, and incapable of receiving a permanent impression. In the Jowli, the Arabs long abandoned the very name of mahomedanism, for a local fetishism and semi Sabæan worship, prayers to the sun and sacrifices to the dead. And though the Wahabi sect endeavoured to force it upon them in its most rigid form, they only met with a limited success.

Mahomedans are bound to recognise professors of mahomedanism, being enjoined to do so in the Koran, Do not say to one who meets you and salutes you, "you are not a true believer," and "O ye true believers avoid suspicions for suspicion is often a crime" are texts known to all and generally obeyed. Hence the pronouncing of the first part of the creed La illah il Allah, there is no deity but God, entitles the speaker to a favourable reception.

Mahomedans in India are divided into the four great classes, Syed, Shaikh, Moghul and Pathan. The Arab shaikh are of three origins, the Koraishiee, Mahomed's tribe, the Siddequee, Abou Bakr's tribe, and the Farooquee or Oomer's tribe. The Syed are all descendants of Mahomed through his daughter Fatmaah. The Moghul are of two countries, the Iranee or Persian and Toorianee or Turkish. The Pathan are mahomedans from Afghanistan. These classes may be and are often, indifferently of the shah or sunnee sect of mahomedanism. There are other small sects and classes, as the Nowaet, the Ghan-Mehdi, Ishmaelee, Lubbay, Bora, &c.

Mahomedanism comprises five divine commands. 1st — Kulmah parhna, or confession of faith.

2nd — Numaz karna, or prayers.

3rd — Roza iakhna, or fasting.

4th — Zukat dena, or alms-giving.

5th — Makkay ka haj karna, or pilgrimage to Mecca.

The principal places for minor pilgrimages are the tomb of Ali, called Mash'bid-i-Ali at Nej'f near Cufa; the shrine of Imam Hosein at Kerbela, and that of Imam Raza at Mush'bid in Kho-

rassan, but all the numerous Imam-zadeh and tombs of holy characters, throughout the country, are visited. The minor pilgrimage is termed a ziyarat, as distinguished from the haj or great pilgrimage to Mecca. Of the mahomedan saints of India are Abd-ool-qadir surnamed Gows-ool-Azam the great contemplative, born at Jal, near Bagdad, A H 471 (A D 1078-79). He was endowed with great virtue and with the gift of miracles, had many disciples, and is still much revered. He is called Shaikh, but was a Syed, i. e., of the race of Hosein, and died in A H 571 (A D 1175), aged ninety-seven years. Where he died or was buried does not appear.

Sooltan Suwui, at Balooch, four coss from Mooltan, was distinguished for piety and purity of manners, and died as a martyr with his brother, fighting against a troop of idolaters, and was buried with his wife (who died of grief) and his son, in the same tomb. Several miracles are related as having happened at his tomb. A camel's leg, when broken, was forthwith made whole, the blind, the leprous, the impotent were cured.

Shah Shums ood Deen, Damai, at Depaldal in Lahore. He is stated to have had even a pious hindoo among his disciples. The latter having expressed a wish to go and bathe in the Ganges, the saint directed him to shut his eyes, when lo! the hindoo found himself among his relations and friends on that sacred stream, in which (as he supposed) he bathed with them. On opening his eyes again, he straightway found himself beside his spiritual guide in Lahore. His tomb is guarded by hindoos, who will not resign their posts to the mahomedans. It is also related that some carpenters having proceeded to cut down a tree which grew near his tomb, split it into many pieces for use. Suddenly a dreadful voice was heard, the earth shook, and the trunk of the tree arose of itself, the workmen fled terrified, and the tree did not fail to resume its flourishing condition.

Qutub Sahib, or Qutub ud Din, near Delhi. He lies buried at Qootoob, a town near Delhi named after him, in which the late Shah Alum and many members of the royal family of Delhi are buried. His tomb is much frequented by pilgrims, he being one of the most renowned and venerated of the mahomedan saints.

Sheikh Baba ood Deen, Zakaria, born at Cctearon in Mooltan. He was a great traveller, having it is said, overrun Persia and Turkey, and a disciple for some time of Shihab ood Deen Sohumndee at

Bagdad. He died on the 7th Sufai, A H 665 (A D 7th September 1266), and was buried at Mooltan.

Fnuered-ood-Deen, born at Ghan-awal near Mooltan. He was so holy, that by his look clods of earth were converted into lumps of sugar. He was therefore surnamed Shakai-ganj, the treasury of sugar.

Sheikh Sharif boo Ali Qalandar, born at Paniput, a town thirty coss north-west of Delhi, to which capital he came at forty years of age, and became a disciple of Qoot-ood-ood-Deen. He devoted himself for twenty years to external sciences, after which he threw all his books in the Jumna, and began to travel for religious instruction. In Asia Minor he profited greatly by the society of Shams Tubreez and Mulvi Roomi. He then returned home, lived retired and worked miracles, and is said to have died A H 724 (A D 1323-24).

Shah Nizam ood Deen Anlia, by some supposed to have been born at Gazna, A H 630 (A D 1622-3), and by others in A H 634 (A D 1236) at Badaam, a town in the province of Delhi where he lived. He died A H 725 (A D 1325), and was buried near Delhi, hard by the tomb of Qoottoob ood Din. Through his great piety he was considered one of the most eminent saints of Hindoostan.

Kabir, a celebrated hindoo unitarian, equally revered by hindoos and mahomedans founder of the sect called Kabeeri Panthees or Nanak Panthees, from which Nanak, founder of the Sikhs, borrowed the religious notions which he propagated with the greatest success.

Baba Lal. A dervesh (and likewise a hindoo) who dwelt at Dhanpoo in the province of Lahore, the founder of a sect called Baba Lah. He held frequent conversations on the subject of religion with Dara Shikoh, eldest son of Shah Jahar, and brother of Aurungzeb, which have been published in a Persian work by Chandabli in Shah Julianee.

Shah Dola, died in the seventeenth year of the reign of Alumgeer, was at first a slave of Humayandar Sialkoti in Lahore. But he seems afterwards to have attained great affluence as well as fame, for, having settled at Ch'hotee Goojat (little Guzerat), he built tanks, dug wells, founded mosques, and bridges, and embellished the city. And no wonder, for though his contemporaries came to visit him from far and near, and made him presents of gold, money, and other objects, he returned to each three or fourfold more than he received. His generosity was such, that had he been contemporary with Hatim Tai, no one would have mentioned the name of that hero.

Syed Shah Zoohoor, distinguished by his wisdom, piety, and austerity of life. He built a small monastery of earth at Allahabad, which still remains. He was celebrated for his miracles, and by his prayers the most frightful chronic complaints were immediately removed, of which an instance is given in respect to the case of the governor of Allahabad, nawab Oomdat ool Moolk Ameer Khan. Zoohoor boasted of having lived three hundred years.

Sheikh Mahomad Ali Hasni Jilani his tomb is at Buxar, where he died in A. H. 1180 (A. D. 1766-7), distinguished for his science, learning, and literary talents. He wrote in both prose and verse with equal skill.

The two most successful religious diffusions which the world has yet seen, are buddhism and mahomedanism. Each creed owed its origin to the enthusiasm of a single individual, and each was rapidly propagated by numbers of zealous followers. But here the parallel ends, for the Koran of Mahomed was addressed wholly to the "passions" of mankind, by the promised gratification of human desires both in this world and in the next, while the Dharma of Sakya Mun was addressed wholly to the "intellect," and sought to wean mankind from the pleasures and vanities of this life by pointing to the transitoriness of all human enjoyment. Mahomed relieved this success by the offer of material or bodily pleasures in the next life, while Sakya succeeded by the promise of eternal deliverance of the soul from the fetters of immorality. The former propagated his religion by the merciless edge of the sword, the latter by the persuasive voice of the missionary. The sanguinary career of the mahomedan was lighted by the lurid flames of burning cities, the peaceful progress of the buddhist was illuminated by the cheerful faces of the sick in monastic hospitals, and by the happy smiles of travellers reposing in dharmasalas by the road side. In the Mahawanso, p. 219, it is mentioned that Upatisso, son of Buddha Das, built hospitals for cripples, for pregnant women, and for the blind and diseased. Dhatusena (p. 256) built hospitals for cripples and sick. Buddha Das himself (p. 245) ordained a physician for every ten villages on the high road, and built asylums for the crippled, deformed, and destitute. The one was the personification of bodily activity and material enjoyment, the other was the genius of corporeal abstinence, and intellectual contemplation. There is a curious coincidence also in the manner of the death of the two teachers. According to

the buddhists, Maio, the Angel of Death, waited upon Sakya to learn when it would be his pleasure to die. Some mahomedans assert the same of Mahomed. Azrail, the Angel of Death, entered the chamber of the sick man to announce that "he was enjoined not to interfere with the soul of God's prophet, without an entire acquiescence on his part."

In North Western India, a khetri convert from Hinduism, or any convert from Sikhism, is styled a Sheikh, and converts from inferior races are styled Moguls and Pathans.

The number of mahomedan sects is not great, as a broad distinction they are generally classed as Shi'ah and as Sunni, but the six bodies of sectarians who oppose the Sunni are classed by them as Rafziah, Kharijah, Jabriah, Kadriah, Jahmiah and Majmiah, each of whom are broken up into smaller bodies. Before the end of the first century, the ascetic turn and the theosophy inseparable therefrom, a combination styled among the Arabs Sufi, had arisen. This made rapid strides, and in the end of the third century, was already itself the subject of learned works, and the mahomedan world has carried this system to the utmost extreme. Then Sufi outstrip in every point of view both the hindu Jogi and the christian monks. The asceticism of the Sufi is more systematic, their pantheistic teaching deeper and more consistent, and their vices more enormous, than those of any other people. Spinoza and Schelling are left far behind by Ibn Arabi. But a deep metaphysical system may be found among all rude nations, for the supernaturalist has no need of learning, dreams suffice for him. Dr. Sprenger traces an essential element of early Moslem literature to the proud supremacy of Islam, and illustrates the position by the analogy of the British in India. He says — "One must live and labour in India to know to what grand aspirations this feeling of supremacy gives birth. The heroic defence of Lucknow and the daring siege of Delhi in 1857, prove to what a pitch of greatness such influences lead. The pride of belonging to the dominant nation makes every man a hero, and, even in the domain of mind produces under such circumstances, the elements of greatness. In the days of Muavia, the finest provinces of the world, yielding a revenue of 40 millions sterling, were at the feet of the conquering mahomedans. All non-Moslems were then slaves. And it was this that moulded the heroic character of the mahomedan world. Supremacy begot assurance — *Ferris's Journey* p. 210,

MAHOMEDABAD See Koh-i-nokieh

MAHOMED ALI, nabob of the Carnatic, was recognised by the treaty of Paris as an independent sovereign. He had several brothers, Abdul Rahim, Abdul Wahab Khan and Mafuz Khan. His father, Anwar ud-din, when about seventy years old, fought and fell at the battle of Amboor, in 1749, on which Mahomed Ali fled to Trichinopoly. After the defeat of the French in the Carnatic, Mahomed Ali, succeeded to the throne, and was recognised by the treaty of Paris in 1763. From that time till his death in 1795, the Carnatic was occasionally under his rule and at times under the civil and military administration of the British. In 1795, he was succeeded by his eldest son, Oomdat-ul Umia, who died in 1811, when the British put aside Oomdat-ul Umia's son, Ali Hussain, and placed his nephew Azim-ud Dowlah on the throne. The British in 1856, on the demise of Mahomed Ghous, grandson of Azim-ud-Dowlah, finally abolished the titular nabob, from which followed long but unsuccessful efforts to seat prince Azim Jah, the second son of Azim-ud Dowla on the musnud — *Malleson's French in India*

MAHOMED BIN ABDALLAH, See Khalit

MAMOMED-BIN-KASIM, a general of the caliph Walid, about A D 718 overran Guzerat and was advancing on Chetore when he was met by Bappa and entirely defeated.

MAHOMED SHAH, emperor of Delhi, was the son of Shah Jehan and succeeded Raffia ud Dowlah. He was raised to the throne by the two brothers Abdallah and Hussain Ali, but one of these brothers subsequently fell in battle against Mahomed Shah, and the other was assassinated by his courtiers. The reign of Mahomed Shah was indolent and irresolute. He offended Nizam-ul-Mulk who invited Tamas Kuli Khan to invade India. Tamas Kuli Khan defeated Mahomed Shah, in 1739, but reinstated him on his throne receiving the cession of all the provinces west of the Indus river, Mahomed Shah afterwards ruled timorously. In 1748, he sent his son Ahmed Shah and his minister Kam-ud din, against the Abdalli but his minister was slain, and in April Mahomed Shah, on hearing of the death, died of convulsions. *Ome*

MAHOMED TAGHALAQ Juna Khan, upon the death of his father, mounted

the throne under the name of sultan Mahommed, but he is known in history as Mahomed Taghalaq. A mad expedition in 1337 was, according to Firishta's account, directed against China. Of the force, which both that historian and Ibn Batuta estimate at one hundred thousand horse besides infantry, scarcely any returned to tell the tale, except the few who had been left to garrison posts in rear of the army. It is difficult to guess by what point this host entered the Himalaya, nor has the town of Jidiah at the base of the mountains, mentioned by Ibn Batuta, been identified, which would ascertain the position. He maintained an enormous royal establishment analogous to the Gobelus, or weavers in silk and gold brocade, to provide stuffs for his presents and for the ladies of the palace. He is said to have been the most elegant and most accomplished prince of his age, but full of wild schemes of aggrandisement — *Malleson's French in India Not et Extraits, an 183 Yule Cathay II p 412 Briggs, The Nizam*

MAHRATTA GOVERNMENTS IN INDIA, have been in number seven, viz

(1) *The family of Seraj* rajas of Satarah, founded in A D 1644 by Shah-ji, a subadar of the Carnatic under Aurungzeb, bestowing jagires on his sons, giving Tanjore to Ekojee. His son Sivaji, the founder of the Mahratta empire was born in 1627, he was rigid in matters connected with the hindu religion. When only 16 years old, he headed a band of people residents of the Mawal or ravines of the ghats, and subsequently by incessant predatory excursions largely extended his possessions. In 1664 he plundered Surat. In 1659, he treacherously stabbed Afzul Khan, a general of the Adil Shahi family at an interview. He was alternately making aggressions on the Moghul territories and making treaties with their ruler Aurungzeb, and at length, he completely routed in a pitched battle an imperial army of 40,000 men whom Aurungzeb had sent under Mahabbat Khan. On the death of the king

of Bejapore, in 1672, Sevaji annexed all the Concan with the exception of the English, Portuguese and Abyssinian settlements, and assumed royalty at Raighur in the 6th June 1674, and for the next 18 months he was engaged in extending his possession to the south, exacting the Choutna or quarter share of the revenues and annexing the dominions of his half brother Venkaji. He suddenly died in April 1680 at Ranee. From this time, a troubled period of usurpations occurred till 1707, when on the death of Aurungzib, Sivaji II, son of Sambha, nicknamed Shao-ji, was released and crowned at Sattarah in March 1708. His nominal successor was Ram Raja 1749, but the power rested with the Peshwa or minister, the last of whom, Bajirao, surrendered to and was pensioned by the British in 1818. Pertabsinh or Sinh was re-instated at Sattarah by the British on April 11, 1818, but he was dethroned in 1840, and sent to Benares, his brother being raised in his place, and the family became extinct with this brother's demise.

(2) *The Peshwas of Poonah*, were hereditary, and after the reign of Sivaji II, in 1749, they assumed the power of the Sattarah sovereigns in the military government established by Sivaji the first in 1669. Their open power lasted from 1740, when Balaji Bayee Rao, succeeded his father and died after the battle of Paniput, until 1818, when the next Bajirao yielded to the British on the 3rd June and was pensioned. Nana Furnavis, Karkun of Madhuj Rao Belal, died November 1771.

(3) *The Bhonsla Rajas of Nagpur*, commenced in 1734, when Raghoji Bhonsla was nominated Sena Sahib Suba or general of the Maharatta confederacy. The family became extinct in 1865 during the administration of Lord Dalhousie, on the demise of Goozui, grandson of Raghoji, who, in 1818, had been seated on the throne when Mudaji (Appa Sahib) was deposed. Appa Sahib having succeeded Paisoji, an idiot, whom he strangled.

(4) *The Sindia family*, now the Gwalior rajahs, came from a family near Satara. The first, 1724, Ranojee Sindia was an officer in the Peshwa's army. In 1825, Baiza Bai, widow of Dowlas Rao, adopted Jankoji, who assumed the reins of government in 1833.

(5) *The Holkar family* rose from Mulhar Rao Holkar 1724, an officer of note in the Peshwa's army, and obtained the Jaghne in Malwa in 1750. The names of this family most familiar to history are those of Ahilya Bai in the middle of the 18th century. Jcswant Rao Holkar an illegiti-

mate son, who (1797) maintained predatory rule, and in 1805 died insane. In 1811, his widow Tulsai Bai, adopted his illegitimate child Mulhar Rao Holkar with whom was fought the battle of Mehdapur in 1818. In 1834, Marhand Rao an adopted son was dispossessed by Harri Holkar, the late chief.

(6) *The Garhwal family*, now reigning at Baroda, in Gujerat, sprung in 1720, from Damraj Gaekwar (Shamsher Bahadur) an officer under Khandi Rao Holkar, and they ruled till the treaty with the British Government in 1802. The Marathas are supposed to have been originally a race of mountaineers, in Baglan on the crest of the ghauts, and cultivating the fertile valleys or mawals, and the country called Maharashtra, which is first mentioned in Indian history in the Mahawanso, probably obtained its name and received a distinctive language from the existence of a Marathi dynasty at some period not recorded in history. According to Coleman (Myth p 285) the original Mahratta state comprehended a country of great natural strength, interspersed with mountains, defiles, and fortresses. The best modern accounts he says, lead us to suppose that it included Kandeish, Baglan, and part of Berar, extending towards the north-east as far as Guzerat and the Nerbuddah river. To the west, the Maharattas possessed the narrow but strong tract of country which borders on the Concan, and stretches parallel with the sea from near Surat to Canara. This country is well calculated for the maintenance of defensive warfare, but that the people were not of the military caste is proved by the names of their particular tribes, the Koonbee, the Dangar, and the Goalah, or, the farmer, shepherd, and cow-herd, all rural occupations. The extensions also, of the Rajpoot and Maharatta mark a different origin. The former is remarkable for the grace and dignity of his person, the latter, on the contrary, is of diminutive size, in general badly made, and of a mean rapacious disposition. The Maharatta brahmans, also, differ in their customs from their neighbours, with whom they will neither associate nor intermarry. Major Moor, however, says (p 241) that the Maharattas are called Maharashtra in Sanskrit. Maha is great and illustrious, and Rashtra, synonymous with Rajaputia, implies their royal descent, and their name also indicates that they were acknowledged to belong to the second class on their arrival in India, and of course, that they were not brahmans. When these adventurers had obtained power and influence, they assumed the superior title of Maha-Rashtra, and by striking out such letters as become useless,

when brought to the standard of the spoken dialects, we have Mahāratta, or Mahratta, similarly as we have Surat, from Surasṭra, and Gujarat, from Gujra Rashtra. They have no physical resemblance to any of the Rajput tribes. It is certainly extraordinary, that a nation so numerous as the Mahrattas should have remained almost wholly unnoticed in Indian history for so long a period as from the first mahomedan conquest until the reign of Aurungzebe, but it appears probable that prior to the time of Sevajee, the Mahratta country, like the other parts of the Deccan, was divided into little principalities and chiefships, many of which were dependant on the neighbouring mahomedan princes, but never completely brought under subjection. Sevajee, the first Mahratta commander, who combined the efforts of these discordant chiefs and tribes, was born in A. D. 1626, and died in 1680. His genealogy being obscure, his adherents were at liberty to invent the most illustrious, and accordingly traced his origin from the rana of Odeypoor (the purest of the Khetri caste), who claim a descent, equally fabulous, from Nowsheerwan the just. But towards the close of the 18th century, they suddenly started on a career of conquest during which they obtained the control over a great portion of India, and established governments of shorter or longer duration at Poona, Sattarah, Gwahar, Nagpoor, Indore, Gujerat and Travancore. Four-fifths of its words have been adopted from Sanscrit. That Mahrattas even of the highest rank have not a dignified appearance. They are hardy and active, under the European standard, and well proportioned with dark skins and irregular features and the women as a rule are not well favored. They are sturdy men, rude, rough, boorish and illiterate, but patient under labour. Their fields and gardens are kept in excellent order and they have formed good soldiers, capable of endurance, much of their tactics having resembled that of the Parthians, though even in this, Lord Lake's energy overcame them. They have all outwardly assimilated to the brahminical teachings, and have amongst them a brahminical body, who are considered to apply brahminical tenets as to caste, more stringently than any other brahmins of India, the bulk of the Mahratta nation however, are only of the Sudra caste. Their chief objects of worship are certain incarnations, or images, of deified mortals, known as Etoba and Kandoba, at Panderpool, Jejuri and Malhagaon, but the village deities receive a large part of their attention in times of sickness or peril. Brahmins state that Siva became

incarnate in Kandeh Rao for the purpose of destroying an oppressive giant named Mammal, at a place in the Carnatic, called Pehner. The giant Mammal made a most desperate defence against Kandeh Rao, but was at length slain whereupon all the oppressed subjects of this giant paid adoration to Kandeh Rao, to the number, as the story goes, of seven crores of people, whence this avatara is called Ychi-khut yulam Tamil? meaning seven, and khut, or koot, being a Mahratta pronunciation of (100,000,000) a hundred lakh, or ten millions. A handsome temple, dedicated to the worship of this avatara, now known as Kandoba, is at Jejuri a town of some extent about thirty miles to the south east of Poona. It is situated in a beautiful country, on a high hill, and has a very commanding and majestic appearance. The temple, walls around, and steps up to it, are well built, of fine stone. The musicians, or musical guls attached to it, are said to exceed two hundred in number. A great many brahmins reside in and about the temple, and many beggars. Kandoba is not an uncommon name with brahmins and other Hindus for instance, Lakpat Kandeh Rao.

The efforts of the Mahrattas in emancipating themselves from a foreign yoke, were neither guided nor strengthened by any distinct hope or desire. They became free, but knew not how to remain independent, and they allowed a crafty brahmin to turn their aimless aspiration to his own profit, and to found a dynasty of 'Peshwas' on the achievements of unlettered sudras. Ambitious soldiers took a further advantage of the spirit called up by Sevajee but as it was not sustained by any pervading religious principle of action a few generations saw the race yield to the expiring efforts of mahomedanism, and the Mahratta owe their present position, as rulers, to the intervention of European strangers. The genuine Mahratta can scarcely be said to exist and the two hundred thousand spearmen of the eighteenth century are once more shepherds and tillers of the ground. The Mahratta is equally averse to the European system of warfare, and the less stiffened Gooikha has only had the power or the opportunity of forming battalions of footmen, unsupported by an active cavalry and a trained artillery. The attention of the Mahratta sudra, for nearly two hundred years, from the middle of the 17th up to the 19th centuries was directed solely to foreign conquest, and nearly all India from Cape Comorin to Delhi yielded the fourth part of the revenues as tribute to their kingdoms. During that period of war, agri-

MAHRATTA GOVERNMENTS

culture cannot but have been neglected and in the early part of the present century they were characterized as mountaineers, herdsmen and soldiers, but essentially bad farmers. For the past forty years however they have been settling down to their fields, and are now, extremely well to do agriculturists, for the great bulk of them follow this pursuit, and are usually designated the Kunbi. The origin of this name is uncertain, but the first mention of it was in its application to a branch of the Mahratta people inhabiting the town and country of Lony, situated on the mountain range, about 12 miles from Poonah. In the Mahratta country, generally, Kunbi now-a-days, however, is the term, by which the cultivators are designated, and the neighbouring Cannese and Telugu races apply it similarly. The Mahrattas bordering on the Telug and Cannese nations in the south-east are taller and better made men than those around Ahmednuggur. Speaking generally, the race is shorter, more robust and darker in complexion than the races of northern India, or even than the Tilung people, and their appearance is so dissimilar to that of the Arian families as to preclude the belief that they have come of that stock. Even the brahminical race amongst them short, dark, and broad framed, is entirely dissimilar in physical structure from the tall fair Arian people who form the brahminical race of the Telugu and Tamil countries. The Mahratta people have amongst them, outside every village, the panah or dher, whom they designate as Mhar, the tanner who is called Mhang, and inside the hamlets dwell the Dhor, or currier. There are still several petty chieftains of this race, with almost regal powers, amongst whom may be mentioned the branches at Sundoor, Gungundeighur and a few miles from Kulladgh of the once powerful Ghorphara family. In Hindustan and Bengal the republic or village-system has been greatly disturbed by the repeated invasions and conquests of foreign races and the long period of mahomedan rule and the village officers and servants are less complete. But, even there, the headman and the accountant are almost invariably retained and some of the other officers and servants are also to be found and in most instances the offices are hereditary, are capable of being mortgaged or sold, are paid by recognised fees and perquisites, by allotments of grain at the time of harvest or sometimes by portions of land held rent free or at a low quit rent.

In the Cannese and Maratta countries the village authorities are still ruling. They greatly vary in number and in duties,

MAHRATTA GOVERNMENTS

but there are office-holders who claim to be descendants of the persons who first settled and at dates long before the oldest of the European dynasties were established. Potails are in the Mahratta country, who trace their descent from persons who settled a thousand years ago and more in the villages they now hold and the same is to be found amongst the Reddi and Ganda of the South and East, it is this that preserves the Indian villages from the changes which would otherwise have occurred from the invasions of the Aryan, Brahmin, Jat, Persian, Tartar, Rajput, Arab, Moghul, Afghan, Portuguese, French and British. Amongst the Mahratta, office-bearers are known as Balute or Alute, amongst the Cannese, as Akanni, Ayaguru or Ayangandlu. The following municipal officers may be enumerated:

Head office, styled Potal, Reddi, Ganda
 Assistant do or Changala
 Accountant, or Kalkam
 District do or Despauli
 Chandari, or convener of trades
 Money-changer, assayer, gold and silversmith, or Potadar
 Barber or Nharu or Nai
 Washerman, Parr, Dhobi
 Temple servant, or Gurao
 Carpenter or Sutar
 Potter or kumbhar
 Gate-keeper or watchman, usually a panah, or Mhar, Mhang, Ramusi or Bhul, called eskar, veskar, tallan
 Waterman do do do
 Astrologer or Josi
 Shoemaker or Mhang
 Bhat or Bard
 Maulana or Mulla, a mahomedan priest
 Coin meter
 Blacksmith
 Notary
 Sweeper
 Tailor
 Physician
 Musician

The Mahratta village head, the potail, rents the lands to cultivators, collects the Government land tax, and forwards it to the Tahsildar. He is also the Civil Magistrate, and settles petty civil matters to the extent of two mounds of grain, or four or six rupees and sends higher claims to the tahsildar. In criminal matters he is only the Polree, and sends all to the Amin. In lieu of pay for the above services, the potail is allowed from 25 to 50 bhigahs of land, rent free, the land tax being about Rupees 3 or 4 the bhigah. For the cultivation of his rent free lands two to four bullocks would be

needed because, from 10 to 16 blugahs, according as the rains are heavy or light, are all that a pair of bullocks can get over. There are, generally, two to four potails in a village, not always of the same caste, for instance the village of Khanpur, zillah of Nandari, has four potails, two maharatta, a Canarese speaking lingaet, and a Kulkaigali, and there are a few brahman and mahomedan and panah potails, but a christian potail is unknown.

The northern limits of the Marathi language stretches on the sea coast from the Kolwan hills or country of the Kol, near the Portuguese settlement of Daman, above the ghauts in a north-easterly direction along the Satpura range, parallel to the Nerbudda, intermingling with the Gujarati, about Nandobar, in the jungly valley of the Tapti. It is spoken throughout Betal, in the open parts of the Nagpur territories, and on the whole of its eastern border it abuts on the countries and languages of the Gonds. From Nagpur, the Marathi trends to the south-west, and near the Chaubasha and Si-bhasha villages of Dongopura and Murg'h to Oodghu, from thirty miles west of Bedel to Sangam and Sadasheepet, it meets with the Telugu and Canarese, touching in advance nearly on Bijapur and Shankashwar, and thence trends south-westely to the coast at Sidashghur, skirting the western boundary of the Canarese. From Daman in the northern Konkan, Marathi runs down the coast to the neighbourhood of Goa, both below and above the coast. It there meets the Konkani, which runs nearly as far as Mangalore. And the southern limits of this mixed language is a village four miles north of Upi or Oodapi near Condapore, where Tulu or the language of Canara begins.

Konkani, the mixed Konkani tongue, however appears to be only Marathi with a large infusion of Tulu and Canarese words, the former derived from the indigenous inhabitants of Tuluva of Canara, the latter, from the long subjection of this part of the Konkan to Canarese dynasties above the ghauts. Mr H Mogling however mentions that the Konkani speaking brahmans of Mangalore, consider it quite distinct from, though cognate with, Marathi. Its limits extend from Goa below the ghauts, to the village above mentioned north of Upi. From this part of the coast in northern Canara, a diagonal line, running in a north-eastern direction towards Bedel, marks the boundary between Marathi and Canarese, of the latter at least above the ghauts.

The Guzerati language spoken in the peninsula of that name, is occupied by Rajput tribes, Gujari, Katti, Kuli and Kun-

bi, all claiming a distinct origin. Gujarati is bounded by the Maiwadi, a little to the north of Deesa, to the north and east by the Hindi or Rangri Basha of Malcolm, in Rajputana and Malwa respectively, and in the south it dovetails with Marathi in the valleys of the Nerbudda and Tapti, ending at Hamp on the former river and running into Nandobar on the latter.

The Maratha race largely worship deified heroes. There is a celebrated idol, termed Massoba. In the Chanki, pass, in the Lakenwara range, which forms the water-shed between the Godavery and the Tapti about 10 miles north of Aurungabad, there is a shrine of this deity to which from a circle of a hundred miles, people of all castes resort, brahman, sudra and dher, but chiefly the Maharatta kunbi. The Jatra is held in the month Chaita, and lasts for four days, during which many sheep are offered in sacrifice. It is in the northern side of the pass, a mere block of stone, with smaller stones at its foot all smeared with red lead. The objects of their pilgrimage are wholly personal, beseeching the deity to give them, or preserve them, children, their flocks and their food. The Mahratta people profess brahminism but, amongst them is a more general amount of demon, spirit, fetish, totem, shaman, and hero worship than is observed amongst the other races of the peninsula. The deities Kandoba and Hanuman, are to be seen in every village south to the Tambudra, and blood sacrifices of sheep and fowls are largely made. Hanuman is the chief of the village gods, and is invariably smeared over with red lead, which is also applied to every bit of stone or wood that has been erected into a fetish god. There has seemed amongst them, also, a more extensive polytheism, than prevails in any other part of India, and an introduction even of the Semitic and Christian names. Between Ellichpore and Oomraoti, the panah races are ordinarily called Krishna, a variation of the word christian, all along the tract southwards to Oodghu the Bawa Adam, near Punderpore, is largely worshipped, and the Jabial Abial, worshipped in east Betal, is evidently the Gabriel or Jibrial of the Semitic races. Even amongst the Kunbi race, who profess brahminism, the hindoo deities Siva and Vishnu are little heard of and with consent the editor put up for two days in the temple of the village of Assaye to which the villagers came at the usual periods to worship Hanuman and the serpent, and the officiating priest to wash and ornament its lingam. An officer of Sindia's artillery who had fallen in the battle of Assaye had been

MAHARATTA GOVERNMENTS

buried beneath a tree, and there the villagers continue to worship his spirit. Sickness is usually attributed by them to the influence of a malignant spirit, and all through the Mahiatta speaking districts the practice of the "Bolwan" prevails, viz, the ceremony of propitiating the Bhuta or spirits who have entered a village, inducing them to leave the village and conducting them across the borders with music and a procession. The conductors often move to the next village and thereby cause intense fear and anger, as the moribific influence is supposed to be conveyed to it. Ai, mother, equivalent to the southern Ammun, is largely worshipped in the form of a rude stone smeared with red lead, and her temples are to be seen in lone places, passes and defiles. The Mahiattas have public recitations of histories or stories of the gods, called Katha (qu Kabta) as the Buimans have the Pui, a theatrical representation. The Gondana or Gondala of the Mahiattas is a tumultuous festival held in honour of Devi, perhaps the same as Gondhal.

Since Lord Lake's defeat of the Mahiattas near Delhi, and that by Sir Arthur Wellesly at Assaye, the power of the Mahiatta chiefs gradually decreased. The privileges of Mahiatta Sudais under British rule date from the time of the reduction of the Deccan about the year 1819 in the war with the peshwa Bajee Rao. The Sudais were high officers under the raja of Sattara and the peshwa. Their titles correspond to those of Quarter Master General, Keeper of the Records, Prime Minister, Private Counsellor, &c. Some as the Vinchulkar in Ahmednuggur zillah and the nawab of Sadarnui near Dhariwar held such offices under Aurangzeb and other moghul emperors. A few of the lesser Sudais were feudatories of smaller local chiefs. The grasping policy of the last peshwa, Bajee Rao, made most of them alarmed and discontented. Accordingly, after the battle of Kukee, most of them were willing to accept the liberal terms offered in the proclamations of Mount Stuart Elphinstone and the other great men who reduced the different provinces. They were as a rule guaranteed the enjoyment of their ancient rights and privileges by treaties entered into by the British Government and still in force. These treaties bind them to provide a contingent of troops, to make adequate police and judicial arrangements in consultation with the Political Agents, for the extradition of criminals. They have generally exclusive civil and criminal jurisdiction in their own territories, in many cases, however, as for example in those of the first class Sirdars

MAHRATTA GOVERNMENTS

under the Political Agent of Sattara, the treaty provides that in grave offences such as murder, the trial shall take place before the Agent. They are allowed to make their own Revenue Settlements and are not bound to give leases for a definite term as the British Government is by the Survey Act. The amount of assessment and other taxes they are entitled to collect is unlimited. This is a source of constant complaint among their ryots who envy the secure and liberal terms given by the British government. The political privileges of Sudais are the following. By Regulation 29 of 1827 it was provided that suits against certain persons of rank should not come under the jurisdiction of the Civil Courts. Three classes of Sudais were thereby established and three several modes of procedure defined. An Agent of Government, now styled the Agent to the Governor for Sudais in the Deccan, was appointed to try such suits against them as would ordinarily be cognizable by the Judges of Poona or Ahmednuggur. The First Class being persons of the highest consideration under the Peshwa's Government, reference is to be had in the most ample degree to their former privileges as by usage and custom enjoyed. No decree of the Agent against a Sirdar is to be executed without the order of the Governor in Council to whom also plaintiff may appeal, a further appeal to the Queen in Council being open to either party. Suits against the second class are conducted with the same regard for former privilege and usage. The Agent is also to consider the present means of the Sudar of discharging the debt and to apply equity. Appeal lies to the superior court of the Governor in Council but the decree may be executed against defendant by the Agent himself. The final appeal is as before to the Privy Council. Many of the Sudais had contracted heavy debts or lost their property in the war with the Peshwa, hence the provision for considering their means in the decree. As the Agent is an Administrative as well as a Judicial Officer, he has ample means of ascertaining their circumstances. The third class of Sudais are entitled to a similar but rather less regard being had to usage and custom. The strict rules of procedure are, if necessary, to be relaxed in their favour especially as regards decree, appeal lies to the High Court and thence to the Privy Council, but it is the practice of the Governor in Council, as a Special Court, to refer appeals for the opinion of the Judges of the High Court. The Agent for Sudais is the Judge of Poona. He sits as Agent every Friday, both as a political and

judicial officer By a later Act, the Assistant Judge is made Assistant Agent and can try original suits up to Rs 5,000 The Sirdars of the zillah of Dhawal are exempted from the jurisdiction of the Civil Courts and subjected to that of the Political Agent of the Southern Marat'ha country whose procedure is the same as that of the agent for Sirdars in the Deccan Formal respect is shown to Sirdars, all process sent to them is posted in a silk envelope covered with tissue, and mandates take the form of polite requests The personal privileges of Sirdars consist in formal courtesies varied with each class Then precedence in Durbar is exactly settled If His Excellency the Governor invite a Sirdar of the 1st Class to attend a Durbar at Poona the Assistant Agent has to meet him at the entrance to the city, and escort him to his house This has to be done no matter at what time of day or night the Sirdar arrives, to meet one for instance at the Railway Station long before day-light A Sirdar of the 1st Class is presented in Durbar by the Agent himself, the other classes by the Assistant Agent The Sirdar on arrival is expected to pay a visit to the Agent as representing the Governor, the Agent returns this visit but the Assistant Agent may not go unless either the Agent or the Sirdar ask him There is also an exact etiquette, varied with much nicety for each class as to the manner the Agent or his Assistant receives the Sirdar, presents him with pan-supari and attai, and invests him with garlands The dignity of the Sirdar and respect to the Sirdar have both to be maintained in presence of beholders who regard any variation of etiquette as significant of something good or bad They are not entitled to salutes as some rajas and nawabs are Sirdars are also exempt from attendance in the Civil Courts and their evidence is taken by a Commission They are of course entitled to chairs in all Courts and Sirdars of the 1st class sit on the judge's raised dais The process of Criminal Courts in the British territories does not run in those of a Sirdar, and separate arrangements have to be made for the extradition of criminals They stand on the footing of Foreign States under the Civil Codes, and as process does not run, witnesses in a Sirdar territory are examined by Commission The political privileges of Sirdars are decreed by legislation, their personal privileges by orders of Government Both originated in the conciliatory policy applied by Mount Stuart Elphinstone, by Mr Chaplain, the Commissioner of the Deccan and the other officers of the Company who settled the

country after the fall of the Peshwa Old natives speak of these men as "having made the Deccan bandobast" Besides Sirdars, there are other classes who hold land, by different kinds of chivalrous tenure They are called Jagheedars, Sam-jamdar and Inamdars They may be Sirdars not included in the list of Regl 29 of 1827 In such case, the Government is empowered to grant them sununds to exercise judicial functions If the Sirdar is of the 1st or 2nd Class, the appeal lies to the Agent if of the 3rd Class to the Zillah Judge—*Thomas Prinsep's Antiquities*, p 286 and 287 *Moor*, pp 241, 424 *Cole Myth Hind* pp 189, 285 *Wilson's Glossary of Indian Terms* See Hindoo, India, Inscriptions, Kandeh-Rao, Kattayawar, Kili-Kati, Kunbi, Lake Reddi

MAHSEER ROHOO, or "Bastard Rohoo" is a noble carp-like fish with very large golden scales, vermilion fins and tail, and brilliant olive green coppery hued eyes It is a mountain fish apparently a cross or hybrid between the true Mahaseer and the fine Cypinus called the "River Rohoo" In the cold season, this splendid species descends to the low country and warm rivers of the plains In the cold season to the great rivers of the Punjab, the Sundah, rivers of Kemaon, the Raptree at Goruckpoor, the backwaters and main stream of the Upper Burampooter It is very widely distributed and is a quiet peaceful fish remaining in small shoals around sunken rocks, and fallen trees in deep eddying pools It is a fish of prey, the most sport is had and the finest specimens are taken with a paste made of coarse flour and coarse sugar kneaded with ghee and a little chopped cotton, also with the ripe fruit of *Ficus Indica* This species frequents sacred ghats and steps of temples where it obtains easy and plentiful pabulum from brahminical hands, the Pind Pooja with its concomitant balls of rice, flour offerings and ficus fruits being greatly attractive Large specimens (up to 20 pounds) are taken about the temples at Hurdwar,—in Upper Assam, at Bagesur in the Sundah,—and in many other parts of India approaching the mountains One of more than 40 lbs, was taken at Goruckpoor in the "Raptree", they pull splendidly, the captor hooked it at 3 o'clock P M, near a pool where great religious offerings are made, and the dead are burned, but it was not landed till after dusk, a lighted torch assisting the operation, the commune vulgus rather impatiently put down the unseen monster for a "Rachis" or "unclean spirit" and re-

peatedly advised a fracture of the tackle so as to part company effectually. It was a noble specimen. The great peculiarity of this species is the unusual breadth and solidity compared to length. He is one of the best or most profitable fish for the table—rich, firm and flaky, must be fed, and that can be done cheaply with all the berries of the ficus tribe and many other gratis products. This fish, after a short time, with all the cunning of the carp species, evades the hook, flattening the paste gradually with his nose, it is then sucked off in fragment. Always change ground from day to day for this reason, any large number of good specimens are never caught, they are so crafty and stout in their resistance when hooked.

Mahaseer, the *Megalocephalus* of Grifiths, as its hindoo and Greek names denote, Big Head, is the striking feature of this otherwise handsome, and delicious fish. Voracious as an English pike, many a one is taken with his own species while spinning in the heavy rapids of the upper Burampooter, the Ganges, and the Tohee river in Jummoo territory. He grows to an unlimited size and I am afraid to tell you his probable weight and dimensions, let it suffice, says a writer, that I have been three times played out, knocked down, and pulled rudely about for hours, with tackle come from London, the line 256 yards costing 6 guineas, being water proof 3 plat silk. These leviathans of the fresh water completely conquered me although in one instance I had a canoe, and changed boatmen more than once. He is a tyrant among the weaker, and will eat every fish he can swallow, but loves change of food, rising greedily at all large, and gaudy flies—natural and artificial, and will also take wild fruits, and sweet pastes, when the angler is trying for other fish, pulls and rushes very violently at first—and then moves down sulkily to the bottom, where he will remain for hours together if not opposed, swarms in all the mountain streams of India, when they retain water in the hot season, the Ganges, Jumna, and Burampooter hold the largest, next, the great rivers of the Punjab, but this fish is often met with running to a huge size in small streams with deep pools. In the Punjab, just after the annexation, there were largely stocked ponds, pools and reservoirs called “Mutelhyal,” abounding in kinds of fish of which this was the chief—they were considered sacred and fed daily by sound of bell or clapping of hands, and in these ponds or pools, (fed by springs), attained a fine size, but the golden haired invaders have ere this cooked most of these holy pets.

The Mahaseer will certainly thrive in lakes and artificial waters, kept up by springs or subterranean streams provided only the temperature and elevation are of reasonable amount. In Ninee Tal (situated in Kemaon) a very deep blue sheet of water with subterranean influx, no Mahaseer or any other fish but one lean looking lanky kind will live, and these degenerate creatures were placed there by human hands. Elevation 7 or 8000 feet above the sea. Descending about 1000 or 1500 feet to “Bheem Tul”—the said degenerate improve in appearance and size, but no Mahaseer, or anything else in its deep cold crystal. Lastly, descending to about 3 or 4000 feet elevation above the sea. Tropical vegetation abounds, and the waters even are warmer. The torrents swarm with a universe of scaly infants of all sorts and sizes and “Mullooa Tul,” a fine natural tarn surrounded on three sides by precipices, its dark surface shaded by overhanging trees, rocks and bushes, and its waters well defended by snags and projecting logs, displays in the multitude and size of its rippling circles, a swarm of scaly tenants of the higher orders, it is well and naturally stocked with the Mahaseer and its congeners, which sometimes rise well at the fly from a boat, for otherwise the tarn was unapproachable. In Cashmeer, at Islamabad, is a sacred collection of fish tanks, terraced one above another and forming a delightful succession of cascades, they are fed by a rivulet entering from a swamp behind the town, in any one of these four or five reservoirs the water is not 4 feet deep, but clear as crystal. Goolab Singh used to bestow daily 2 or 3 maunds of flour to the piscatory collection, while a writer mightly with hook and line abstracted the best fed, and best flavoured specimens of the usually coarse Hill Trout he ever tasted. Feeding decidedly improves fish as it does flesh and fowl, producing flavour and plumpness combined. The Mahaseer is a great forager, and when starving or sharp set will eat carrion. Where very plentiful they will devour even their own kind hence all the small fishes especially the “Chilva” should be especially produced for their laider.

MAHSUL AR PERS HIND Revenue, a tax or toll

MAHTAR, HIND scavengers, and, like the Dheer, or Mhar, and Mang, generally village servants

MAHVI, a force was sent against the Bozdai Affghans in March 1857 through the Mahvi and Mungrota passes, and after seeing their green crops destroyed, and

seeing the Osteriani, a small but warlike tribe, join the British, one morning the Bozdar chiefs rode into the British camp and sued for peace. They were received in solemn Dubai, and for every man they had slain in their forays 125 Rupees were paid, and 50 Rupees for every wounded man, this being the regular price of blood in the hills. A few months afterwards, they furnished a contingent to protect the frontier, when the troops were sent to quell the mutiny—*Medley's years Campaigning*, pp 5, 20 and 21

MAHUL, a Nepaul tree that affects the highest situations, its flowers are large and of a deep red, and yield by decoction a purplish colour, which is converted by acids into a tolerable pink. The Jumno-mandoo tree, the Gurias, the Puddiem or Payah, the Chootra-phul, the Mahal and the Puhuttoli tree, all grow in Nepaul—*Smith's Nepaul*

MAHULA BENG *Bassia latifolia*—*Willd*
MAH-UL-LAHM HIND Essence of meat, used in medicine. The flesh of a young lamb being cleared of bones, fat, sinews, &c, is boiled in a moderate quantity of water, until only one-third of the water remains. This is strained and condiments added and portions distilled when needed.

MAHYUH GAH BURM A tree of Amherst, Tavoy and Mergui, maximum girth $2\frac{1}{2}$ cubits, and maximum length 18 feet. Abundant all over the Tenasserim and Mataban provinces. When seasoned it floats in water. It is used for elephant bells, but is not a durable wood—*Captain Dance*

MAI See Cochinchina
MAI TEL *Schleichera tinjuga*, *Willd*
MAIA MALEAL *Queicus infectoria*
MAIAUTZE Marco Polo mentions as a custom amongst several ancient tribes that in the Zai-dandan (gold teeth) tribe on the frontiers of Burmah, when a woman bore a child, she rose and went about her business and the husband took to bed for forty days, and was fed on possets. A Greek epic treats entirely on the same subject, as customary amongst a people on the Euxine,

In the Tibaitenian land,
When some good woman bears her lord a babe,
'Tis he is swathed and groaning put to bed,
Whilst she arises, tends his baths and serves,
Nice possets for her husband in the straw

Marco Polo in the thirteenth century seems to have observed the custom in the

Chinese province of west Yunan amongst the aboriginal tribes of the land, the Miautze, who practice it to the present day. The father of the new born child, so soon as the mother can leave her couch, gets into bed and there receives the congratulations of acquaintances. About the beginning of the christian era, Strabo (in 4,17) mentions, that among the Iberians of the north of Spain the women after the birth of a child, tended their husbands, putting them to bed, instead of going themselves. In the same locality amongst the modern Basques in Biscay, M Michel found the same custom prevailing a few years ago. The women, he says, rise immediately after child-birth and attend to the duties of the household, while the husband goes to bed, taking the baby with him and thus receives his neighbours compliments. This practice seems to have spread to France and to have there received the name of *faire la couvade*. It has been found in Navarre and on the French side of the Pyrenees. Diodorus Siculus mentions that in Corsica the wife was neglected and the husband put to bed and treated as the patient. According to Apollonius Rhodius, the same almost incredible custom prevailed among a people called the Tibaiten at the mouth of the Black Sea. Amongst the Caribs of the West Indies, the father is put to bed and fed on meagre diet and his body punctured and tortured, and the Abipone husband of S America is treated like a lying in woman—*Apoll Rhod Argon* ii 1012 *Taylor's Early History of Manland* quoted in *Quarterly Review*, July 1868 *Mrs Muller Chips*

MAI-BARI, also Mai-ehhoti HIND the larger and smaller galls of *Lamium orientalis*

MAIKAL The range of hills running south-west from Amankantak, for a distance of some seventy miles, whence they are continued by a similar range, locally known as the Saletekri hills. The Maikal hills form the eastern scarp or outer range of the great hill system, which traverses India almost from east to west, south of the Nerbada they do not ordinarily exceed 2,000 feet in height, but the Lophi hill, which is a detached peak belonging to this range, has an elevation of 3,500 feet

MAIKAY BULM A species of *Mimosa*? A timber tree of Amherst, Tavoy and Meigu, maximum girth 1 cubit and maximum length 15 feet. Abundant inland in Tavoy, but is scarce near Moulmein. When seasoned it floats in water. It is too scarce for helms, but recommended for handles of planes, chisels, hammers, &c. It is used by Burmese for handles of knives and other weapons, and is a strong, tough wood, in grain like Box wood. It is recommended by the Ordnance carpenters as the very best wood, in the collection, for planes or for any purpose in lieu of box — *Captain Dance Major Simpson's Report*

MAKER SANKRAUT is a festival at the time the sun leaves Cancer for Capricorn and which always falls either on the 12th or 13th January, Kark Sankraut is the day on which the sun again leaves Capricorn for Cancer and this festival generally occurs on or about the 15th July. Of these two the former has been regarded by all hindoo as a regular holiday, whereas the latter is confined to the brahmins and therefore less known to the lower classes of the hindoo creed. There is another festival known to all classes of hindoo held about the 31st January under the name of Rath Suptamee, on which day according to hindoo mythology, the sun is said, to commence his travelling in a car drawn by a horse having seven heads, on this day all the brahmins draw a representation of the sun riding in a chariot drawn by the seven headed horse, mentioned above, and worship it. The following hindoo holidays are regulated by the moons positions

Voojathu — The Telugu New Year's day, is the day of the moon entering in the Rewothe and Asvamee stars

MAKER SANKRAUT

Chithra Purooyam — In the first Tamil month, i.e., Chethira, The entering of the moon at the star Chithra

Garooda seva — In the same month, do do at Vesika

Rithavooahyam — Do do and do at Poo-roashada

Aioothia — Do do and do at Aioothia

Sticeerama Navamy — In the first Telugu month Chithra Falls after the 9th day of the new Moon. The presence of moon at Poomavaso or Pushumee Star

Gnoodra seva at Conjeveeram — In Malabar Vyusu and do at Vesika

Rithavooahyam at Conjeveeram — In do do and do at Poo-roashada

Kistna Jyante — In do Avany do at Rohenee

Pilliyai Chivithe — Do do do at Chithra

Maharaja Annasara — In Telugoo Bathrapathra month, New Moon day and do at Poobba and Wootthara Stars. On this day is performed the oblation of funeral rites to deceased forefathers

Anutha Pooja or Daria feast — In Telugoo Anavoojumu do at Bathra or Chithra

Avanathi Pooja — Begins at Sivaram and ends at Voottharshada, beginning day is Vyridisamy 10th day after the New Moon

Deepavalee — In Malabar Alpusee, Moons entering at Vootthra or Husha, being the 15th day from, or 14th after, the New Moon

Deepavalee Katharo Veerthum — In do and do at Husha or Chithra day of performance of Vairathi

Katheek — In Ketheek month of Tamil and do at Ketheka Star

Vykoonta Ekadase — In Mugulee 11th day after the New Moon and do at Keootleer or Rohenee

Ratha Sapthami — In Thyee and do at Asvamee 7th day after New Moon

Ponghol Feast — On the first of Thyee without reference to the particular Star

Eclipse of the Moon — There will be a moon's Eclipse when it enters at Rahoo or Rathoo Stars on the eve of the Full Moon on its turning by rotation at the 27 particular stars during 27 days in each month, joining at the completion of each turn at Asvamee the first star

Eclipse of the sun — During each Malabar month the sun stays on 27 stars and when it exists at Rahoo or Rathoo on the eve hours of the New Moon day then there will be a sun's Eclipse, so it stays during 12 months at the 27 stars on coming by rotation

The Tamil months receive their names from the Stars which the sun reaches during each particular month

The Telugu months from the Stars at which the Moon stays on the Full Moon day — viz

Chithram from Chithra	The tamil months are,
Vysakam from Vesika	Chithra
Aushadam, Poo-roashada	Vyasee
Iastum from Iast	Anco
Sivaram from Sivaram	Andy
Bathrapathum, Vootthara	Avany
Bathra	Uitasee
Asvayujum, Asvamee	Uppasee
Katheekum from Keootleer	Kathaca
	Mugulee

MAIRA or Meira a kind of soil, sandy and rather inferior

MAIR The Mair is a branch of the Mena or Maina The Mair is also called Mainote and Manawut, Meira is 'a mountain' in Sanserit, Manawut and Mainote 'of or belonging to the mountain, the name of the Albanian mountaineer, Mainote, has the same signification Manwaira is that portion of the Aravali chain between Komulmer and Ajmere, a space of about ninety miles in length, and varying in breadth from six to twenty The Mair are a branch of the Cheeta, an important division of the Mena, a race which consists of as many branches as their conquerors, the Rajpoots All these wild races have the vanity to mingle their pedigree with that of their conquerors, though in doing so they stigmatize themselves The Cheeta-Mena, accordingly, claim descent from a grandson of the last Chohan emperor of Delhi Unail and Anoop were the sons of Lakha, the nephew of the Chohan king The cocoa-nut was sent from Jessulmer, offering princesses of that house in marriage, but an investigation into their maternal ancestry disclosed that they were the issue of a Mena kept woman and their birth being thus revealed, they became exiles from Ajmeer, and associates with their maternal relatives Unail espoused the daughter of a Mena chieftain, by whom he had Cheeta, whose descendants enjoy almost a monopoly of power in Marwaira The sons of Cheeta, who occupied the northern frontier near Ajmer, became mahomedans about fifteen generations ago, when Doodha, the sixteenth from the founder of the race, was created Dawad Khan by the hakim of Ajmer, and as Athoon was his residence, the "Khan of Athoon" signified the chief of the Manote Athoon is still the chief town of the Mair race Chang, Jhak, and Rajosi, are the principal towns adjoining Athoon Anoop also took a Mena wife, by whom he had Buirai, whose descendants have continued

MAIRWARAH

true to their original tenets Their chief places are Buirai, Banawara, Mundilla, &c The Mena were always notorious for their lawless habits, and importance has been attached to them so far back as the period of Beesildeo, the celebrated prince of Ajmer, whom the bard Chand states to have reduced them to submission, making them "carry water in the streets of Ajmer" Like all mountaineers, they broke out whenever the hands of power were feeble The Mair country is situated but a very few miles west of Ajmere, and is composed of successive ranges of huge rocky hills, the only level country being the valleys running between them From the sturdy valour of this race, the rulers of India never made any impression on them, notwithstanding their vicinity to the occasional residence, for a long period, of the emperors of Hindustan. In later times the Mair were the terror of their lowland neighbours, and even the Rajpoots, perhaps, with the sole exception of the Rohilla, the bravest men in India, dreaded their approach The Mair of the Marwara hills occupy the Aravali range running towards Ajmer Their chiefs claim to be of Rajput descent, but the Koli assert their relationship to them, and they admit having intermarried with the Bhil and Meena, and Colonel Dixon says that for hundreds of years they have been recruited by refugees and all sorts of rascals from Hindustan, and they are probably a very mixed race They are described as rather good looking Colonel Briggs states that the Mahattas and Marwara have their origin from Mair Colonel Tod remarks we should scarcely have expected to find a mountaineer (meira) in the valley of Sind, but their Bhatti origin sufficiently accounts for the term, as Jessulmer is termed Mei Athoon, is the chief town of the Mair or Meira race, the mountaineers of Rajpootana, and the country is styled Marwaria, or "the region of hills"—*Tod's Rajasthan Vol 2, p 681 Cole Myth Hind p 299 Campbell p 45*

MAIRASSI, Muller's name for the Papuans of New Guinea

MAIRU TAM Hair

MAI RUBIYA a dried fish brought from Delhi considered good in impotency, four tolas for one rupee—*Gen Med Top* p 147

MAIRWARAH has been rescued by the British Indian Government from barbarism of the worst kind No Native corps did more substantial service at the time of the mutiny than the Marwara battalion The mere fact of its having held Ajmere with an immense arsenal when the troops in Nuseerabad mutinied, was a boon to the British

MAI TAI YO

which it would be difficult to over-estimate. Had the mutineers got possession of the arsenal with its vast stores, it would have given them a prestige which would have made it impossible for the Rajpoot princes to resist the pressure of the people to rise against the British Government. In subsequent actions they were always loyal, often very gallant. A single company on one occasion turned the whole of Tantia Topce's force when trying to pass the Aravullee. They were some years afterwards formed into a police corps. This has been felt keenly by the Mans, who are proud of their old prowess. The district of Manwarra, is inhabited by predatory tribes and belongs partly to Oudeypore, Jodhpore, and the British Government in virtue of its possession of Ajmere. The pergunnahs of Beawun, Jak-Shamguah, Behal-Burkocna, and Bhacelan belong to the British Government, Todguah, Dewan, and Saroth to Oudeypore, and Changand Kot-Kurana to Jodhpore. Mhairwarra was entirely subdued by a British force in 1821. With a view to the pacification and improvement of the country it was taken under British administration and a local corps was raised to which Oudeypore and Jodhpore were to contribute annually Rupees 15,000 each. Under the British Government the Mans greatly benefitted. In 1847 the British wished to take over all Manwarra, but this was not done. Manwarra remains in an unsatisfactory state —

Mokka,	HIND	Tigo de Turquia, Sr	
Mokka Juari,			

The Zea mays of botanists is much cultivated in India and in all the islands of the Asiatic Archipelago. It is however more reared in the western than in the old continent. In the torrid zone, maize predominates in America, rice in Asia, and both these grains in nearly equal quantity in Africa. The cause of this distribution is, without doubt, historical, for Asia is the native country of rice, and America of maize. In some situations, especially in the neighbourhood of the tropics, wheat is also met with, but always subordinate to these other kinds of grain. Besides rice and maize there are in the torrid zone several kinds of grain as well as other plants which supply the inhabitants with food, either used along with them or entirely occupying their place. Such are, in both continents, Yams (*Dioscorea alata*), the Manihot (*Jatropha manihot*), and the Batatas (*Convolvulus batatas*), the root of which and the fruit of the Pisang (*Musa paradisiaca*), furnish common articles of food, in the same zone in Africa, are Doum (*Sorghum*), Pisang, Manihot, Yams, and Arachis hypogaea, in the East Indies and in the Indian Islands, Eleusine coracana, E stricta, Panicum frumentaceum, several Palms, and Cycadaceæ which produce the Sago, Pisang, Yams, Batatas, and the Bread-Fruit (*Artocarpus incisa*). In the islands of the South Sea, grain of every kind disappears, its place being supplied by the bread-fruit tree, the pisang, and Tacca pinnatifida. In the tropical parts of Australia there is no agriculture, the inhabitants living on the produce of the sago, of various palms, and some species of Alum. "In the high lands of South America, there is a distribution similar to that of the degrees of latitude. Maize indeed grows to the height of 7200

feet above the level of the sea, but only predominates between 3000 and 6000 feet of elevation. Below 3000 feet it is associated with the plantain and the above mentioned vegetables, while from 6000 to 9260 feet the European grains abound: wheat in the lower regions, rye and barley in the higher, along with which *Chenopodium quinoa* as a nutritious plant must also be enumerated. Potatoes alone are cultivated from 9260 to 12,300 feet. To the south of the tropic of Capricorn, wherever agriculture is practised, considerable resemblance with the northern temperate zone may be observed. In the Southern parts of Brazil, in Buenos Ayres in Chili, at the Cape of Good Hope and in the temperate zone of Australia, wheat predominates, barley, however, and rye make their appearance in the southernmost parts of these countries, and in Van Diemen's Land. In New Zealand the culture of wheat is said to have been tried with success, but the inhabitants avail themselves of the *Acrostichum furcatum* as the main article of sustenance. Hence it appears that in respect of the predominating kinds of grain, the earth may be divided into five grand divisions, or kingdoms—the kingdom of rice, of maize, of wheat, or rye, and lastly of barley and oats. The first three are the most extensive, the maize has the greatest range of temperature, but rice may be said to support the greatest number of the human race."

Its composition is as follows

Per cent		Per cent
Moisture - - -	12 90	Mineral constituent
Nitrogenous matter	9 23	(ash) - - -
Starchy matter -	74 63	1 86
Fatty or oily matter	1 59	Total 100 00

The growers on the hills of Nepal reckon three kinds of maize: a white grained species, which is generally grown in the low and hot valleys, and a smaller one, called "Bhoteah," or "Munli Moki," which is considered the sweetest of the three, but from being less productive is not generally grown on good lands. Maize thrives best on a siliceous, well-drained rich soil. The finest Indian corn of the Sikkim range, is grown where the soil consists of a substratum of decomposed mica from the under or rocky stratum, with a superstratum of from three to six inches of decayed vegetable matter, from leaves, &c, of the ancient forests. Throughout Hindostan, June is the usual time for sowing. In Behar, about two seers are usually sown upon a beegah; in Nepal, twenty-four seers upon an English acre, in the vicinity of Poonah, one and a-half seer per beegah. Before the seed is sown the

land is usually ploughed two or three times, and no further attention given to the crop than two hoeings. In Nepal, where it is the principal crop cultivated, the seed is sown, after one delving and pulverisation of the soil, in the latter end of May and early part of June, the seeds being laid at intervals of seven or eight inches in the drills, and the drills an equal space apart. The drills are not raised as for turnip sowing, but consist merely of rows of the plant on a level surface. The seed is distributed in this manner with the view of facilitating the weeding of the crop, not for the purpose of earthing up the roots, which seems unnecessary. Indian corn sowing resembles that of the *gohya* (or upland) rice, in the careful manner in which it is performed, the sower depositing each grain in its place, having first dibbled a hole for it five or six inches deep, with a small hand hoe, with which he also covers up the grain. The after-culture of this crop is performed with great care in the valleys, but much neglected in the hills especially on new and strong lands. In the former it undergoes repeated weeding during the first month of its growth, the earth being loosened round the roots, at each weeding, with the hand hoe. After the first loosening of the soil, which is performed as soon as the plants are fairly above ground, a top dressing of ashes or other manure is given. By this mode the crop gets the immediate benefit of the manure, which otherwise, from the extraordinary rapidity of its growth, could not be obtained by it. In three months from the time of sowing, the seed is ripe. The crop is harvested by cutting off the heads. In Nepal these are either heaped on a rude scaffolding near the cultivator's house, or, more commonly, they are suspended from the branches of the trees close by, where, exposed to wind and weather, the hard and tough sheath of the seed cones preserves the grain for many months uninjured. Cattle are voraciously fond of the leaves and stems, which are very sweet, and even of the dry straw, which Dr. Buchanan surmises may be the reason why it is not more generally cultivated by the natives as the difficulty would be great to preserve the crop. It is said that near Kaliyachak, though the people give all other straw to their cattle, yet they burn that of maize as unfit for fodder. In Nepal, the stalks, with the leaves attached, often twelve feet long, cut by the sickle, are used as fodder for elephants, bedding for cattle, and as fuel. The maize crop within the hills of Nepal suffers much from the inroads of bears, which are very numerous

in these regions, and extremely partial to this grain. The average return from this crop is seldom below fifty seers, ranging frequently far above it. In the peninsula of India, it is nowhere used for diet food but like fruit, as a luxury, roasted, maize is increasing in cultivation in Java, and some of the Eastern islands. It is found to have the advantage there over mountain rice, of being more fruitful and hardy, and does not suffer from cold until the mean temperature falls to 45 deg of Fahrenheit, and no heat is injurious to it. Several varieties of it are known, but for all practical purposes these resolve themselves into two kinds: one, a small grain, requiring five months to ripen, and a larger one, which takes seven to mature. In some provinces of Java it yields a return of 400 or 500 fold. Mr Crawford found, from repeated trials, that in the soil of Mataram, in Java, an acre of land, which afforded a double crop, produced of the smaller grain 84½ lbs annually—*Simmonds, Commercial Products*, p 283 *Schouw in Jameson's Philo-ophical Journal* *Simmond's "Colonial Magazine,"* vol II p 309 *Transactions of Agr Hort Society of Calcutta,* vol IV p 125 *Crawford's Dictionary*

MAKLEUA The berry of a large forest tree at Bangkok, said to be the *Diospyros mollis*, which is used most extensively by the Siamese as a vegetable black dye. It is merely bruised in water, when a fermentation takes place, and the article to be dyed is steeped in the liquid and then spread out in the sun to dry. The berry, when fresh, is of a fine green color, but after being gathered for two or three days it becomes quite black and shrivelled like pepper. It must be used fresh and whilst its mixture with water produces fermentation.

MALABAR A Madras collectorate running for 100 miles on the western part of the peninsula, between the mountains and the sea. It has many rivers and marine lagoons. Its name is obtained directly from the Portuguese "Malavares" but the people call themselves Malleallai from "Mala" a mountain and "alam" a district or country. Malabar is 188 miles long, 25 broad in the northern and 70 in the southern half and contains 6,262 square miles. It is divided into 17 talooks or districts and has a population of 1,602,914 souls, of whom 1,165,174 are hindus, 414,126 moplabs and 23,614 christians. Malabar is the garden of peninsular India. Here nature is clad in her brightest and most inviting robes the scenery is magnificent, the fields and gardens speak of plenty and the dwellings of the people are substantial and comfortable. The term Malabar as usually applied by older geographers, designates the whole of the narrow belt of country rarely above fifty miles broad, west of the great Peninsular chain, from Goa to Cape Comorin. It thus includes the British district of Malabar, besides Canara and Kunig to the north of it, and the kingdoms of Cochin and Travancore to the south. This tract is in general hilly and mountainous, a narrow strip of low land borders the sea, frequently intersected by long sinuous salt water creeks, and covered with cocoa-nut trees, the hills which are thrown off as spurs from the main axis often reach the sea and dip suddenly into it, they enclose well cultivated valleys, and though generally low to the west, they rapidly rise to the east, where they join the chain. The climate of Malabar is characterized by excessive humidity, and an abundant rain-fall during the south-west monsoon, when the temperature seldom rises above 75° the mean of the year being 81°. Malabar was over-run by Hyder Ali, and made tributary to Mysore, but after the war of 1791-2 the

treaty of 1792 transferred it to the British. The rain-fall is on the average 120 inches. Malabar has many hindus following the rule of descent e matrice, also many mahomedan Moplahs, active intelligent men, engaged in commerce. The *Charumar* are pedial slaves whose name Wilson derives from 'Cheira' Malayalam, the soil, they follow the rule of Maruma-ka-tayam. They are very diminutive with a very black complexion and not unfrequently woolly hair. The *Mullavan* is a fisherman caste of Malabar also called *Makwa* and then women *Makate*. The toddy drawer of Malabar is called *Katti Karian*. The *Ashary*, in Malabar, is the carpenter caste. In common with the brass founder, gold and iron smiths, they continue the practice of polyandry, but in civil inheritance follow from father to son, and not the old Italian practice of maternal descent, *descensus ab utero*. The elder brother marries and the wife is common to all the brothers. If a junior wish to marry he must live apart and set up business apart, but if any of his younger brothers reside with him, his wife is common to them. The *Pann Malayar* are a servile caste of Malabar. The *Adiyar* of Malabar is a slave, scif or vassal who lives under the protection of a rajah or religious establishment. The *Malayan* of Malabar, seem to be the same as the *Palayan*. The *Nair* are the ruling race of Malabar, they profess to be sudras. They were formerly accustomed to duelling. The practice was called *Ankam* and hired champions were often substituted. The *Puluh* is a forest tribe in Malabar, who are deemed so unclean that they are not allowed to approach other castes. The *Urali* or *Urali* of Malabar are a servile race. The *Tiyar* race in Malabar are toddy drawers and agriculturists. The *Pulayan* or *Puhan* of Malabar is a servile caste, often slaves, this is doubtless the *Pullar*. *Chéira* was a small ancient state, between the territory of the *Pandya* and the western sea. It comprehended *Tiavaneore*, part of Malabar, and *Combatun*. It is mentioned in Ptolemy, and may have existed at the commencement of the Christian era. It spread, at one time, over the greater part of *Canuta*, but was subverted in the tenth century, and its lands partitioned among the surrounding states.

Gold is largely washed out of the sands of the *Arliporamboor* river, a feeder of the *Todakul* river, of the *Arankyum* river disemboguing at *Caralondy*, at the *Beypore* river, gold is found in the beds of the several branches of this river which flow through the *Nelamboor* valley, before they all unite above *Mamfaat Angaddy*. The *Carampoya* or *Carambye* river rises like the *Ponapoya*,

with which it unites at *Poolhumpara* in *Wynaad*, and then united stream is then called *Pandy-paya*, but this, on approaching the ghauts, again divides into two streams and the main branch called in the *Nelamboor* valley, the *Cuamboe*, rushes down the *Allumpully cheerum*. The *Pooloowye* and the *Hoopoonjay* rivers in *Calicut talook* and the *Cooderapoya* river, a feeder of the *Beypore* river all contain gold.

Caracooripoya river, descends from *Devalla* to the right of the road through the *Cucoor* pass to join the *Poonapoya* river. Gold is also found in the *Cumballa Nullay*, one of the *Chulimally* range close under *Nellialum*, and in many other places, at *Kutchambara* on the bank of the *Coodooria Poya* river, in the bed of the *Killakumpoyr* river, which rushes down from the *Wynaad* into the *Nelamboor* valley to join the *Poonapoya* river. The matrix of the gold ore is supposed to be in the mountains and hills of Malabar, and even many elevated spots in the valleys of *Nelamboor* and *Mookooty*, and immediate vicinity of *Devalla* and the *Koondah* and *Neilgherry* mountains whilst that which is found in the beds of rivers and other mountain streams seems to be brought down by the monsoon rains. The mines of the *Nelamboor* valley are here innumerable the principal, however, are in the thickest part of the jungle immediately under the *Wynaad Hills* and near the villages belonging to the *Tee-loopiad*. The sands on the sea beach between *Parparangaddy*, *Caralondy* and *Beypore* contain gold.

The *Poonapoya* or *Golden* river, rises in the *Paral Mullah N E* of *Mookooty*, forming part of the main chain of the *Neilgheries*. The *Poonapoya* descends the mountains between *Allam Pullay* and the *Cucoor Cheerum* and long before its formation with the *Canumbye*, it receives both the *Kellakumpoya* and *Caracooripoya* the sea beach between *Parparangady* in the *Sheruad talook* to *Caralondy* and thence to *Beypore*.

Teeoowalay or *Teeimoulay* is a hill near *Mamfaat Angady*, about 150 feet above the level of the *Beypore* river. In the *Teeoowambady* division of *Polwy*, north of the *Beypore* river is a mountain stream which, descending the ghauts to the left of the road through the *Tambercheri* pass, runs through the *Tambercheri* and *Palwy* districts and forms a junction with the great *Beypore* river between *Paroor* and *Sherwaddu*, and opposite to *Mapooram*, in the *Einaad Talook*.

In *Wynaad*, above the ghauts, gold is found in *Parkmeetil*, a higher table land, between *Manantody* and *Nambollacotta*, at a place called *Chollyode* in *Nonanaad* and *Nillialum*.

and Ponany in Moopeyanaad, it is likewise found at Devalla and its immediate vicinity in Nambollacotta. Along the Malabar coast, at every seaport town, cocoanut day, is one of the great feasts. It occurs in August, and is supposed to mark the termination of the S W Monsoon, the date when the navigation of the sea is open, and when the hindoo trader may very safely trust his ships and goods to the ocean. At Bombay, the natives clad in their holiday attire, go in procession from their houses in the town to the seashore, preceded by bands of music. On the beach, numerous ceremonies are performed over a cocoanut, generally covered with gold and silver leaf, which is then cast into the sea as an offering by the principal person present. Every trader or boat-owner there makes a similar offering on his own account. Many of the lower classes of natives swim or wade in, to fish out the cocoanuts, and as during the scramble, some of them often receive severe knocks from the cocoanuts, which are thrown in by persons in the crowd, there is generally a good deal of laughter, noise and excitement. The first boat of the season generally puts to sea directly after, gaily decorated with streamers. In former days, the chief civil functionary at the E I Company's factories, at such places as Tanna, Suirat, and Broach, used to attend and sometimes cast in the first cocoanut, but this practice was long since stopped by orders from the Court of Directors, and no servant of Government is now allowed to take any part in any such ceremony.—*Madras Int Journ Elphinstone's History of India*, p 414. *Chow Chow*, p 290. MALABAR POINT, in Bombay, here, are the ruins of a very ancient black stone temple, and many fragments strewn about with a variety of images sculptured on them. Below the point among the rocks, there is a cleft well known to the natives, and esteemed very sacred. Here the believing hindu, obtains regeneration or a second birth. He comes to the spot and deposits all his clothing, then passing through the aperture he is supposed to be born again, and ablution in the tank and gifts to the priests completes the washing away of his sins. *Chow Chow*, page 60 and 61. See You.

MALABAR SAGO-PALM Eng *Calypota uens*—*Linn*

MALABATHRI TAMALAPATHRI, leaves of *Cinnamomum tamala*

MALABATHRUM, a name which occurs frequently among the writings of the ancients, and which was applied to a leaf imported from India, whence it was likewise called φύλλον Ἰνδικόν, and also simply Folium. It was employed by them both as a medicine and as a perfume. From it there was prepared both an oil and a wine by maceration of the leaves in these menstrua. Many fabulous statements accompany the earliest accounts, as that of Dioscorides, by whom it is stated that by some they are thought to be the leaves of the Indian Nand, that they are moreover found floating on Indian marshes, and that they grow without roots (lib 1, c 11), and that (lib 11 c 10) it is by feeding on them that the animal affording the Onychia or Unguis Odoratus of the ancients, becomes aromatic. In the works of the Arabs, Saduj is given as the synonyme of Malabathrum, and Saduj, both in Persian works and in India, is applied to Tej-Pat, or Tej-bal, or the leaf of the Tej, which is a species of *Cinnamomum*, *C albiflorum*, growing in the dense forests of the valleys of the Himalaya, which extend from Rungpoie to the Deyra Doon in 30° N lat. Dr Hamilton found the same name applied to a very nearly allied species, the *C tamala*. Both species, as also *C aromaticum*, most probably yield the leaves which were so highly esteemed in ancient times, and are still as extensively employed in eastern countries, and may be found in every Indian bazaar under the names of Tej, or Tej-Pat, or Tej-bal or by the Arabic name of Saduj-Hind. They are analogous in all respects to bay-leaves produced by the *Laurus nobilis*, and are in fact the bay-leaves of India. The name Malabathrum no doubt is derived from Tamala-patia, or

Tamala-leaf, as was first indicated by Garcias — ‘Appellant autem Indi folium Tamalapatia quam vocem Græci et Latini imitantes corrupte Malabathium nuncupant’ These are brought from the interior of almost inaccessible forests, and necessarily stripped from the branches for the facility of carriage, hence, most probably, originated the fables with which their early accounts are accompanied. Some of the early writers after the Portuguese discoveries took the pan or betel leaf for the malabathium of the ancients, but the physician Garcias da Horta, in his work on the aromatics of India (first published at Goa in 1563), pointed out that malabathium was the Tamalapatia, the leaf of a species of cassia — *O’Shaughnessy Beng Dispens Eng Cyc Yule Cathay* I p cxlv *Pouell*, p 302

MALACA MALAY *Embica officinalis Gaertn*

MALACCA Except Goa, Malacca was the earliest European settlement in the east. The province, at one time the great emporium of trade from the innumerable islands of the Indian Archipelago, has seen many changes since it was wrested from Mahomed Shah by the Portuguese in 1511. After remaining in quiet possession of Portugal for 130 years, it fell into the hands of the Dutch, who held it for 74 years, when the British took possession and their first act was, at an expense of two lacs and sixty thousand Rupees, to demolish the Fort, erected at a vast cost by the Portuguese and much improved by the Dutch. In 1818 Malacca was again ceded to the Dutch, who finally exchanged it with the British for Bencoolen and other settlements in Sumatra, in 1825 the British by treaty with the Dutch agreed to hold no possessions in the Archipelago, south of the Equator, and the Dutch, vice versa, north of the Equator. The approach to Malacca from Penang cannot be excelled in picturesque beauty. On one side the steamer skims along the Malay coast, the treble peaked mount Ophir 4,000 feet high and other high-lands are in the distance, on the other she passes through a chain of beautiful Isles, wooded to the water’s edge so low, that they appear like masses of verdant bushes growing out of the ocean. Malacca occupies a crescentic Bay. A street of substantial two storied houses faces the sea, forming one horn of the crescent, erected from the debris of the old Fort by the ruler over the settlement at the time, as a private speculation. A river navigable for small boats for twenty miles runs down the centre of the crescent and on the right bank the native

town is built. To the left of the first line of houses is the remains of the fort gateway decorated with the Portuguese and Dutch arms—and on the summit of a conical hill rising behind the houses, is the ruined church of St Marie, in which are tomb stones from the year 1595 downwards, and the remains of the citadel which formed the centre of the Fort, the British turned the old church into a powder magazine. Malacca is the favorite resting place for the Straits Chinese. So soon as they have made a little money they retire to lay their bones there. Many of them speak English fluently and in commercial dealings they are running a close race with the merchants from civilized Europe. With their own ships they carry the produce from the islands around either for barter or for sale at Singapore, or for shipment to England and they are as liberal in their commercial transactions as they are bountiful in their charities.

The town of Malacca is situated on the Malay peninsula, at the mouth of a small river flowing into the Straits of Malacca, in long 102° 12 east, lat 2° 14 north, and the Malacca province on the western sea-board of the Malay peninsula, has a sea frontage of 43 miles. Malacca derives its name, according to Malay history, from the Malacca tree. In 1517, the salvation of this city from the Achinese was ascribed to the sudden appearance of Saint Francis Xavier, the apostle of India, who was then on his pilgrimage through the East, and had recently made 600 or 700 converts among the pearl fishers of Manan. At the period of his arrival, Malacca was threatened by a formidable invasion from the opposite island of Sumatra which was delayed though not abandoned.

Malacca alone, of the three Straits stations has a name in history, it being not improbable as is thought, that it is the eastern extremity of what was known as Ophir to the ancient Hebrews, or Sophir to the authors of the Septuagint version, whither the fleets of Hiram and Solomon voyaged on their trading expeditions. In various parts of the First Book of Kings are notices of the productions of Ophir. ‘And they came to Ophir, and fetched from thence gold, four hundred and twenty talents’ ‘And the navy also of Hiram, that brought gold from Ophir, brought in from Ophir great plenty of almug trees, and precious stones’ ‘Once in three years came the navy of Tarshish, bringing gold and silver, ivory, and apes, and peacocks’ The learned dispute as to the situation of Ophir. Some

contend that the Eastern part of Africa now called Zanzibar and Mozambique, where there is a region called Fuia, producing gold, was the Ophir or the Tarshish of the East Spain being that of the West Others believe that the district of Oman in Eastern Arabia, where is a place called Al Ophir, is meant, and others say that India and Ceylon are to be understood But although it is said, that the Queen of Sheba (the present country of the Habshi or Abyssinians and the southern parts of Arabia) came to see Solomon with great stores of gold, precious stones, and spices, it is nowhere said that these, at least the gold and precious stones were the productions of Sheba As Sheba lay contiguous to the gold regions of Africa and not far from India, it does not seem at all improbable that she obtained these precious articles by trade with those countries A production peculiar to the Archipelago is the camphor tree *Dryobalanops camphora*, one of the most gigantic and lofty of the great trees of the forests, which so densely clothe these islands The trunk often rises 120 feet before it branches out, with a girth a few feet above the ground of 25 feet A single trunk would form a most magnificent pillar or column The timber is so plentiful, that 'terrace' or 'highways' being made of it appears nothing improbable, it is also valuable, being fragrant and lasting An extensive trade has always been carried on in it The word 'almug' etymologically leads to the idea of the wood having the appearance of coral, and 'algum' may show that the wood was either resinous, or produced some resin The timber of the camphor tree is resinous in quality, produces the most valuable camphor known, and has a fresh, pale red tinge much resembling that of the common coral Here, then, in the camphor tree, we may find the qualities and appearance of the 'almug' or 'algum tree' Camphor is not strictly speaking, a resin, it is rather a solid volatile oil Josephus expressly says that the Arabia Cherisonesus was the Ophir of Solomon's time Kim Ballu (the Chinese widow) is the name of the highest mountain in Borneo Within the limits of the British province of Malacca are several productive mines of tin and gold, which are worked by thousands of Chinese and Malay miners But the principal mines of both gold and tin exist in and about Mount Ophir The depth of the gold mines is from 70 to 200 feet, and the process of pounding the rock and washing the gold dust is simple and rude The tin is worked from lowlands at the depth of a few feet, and some of the ores are so rich,

that they contain about 80 per cent of the metal The whole Malayan Peninsula, from Perak and Queda (Kedah) on the North to the islands of Carimon and Banca, which were once probably connected with the main land, in the South, is one rich deposit of tin The population of the whole province is about 80,000 that of the town being a third of the above number Of the town population not many are Malays, they are chiefly to be found in the country, but there are about 12,000 Chinese, 5,000 Kling, 3,000 Christians (Dutch and Portuguese,) 1,000 Bengali (chiefly convicts and their descendants,) and about 1,000 of the various races of the Archipelago and Arabs—*Newbold, British Settlements Vol 1 p 108 1 Hough, Christianity in India, ii in 188, Abbe du Bois, 3 St John's Indian Archipelago Vol 1 p 162 Cal Rev No 73 Sept 1861 p 49-57 Low's Sarawak See Jakun, Johore, Leedes, Koeng, Marco Polo, Monsoon, Kedah, Pulopisang, Phyllanthus emblica*

MALACHIA, (?) H A class of thieves and dishonest persons in Bengal now apparently extinct — *Benq Reg* 22, 1793

MALACHITE The mines of Siberia, at Niehne Tagilsk have afforded great quantities of this ore. A mass partly disclosed measured at top 9 feet by 18 feet, and the portion uncovered contained at least half a million pounds of pure malachite. Other noted localities are Chessy in France, Sand-lodge in Shetland, Schwartz in the Tyrol, Cornwall, Australia, and the island of Cuba. This mineral receives a high polish, and is used for inlaid work, and also ear-rings, snuff-boxes, and various ornamental articles. It is not much prized in jewellery. Very large masses are occasionally obtained in Russia, which are worked into slabs for tables, mantel pieces, and vases, which are of exquisite beauty, owing to the delicate shadings and radiations of colour. In the Great Exhibition of 1851 there were magnificent specimens of this material in the shape of doors and vases sent thither by the Emperor of Russia. At Versailles there is a room furnished entirely with tables, chairs, &c, wrought in malachite, and the same are to be found in other European palaces. At Niehne Tagilsk, a block of malachite was obtained weighing 40 tons. Malachite is sometimes passed off in jewellery as turquoise, though easily distinguished by its shade of colour and much inferior hardness. It is a valuable copper ore when abundant, but it is seldom melted alone, because the metal is liable to escape with the liberated volatile ingredient, carbonic acid. In India it is rarely worn as a gem and only by Europeans. It occurs abundantly in the copper mines in Australia — *Eng Cyc* p 134

MALLAPURAM The city of the great Malla According to the Mackenzie MSS, Malla is the patronymic title of a northern tribe of mountain chiefs, who sprang from the aboriginal inhabitants, and who were non-Aryan The Khond, it appears now call themselves Mallarn According to the inscription near the Varahsvami temple, it was also known as Janonathapura, a name possibly indicating Jaina ascendancy The idea of Dr Babington is that the place was first procured by the brahmins as an Agrihara, and that they employed stone-masons at their own cost from time to time to ornament the rocks with the excavations and sculptures which we now find Brahmins apply the legend of Mahabali to Malla, the king of Mallapuram and identify the one with the other According to the legend, Mahabali was a rajah, living in the trieta-yuga, who by penance and austerity had obtained possession of the whole universe, including heaven, earth and hell, so that he was a universal monarch He became so elated by his greatness, that he omitted to perform the customary religious ceremonies to the gods Vishnoo, in order to check the influence of so bad an example, became incarnate in the person of a wretched looking brahmin dwarf, and in this form appearing before Mahabali asked as a boon as much of his wide possessions as he could pace in three steps This the king readily granted, upon which the dwarf grew larger, and continued to expand till he filled the whole universe, thus depriving the insolent monarch of all his possessions except hell, which he was allowed to keep This legend probably represents the victory of hindoos of the vaishnava sect over some powerful non-Aryan king But the application of it to the king of Mamallapuram naturally leads us to conclude that there must have been some similarity between him and the asura Mahabali

The shore temple is so close to the sea that the surf in the calmest weather dashes against the door way This and the usual stone pillar in front of such temples lying in the sea, as well as fragments of images, large quantities of stone, and broken bricks lying about, some partially buried in the sea, plainly show that at one time buildings existed to the east-ward which have been destroyed and overwhelmed by the sea The situation of this temple, therefore, and the remains of ruins towards the sea, plainly indicate an encroachment of the sea, and traces of a large city destroyed by the sea are confirmed by tradition Besides the tradition it is stated in the catalogue of the

Mackenzie MSS that the whole coast from Mallapur, or St Thome, down to Mamallapuram was overflowed by the sea, and that many towns were destroyed, and this tradition is confirmed by the appearance of a ruined city about two miles north of Mamallapuram That there has been a great convulsion of nature is proved by the unfinished state of the temples, and the great rent in one of the largest ratha These celebrated rock sculptures at Mavalivaram, are commonly known to Europeans as the "Seven Pagodas" but the sculptures cannot be older than the 13th century of our era The mythology of the figures is Aryan, chiefly taken from the Mahabharata, and the language of some of the inscriptions is Sanscrit, which plainly proves the predominant influence of the brahminical priesthood The Rev W Taylor states, it is beyond doubt that before the time of Kulattunga Cholen, and his illegitimate son Adondai (about A D 1200) the whole district bounded on the north by the Pennar, on the south by the Palai, on the east by the sea, and on the west by the ghats, was dwelt in by half-civilized people termed Kurumbai, who had embraced the Jaina religion, brought to them from the north Allowing, then, a period of 100 years for the brahmins to eradicate Jainism and establish their authority, the date of the oldest temples, the rathas, cannot be placed earlier than the 13th century, of the christian era Some of the sculptures are probably much later The good state of preservation in which they are, and the freshness of the workman's chisel observable here and there, as well as the legibility of the inscriptions, all tend to show that they cannot be very old Mavalivaram in ancient times seems to have been a large city, the capital of a kingdom, and the seat of the ruling sovereign In the Sthalapurana, written in Sanscrit, the name is simply Mallapur But in the inscription near the Varahsvami temple, it is enlarged into Mahamallapuram by pre-fixing the Sanscrit adjective Maha Mallapuram means the city of Malla

MALARIA It has been remarked along the Mahaveliganga, a few miles from Kandy that during the deadly season, after the subsidence of the rains, the jungle fever generally attacks one face of the hills through which it winds, leaving the opposite entirely exempted, as if the poisonous vapour, being carried by the current of air, affected only those aspects against which it directly impinged The most malarious part of India, is the Therai near the Himalayas

MALATAFAT, AR *Attenuatum*
MALATI and MADHAVA is the title of a hindu drama, in which the social life of the race is largely represented. Malati puts on her bridal dress in presence of the deity. It was customary also amongst the Greeks for the intended bride to pay her adoration to some deity before her marriage, usually to Diana, but at Athens no virgin was allowed to be married before worshipping Minerva, who, was the tutelary deity of the city. Madhava's passion is described as

Heard, felt, and seen, possesses every thought,
Malati alone, fills every sense, and pants in every vein

The passion of Malati is equally intense with that of Juliet, but her unconquerable reserve, even to the extent of denying her utterance to him she loves more than life, is a curious picture of the restraint to which the manners of hindu women were subjected even whilst they were in enjoyment, as appears from the drama, of considerable personal freedom. Megasthenes tells us that the Indians of his time did not communicate their metaphysical doctrines to women, thinking that, if their wives understood their doctrines and learned to be indifferent to pleasure and pain, and to consider life and death as the same, they would no longer continue to be the slaves of others. We find from the later ceremonial sutras (Sautra and Grihya sutra) that women were not allowed to learn the sacred songs of the Vedas, the knowledge of which constituted one of the principal acquirements of a brahman before he was admitted to the performance of the sacrifices. *Manu*, ix and 18 says "women have no business with the text of the Vedas, thus is the law fully settled, having therefore no evidence of law, and no knowledge of expiatory texts, sinful women must be as foul as falsehood itself and this is a fixed rule." The practice of the wife worshipping the husband is very ancient. In the drama styled Ratna vali or the necklace, Vasavadatta, after worshipping the image of the deity, her attendant says

"The worship of the divinity concluded, be pleased madam to pay adoration to your lord Vasava. Where are the flowers and unguent?"

Kanch. Here madam

On which Vasavadatta worships the king. This is conformable to the Bhavishyottara Purana, which directs, "Having offered adoration to the mind-born divinity, let the wife worship her husband, with ornaments, flowers, and raiment. Thinking internally with entire complacency, 'this is the god of

love'"—*Hind Theat Vol. ii pp 67, 122, 275 Muller, Hindu Literature*

MALAY men average 5 ft 3 in high. They are far more gallant than the natives of other parts of the east and those they love, they also respect. Their dress is the baju or jacket, generally white, the seluar, short trousers, and sarong, or petticoat, with the saputangan or coloured handkerchief round the head. The women are generally fairer than the men, with soft, lustrous eyes, and long drooping lashes. They use the sarong falling from under the arms, and the kabia a long loose robe open in front and falling from one of the shoulders, to within one or two inches of the ground.

The Malays were not originally coerced into mahomedanism, nor have instances of violent conversion, such as the recent one of many of the Batta by the padris in Sumatra, been frequent in later times. The Arabs and other mahomedan missionaries conciliated the natives of the country, acquired their

language, followed their manners, intermarried with them, and, melting into the mass of the people, did not, on the one hand, give rise to a privileged race, nor on the other to a degraded caste. Their superiority of intelligence and civilization was employed only for the instruction and conversion of a people, the current of whose religious opinions was ready to be directed into any channel into which it was skilfully diverted. They were merchants as well as the Europeans, but never dreamt of having recourse to the iniquitous measure of plundering the people of the produce of their soil and industry. This was the cause which led to the success of the mahomedans, and it was naturally the very opposite course which led to the defeat of the christians. The Europeans in the Indian Archipelago have been just what the Turks have been in Europe, and the consequences of the policy pursued by both may fairly be quoted as parallel cases"—*Chauvigny's History of the Indian Archipelago* Vol II p 275 E D p 276 J I A No v May 1848 See India.

MALAYALAM, or Malayarma is spoken along the Malabar Coast on the western side of the Ghats or Malaya range of mountains from the vicinity of Mangalore where it supersedes the Canarese and the Tulu, to Trivandrum, where it begins to be superseded by the Tamil. The people speaking it in the states of Travancore and Cochin, and in the provinces of Malabar and Canara, are estimated by Dr Caldwell at two and a half millions. The language, however, on the Malabar Coast, is rapidly being driven out by the Tamil. The people who speak it are of all the Dravidian races, the most exclusive and superstitious and shrink with most sensitiveness from contact with foreigners, though their coast, more than any part of India, has been in all ages visited by the traders of other lands, by Phœnicians, Greeks, Jews, Syrian Christians, and Arabs, and the three last even formed permanent settlements amongst them. Their retired character has led to the less scrupulous and more adroit Tamilian people occupying all the lines of communication and monopolizing the greater part of the public business and commerce of the Malabar states. In a short time, perhaps, the Malayalam will only be known in the hilly tracts or jungle fastnesses. Malayalam was separated from the Tamil before the latter was cultivated and refined, and, from brahminical influence, has since had an infusion of Sanscrit words more than in any other Dravidian language, the fewest of such being in the Tamil. In all the southern languages, save the Malayalam, the pronoun is

post-fixed in a contracted form to the verb. Some of the post-fixes are also made honorific by slight euphonic changes. The Malayalam is spoken by about $2\frac{1}{2}$ millions, and the Tulu, on the sea-border somewhat to the north, by about 100,000 or 150,000. All along the southern portion of the West Coast, a large part of the population is to a great degree of foreign blood. The Mappila in N Malabar write Malayalam with the Arabic character but with additional vowel marks for e, o, and i, and some of the consonants have additional dots. In S Malabar they use the old Tamil character called *வட்டெழுத்து* vattezhuttu. The origin of the Mappila is explained by the fact that till lately Tyatti or women of the Tiya race did not lose caste by forming connections with rich and respectable foreigners. Since two or three have risen in the Government service to position (one was a Deputy Collector) they have put a stop to this practice. The Mappila race have several times risen in insurrection seemingly from agrarian grievances. Hindu landlords kept the land in their own hands or leased it out to the Mappila at high rents and then took advantage of legal rights to turn them out. The derivation of Mappila seems uncertain because it is written Mappila and not Mappallai or Mappilla, it may be a corruption of some Arabic participle? The 'Hill Kings' called in Malayalam Male arasai, are hill tribes inhabiting the Southern Ghats. They speak corrupt Malayalam in the northern part of the range, where the Malayalam is the prevailing language, and corrupt Tamil in the southern, in the vicinity of Tamil speaking districts. The term Malabar is evidently derived from Malayala or Malayam, meaning the hill country. Some writers indicate its origin as from the Arabic word Ma'abi, meaning the place of crossing over, but it is dangerous to quit India for derivations of Indian words. The Malayalam language is spoken in the low country and along the western ghats from Cape Comorin to the Chandagui river. The people occupying that tract are mostly settled but it has had several dynastic races, the Zamorin of Calicut, the Bibi of Cannanore, the rajah of Cochin, the rajah of Travancore, the Dutch have held sway there, and the present paramount power is the British. Adjoining the Malayalam district on the north, is the S Canara district, in part of which, around Mangalore, the Tulu language is spoken, Canarese being the tongue in general use. In this tract, the Nair race occupy large holdings, the rajah of Travancore is a Nair, and there are many of the

mahomedans styled Mopla or Mappilah In South Malabar, descent to sons is the law, but in North Malabar, the Nan, the artizans, carpenter, brass-smith, black-smith, gold-smith, the Tiyar, who are toddy drawers, and the Mookwa who are fishermen, are all polyandrists and descent of property goes in the female line In North Malabar this law of descent is called Marumakatayam, and the mahomedan Mopla has conformed to this usage In Canara, a similar law called Alya-Santana, or nephew inheritance prevails, and is in practice more strictly carried out than in North Malabar In North Malabar, the adherents to Marumakatayam form united family communities termed Talwaad The senior member of whatsoever branch is the head of the family and is termed Karnaven, the other members are styled Anandraven The remotest member is acknowledged as one of the family and entitled to maintenance if living under subordination to the head of the family and taking part in their religious observances, for the women there is nothing analogous to the state of widow-hood as existing elsewhere,—whether, in alliance with men or not, they reside in their own families The Nan marries before he is ten years of age, but though he supports, he never associates with his wife, who receives at her pleasure, any men, provided they be not of lower birth Consequent on this form of descent, a Nan does not know who his father is In law, property is held to vest in the females only practically the males are co-sharers with the females In default of males, females succeed to the management of the family property In some families, the management devolves on them preferably to the males and the senior female takes it There is, however, a growing tendency to convey property from father to son, arising from the gradual abandonment of polyandristm The connubial connection in question is called in Malabar “goona-dosham,” —“goona,” good, “Dosham,” evil (for better for worse) In Travancore, it is styled “mundu-vanga,” viz mundu, cloth “vanga” receiving, where the girl taken is of ripe age and her consent must be obtained Personal acquaintance thus precedes the union The hour selected is 8 P M, there is an assemblage of friends, the man presents the woman with a “mundu” or white muslin cloth, in a corner of which in North Malabar, a small sum of money is tied The girl either goes to the man’s house, or remains in her own and is visited by him there Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three The

descent being in the female line, the parentage of the father is immaterial The marumakatayam law is not followed in North Malabar by the Aka-Podwal, a class of pagoda servants, nor by the brahmins of North Malabar or of Canara, but in Travancore law, only the eldest brother of a brahmin’s family is allowed to marry with his equal, and the other brothers form other connexions In the Taluwa country, the brahmin widow can devote herself to the temple, and reside outside or inside its walls If within the walls, she is a servant of the idol and receives the visits of men of her own caste only the offspring of such, if boys, are called Moylai, and the girls are married to them But if she elect to reside outside the wall she must pay a monthly sum to the pagoda and may cohabit with any man of pure descent The Mopla, written also Mappilah, possibly derived from the Tamil words ma, mother, pilla, a son, are all mahomedans, and are descendants of Arabs who visited or settled in Malabar, and Wilson supposes that the Malabar women who bore children to them, from such casual or permanent intercourse, ignorant as to who of the race of foreigners were the fathers, styled the children sons of mothers, but the probability is that the law of descensus ab utero, marumakatayam followed by the mothers was prevailing from prior ages The Mopla are all large men, active, enterprising and possess much landed property They have been restless under British rule, and have repeatedly risen in insurrections but these have been local, and seem to have been from agrarian grievances the result of the British being unacquainted with their proprietary rights in the lands—*Journal of the Indian Archipelago* No IV and V April and May 185 p 216 See Davidson, India, Kerala, Kummaler, Mopla, Nan

MALAYAN The designation of a caste of slaves in Kanara and Malabar

MALAYANESIA Instead of the name Indian Archipelago which is too long to admit of being used in an adjective or in an ethnographical form, Mr Earl at first suggested the term Indu-nesia but rejected it also in favour of Malayanesia The purely geographical term Indonesia, is suggested by Mr Logan as a short synonym for the Indian Islands or the Indian Archipelago, as we thus get Indonesian for Indian Archipelagian or Archipelagic, and Indonesians for Indian Archipelagians or Indian Islanders

MALCOLM, Sir John, K C B, an officer of the Madras Army. He went as ambassador to Persia, was employed with the army against Bajirao, peshwa, in the last Maharatta war, and afterwards was governor of Bombay. He was an active, able man, with much energy and great bon-homme. He greatly aided Colonel Kirkpatrick in the dispersion of the trained French armies of the Hyderabad Government. He accompanied the Hyderabad armies when they advanced to aid in the siege of Seringapatam. After the battle of Assaye, at which he was not present, he was Resident at Mysore. He died in July 1833 in London. He wrote a history of Persia, History of Central India, Life of Clive.

MALCOM, HOWARD An American missionary and traveller, who published a history of his travels in Ava.

MALDA, a district and station town of Bengal, the station 191 miles from Calcutta. It is a small district N W of Rajshyee. The ruins of Gouri, the ancient capital of Bengal, are in this district.

MALDEO, died S. 1671 (A D 1615), he had twelve sons. His death formed an important epoch in the annals of the Rahtor race. Up to this period, the will had waited upon the wish of the gallant descendants of Siva, but now, the banner of the empire floated over the 'panchianga', the five coloured flag, which had led the Rahtor from victory to victory, and had waved from the sand-hills of Amerkot to the salt-lake of Sambhur, from the desert bordering the Garah to the peaks of the Aravalli. Henceforward, the Rahtor princes were required to maintain a contingent of their proud vassals, headed by the heir, to serve at the Mogul's pleasure — *Tod's Rajasthan, Vol II p 30*

MALDEVA See Malwa

MALDIVE ISLANDS A vast group of islands in the Indian Ocean, estimated at twelve hundred, extending southward from lat $7^{\circ} 6\frac{1}{2}'$ N, to $0^{\circ} 42'$ S. The islands are formed into large groups which the natives call Atoll or Atollon. Of these there are

MALE

nineteen, and they appear to be the summits of coral mountains. The inhabitants are mahomedans, governed by a sultan or king, and engage in trade and navigation. The Maldiva and Lakkadive islands have the Arabic alphabet, but their language is Singhalese. The group extend 466 geographical miles in length and 46 or 48 miles in breadth. Between the islands the water is of great depth but on the surrounding reefs the waves beat with great violence. The reefs have openings which admit ships to enter, and though the water inside the atolls, is generally shallow and calm, the depth is sufficient to allow vessels to pass from one side to another. The number of the islands is supposed by the natives to be 1,200, but it is generally believed that there are much more numerous. Malé the largest island in L 4" 10 N and L 73 40 E, is 7 miles in circumference and contains about 2,000 people. There are four safe channels through the islands. The soil is sandy, all the islands are densely clothed with palms, fig trees, bread fruit trees and a thick jungle covers them all. Indian corn, sugarcane and millet are grown in a few. There are no sheep or goats, but there are a few cattle and the inhabitants live chiefly on fish and cocoanuts. They trade with India, carrying, in boats, cocoanuts, cocones, salt-fish, coconut oil, con, jaggeery, coral, ornamental mats, tortoise shell and cowries, and import grain, cotton, silk and tobacco. The population of the latter group is estimated at 1,50,000 to 200,000. They are all mahomedans, who do not conceal their women. They are governed by a ruler, who is styled Sultan of the thirteen Atolls and twelve thousand Isles but who is tributary to the British Government of Ceylon. The people are quiet and inoffensive and little accustomed to war. The larger islands produce edible roots, fruits, and poultry and they traffic with Sumatra. The bread fruit, coconut and fish are the chief food of the people — *Memoir by Lieuts J A Young and W Christopher, I. N, in Bombay Geog Trans 1836-1838, and in Bombay re-print vol 1 54 Encyc Brit*

MALDUNG, HIND *Ulmus erosa*

MALDY A fabric made at Maldah, of a mixture of silk and cotton, very durable and which washes well. It is exported through Sikkim to the North West provinces and Tibet — *Hooke's Vol II p 251*

MALE, HIND *Panicum antidotale*

MALE of Cosmas is a region of Malabar

MALE The Rajmahal hills form a kind of knot, at the extreme eastern point of the hill

country of Central India, dividing Bengal from Behar and the Rajmahal people are known as Male. They are to the east of the Oraon, but are entirely different from their neighbours the Sonthal. They are better looking than the Sonthal. The skin is dark, face broad, eye small, and lips thicker than those of the men of the plains. Their language abounds in terms common to the Tamil and Telugu, and contains so many Dravidian roots of primary importance, though it also contains a large admixture of roots and forms belonging to the Kol dialects, that Dr Caldwell considers it had originally belonged to the Dravidian family of languages. A brief vocabulary of the words of the tribe inhabiting the Rajmahal hills in Central India, is contained in Vol V of the Asiatic Researches and Mr Hodgson's more complete collections prove the idiom of this tribe to be in the main Dravidian. Test words show an identity of language among the Rajmahali on the east, and the Manu in the remote jungles down to the Godavery, and the Gond who live along the Satpura as far west as Nimai and Malwa. It is akin to that of the Oraon. Latham says Bedo is one of their gods, and is the same as the Batho of the Boda, the Potlang of the Kuki and Buddha, and their priesthood like that of the Bodo consists of Devian and Devasi. It was the Male race, amongst whom Mr Cleveland so successfully laboured to impart to them settled habits. They have been successfully reclaimed, are quiet cultivators and formed the bulk of the corps known as the Bhagulpore hill ranges. Ghatwall estates are particularly numerous in the Bhagulpur and Bherbhum districts adjoining the Rajmahal hills on either side. The estates pay no revenue, but are held on the condition of guarding the passes against hill robbers, murderers and cattle-lifters. The Sonthal and Male or Rajmahali are regarded by Mr Logan as a displaced portion of the prior inhabitants of the country. The Male and Kol tribes are supposed by him to resemble the coarser Binua tribes of the Malay peninsula, more than the Burman the Malay, or other Indonesian tribes. But the same type as the Male and Kol are found amongst Malays and Burmans, although generally softened, and the short and turned up nose are Binua, as also is the small stature and the vertical, turned up head. The Male or Rajmahali are described as mostly very low in stature, but stout and well proportioned. There are many less than 4 feet 10 inches and perhaps more under 5 feet 3 than above that standard, but 5 feet 3 inches is about the average height of the men. Their nose

is flat and then lips thick, though less so than the Kaffir of Africa, but then lips are thicker than those of the populations of the neighbouring plains. Buchanan Hamilton says that the features and complexion resemble those of all the Indo tribes whom he had seen on the hills from the Ganges to Malabar. Their noses are seldom arched and are rather thick at the points, owing to their nostrils being encased, Bishop Heber says that the Male nose is rather turned up than flattish, but they are not so diminutive as the noses of the Tartar nations, nor flattened like those of the African negro. Their faces are oval and not shaped like a lozenge, as those of the Chinese are. Their lips are full, but not at all like those of the negro, on the contrary their mouths in general are very well formed. Their eyes, instead of being hid in fat and placed obliquely like those of the Chinese, are exactly like those of the Europeans. Their women, though hard worked are far from having harsh features. Bishop Heber says that the Malay or Chinese character of their features is lost, in a great degree, on close inspection. The Male head like that of the Kol has more of an elongated oval than that of a lozenge shape. The forehead is not narrow and the lateral projection of the zygoma is comparatively small. Nothing is said respecting the shape of the back of the head, a very important point in comparing European tribes. The Male, or hill man is described by Captain Sherwill as much shorter than the Sonthal and of a much slighter make. He is beardless or nearly so, is not of such a cheerful disposition nor is he so industrious. In the mountains S W of Calcutta, are the Dhangri, Oraon, the Kol, the Luka Kol or Ho, and the Khond.

The Ho are a comparatively small tribe. Their country proper is the part of the Singhbhum district, called Colehan, a series of fan and fertile plains straddled with hills. It is about 60 miles from N to S and from 35 to 60 in breadth, and has, to the South and S E, the tributary estates Mohimbhu, Keonjuri, Bonai and Gangpur, inhabited by Uiyah speaking Hindus to the east and north the Bengali pergunnah of Dhalbhum and district of Manbhum, and to the N and N E the Hindi district of Loharlagga.

For the Male or Rajmahali, the most eastern dialect, and those which it might have been supposed, were longest in contact with the east Gangetic, we have vocabularies by Major Roberts (A R iv 127) and by Mr Hunter (in Mr Hodgson's series, J A S XVIII, 553). The Oraon vocabulary of

Colonel Ousely (Hodgson's series) has so much resemblance to the Male that it may safely be set down as a dialect of the same language. It frequently agrees with the Male where it differs from the co-dialects, with which it is now in contact in Chota Nagpur. This may be considered as confirming the tradition of the Uiaon that their original country was Rotas and parts of Rewa, or the hills along the northern bank of the Sone (to the southward of Benares). According to the tradition, they were driven across the Sone by the intrusion of Gangetic hindus into their native land, and ultimately settled in Chota Nagpur, the country of the Kol tribe of Mundra or Ho. At a latter period hindus pushed into this territory, reduced the more civilized Uiaon to slavery, drove the wilder Kol into revolt, and eventually forced them to migrate to the southward and eastward into the land of the Bhman. The more northerly of the eastern emigrants passed out into the low country, and mixing with the Bhumi and Bhman natives, formed the class of Tamaria. The more southerly moved into Singbhum, and Kolehan, living at peace with the Bhman pre-occupants until the intrusion of Hindus from Marwar, who first leagued with the Bhman against the Kol and then with the Kol against the Bhman, and finally appropriated Singbhum leaving Kolehan or Ho-desam to the Kol or Ho, as this southern tribe call themselves. Remnants of the Kol are still found to the northward nearer Chota Nagpur, and they appear to be also spread to the northward towards Rajmahal. One tribe, the Sonthal, is found in Chota Nagpur and in the skirts and valleys of the Rajmahal hills. It is enumerated by Mr Stirling in his list of the Kol tribes of Cuttack, and according to Captain W S Sheil its range is from Cuttack through Chota Nagpur to Rewa, thus embracing the territory of both divisions of the eastern Vindhyan. The Raen, Male, and some others, are not inferior to the Jut in labouriousness and sobriety, although they are inferior in enterprise and resolution.

The Male and Uiaon languages are mainly Dravidian, and it is remarkable that although the Male are now confined to the N E extremity of the Vindhya, where the Ganges washes and bends round the chain, and are separated from the South Dravidian nations by the Kol race, their language is more Dravidian than the Kol itself. The pronouns and numerals, for instance, are Dravidian, while those of the Kol are Gangetic, Himalayan and Ultra Indian. The explanation is probably to be found in the cir-

cumstance of the Uiaon and Male having, originally, formed an uninterrupted continuation of the Gond tribes and dialects that extended from the Godavery to the N E extremity of the Vindhya. The Kol, again, must have formerly had a greater extension either on the north, breaking through the Male Gondian band, into the Gangetic valley, or on the south to the seaboard of Cuttack and the lower valley of the Ganges, where they would be exposed to the influence of maritime visitors and settlers, Ultra Indian and Gangetic. But as both the Kol and the Male-Uiaon are physically Ultra Indian more than Dravidian, and the occupation of the Eastern Vindhya and the hills on the opposite side of the Gangetic valley by Ultra Indians implies that the valley itself was at one time possessed by the same race, the simplest conclusion is that the Kol were an extension of the ancient Ultra Indo-Dravidian population of the Lower Ganges and the highlands on its eastern margin. The peculiarities of Kol, when compared with the S. Dravidian, and the Male-Gondian or pure north Dravidian dialects, are chiefly glossarial — *Journal of the Indian Archipelago* No IV and V April and May 1853 pages 106 to 108 Tichell J A S 1849 pp 691-7 *Mr Logon in Il In Arca Latham Campbell*, p 25 to 33

MALE, See Tsan-pe-na-go

MALE ARASAR, or hill kings, are small tribes of mountaineers on the hills in the extreme south of the Peninsula. They inhabit the range of ghats between Tinnevely and Travancore, in small communities of five or six families and probably do not exceed 500 in all. Their huts consist of a few sticks covered with bark and thatch. They live on wild forest products, but, since A D 1850, they have been cultivating potatoes for their own family use. They have a few fowls and dogs. As a race they are diminutive and pot-bellied, their crania small, and pear shaped, rising to a point about the junction of the occipital bone and the sagittal suture, a low retreating forehead, long, tangled, black hair, flat nose, and small eyes. They are averse to intercourse with strangers. They catch wild animals with pits and traps and use bows and arrows. They are a miserable body, low in the scale of civilization.

MALT

Mont,	Dur	Milnam,	Liv
Val, Bludgerme,	Fr	Solud,	Rus
Maly,	Gru	Cebidiretonidao	
Malto,	Il	entallaida,	Sp

Malt is grain, steeped in water, and made to germinate to a certain extent, after which the process is checked by the application of heat This evolves the saccharine principle of the grain, which is the essence of malt Rice, and almost every species of grain, has been used in malting, but in Europe, and especially in England, malt is almost entirely prepared from barley It is the principal ingredient in the manufacture of beer, and is little used except in brewing and the distillation of spirits — *Faullner, McCulloch's Commercial Dictionary* p 777

MALTA An island in the Mediterranean sea in lat 35°54' N, lon 14°31' E, about 200 miles from the African Coast and 60 from Cape Pessaro in Sicily, its length is about 17 miles, and average breadth 9 miles The population, exclusive of the garrison and sailors of the fleet, comprising a mixture of Maltese, Franks, Greeks, Africans, and na-

times of the Levant, is estimated at about 106 000. Malta has been successively occupied by Phœnicians, Greeks, Carthaginians and Romans, on the decline of the Roman power it was seized by the Goths and Vandals, and then passed for a short period into the hands of the Eastern Emperors, who surrendered it to the Saracens. It then came into the possession of the Norman and German kings of Naples, with whom it remained until 1522, when it was granted by Charles V to the Knights of St John of Jerusalem, who on several occasions valiantly defended it against the Turks, but surrendered it to Napoleon on the 12th of June, 1798, at the first summons. The island was soon after blockaded by the British fleet under Lord Nelson, and, after suffering severe privations, the French finally relinquished the island to Sir Alexander Ball in August 1799.

MALTA or **Sea Wax**. A solid, whitish, inflammable, vegetable substance, not unlike tallow, and may be impressed with the nail. It swells when heated, and on cooling assumes the consistence of white cerate. It affords a better light than petroleum, and emits a less disagreeable smell. It is found on the surface of the Baikal lake in Siberia, at the foot of the Bakhtian mountains in Persia, and other places.

MALVE. See Nicobar Islands.

MALWA. The rajis of Malwa, the capitals of which are Ujjayini and Mandor, are known from the writings of Abul Fazl whose information is supposed to have been furnished

ed from Jain authorities. It would appear that in early ages, Mahahmah founded a fine temple, which was destroyed by buddhists, but restored in B C 840 by Dhanu (Dhananjaya) a name of Arjun, about 785 before Vikramaditya. Between A D 866, and A D 1390, the country repeatedly changed hands from hindu to mahomedan sovereigns from the time that in 866 Maldeva was conquered by Sheikh Shah, father of Ala ud din, to 1390 when Dilawar Khan Ghori, viceroy of Malwa assumed sovereignty. Malwa was added to the Delhi empire by Han ayun, before his flight. The peshwas, the southern paghmedars, the principal officers of state, and chiefs who remained in the Mahatta countries south of the Taptée, were brahmins. The Bhonslahs, who early possessed themselves of Nagpoor, the Gaekwar of Guzerat, and the family of Puar, who settled in Malwa, were of the Khetri tribe. The Sindia and Holkar families were of the sudia caste. At the close of the Pindari war, the districts in Central India and Malwa were left in a disorganized state, the Mahatta chiefs had parcelled out amongst themselves the possessions of the Rajput chiefs and the smaller states were all subject to Sindia, Holkar or the Puar, and sometimes to all three. Many of the smaller chiefs had been driven from their possessions, and had sought refuge in the jungles and mountains where they robbed or levied "tankhah" or black-mail from the larger states. These robber chiefs were twenty-four in number at sir J Malcolm's time. Malwa and Gwalior are great centres of trade. In Malwa, the towns of Indore, Bhopal, Oojem, Mundipore, Rutlam, Dhar, Jowia, Augur, Nemuch, Shoojawulpore and Bhilsa are the principal marts. The richly cultivated plains of Malwa with occasional intervening tracts of hill and jungle, extend from the Myhee on the west to Bhilsa on the east, a stretch of nearly 200 miles, and from the crest of the line of the Vindhya to Mundissoie and Oomutwaria, a distance of 100 to 120 miles, all occupied by a thrifty, agricultural, people. This is succeeded by the more hilly and jungly tract of Oomutwaria, Seronge and Keechwarra, with a scanty population. Northwards, towards Gwalior, the country becomes more open, except on the wild border tracts of Kotah of Bundelcund till we come to the carefully cultivated plain of Gwalior stretching for a distance of 140 miles between the Chumbul, Pahooj and Sind rivers. Western Malwa Agency embraces Jowiah, Rutlam and Sillana. The districts of Western Malwa are subject to the incursions of the Bhels from Bauswara

and Petaabguah. In 1861 an engagement was made with the Thakooris on the frontier, in whose districts the principal passes of the hills are situated, to unite and oppose the incursions of the Bhels. Under an engagement mediated by sir John Malcolm in 1819 between Purbut Sing, Rajah of Rutlam, and Dowlat Rao Sindia, the former agreed to pay an annual tribute of Salim Sahce Rupees 81,000, while Sindia undertook never to send any troops into the country or to interfere in any way in the internal administration or succession. This tribute was assigned under the treaty of 1841 with Sindia in part payment of the Gwalior contingent. It is now paid to the British Government under the treaty of 1860. The rajah of Rutlam is considered the principal Rajpoot leader in western Malwa, and in consequence receives a voluntary allegiance and assistance if called for from the neighbouring Rajpoot chiefs. The late rajah Bulwant Sing rendered good service during the mutinies, in recognition of which his successor Bhayon Sing received a dress of honour of Rupees 3,000 and the thanks of Government. The military establishment of the rajah of Rutlam consists of 500 sepoys. The revenue from all sources is estimated at Rs 3,61,001 and the population at 91,839. The town of Rutlam is the principal opium mart in western Malwa. The area of Rutlam is about 500 square miles. Sillana pays an annual tribute of Rupees 12,000 under the same conditions as Rutlam of which territory it originally formed a part. The tribute is paid to the British Government under the treaty with Sindia of 12th December 1860, having been assigned in 1811 in part payment of the Gwalior contingent. The revenue of Sillana is estimated at Rupees 2,19,000, the population at 88,978 and the area at about 103 square miles. Seetamhow, like Sillana, was once a part of Rutlam, but separated from it in A D 1660 on the death of Ram Singh, rajah of Rutlam. A tribute of Rupees 60,000 from this state was guaranteed to Sindia by an agreement mediated by sir John Malcolm in 1820. The total revenue of Seetamhow is about Rs 1,50,000, and the population about 20,000. In consequence of repeated representations from the rajah, 5,000 of the annual tribute were remitted in 1860 by Sindia of his own free will on the occasion of the rajah's son waiting on him at Gwalior. An intimation of the remission was given to the rajah of Seetamhow in a letter from Sindia to his address. The rajah of Seetamhow remained faithful to the British Government during the mutiny of 1857, and received a dress of

honour of Rupees 2,000 The rajah keeps up a military force of 40 horse and 200 foot

Punt Peeploodah In 1821 Naroo Dhandeo and -Wasadeo Jinardin received from sir John Malcolm a sunnud which was confirmed by the Supreme Government whereby they received tribute on ten villages in the district of Mundavul and sonbah of Mundisore. Naroo Dhandeo was succeeded by his son Gopaul Rao The jaghnedars furnish reports of crime to the Political Assistant The settlement of *Peeploodah* chieftship, under which a tribute of Sahm Sahoo Rupees 28,000 is paid to the nawab of Jowrah in accordance with the 12th article of the treaty of Mundisore was made with Puthree Sing by sir John Malcolm in 1820 The thakoor receives from Kishnajeo Rao Puar of Dewas, Rupees 138 on six villages and from Hybut Rao Puar Rupees 115 on five villages in Gooigoocha He also holds a grant of land in the village of Betekheere in Alote district from Kishnajeo Rao Puar, and he receives Rupees 1,000 damee from Tual and Mundavul

Jawasea thakoor receives, besides tunkhas, quit-rent, for the villages of Jawasea for Rupees 501, Gookheere for Rupees 201, and Chaplakheere for Rupees 341-8 in Dewas He also holds in jaghne a well and 16 beegahs of land in the village of Soondwurnee, and a well and 25 beegahs in the village of Biwasee But none of these tenures appear to have been mediated or guaranteed by the British Government

Noulana thakoor receives, from Sindia, Rupees 1,570 and from Holkar Rupees 1,650, he also holds in jaghne the village of Sataria in the Deypalpoie pergunnah, where he also has 40 beegahs of land in jaghne But for these he has no sunnuds

Theogurh thakoor receives from Sindia Rupees 3,200 and from Holkar Rupees 623

Dabree thakoor receives Rupees 180 from Sindia on Oogem and Pan Behar He receives his tunkha He also claims certain rights of "lag" and "bhet" on the village of Sawukheere and Kudwuree in the Pan Behar pergunnah and "Kahdy," Ukonta, "Karrundie," "Ootara," in the Oogem pergunnah, and states that he originally held 500 beegahs of land in the village of Dabree, but he has no sunnud for these

Bichrode thakoor receives a tunkha from Sindia, he holds in jaghne 20 beegahs of land in the village of Kheikheere in the Pan Behar pergunnah under Sindia

Kalookheera thakoor receives Rupees 3,261 on tunkhahs

Nurwar thakoor receives from Sindia Rupees 17,100, and from Dewas, Rupees 25,512 Besides the above he holds in quit-rent tenure the villages of Nurwar, Mochakheere, and Goomree under Sindia for which he pays Rupees 7,000

Lalgurh and *Peepia* thakoors receive tunkhas

Nowgong thakoor receives a tunkha Rupees 114 from Sindia He holds in jaghne under Sindia 100 beegahs in Nowgong, 75 beegahs in Puriwar-Kheere, 100 beegahs, a tank, a well, and a garden in Dutana

Dutana thakoor receives a tunkha of Rupees 186 from Sindia and holds lands in jaghne from Sindia in Dutana, Umtana, Soondekheere, Gokheere, and Balkheere

Ajaoada, receives a tunkha from Holkar and from Sindia

Dhoolatia thakoor receives Rupees 400 from Sindia, he holds a perwanah from Colonel Sandys

Bichrode thakoor receives a tunkha of Rupees 430 from Sindia

Biloda receives tunkhas

Bundia receives tunkhas — *Thomas' Princess p 259 Orme Malcolm's Central India Vol I p 67 Treaties, Engagements and Sunnuds, Vol IV p 364*

MAMAREE, a pretty village with many brick buildings and a fine nuboruttan or nine-pinnacled hindoo temple — *T. of Hind vol 1, p 149*

MAMASENI A nomade tribe dwelling in Luristan, and belong to the Lur family, as do likewise their neighbours the Khogilu and the Bakhtyar, who, like themselves, occupy the valleys of the great chain of Zagros which separates Iraq Ajam from the provinces bordering on the Persian Gulf All these tribes are the descendants of the ancient Zend race and the Mamaseni claim great antiquity, the country inhabited by the Mamaseni, may be comprised approximately within the following limits — the direct dependencies of Fars, to the east; Kazerun, to the south, the Khogilu tribes, and the hilly country descending towards the Persian Gulf, to the west, and the chain of the Audekan mountains to the north The tract of land occupied by the Mamaseni bears the name of Shulistan *Baron C A De Bode's Travels in Luristan and Arabistan, p 262*

MAMBRE HIND *Ficus reticulata*

MAMBU—The bamboo

MAMECH HIND *Polygonum bistorta*

MAMEERA also written Mameeran, are of two different kinds in the Lahore bazaar, the one from Cashmere, the other from China, called Khutai (*Scythia*). The latter is official all over the East, being much used by the hakims, who deem this root to be a specific in ophthalmia, but, the genuine drug is seldom to be met with, as it has many substitutes, *Chelidonium majus* and *C. glaucum*. But Dr Royle affirms *Ranunculus ficaria* or *ficaria* to be the plant from which the Cashmerean mameera is produced. Both sorts are used, in general externally, and in composition with other drugs, are applied to the eyes as a dry collyrium—*Hongbeiger*, p. 301. See Mamna.

MAMEKH HIND *Paeonia officinalis*, grows at about 8,000 feet in the Hazara Hills, &c

MAMELUK These were of two races, the Bahente and the Boigite the latter of Circassian origin. In the times of Selim the first, the Mameluks were all of pure Circassian blood, and their ancestors had all been originally slaves.

MAMMALIA The animal kingdom was divided by Cuvier into four great sub-divisions, Vertebrata, Mollusca, Articulata and Radiata. The Articulata has since been greatly sub-divided, and the limits of two of the other sub-divisions have been slightly altered. Vertebrate animals comprise four distinct classes, some of which, viz., Fishes and Reptiles have blood nearly the temperature of the water or air in which they live, whilst the others, viz., the Birds and Mammals are warm blooded. Mammals are warm-blooded, vertebrate, viviparous animals, and are distinguished from birds, as well as from the other vertebrate animals, by the possession of mammary glands, secreting milk for the nourishment of their young and terminating outwardly in all (except in one or two) by teats. They are also distinguished by a covering of hair, except whales, but even the foetus of whales has some tufts of hair. Most mammals have four limbs, from which they were formerly termed quadrupeds, but that term has been

discontinued as it is not applicable to the Cetaceæ. The leading peculiarity of the mammals is their power of nourishing their new-born young with milk. This is secreted by mammary glands, and these vary in number and position, being most numerous in the more prolific races. In cold climates several animals pass the winter in a state of torpidity, and even in India, certain bats and hedge hogs, and perhaps some rats are more or less torpid during the cold season. Two species of bears found in the Himalaya retire to their caves during winter, and are rarely or never seen from the month of December till the end of March.

Dr Jerdon divides Mammals into Placental or those in which the foetus are nourished in the maternal uterus by means of a placenta and Implacental or Marsupial or those in which the young foetus is expelled at a very early period and maintained in a pouch firmly attached to a nipple. None of the Implacental or Marsupial animals occur in the Asiatic provinces, being chiefly developed in the Australian region and a few in America.

Mr Blyth arranged the Placental Mammals into

A Typodontia, animals with the typical forms of teeth developed, and include man, monkeys, bats, carnivorous animals and shrews. The majority live on animal food.

B Diplodontia, rarely more than two kinds of teeth, and include rats, squirrels, deer, sheep, cattle, the elephant, pig, horse, and the almost toothless ant-eater. They chiefly live on vegetable matter.

C Isodontia, teeth, when present, are all of one kind, and comprise the whales and porpoises.

The details of the above classification are thus shown,—

A Placental Mammals, Foetus nourished in the uterus, through a placenta.

I Typodontia, Teeth of all ten kinds.

1st Group, PRIMATES, Hair of one kind only.

ORDER *Quadrumania*, with thumb on the feet.

„ *Cheiroptera*, winged,

2nd Group, SECUNDARILS, Hair of two kinds.

ORDER *Carnivora* Molars trenchant, mixed with tubercular ones.

„ *Insectivora*, Molars studded with cusps.

II Diplodontia, Teeth generally of two kinds only, abnormal.

ORDER *Rodentia*, Front teeth long and chisel like.

MAMMALIA

ORDER *Pachydermata*, Teeth varied, skin thick, do not ruminate

„ *Ruminantia*, upper incisors generally absent, chew the cud

„ *Suavia*, want posterior extremities.

„ *Edentata*, Incisors absent

III Isodontia, teeth, when present, of one kind and often very numerous

ORDER *Cetacea*, Posterior extremities wanting

B Implacental or Marsupial mammals

I Unguiculata, with nails

Colonel Sykes published a list of the animals observed by him in the Deccan, Mr now Sir Walter Elliot, in 1839, gave a Catalogue of the Mammalia of the southern Malabar country. Mr Hodgson published several lists of the Mammalia of Nepal, Colonel Tickell gave a detailed history of a few animals. Major Hutton recorded some facts on the mammals of Afghanistan. Mr E. L. Layard, Dr Kelam, Dr Templeton, Sir J. E. Tennent have almost exhausted the subject of the animals of Ceylon, Dr Horsfield and Sir T. S. Raffles were amongst the first who described the animals of the Eastern Archipelago, and Professor Bickmore and Mr Russell Wallace have recently extended their researches. Dr Cantor furnished a valuable list of the mammalia of the Malay peninsula, Dr T. C. Jordan in 1867 published the Mammals of India, and the labours of all these Zoologists were revised by Mr Blyth of the Calcutta Museum, in many notices and reviews in the scientific journals of the day.

Southern India, more particularly the richly wooded Malabar Coast, possesses more species peculiar to it than all Central and Northern India, except the Himalayan range. Of the animals only found in the Himalayan range, several equally belong to the Indo-Chinese fauna, of which they appear to be the Western extension and a few others to Central Asia, whilst a moderate number appear to be peculiar to the Himalayan mountains. The Langoor monkeys (*Presbytis*) form a well marked group in India and are still further developed in the Indo-Chinese provinces and Malaya. Out of five continental species, one is spread through all the plains of Central and Northern India, one through the Himalayas, and there are three well marked species in the extreme South of the peninsula. *Macacus radiatus* of Southern India replaces *Inuus rhesus* of all Northern and Central India. A well marked form of this group, *Inuus silenus* is peculiar to the South-west corner of the peninsula. The Lemurs are almost

MAMMALIA

peculiar to Madagascar, but one species is very abundant in the extreme south, and a Malayan species extends sparingly through Burmah into the N. E. corner of Bengal.

Two species of frugivorous bats are spread all over India and one species occurs only in the south.

Of Insectivorous bats, seven species of *Rhinolophus* have been found in the Himalayas, but only two species in southern India. The *Hipposideros* section is represented equally in the north and south of India, and is more Malayan. The *Cœlops* of Blyth has, as yet, been found only in the Bengal Sundrbanas. The yellow bellied *Nycticeius* occur pretty generally throughout India, *N. ornatus* occurring in the Himalayas. A few European forms are found in the Himalayas. Moles occur in the Indo-Chinese region and in the S. E. portion of the Himalayas. Shrews occur in all parts of India, but are most abundant in the Himalaya. One species of *Tupaia* occurs in southern India, and another from the S. E. Himalayas to Burmah. Of the Carnivora, two species of bears are Himalayan, and a third species extends throughout all the plains of India. *Ailuus fulgens*, one of the *Ursidae*, is peculiar to the Eastern Himalayas. Weasels occur only on the Himalayas, one martin is found both on the Neilgherries and Himalayas, one species of otter is found in the south of India, in Bengal are two species and others occur in the Himalayas. Of fifteen feline mammals found in India, five are common to India and Africa, seven are found in India and the Indo-Chinese region, but three of these occur only in the S. E. Himalayas. One, the ounce of central Asia, is Himalayan, and the smallest of the feline animals are peculiar to the plains of India, two of them in the extreme south of the peninsula, and the other on the N. West. Of the strictly Asiatic *Paradoxurus*, more Malayan than Indian, one species is common in most parts of India, and two occur on the Himalayas and adjoining Terai. The genus *Herpestes* is common to India and Africa, out of seven Indian species, five occur only in the south of the peninsula and of these four only in the extreme south. One small *Civet* cat is found throughout India, and is common in the Himalaya. A large species on the Himalaya replaced by a different race in the extreme south. *Aictonyx*, *Arctictis*, *Helictes*, *Uiv*, and *Prionodon* are found in the S. E. Himalayas and in the Indo-Chinese region. The wolf, the jackal and wild dog are found throughout India, two small desert foxes are found throughout the plains and a fox of the European type

The bison of sportsmen, the magnificent Gour, *Gavæus gaurus*, abounds in the forests of S India and extends into Central India, Burmah and the Malay peninsula. Two species of the Mams, the scaly Ant-eater, occur, one common throughout all

The isabella, or brown bear of the Himalaya is an exceedingly stupid and unsuspicious animal in districts where it has not been disturbed. The contents of the gall bladder are much prized as medicine by the hill people.

The ran-hun or wild dog, *Canis primævus*, is a native of the Cashmere ranges, and although not so common, is by no means rare, it is so stealthy in its habits that all attempts to obtain specimens often prove abortive. They hunt in packs, and attack the largest deer. Even the Cashmere stag is said to be brought to bay and killed by packs of wild dogs. The wild dog seen by Dr. Hooker on the Khasia mountains, and known there by the names kulsam and khas, may be a different species, though Colonel Sykes considers it identical with the kolsum of the Deccan (*C. dukhunensis*).

The strange looking goat antelope (*Capricornis bubalus*), known by the name "ramoo" in Cashmere, and "seron" in other districts of the western Himalaya, is perhaps the rarest of the wild ruminants. Occasionally the sportsman comes across an individual in the depths of the Alpine forests, but the animal is very solitary in its habits, and seldom more than a couple are seen together. Both in figure and movements the seron is perhaps one of the most ungainly of its tribe, and so stupid is it that when come on unawares it will stand and gaze at the intruder even the report of a rifle seldom scares it. The seron has the legs of a goat, the horns of an "antelope," its general appearance is bovine, whilst the long stiff bristles on its back, and general shape of the head, are decidedly porcine, a sort of nondescript beast, which European sportsmen often call a "very extraordinary looking animal" and so it is. The seron is said to fight desperately, it has been known when wounded or brought to bay, to have kept off a pack of wild dogs, and killed several by its sharp pointed horns. A few are met with on the Cashmere ranges, and in favourable situations eastward to Nepal.

The Houmar (*Caprovius Vignei*) extends along the eastern spurs of the salt mountains, but becomes less common as we proceed eastward, and is seldom met with on the ranges beyond the town of Jhelum, or southwards of the Beas River. It is confined to the north and western portions of the Punjab, including the Suliman chain, where it is known by the name of Kuch. It is also a denizen of the mountains around Peshawar, including the Khyber Pass, Hindu Koh, and Kaffirstan. The shapoo or shalmar of Ladakh, if not identical, is certainly very closely allied, its differences are slight, and, such as might result in a great measure from the marked diversity of climate, food, &c., of the two regions. This species is no doubt

the Sha of Tibet described by Vigne, and possibly the wild sheep of western Afghanistan, Persia, the Caucasus, Armenian and Coisican mountains, is the same species altered mayhap by climate and other external agencies. The eastern limits of the Shapoo have not been fixed with certainty, but so far as inquiries have extended, it would seem that, commencing at Ladakh, it proceeds westward towards the Indus, into the regions where the houmar is found, and probably when these regions are explored we shall find out the relation between what has been supposed distinct, but which Dr. Adams is inclined to consider one and the same animal.

The ibex (*Capra himalayana*) frequents many of the lofty ranges of the western chains, and is known to the natives by the names "skeen" and "kail," which they apply indiscriminately in the districts of Aserung, Spiti, Kanawar, the Northern Cashmere mountains, Ladakh, Chinese Tartary, and the Altai. It is not clear that the European ibex is a distinct species. There appears to be a variety in Ladakh with shorter horns than the Himalayan, and specimens of the Siberian ibex possess the same peculiarity. The leopards, panthers, wild-dog and bearded vulture, are the common enemies of the ibex, the latter preys on the kids only. The ibex is found on certain ranges in Ladakh, especially on the chains northward.

The Caucasian ibex (*Capra caucasia*) frequents the mountains of Beloochistan and it is likewise a native of the Muiree and other ranges on the north-western frontier of Sind. The Caucasus, Asia Minor, Syria, and Arabia, are also countries which it inhabits. It does not appear to travel any great distance eastward, and is probably replaced on the higher ranges of Afghanistan and Persia by its noble congener the Himalayan ibex. The Caucasian ibex has the hair short and dark brown, with a black line down the back. The beard is also black. Like the European and Himalayan animals, the horns are also bent backwards but they differ in being more slender and tapering. In the latter, moreover, the horns are three-sided, and the anterior and posterior surfaces sharp, and generally smooth, with the exception of a few irregular tubercles on the frontal aspect. Like the other species, it frequents dangerous and inaccessible places, such as bleak and barren mountain tops.—*Jerdon, Mammals*.

170 species of mammalia are known to inhabit Indo-Malaya. There are 24 of the quadrumanous or monkey tribe, 10 of which

occur in the Malay peninsula, 11 of them in Sumatra, 9 in Java and 13 in Borneo. The Orang-utan are found only in Sumatra and Borneo, the Siamang, next to them in size, in Malacca and Sumatra, and the long nosed monkey only in Borneo. The gibbons or long armed apes and monkeys and the lemur like animals, *Nycticebus*, *Tarsius*, and *Galopithecus*, are found in all the islands. With the exception of the Orang-utan, the Siamang, the *Tarsius spectrum* and the *Galopithecus*, all the Malayan genera of quadrumana, are represented in India by closely allied species. In the Indo-Malay region are 33 Carnivora, 8 of which—a tiger, leopard, civet, tiger-cat and otter are found in India and Malacca and 20 in the Malayan region. 13 have representatives in India, of closely allied species.

The Malacca gibbon, *Helictes orientalis*, has the *H. Nopaleus* in the Himalaya. There are 22 hoofed animals in Indo-Malaya, seven of which are found in India and Burmah. The *Bos sondaicus* is found in Burmah, Siam, Java and Borneo. There is a goat-like animal in Sumatra, the two horned and the long horned rhinoceros occur in Burmah, Sumatra and Java, and the elephant of India is found in Malacca, Sumatra and Borneo. There are about 50 bats, of which under a fourth part occur in India, 34 rodents (squirrels, rats &c.) of which 6 or 8 are Indian, and 10 Insectivora, 9 of which are peculiar to the Malay regions. The Tupia, insect-eaters, closely resemble squirrels, are almost confined to the Malay islands, as also are *Ptilopus* Linné of Borneo and *Gymnurus Rafflesii*. In Timor, there are 15 bats, and 7 land mammals, amongst them the *Macacus cynomolgus*, the common monkey of all the Indo-Malay islands. *Paradoxurus fasciatus*, a civet cat, is found over much of the Archipelago—

Felis megalotis, a tiger cat is peculiar to, and rare even in Timor. *Cervus Timoriensis*, *Sus Timoriensis*, *Sorex tenuis*, and *Cuscus orientalis*, are all found in Timor and the Moluccas. Horses said to be wild in Timor are all private property.

The mammalia of Celebes consist of 7 bats and 14 terrestrial species, amongst them the *Tarsius spectrum*, *Viverra tangalunga* and *Rusa lippelapha*. *Cynopithecus nigrescens* in Batchian, is of a jet black color and the size of a spaniel.

The Anoa depressicornis, called "sapitau" or the wild cow of the Malays, approaches the ox-like antelopes of Africa, and has been classed as an ox or a buffalo and antelope. It is found only in the mountains and never occupies places where there are deer.

The wild boar of Celebes is peculiar, but the Babussa or Pig deer there, has long and slender legs and the male has curved upper tusks joined back so as to resemble horns. It feeds on fallen fruits, it is found in the Celebes, in the Sulu islands and in Borneo. There are also 5 species of squirrel, and 2 species of Cuscus or eastern opossums.

The Anoa depressicornis, (*Sapitau*, Malay) is the wild cow of Celebes. It is smaller than other wild cattle. It is found in the mountains. *Cynopithecus nigrescens*, the black baboon monkey is also of Celebes. *Paradoxurus fasciatus* is a civet cat of Timor.

The Moluccas consist of three large islands, Gilolo, Cerana and Bomu, with many small isles and islets, Batchian, Morot, Obi, Ke, Timor-Laut, Amboyna, Ternite, Tidore, Kava and Banda. There are 25 bats but only 10 land mammals are known in the group, amongst them *Cynopithecus nigrescens*, *Viverra tangalunga*, *Rusa lippelapha*, the Babussa, *Sorex myosurus*, common to Sumatra, Borneo and Java, and four marsupials viz the small flying opossum, *Belidens ariel*, a beautiful little animal resembling the flying squirrel in appearance, and a species of Cuscus peculiar to the Austro-Malayan region. They are opossum like animals with a long prehensile tail, of which the terminal half is generally bare, they have small heads, large eyes, and a dense covering of woolly fur, often pure white with irregular black spots or blotches, but sometime ashy brown. They live in trees and feed on the leaves of which they devour large quantities, they are very tenacious of life.

The Papuan islands, consist of New Guinea 1,400 miles long and its adjacent islands. In them only 17 mammals as yet are known, viz 2 bats, 1 *Sus papuanus* and the rest are marsupials, one of these a kangaroo of Mysol and the Aia islands. An allied species occupies N. Guinea. Two species of the tree kangaroo with powerful claws. There are 1 species of Cuscus, and the small flying opossum, and there are 5 small marsupials, one of which is the size of a rat and takes its place by entering houses and devouring provisions. Wallace, *Malay Archipelago* vol 1 pp 116, 208 279 and n 79, 263.

The maral, a large stag, is found in all the higher regions of the Ala-tau and Mustau. He affords noble sport for the hunters, and his horns are highly valued by the Chinese. But it demands a fearless hunter to follow him into his haunts among the peerpees, glaciers, and snowy peaks of this region. In winter and spring, he is found in the valleys, but as the weather becomes warmer he ascends, to escape the flies and

other insects. They are seldom found in herds, though groups of ten or twelve are sometimes seen standing on the brink of a precipice 1,500 to 2,000 feet in height, quite inaccessible to man.

Two Cossacks hunting the maral, followed the game far up into the Ala-tau, and had been successful they started again in pursuit, and found a magnificent animal, whose horns were worth 120 roubles—*The Upper and Lower Amoor*, p. 110 112.

We have the evidence of Jehangir, and the Reverend Edward Terry, that in their days, the province of Malwah abounded with lions. Jehangir records, that he had killed several and Mr Terry mentions his having been frequently terrified by them, in his travels through the vast woods and wilderness of the country—*Terrants Hindustan Vol I* p. 78-9.

Elephants are common in Birmah, in Ceylon, in the peninsula of India and in the Terai. They were not in use by the Moguls as Polo tells, until Kahlai's capture of a number in the war with Mien or Ava. A few continued to be kept at the Chinese Court, at Timkowski's visit in 1821—*Yule Cathay*, p. 140.

The barking-deer (*Cervus muntjak*) is frequent in several parts of India. The Chevrotin or pigmy deer, are not much larger than hares.

Of the Cetacea, the whale tribe of Mammals, of the family of Balænidæ, there are in India, 4 genera and 7 species, viz—1 Balænoptera, 4 Balæna, 1 Physeter, 1 Phocæna. Balæna antarctica the antarctic or smooth backed whale, in spring resorts to the bays of Chili, South Africa, the Brazils, Australia and Van Diemens land.

The Zoology, like the Botany of the Himalayas differs essentially from that of the sultry plains of India, which skirt their southern base, though occasionally mixed with tropical forms, it is upon the whole of a character closely resembling that of the more temperate and northern latitudes, and the insulated position of these remarkable mountains, exhibiting, as they do, the rare and interesting phenomenon of a temperate and even a boreal climate on the very confines of the tropic, where the summer heat is necessarily greater than even under the equator itself, are of importance to inquiries connected with the geographical distribution of Animal Life. The principle of animality, possesses an innate power of adaptation which renders Animals in some measure independent of climate, particularly as compared with vegetables, and which increases in proportion as we ascend in the scale of

life. The power which all animals possess, in a greater or less degree, of adapting themselves to different varieties of climate, and of withstanding, uninjured, the effects of temperatures foreign to their natural habits, increases in proportion as we ascend from the lower to the higher tribes, and the Mammalia undoubtedly form one of the most favourable groups for the discussion of this important question. Indeed, were it not from their limited powers of locomotion, they would be the very worst of all, because their high position in the scale of life, and the superior intelligence and resource with which it endows them necessarily protect them against changes and casualties, which would prove fatal to more simply organized beings, but, deprived of the powers of flight, ordinary mammals have not the means of traversing the wide deserts and oceans, which separate the habitable portions of the earth: the nature of their locomotive powers consequently confines them to particular regions, and, in spite of the more favourable circumstances of their physical organization, their more varied resource and superior intelligence, they afford better materials for studying the problem of geographical distribution, than the kindred class of birds, whose faculty of rapid flight enable them to set oceans and deserts equally at defiance, in passing to the most distant quarters of the globe, and, as it were, to choose their own temperature and climate in the boundless fields of air. Hence it is that the circumstances of the important problem of geographical distribution are less favourably presented in Ornithology than in Mammalogy.

The species of mammalia found in the Southern Mahratta Country, were described by Mr Walter Elliot, of the Madras Civil Service in the Madras Literary Society's Journal July 1839. The district of India, in which the animals were procured, is a part of the high table land towards the south of the Dekkan, commonly called the Southern Mahratta Country, and constitutes the British zillah of Dharwar. It ought, likewise, geographically speaking, to include the small province of Sunda. The general boundaries are the rivers Kistnah and Bhima on the north and N. E., the Tumbrdra river on the south, the Nizam's territory on the east, and the Syhadra range of mountains on the west. The latter are generally called the Ghats, a term which, however, properly applies only to the passes leading through them. The general face of this tract is much diversified, and affords a great variety of elevation and of geological structure, thereby materially affecting the

distribution and the habitat of the different species of animals existing within its limits. The whole of the western portion is a thick forest, extending from the outskirts of the mountainous region of the Ghats to their summits, and clothing the valleys that extend between their different ridges. It abounds with the teak and various other lofty forest trees, festooned by enormous perennial creepers. The bamboo forms a thick and luxuriant underwood in some places, while others are entirely open, and the banks of many clear and rapid streams flowing through it, abound with the black pepper plant, the wild cinnamon and other odiferous shrubs. Portions of this forest are often left entirely untouched by the axe or knife, forming a thick impenetrable shade for the growth of the black pepper, cardamom and Mann palm (*Caryota urens*). These are called kans and are favourite resorts of wild animals. To the east of the regular forest lies a tract called the Mulnad, or rain-country (though the natives of the plains often include the ghats, or forest, under the same denomination), in which the trees degenerate into large bushes, the bamboo almost entirely ceases, and cultivation, chiefly of rice, becomes much more frequent. The bushes consist chiefly of the karunda, the pallas, &c. It abounds in tanks and artificial reservoirs for purposes of irrigation. East of the Mulnad is a great extent of alluvial plain, producing fine crops of wheat, cotton, maizes, millet, &c. [*Holcus sorghum*, *Panicum Italicum*, *Cicer arietinum*] And on the Nizam's frontier are found a succession of low dry hills, with tabular summits, often rising in abrupt scarped precipices, and intersecting and traversing the plains in various directions.

They are clothed with low thorny jungle of babul and acacia, and then bases, and the valleys between, composed of a light sandy soil, are cultivated with millet, vetches, &c. *Panicum spicatum*, *Panicum mihue*, *Phaseolus max*, *Phaseolus mungo*, &c. The first or mountainous division consists chiefly of micaceous clay, and other schists, which to the northward are succeeded by basaltic or trap formation. The Mulnad is composed of undulating clay-slate hills, which become covered with basalt to the north. This trap formation extends in a slanting direction from S W to N E nearly coinciding with a line drawn from Sadasheghum on the coast, to Bejapoor and Sholapoor—and, what is remarkable, is almost coincident with that marking the separation of the two great tribes of the population using totally distinct languages, the Mahrattas and Canarese. The hills to the N E and E are all of primitive sandstone sometimes resting on schists, sometimes immediately on granite, which latter is the rock nearest the surface in the central and eastern plains. But a well defined range of hills to the S W, called the Kuppattgad, is entirely composed of micaceous and clay slates, resting on granite. The hills more to the N and N W are basaltic. The extensive plains lying between these different lines of hills and commences are composed of the rich black mould called regur or cotton ground, resulting from decomposed basaltic rocks. To the N E a considerable tract of limestone is found, resting on the sand stone, about Bagalcote, Badami, Hungund, Mudibihal, &c. The distribution of species throughout these different tracts is shown in the following table those marked * are confined to one tract only.

MAMMALIA

Simia radiatus Madras monkey

Macrus radiatus		Cercopithecus radiatus,	Geoff
Koti,	CAN	Bandar	DFK
Munyga,	"	Mikada,	MAH
Munga,	"	Keida, do of the	GHAS

This species abounds over the whole country, sometimes inhabiting the wildest jungles, at others living in populous towns, and carrying off fruit and grain from the shops of the dealers, with the greatest coolness and address

Simia (Semnopithecus) entellus

Presbytes entellus		Cercopithecus entellus,	Geoff
Moosya,	CAN	Wanur,	MAH
Langur,	DEK	Bengal Langur	

The black-faced monkey of Europeans,—abounds more particularly in the forests, where its loud wild cry is particularly striking. They are both useful and troublesome to the sportsmen, who may often judge by their agitation and chattering of the vicinity of some beast of prey, while he himself is apt to be assailed in a similar manner when trying to steal upon the more timid kinds of game. The species is celebrated in hindu mythology, for having, under their leader Hanuman, assisted the hero and demi-god Rama, the first hindu conqueror of the forests of Southern India, as related in the Ramayana. The Entellus appears to want the cheek pouches characteristic of Semnopithecus. An adult male measured, from muzzle to insertion of tail, 1 foot 10½ in length of tail alone 3 feet 2½ height from heel to crown 3 feet 2½—weight 22 lbs—do of an adult female 18 lbs

Pteropus edwardsii

P. medius, Temminck, Monog de Mam 1 173

Toggal Bawli,	CAN	Gnddal,	DEK
Sikatyelle of Wuddurs,		Balbagal,	"

The flying-fox or large fox bat. Its flesh is esteemed good eating. Its tongue is covered with large papillæ, pointing backwards, and each one terminating in a brush or collection of bristly points. Length of the male, 12 to 13 inches—weight 29 oz—of a female, 20 oz. Expanse of wings upwards of 4 feet. When disturbed during the day, they fly slowly round and round, with a low screaming noise, and soon settle again, hovering for a moment over a bough, they catch suddenly with the claw on the angle of the wing, and, allowing the body to drop, they swing with a single hold. In shade and colour, they are of a yellowish brown above, and yellowish white below

MAMMALIA

Pteropus marginatus, Fr Cuvier

Cynopterus marginatus, Temminck, Monog de Mdm 202

Length, 4½ inch Weight, 2oz a male. The dentition agrees with the statement of Fr Cuvier, which he adopts as the character of his genus Cynopterus. Incisors ½ canines 1 1 1 molars 4 4 30. Is somewhat rare, found in clusters on the folded leaves of the plantain, the palmyra, &c

Vespertilio carnatica?

Megaderma Carnatica		M lyra	
Kankapati,	CAN	Shamgudar, Shab parak,	DEK

Kankapati is the generic name in Cananese for all bats. This species differs from the dentition commonly assigned to Megaderma, in having incisors 2 canines 1 1 1 molars 3 3 — 24, whereas the molars according to Geoffroy are 4 4. Above, mouse colour; beneath, paler. Nasal appendage large, oblong, reaching to the base of the ears, with a plait or fold down in the centre. Oreillon cordate, the anterior lobe high and pointed, the posterior rounded, the muzzle truncate, the under lip cleft. Four mammae. Female generally larger. Temminck states, Mon de Mam Tom 11 p 5 that the females and young of some bats live apart from the males at certain seasons, which may account for this.

	Female inches	Male inches
Length .	3½	3
Expansion of wings	19½	18
Ear (behind),	1 1 1 10	
Ear (before),	1 1 1 10	
Carpus . . .	2½	
Tarsus,	1 1 1 10	
Head, . . .	1½	
Additional length of the interfemoral membrane, . .	1½	
Weight,	1oz 10dis 1oz 3dis 10g.	

Vespertilio Hardwickii

Rhinopoma Hardwickii

These were the largest dimensions ascertained from 14 females and 7 males, obtained at various times. They are common in the Mulnad, in old temples, caves, &c. Weight 10 drs Male 8dis 13grs Female. Length of body, . . . 2 2 10 inches. tail. . . 2 1 10. carpus 2 4 10. tarsus 2 5 10. Expanse of wings 13

This species has the muzzle long, thick, truncated and surmounted with a small leaf, oreillon oblong, bi-acuminated, forehead concave with a fossa or channel running

down the centre. The nostrils are placed in the truncated plane of the muzzle, being covered with a membrane slit transversely, and with a small round puncture in the middle of the slit. By means of this apparatus the animal is enabled to open or shut its nostrils at pleasure. The leaf-like process rises from the same plane of the muzzle. Found in old ruins to the eastward of the province.

Rhinolophus, *Geoff*. This, and the two following species, seem to form a subdivision of the section *Rhinolophus* (*Geoffroy*), differing in the number of teeth and having in common a remarkable peculiarity common to all, not included in his specific characters, which may be described as a circular cavity, or sac, behind the nasal crest. This cavity the animal can turn out at pleasure, like the finger of a glove, it is lined with a pencil of stiff hairs and secretes a yellow substance like wax. When alarmed, the animal opens this cavity and blows it out, during which it is protruded and withdrawn at each breathing. Temminck notices it under the name of a syphon, or pulse in *R. Insignis* and *R. Speoris*. Dentition, incisors $\frac{1}{2}$, canines $\frac{1}{2}$, molars $\frac{1}{2}$ $\frac{1}{2}$ 28, whereas in *Geoffroy's* group the molars are $\frac{3}{4}$ $\frac{3}{4}$, and the total number 30. But Temminck makes them vary from $\frac{1}{2}$ to $\frac{3}{4}$. The upper incisors are distant, placed near the canines and triangular, broad at the edge and sloping to the root, the lower ones are close together, crenelate at the edge each having three points. In all other respects, the characters are the same as *Rhinolophus*. Nose furnished with a complicated crest. Ears distinct, marked with transverse distinct wrinkles. Interfemoral membrane large. Waits on the pubes.

Hipposideros speoris

R. Crumenifer, *Peron* | *Rhinolophus speoris*

R. Mursupialis, *Geoff* | *R. Dukhunensis*, *Sykes*

Ears large, erect, acuminate, rounded to the base. Muzzle short, crest very complicated, consisting of a simple transverse membrane, or leaf extending between the eyes, behind which is the circular sac. In front is a cavity, in which are pierced the complicated nostrils, and surrounded by another smaller membrane, the upper portion next the frontal leaf thick and fleshy, the lower, above the lip, fine. On either side without this are three smaller parallel membranes or finges, reaching from the eyes downwards. Body short, thick, of a light mouse colour. Interfemoral membrane, narrow, square, including the tail, which consists of about four joints, the half of the last joint being free at the point. Pubes naked,

large, with one or two warts. Two pectoral mammae, two inguinal. Whether the latter are false or real is doubtful. It has been said they have no lacteal glands, but I have constantly remarked them, and that they are smaller in the young female. Females with the frontal sac less developed. On a comparison of about 18 specimens, the measurement of the largest was—

	Male	Female
Length .. .	$2\frac{1}{10}$ inches	$2\frac{2}{10}$
of tail .. .	1	1
of exerted portion of tail .. .	$1\frac{1}{10}$ -10ths	
of ear .. .	$\frac{1}{10}$	
of carpus... ..	2	
— of tarsus	$\frac{1}{10}$	
Expansion of wings ..	13	12 $\frac{1}{2}$
Weight .. .	6 drs 13 grs 6 dis	

Found in old buildings, wells, &c. The *R. Dukhunensis* of *Sykes* is said to differ from *R. Speoris* in the length of the carpus, but in Temminck, (*Monoy de Mam T' n*) p 17, the fore arm is stated to be shorter than the whole length, and the difference of colour is not sufficient to constitute a specific difference.

Rhinolophus murinus

Hipposideros murinus

Ears large, erect, rounded. Muzzle short, with a transverse frontal leaf or membrane and the sac behind it as the last, and in front a simple membrane round the nostrils. Body short, and thick. Inter-femoral membrane large, including the tail, all but the extreme tip. Pubes small, covered. Mammae as in the preceding, colour dusky brown, paler beneath.

Male — Length $1\frac{9}{10}$, tail $1\frac{2}{10}$ — $3\frac{1}{10}$, ear $\frac{7}{10}$, carpus $1\frac{9}{10}$, tarsus, barely $\frac{1}{10}$, expansion of wing $10\frac{1}{2}$, weight 4 dis 20 grs — The sexes nearly alike — *Elliot M L S J July, 1839*

Taphozous. Of this only one specimen was obtained.

Vespertilio proper — Two small species are common, but neither of them have been identified.

Vespertilio sp. Ears small, sub-triangular, shorter than the head. Oreillon oblong rounded, colour above, pale dusky brown, beneath lighter. Length 2 inches, tail $\frac{1}{10}$ — $2\frac{1}{10}$, carpus $1\frac{3}{10}$, expansion of wing 10 inches.

Vespertilio sp. Smaller than the last, ears larger, rounded, nearly as long as the head. Oreillon emoved and rounded at the end. Colour dark brown above and below. Length $1\frac{1}{10}$, tail $\frac{1}{10}$ — $2\frac{1}{10}$, carpus 1, expansion of wings $7\frac{1}{4}$.

Sorex Indicus, Geoff Musk Rat or Shrew

Sorex caeruleus

Sondeli, CAN | Chichunda, DUK

Uisus labiatus, Blainville

Prochilus labiatus

Kaddi, Karadi, CAN | Reech, DUK
Aswal, MAH |

The peculiar dentition of this animal, distinguishing it from the genus Uisus, has been remarked by Colonel Sykes. There are never more than 1 incisors in the upper jaw. Several crania agree in this peculiarity. Their food seems to be black ants, termites, beetles, fruit, particularly the seed of the Cassia fistula, of the date tree, &c, and honey. When pursued, they carry their cubs on their back. In 1833 a bear was chased and killed, having carried her two cubs in this manner nearly three miles. It appears to be a long-lived animal. Instances are known of their living in a state of captivity for 40 years.

Lutra Nair — *F. Canis* Indian Otter

Nunai, "water dog" CAN | Hind or Hada, Mah of
Datwai bekki Do of the Wud- the Ghats
dr tribe | Jelmus and Jalman-
Pani kutta, "water dog") ju MAH
DUK

Canis rutilans

Canis familiaris, (wild variety)

C Dukhuncensis, SIXTS | Jungli Kutta, DUK

The wild dog was not known in the Southern Mahratta Country until of late years. It has now become very common. The circumstance of their attacking in a body and killing the tiger, is universally believed by the natives. Instances of their killing the wild boar, and of tigers leaving a jungle in which a pack of wild dogs had taken up their quarters, came to Sir Walter Elliot's own knowledge, and on one occasion a party of the officers of the 18th regiment, M N I saw a pack run into, and kill, a large Sambar stag near Dhairwar.

Canis pallipes The wolf

C lupus, var Ell

Tola, CAN | Landgal, DUK

This species does not appear to differ from the common wolf. Three young ones which Sir W Elliot had alive for some time agreed very much with the description of the Canis pallipes of Colonel Sykes, but several adults that he shot differed in their colours and general character. The head was large, the muzzle thicker, the colour in some cases more inclining to rufous, particularly on the fore legs, which in some cases were deep red, and the same colour was found on the muzzle from the eyes to the nose. Others have more rufous on

the hind legs, together with some black on the thighs, rump, and tip of the tail. Length from muzzle to insertion of tail 36 to 37 inches, do of tail 16 to 17½ height at shoulder 24 to 26, length of head 10, circumference of do 16 to 17, weight of an adult female 42 lbs. The wolves of the Southern Mahratta country generally hunt in packs, chase the goat antelope (*Gazella arabica*), steal round the herd of Antelope cervicapra, and conceal themselves on different sides till an opportunity offers of seizing one of them unawares, as they approach, whilst grazing, to one or other of their hidden assailants. On one occasion, three wolves were seen to chase a herd of gazelle across a ravine, in which two others were lying in wait. They succeeded in seizing a female gazelle which was taken from them. They have frequently been seen to course and run down hares and foxes, and it is a common belief of the ryots that in open plains, where there is no cover or concealment they scrape a hole in the earth, in which one of the pack lies down and remains hid, while the others drive the herd of antelope over him. Their chief prey however is sheep, and the shepherds say that part of the pack attack and keep the dogs in play, while others carry off their prey, and that, if pursued, they follow the same plan, put turning and checking the dogs while the rest drag away the carcass, till they evade pursuit. Instances are not uncommon of their attacking man. In 1821 upwards of 50 children were devoured by wolves in the Pargunnah of Rome. Sometimes a large wolf is seen to seek his prey singly. These are called won-tola, and reckoned particularly fierce.

Canis aureus, Lin The jackal

Nair, CAN | Kolah also Shughal, DUK

The native sportsmen universally believe that an old jackal, which they call bhalu, is in constant attendance on the tiger, and whenever his cry is heard, which is peculiar and different from that of the jackal generally, the vicinity of a tiger is confidently pronounced. Sir W Elliot says he has heard the cry attributed to the bhalu frequently.

Vulpes bengalensis

Canis bengalensis, Shaw | C Kokier, Sykes
and Pennant

Konk, CAN | Lomii, Nomari, DUK
Kemp nui (red jackal) ,, Kokii, MAH
Chandak nui, ,,

Length from nose to insertion of tail 20 inches, do of tail 14 in, weight, male 7½ lb, female 6½ lb — both large specimens. Shaw's animal appears to be identical with

the *Canis Kokiee* of Colonel Sykes Its principal food is rats, land crabs, grasshoppers, beetles, &c On one occasion a half devoured mango was found in the stomach It always burrows in open plains, runs with great speed, doubling like a hare, but instead of stretching out at first like that animal, and trusting to its turns as a last resource, the fox turns more at first, and if it cannot fatigue the dogs, it then goes straight away It is remarkable that though the brush is generally tipped with black, a white one is occasionally found, while in other parts of India, as in Cutch, the tip is always white

Viveria malaccensis

Viveria Indica, GEORGE V IASSE, HORSE
Punagin bekk, CAN | Kasturi, MAN
Mushk bill, DUK

Length from the nose to insertion of tail 22 inches, do of tail $15\frac{1}{2}$ in—total $37\frac{1}{2}$ —weight $5\frac{1}{2}$ lb—an adult female Varies much in the distribution of the marks on the fur

Mangusta mungus

Herpestes griseus, DESM

Mungh, CAN | Mangoos, DUK

There does not appear to be any difference between the *Mangusta mungus* and *Mangusta caha*, both of which are referrible to the *Herpestes griseus* of Desmarest

Mangusta vitticollis

Herpestes vitticollis, BENNETT, *Proceed Zool Soc* 1835, Part III p 67

A specimen of this animal was procured in the thickest part of the ghat forests by accident, in 1829, and is now deposited in the British Museum It is very rare, inhabits only the thickest wood, and its habits are little known Size the same as *M grisea*, the animal was first figured in 1839

Weight,	380 lbs	360 lbs	210 lbs,	

Nothing is more common than to hear of tigers of 12, 14, and even 15 feet in length Most persons content themselves with measuring the skins of an animal after it is taken off, and Sir W Elliot once measured a lion of 9 feet 4 inches, which was noted by another of the party in his journal, as 11 feet and by a third as 12—the one having measured the skin newly taken off and pulled out, the other when it was stretched to the uttermost by pegs, to dry He does not believe that any tiger has ever been known that would exceed ten feet The female has from 2 to 4 young and does not breed at any particular season Then chief prey is cattle, but they also catch the wild hog, the sambar, and, more rarely, the spotted deer It is naturally a cowardly animal and always retreats from opposition until wounded or provoked Several instances came to notice of its being compelled to relinquish its prey by the cattle in a body driving it off In one case an official report was made of a herd of buffaloes rushing on a tiger that had seized the head-boy and

forcing it to drop him. Its return from the wild dog has already been adverted to. Though the wild hog often becomes its prey, it sometimes falls a victim to the successful resistance of the wild boar. Sir W. Elliot once found a full grown tiger newly killed, evidently by the tip of a boar's tusk, and two similar instances were related to him by gentlemen who had witnessed them, one of a tiger the other of a panther. It is generally believed that a tiger always kills his own food and will not eat carrion, but he met with one instance of a tigress and two full grown cubs devouring a bullock that had died of disease. He saw the carcass in the evening, and next day on the report of tigers having been heard in the night, he followed their track, and found they had dragged the dead animal into the centre of a corn-field and picked the bones quite clean, after which they found a buffalo, killed it, and eat only a small portion of it. Another instance was related in a letter from a celebrated sportsman in Kandesh, who having killed a tigress, on his return to his tents, sent a pad elephant to bring it home. The messenger returned reporting that on his arrival he found her alive. They went out next morning to the spot and discovered that she had been dragged into a ravine by another tiger and half the carcass devoured. They found him close by and killed him also. The Bheels in Kandesh say, that in the monsoon, when food is scarce, the tiger feeds on frogs, and an instance occurred some years ago, in that province, of one being killed in a state of extreme emaciation, from a porcupine's quill that had passed through his gullet and prevented his swallowing, and which had probably been planted there, in his attempts to make one of these animals his prey. Many superstitious ideas prevail among the natives regarding the tiger. They imagine that an additional lobe is added to its liver every year, that his flesh possesses many medicinal qualities, that his claws arranged together so as to form a circle, and hung round a child's neck, preserves it from the effect of the evil eye. That the whiskers constitute a deadly poison, which for this reason are carefully burnt off the instant the animals are killed. Several of the lower castes eat his flesh.

Felis pardus, Lin

F. leopardus		Leopardus varius	
The large variety,		The smaller variety,	
Honiga,	CAN	Kerkal,	CAN
Tendowa,	DUK	Gorbacha,	DUK
The panther, leopard		Bibla, of the Bahr	
or pard of the E. INDIES			
Asnea,	MAHR		

Of this species there appear to be two varieties, a large and a small kind, though some are of opinion that the smaller animal is the leopard. Col Sykes also distinguishes two kinds of cheeta, but considers the larger one to be the leopard. The natives distinctly recognize the two kinds by different names. Shaw says the leopard is distinguished from the panther by its paler yellow colour, and again that the leopard is considerably the smaller of the two. Here the paler is the larger. The most remarkable difference between these seems to be that of size, but on a careful inspection, other particulars are detected. An examination of a large collection of skins, gave the following characters. The large skins measured from $4\frac{1}{2}$ to 5 feet, the tail $2\frac{3}{4}$ — $7\frac{3}{4}$, the height appeared to be $2\frac{1}{2}$, the smaller ones were 3 to $3\frac{1}{2}$ ft long, the tail $2\frac{1}{2}$ —6, the height was from $1\frac{1}{2}$ to 2. The colour of the larger skins was generally pale fulvous yellow, the belly white, whilst others were deeper and more tawny, some being a sort of reddish yellow, without any white at all, beneath. In the Kerkal there is also a great variety of shades. But generally a greater number of Honiga are pale coloured and of the Kerkal dark, whence probably the name of the latter from kera, dark or black. As a general rule too, the fur of the Honiga is shorter and closer than of the Kerkal longer and looser. The character of the spots is always the same. They may be characterised as imperfect annuli, consisting of groups of spots, arranged in imperfect circles, but sometimes approximating more and becoming like trefoils, squares or like the impression of a dog's foot, particularly along the dorsal line, and on the head, neck, shoulders, loins and legs. Where the ground colour is dark, the spots are more confused. The tail is without annuli, spotted throughout, but sometimes the spots run into each other at the end, giving the appearance of a black tip. The large variety is found chiefly among the rocky hills to the eastward, the smaller is more common in the wooded country of the Mulnad. The former is a taller, slighter, more active animal, exceedingly strong and fierce, the latter is smaller, and stouter, and varies much in size, some being not bigger than a large tiger-cat, though the skull proved them to be adult animals. The latter may be killed easily, while the Honiga is a very formidable assailant, and several instances occurred of as many as four men having been killed by one, before it was put hors de combat. The strongest marked difference of character that Sir W. Elliot

observed, was in the skulls, that of the *Hongā* being longer and more pointed, with a ridge running along the occiput, and much developed for the attachment of the muscles of the neck—while those of the *keikal* were rounder and the bony ridge was wanting. If this character be universal and permanent, it will afford a good ground of distinction. He was disposed to consider the Indian species as consisting of three varieties,

(a) the larger or *Hongā*

(b) ditto of a uniform black colour, from the Malabar Coast, the spots appearing when the light shines strongly on the skin

(c) the smaller variety or *keikal*.

The following are the dimensions of a very large *hongā* killed in the Muluad-length of body from nose to insertion of tail 4 ft 6 in tail 3-2, in all, 7-8 height at the shoulder 2 ft 3½ in from ends of toes to top of shoulder 2—7, circumference of the arm below the elbow 1-3, head 1-11 This was a very large male called by the natives a *Mai-hongā*, stouter than the generality of the larger kind.

A number of skins were deposited by Sir W Elliot in the British Museum

Felis - The *Wagati*, of the Mahratta of the Ghats, Sir W Elliot was unable to identify with any of the species described. It seemed to him to differ both in size and colour from the *Felis viverrinus* sent to England by Mr Heath, and described by Mr Bennett (*Proceed Zool Soc. 1833, Part I p 68*). It is peculiar to the western ghat forests. It approaches most nearly to the *Felis tigrina* or *Margav, Gm*, the *Felis Javanensis* or *Kuwuk Horsf*, and the *Felis diardi*. An

adult male of the *Wagati* is 26 inches long, from the muzzle to the insertion of the tail, which is nearly 11 more—in all nearly 37 inches. The colour is pale yellowish grey—darker on the back—yellowish white or pale yellow on the sides—white on the under parts of the body. The forehead has 4 longitudinal spots. In a line with these, from the vertex, four lines run to the shoulders, the outer broader, the centre ones narrower, and these two last are continued almost uninterruptedly to the tail, the others break diagonally into large longitudinal spots, which are continued in rows of smaller rounder spots to the centre of the belly. There are about six rows on each side, exclusive of the two dorsal lines. Two smaller bands run from the eye, and along the upper lip, to a throat band running transversely below the ears. Two other similar transverse bands cross the breast with a row of spots between. The inside of the arm has two broad bands, and the soles are dark brown or nearly black. The tail is spotted on the upper half and indistinctly annulate towards the tip. It is very fierce—living in trees in the thick forests, and preying on birds and small quadrupeds. A shikari declared that it drops on larger animals, and even on deer, and eats its way into the neck, that the animal in vain endeavours to roll or shake it off, and at last is destroyed.

Mus The different Indian species of this genus described are

<i>Mus giganteus</i> <i>Hardw</i>	<i>Mus tyleri</i>
" <i>decumanus</i> <i>Pallas</i>	" <i>urbanus</i>
" <i>rattus</i> ... <i>Lin</i>	" <i>hactianus</i> .
" <i>platylophus</i> <i>Sykes</i>	" <i>brunneus</i>
" <i>oleraceus</i> <i>Sykes</i>	" <i>brunneusculus</i>
" <i>mitidus</i>	" <i>caudator</i> .
" <i>viviventer</i>	" <i>cervicolor</i> .
" <i>musculus</i> , ... <i>Lin</i>	" <i>eracipes</i>
" <i>plummaris</i>	" <i>dargeelensis</i> .
" <i>providens</i>	" <i>homionus</i>
" <i>rattus</i>	" <i>infusileatus</i>
" <i>rufescens</i> .	and
" <i>temicolor</i>	" <i>mlagnicus</i> .

Some of these are very numerous and troublesome

The *Mus giganteus* of Hardwicke differs from the Florida rat, the type of *Neotoma* (as figured), in having the naked scaly tail of the common rat, whereas, in the Florida species it is covered with hair.

The *Gerbillus Indicus* of Hardwicke unites both these characters, the surface of the molars being the same as that of two Indian species while the tail has the same peculiarity as the Florida rat, with the addition of a tuft at the extremity. But it is separated from the

latter by the length of the hind foot, and the disposition of the toes, and by the carinated upper incisors, characters peculiar to *Gerbillus*. These common points of resemblance, however, show how intimately the different groups are connected and how gradually they pass into each other. The remaining species all belong to the group of *Mus* proper with tuberculated cheek teeth.

The species observed in the Southern Mahrattatta Country were—

With flat molars,

a Scaly tails, short metatarsi (*Neotoma*)

Mus gigantens | *Arvicola indica*

b. With hairy tail, long metatarsi (*Gerbillus*)

Gerbillus indicus.

With tuberculated molars.

a Covered with soft hair (*Mus*).

Mus decumanus...*Lin* | *Mus olivaceus*, *Sykes*

„ *rattus**Lin* | „ *rufus* .. *New sp*

„ *mettade* *New sp* | „ *musculus*... *Lin*.

„ *golundee* *New sp*

b Covered with hair and spines

Mus platythrix *Sykes* | *Mus boodaga* *New sp*

The first division have 3 molars in each jaw, with strong alveolar processes, the anterior or largest one divided into three sections by transverse ridges of enamel; the middle into two, and the third partly, or entirely so, as the centre ridge of enamel extends altogether, or only partly across the surface. In *M. gigantens* and *M. gerbillus* the enamel of the posterior molar of the upper jaw generally forms only a deep indentation. In *M. gerbillus* the incisors are more prismatic, the upper ones divided by a longitudinal furrow passing down the centre. In the other two species the incisors are smooth, rounded, with a longitudinal mark on the worn under surface. The upper incisors in *M. gerbillus* also are much more curved downwards than in the other two. In the former the usual and superior maxillary bones project considerably beyond the incisors, in the latter the incisors extend beyond these bones.

Mus (*Neotoma*) *gigantens*, *Hard* *Lin*

Heggin, CAN | Ghong, DUK
Pandi koku, TEL |

The English name, bandicoot, is a corruption of *pandi-koku*, literally pig rat. It lives in granaries and stack-yards, feeds entirely on grain. Fierce, bold, easily killed. Makes a peculiar grunting noise when frightened or angry. Female with 12 teats. Incisors dark olive green at the base, becoming yellow at the extremities.

Mus providens—*Elliot*.

<i>Mus Indicus</i> ,	<i>Geoff</i>	<i>Arvicola Indica</i> ,	<i>Gray</i>
„ <i>Kok</i> ,	<i>Gray</i>	<i>Mus pectoris</i>	<i>Hodgs.</i>
<i>Nesokia indica</i> ,	<i>Jerd</i>		
<i>Kok</i> ,	<i>CAN</i>	<i>Golatta Koku</i> .	<i>TEL</i> .
<i>Indian mole rat</i>	<i>ENG</i>		

The Indian mole rat or provident rat is found throughout India ranging up to a considerable altitude. Geoffroy's animal is not sufficiently particularized to indicate which of the Indian species he meant; and Gray's was given under the supposition that it applied to an *Arvicola* which he subsequently discovered it did not: The present term seems sufficiently applicable to its habit of laying up a large store of grain for its winter food. The *koku* is from 13 to 14 inches in length, and weighs upwards of 6 oz. Its figure is thick and strong, with powerful limbs, the head short and truncated, the ears small, subovate or nearly round, and covered with a fine down or small hairs. The tail naked and nearly as long as the body, whiskers long and full. Fur long and somewhat harsh, brown, mixed with fawn, the short fur softer and dusky. The colour generally being something like that of the brown rat, with more fawn or red intermixed, and lighter beneath. In its habits it is solitary, fierce, living secluded in spacious burrows, in which it stores up large quantities of grain during the harvest and when that is consumed lives upon the *huryalee* grass and other roots. The female produces from 8 to 10 at a birth, which she sends out of her burrow as soon as able to provide for themselves. When irritated, it utters a low grunting cry, like the bandicoot. Incisors entirely of an orange yellow colour. The dimensions of an old male were as follows—length of body 7 inches; of tail $6\frac{1}{2}$, total $13\frac{1}{2}$; of head $1\frac{3}{10}$, of ear $\frac{2}{10}$ ths; of fore palm $\frac{1}{10}$ ths, of hind $2\frac{1}{10}$ ths. Weight 6 oz 5 drs. The race of people known by the name of Wuddurs, or tank-diggers, capture this animal in great numbers as an article of food; and during the harvest they plunder their earths of the grains stored up for their winter consumption, which, in favourable localities, they find in such quantities, as to subsist almost entirely upon it, during that season of the year. A single burrow will sometimes yield as much as half a seer (about 1 lb) of grain, containing even whole ears of *jowaree*, (*Holcus sorghum*). The *kok* abound in the richly cultivated black plains or cotton ground but the heavy rains often inundate their earths, destroy their stores and force them to seek a new habitation. He dug up a winter burrow in August 1833, situated near the old one, which was deserted from this cause. The animal

had left the level ground, and constricted its new habitation in the sloping bank of an old well. The entrance was covered with a mound of earth like a mole-hill, on removing which the main shaft of the burrow was followed along the side of the grassy bank, at a depth of about 1 or $1\frac{1}{2}$ foot. From this a descending branch went still deeper to a small round chamber, lined with roots and just large enough to contain the animal. From the chamber a small gallery ran quite round it, terminating on either side in the main shaft at the entrance of the chamber, and the passage then continued down to the bottom of the bank, and opened into the plain. Near the upper entrance, and above the passage to the chamber, was another small branch which terminated suddenly and contained excrement. But these burrows are by no means on a uniform plan. Another occupied by an adult female was likewise examined in the same neighbourhood. It was much more extensive, and covered a space of about 15 feet in length about 8 in breadth, also in a grassy mound, of which it occupied both sides. Six entrances were observed, (and there may have been more,) each covered with loose earth. The deepest part of the burrow near the chamber was about three feet from the surface, the chamber raised a little above the shaft which terminated abruptly and was continued from the upper part of the chamber. The chamber lined with roots of grass and bark of the date-tree. The branching galleries, of which there were six, from the principal shaft, appeared to have been excavated in search of food. A variety found in the red soil is much redder in colour than the common koku of the black land. Another variety is said to frequent the banks of nullahs and to take the water when pursued, but except in size the specimens seen differed in no respect from the common kind of which they appeared to be young individuals.

Gerbillus Indicus, *Hardw* Jerboa rat

G Hardwicke, <i>Gray</i>	G Cuvier, <i>Waterhouse</i>
Harna mus, HIND	Tel-yelka of YANADI
Jhenku indur, SANSK	Billa ilei, CAN
Yeri Yeka of WUDDUR	

In the Jerboa rat, which occurs throughout India, the muzzle appears to be more pointed than is stated by General Hardwicke, who characterizes it as "very round," and the colour is always of uniform bright fawn, without any admixture of brown spots, which have never been observed. The incisors are always of a deep yellow colour, the eyes very large and full, the tail longer than the body. A large adult male measured—length of body 7 inches,

of tail $8\frac{1}{10}$, of head $2\frac{1}{10}$, of ear $\frac{2}{10}$, of fore foot $\frac{1}{10}$, of hind foot 2. Weight $6\frac{1}{2}$ oz. They are said to be very prolific, bringing forth 16 to 20 at a birth but this seems an exaggeration, and the litter probably seldom exceeds 12. It is the common prey of foxes, owls, snakes. Lives in numerous societies, making extensive burrows in the red gravelly soil of the Mulnaad, generally in or near the root of shrubs or bushes. The entrances, which are numerous, are small, from which the passage descends with a rapid slope for 2 or 3 feet, then runs along horizontally, and sends off branches in different directions. These galleries generally terminate in chambers from $\frac{1}{2}$ a foot to a foot in width, containing a bed of dried grass. Sometimes one chamber communicates with another, furnished in like manner, whilst others appear to be deserted and the entrances closed with clay. The centric chamber in one burrow was very large, which the Wuddus attributed to its being the common apartment, and said that the females occupied the smaller ones with their young. They do not hoard their food, but issue from their burrows in the evening, and run and hop about, sitting on their hind legs to look round, making astonishing leaps, and, on the slightest alarm, flying into their holes. The Wuddus eat this species also.

Not so common above the Ghats as below

Mus rattus, *Lin* Rare

Mus lanuginosus — *Elliott*

Golunda meltada *Jerdon*

Mettade, of the WUDDERS	Keira ilei,	CAN
-------------------------	-------------	-----

The name adopted to designate this species is taken from the word mettade, meaning soft in allusion to its fur, which is fine and soft mettani meaning soft in Telugu. It is also called mettan-yelka, mettan-ganda, from the same cause. It is about half the size of the kok, which it somewhat resembles. The head is short, but the muzzle, instead of being square and truncated, is sharp, the ears are larger in proportion and more ovate. The general form is not so stout. The tail is shorter than the body. The colour above is reddish brown, with a mixture of fawn, lighter beneath, close and soft, with a few longer hairs projecting. A large adult male measured—length of body, $5\frac{2}{10}$ th inches, of tail, $4\frac{3}{10}$ ths, total $9\frac{5}{10}$ ths, of head $1\frac{1}{10}$ th, of ear $0\frac{2}{10}$ th. Weight $2\frac{1}{2}$ oz. The mettade lives entirely in cultivated fields, in pairs, or

small societies of five or six, making a very slight and rude hole at the root of a bush or merely harbouring among the heaps of stones thrown together in the fields, in the deserted burrow of the kok, or contenting itself with the deep cracks and fissures formed in the black soil during the hot months. Great numbers perish annually, when these collapse and fill up at the commencement of the rains. The monsoon of 1826 having been deficient in the usual fall of rain, at the commencement of the season, the metatades bred in such numbers as to become a perfect plague. They ate up the seed as soon as sown, and continued their ravages when the grain approached to maturity, climbing up the stalks of jowaree, and cutting off the ear to devour the grain with greater facility. Mr Elliot saw many whole fields so completely devastated, as to prevent the farmers from paying their rents. The ryots employed the Wuddus to destroy them, who killed them by thousands, receiving a measure of grain for so many dozens, without perceptibly diminishing their numbers. They are eaten by the Tank-diggers. The female produces from 6 to 8 at a birth.

Golunda Elliotti, *Jerd* Bush-Rat

<i>Mus hirsutus</i> <i>Elliot</i>		<i>Mus coffæus</i> , <i>Kelaart</i>
<i>Gulandi</i> , CAN		<i>Sora-pani gadur</i> , TEL
<i>Gulat yelka</i> , of WUDDURS		

The *Gulandi* is about the size of the last species, or a little larger—but differs from it in living entirely above ground, in a habitation constructed of grass and leaves, generally in the root of a bush at no great height from the ground, often indeed touching the surface. The head is longer than that of the *Metatade*, but the muzzle is blunt, rounded, and more obtuse, and covered with rough hair. The face and cheeks are also rougher than those of the other rats, the ears round and villose, the eyes moderate, the whiskers long and very fine. The tail naked and scaly, somewhat villose. The colour is an olive-brown above, mixed with fulvous, beneath yellowish tawny, sometimes paler, or light yellowish grey. A male *Gulandi* measured—length of body, $6\frac{2}{10}$ th, of tail, $4\frac{3}{10}$ th, total $10\frac{5}{10}$ th, of head $1\frac{1}{10}$ th, of ear, $0\frac{6}{10}$ th. Weight nearly 3 oz. The *Gulandi* lives entirely in the jungle, choosing its habitation in a thick bush, among the thorny branches of which, or on the ground, it constructs a nest of elastic stalks and fibres of dry grass, thickly interwoven. The nest is of a round or oblong shape, from 6 to 9 inches in diameter, within which is a chamber about 3 or 4 inches in diameter, in which it rolls itself up. Around and through the bush are

sometimes observed small beaten pathways, along which the little animal seems habitually to pass. Its motion is somewhat slow, and it does not appear to have the same power of leaping or springing, by which the rats in general avoid danger. Its food seems to be vegetable, the only contents of the stomach that were observed being the roots of the *huryalee*. Its habits are solitary (except when the female is bringing up her young), and diurnal, feeding during the mornings and evenings.

Mus oleraceus, *Sykes*—Tree Mouse

<i>Mus dumeticola</i> <i>Hodgs</i>		<i>Mus povensis</i> <i>Hodgs</i>
<i>Meina yelka</i> , CAN		<i>Marad ilai</i> , CAN

This species was designated as *M. Longicaudatus* in the distribution list a term applied to it in Mr Elliot's notes, some years ago, when he believed it to be undescribed, as in fact it was at the time, but it was subsequently noticed by Mr Bennett from a specimen taken home by Colonel Sykes [*Proceedings, Zool Soc July 26, 1832, p 121*]. Its colour is a bright chesnut above, beneath pure white. Head moderate, muzzle somewhat obtuse, ears ovate, tail naked. The dimensions of a young female were—length of body, 3 inches, of tail, $4\frac{2}{10}$ ths, total $7\frac{2}{10}$ ths, of head, 1, of ear, $0\frac{3}{10}$ ths. The *Meinaka* is extremely active and agile, and difficult to catch. He never procured its nest, but was told by the Wuddus it lived always in bushes or trees, up which it is able to run with great facility. Colonel Sykes merely observes that "it constructs its nest of leaves of oleraceous herbs, in the fields." Whence the designation he has adopted for it.

Mus flavescens,—*Elliot*. This species somewhat resembles the last, but is nearly double the size, is of a pale yellow colour, and was met with only in out-houses and stables at Dharwar, but there are considerable numbers. Habits social. Its synonyms are *Thee rat*, *M. rufescens*, *M. arboreus*, *M. brunneusculus*, and in Bengal *Gachua-indu*. This is a pale yellowish brown above, and white beneath. The head is long, the muzzle pointed, the ears very large, subovate. Dimensions of an adult male—length of body $5\frac{1}{2}$ inches, of tail $6\frac{1}{2}$, total 12. Weight $12\frac{1}{4}$ oz.

Mus musculus, *Lin* Common Indian Mouse

<i>Mus dubius</i>		<i>Mus manei</i> <i>Gray</i>
		<i>Manei Bubga</i> , CAN

Mr Gray considered a specimen given to the British Museum to differ from the European species.

Mus platythrix, *Sykes* | *Leggada platythrix*, *Jerdon*

<i>Leggyade</i> , of WUDDURS		<i>Kul ilai</i> , CAN
<i>Kal yelka</i> , "		<i>Gijeli gadu</i> "

The leggyade has also been described by Mr. Bennett from Colonel Sykes' specimen. *Proceedings, Zool Soc June 26, 1832, p 121* Sir W Elliot proposed to call it *M. savicola* as better expressive of its habits, and as being exactly equivalent to its native name, platytrix expressing a generic rather than a specific character. It has the head oblong, the muzzle pointed, the ears rather large, oblong, rounded. Incisors yellow. Colour light brown, mixed with fawn, beneath pure white, the white separated from the brown by a well defined pale fawn line. The flattened spines are transparent on the back, beneath smaller, and forming with a fine thick close covering. The dimensions of an

Adult Male Do Female

Length of body	$3\frac{4}{10}$ inch	3 inches
„ of tail	$2\frac{1}{10}$	$2\frac{1}{10}$
Total...	$5\frac{5}{10}$	$5\frac{1}{10}$ or near- [ly 5]
„ of head...	$1\frac{4}{10}$..	$1\frac{1}{10}$
„ of ear ..	$\frac{1}{10}$	„
„ of fore palm ..	„ ..	$\frac{1}{10}$
„ of hind palm ..	„ ..	$\frac{1}{10}$

Weight . . . 1 oz 15dis

The leggyade lives entirely in the red gravelly soil, in a burrow of moderate depth, generally in the side of a bank. When the animal is inside, the entrance is closed with small pebbles, a quantity of which are collected outside, by which its retreat may always be known. The burrow leads to a chamber, in which is also collected a bed of small pebbles, on which it sits, the thick close hair of the belly protecting it from the cold and roughness of such a seat. Its food appears to be vegetable. In its habits it is monogamous and nocturnal. In one earth which he opened, and which did not seem to have been originally constructed by the animal but to have been excavated by ants, he found two pairs, one of which were adults, the other young ones about three parts grown. The mouth of the earth was very large, and completely blocked up with small stones, the passage gradually widened into a large cavity, from the roof of which some other passages appeared to proceed, but there was only one communication with the surface, viz the entrance. The old pair were seated on a bed of pebbles, near which, on a higher level, was another collection of stones, probably intended for a drier retreat. The young ones were in one of the passages likewise furnished with a heap of small stones.

Mns lepidus Elliot

Badaga,	CAN Chitta birkani	TRF
Chitjalka,	TEL Chitta ganda,	„

This pretty little species resembles the preceding, but is only about one third of the size. The colour is similar, but paler, and it has the same pure white under surface, separated from the upper by an exact line. The spines are small, fine, transparent, and of a dusky tinge, tipped with fawn. The head is very long, being nearly one third the length of the body, and the muzzle pointed. The ears are large, ovate, naked. Incisors white. Tail naked, scaly. Limbs rather long, fine, the 3 middle digits of the hind foot produced, as in Gerbillus, the two outer ones much shorter and nearly equal. The dimensions of an old male were—length of body $2\frac{2}{10}$ th inch, of tail, $2\frac{7}{10}$ th, total $5\frac{1}{10}$ th; of head $\frac{1}{10}$ th, of ear $\frac{1}{10}$ th, of fore palm $2\frac{1}{10}$ th, of hind palm $\frac{1}{10}$ th, weight 6 drs, but in general it does not exceed a $\frac{1}{4}$ of an oz (or 4 dis). Lives generally in pairs in the red soil, but sometimes a pair of young ones is found in the same burrow with the old ones. Does not produce more than 4 or 5 at a birth.

Sciurus palmarum, Gmel — Common squirrel

Beral,	BENG	Kharrri	MAH
Lakki	"	Vodati	TRF
Alala,	CAN	Uita, of the	WLDURS
Gilbert,	DUK		

The common species is sufficiently well known, the other, found only in the forests of the Ghats, is darker, the front and the back between the stripes reddish brown, the stripes small, narrower than in the common kind, and not extending the whole length of the back. The size of both is the same—Length, 13 to 14 inches, weight of males, 4 or 12 drs, females 4 oz 11 drs. The young are born without any hair, but three dark lines are visible along the back indicating the position of the future stripes.

Sciurus Elphinstoni, Sykes Bombay red squirrel

Shekra,	MAH Kes Annalus,	CAN
	the Halapyks.	

Mr Elliot observed the same uniformity of colour in the Ghat variety that has been described by Colonel Sykes, but it seems doubtful whether mere difference in colour, constitute sufficient grounds for the formation of a new species. He had both the black and the red kinds alive, and tame, in his possession, for months together, and he observed the most perfect similarity in their habits, cry, and in every particular except in that of colour. Though he never met with

individuals of the *S. maximus* in the forest, he had often obtained them from the people of the country, who said they caught them in the Southern parts of the mountain range. The same disposition to vary in the shade and distribution of colour has been remarked by Dr Horsfield in the Java congener of the Indian species, the Jeralang, or Leschenaults squirrel, a specimen of which has been described by Geoffroy as *S. Albiceps* from a casual difference of this kind. These varieties probably depend on locality, and have given rise to a great multiplication of species. Thus we have the *S. maximus* of Gmel, identified by Cuvier with *S. maximus* *S. ceylonensis* of Ray, *S. Indicus* said to come from Bombay, &c. Fischer makes the distinction between *S. maximus*, and *macrinus* to consist in the former having the cheek stripe terminating simply, while in the latter it is forked. *J. B. Fisch. Syn. p. 363*

Pteromys Philippensis *Elliot*

P. petaurista *Pallas* | *P. oral* *Tickell*
Pukhya, Pakya, MAHR | *Oral* *KOL*

Mr Gray designated the specimens of this species presented to the British Museum by the specific name of *Philippensis*, and showed a former description of them under this title. It is the brown flying squirrel of Ceylon and the peninsula of India. The length of the male is 20 inches, and the tail 21 41 inches. that of the female 19, and the tail 20 39 inches. The colour above is a beautiful grey, caused by the intermixture of black with white and dusky hairs, beneath it is white, the legs and posterior half of the tail black. The male is distinguished by an irregular patch of rufous on the sides of the neck, which in the female is a sort of pale fawn. It is very gentle, timid, and may be tamed, but from its delicacy is difficult to preserve. Lives in the holes of trees in the thickest part of the forest.

There are three porcupines in the East Indies, *H. leucura* the Indian porcupine, *H. bengalensis*, the Bengal porcupine, and *H. longicauda*, the crestless porcupine of Nepal, Sikim, Burmah and the Malay peninsula. The porcupine of Europe is *H. cristata*,

and that of Africa is *H. Africa Australis* of *Peleis*. *H. leucura* is found over a great part of India, from the lower ranges of the Himalaya to the extreme south but does not occur in Bengal. It forms extensive burrows, often in societies, in the sides of hills, banks of rivers and nullahs, in the bunds of tanks and in old mud walls, and they are very destructive to crops of potatoes, carrots and other vegetables. See *Hystrix*.

Lepus, the hare, of these there are five species known to inhabit the East Indies, *L. rufi caudatus*, the common Indian hare, *L. nigricollis*, the black naped hare, *L. hispidus*, the hispid hare, *L. peguensis* of Burmah, and *L. pallipes* of Tibet.

Mams, the pangolin genus, is represented in the E Indies by *M. pentadactyla*, the Indian Scaly Ant-eater, *M. aurita*, the Sikim Scaly Ant-eater, *M. javanica*, of Burmah, the Malay Peninsula and the Eastern Archipelago.

Alawa, } *DUR*

The *mams* burrows in the ground, in a slanting direction, to a depth of from 8 to 12 feet from the surface, at the end of which is a large chamber, about 6 feet in circumference, in which they live in pairs, and where they may be found with one or two young ones about the months of January, February, and March. They close up the entrance of the burrow with earth, when in it, so that it would be difficult to find them, but for the peculiar track they leave. A female that Mr Elliot kept alive for some time, slept during the day, but was restless all night. It would not eat the termites or white ants put into its box, nor even the large black ant (*Myrmex indefessa*, *Sykes*) though its excrement at first was full of them. But it would lap the water that was offered to it, and also congee or rice water, by rapidly darting out its long extensive tongue, which it repeated so quickly as to fill the water with froth. When it first came it made a sort of hissing noise, if disturbed, and rolled itself up, the head between the four legs, and the tail round the whole. The claws of the forefeet are very strong, and in walking are bent under, so that the upper surface is brought in contact with the ground, its gait is slow, and the back is curved upwards. After its death a single young one was found in it (Sept 15th), perfectly formed, and about 2 inches long. The marks

of the future striated scales were distinctly visible, and its long tongue was hanging out. The tongue of the old one was 12 inches in length, narrow, flat fleshy to the tip, the muscle along the lower surface very strong. The length of the animal was 40 inches. The weight 21-lbs.

The Indian wild hog differs considerably from the German. The head of the former is longer and more pointed, and the plane of the forehead straight, while it is concave in the European. The ears of the former are small and pointed, in the latter larger and not so erect. The Indian is altogether a more active looking animal, the German has a stronger heavier appearance. The same differences are perceptible in the domesticated individuals of the two countries.

The different Indian names of Hippelaphus, Aristotelis, Equinus, are applied to the samber stag, the great Indian stag, originally described by Aristotle under the designation of Hippelaphus, and discriminated as such by Mr Duvaueel, in the Asiatic Researches, vol xv p 174. The horns of different individuals present great diversities of form. The only common characters are those of a basal antler, springing directly and equally with the beam from the base, and

the beam terminating in a bifurcated extremity, formed by a branch or snag separating posteriorly and pointing obliquely to the rear. But Mr Elliot met with instances of medial antlers, of trifurcated extremities, and in one case, with the extremity showing a fourfold division. The size of the Rusa is large, sometimes exceeding 14 hands in height. The colour varies from dark greyish black or slate-black, with the chin, the inner sides of the limbs, the under part of the tail, and the space between the buttocks, yellowish white, passing into orange yellow, but never extending into a large circular disk on the buttocks. In several instances he met with kinds of a pale yellow or light chestnut colour. These were young individuals, but the shikaries always declared them to be the same as the common kind, and no other difference was perceptible. The cranium of one of these light coloured females presents no structural differences from that of a young black female. Both sexes have canine teeth in the upper jaw, springing from the suture between the maxillary and intermaxillary bones. The neck and throat are clothed with a long mane. The suborbital sinus is very large. When the animal is excited, or angry, or frightened, it is opened very large, and can be distended at pleasure. The new horns are soft and tender during the monsoon, from June to September, about which time the rutting season commences. The stags are then fierce and bold. Mr Elliot has seen one, when suddenly disturbed, face the intruder for a moment, shaking his head, bustling his mane, distending the suborbital sinus and then dashing into the cover.

The buck is the Alali, of the Baori or harn shikarees, called also Aravi-Chinchei. They are a singular nomade tribe, who live entirely by capturing antelope by means of springes, in which they are very successful. They also catch the Chita (*Felis jubata*) for the Meer Shikaries. They wear a dress of a sort of brown coloured cloth peculiar to themselves, and speak a dialect of Hindi with a very singular intonation.

Gundoli, of the Baori... the Doe

The Indian antelope frequents the black plains, in herds of sometimes 20 or 30, each of which has only one buck of mature age, the others being young ones. The buck of the herd always drives off the others, as soon as they begin to turn black, in the course of which desperate combats ensue, by which their horns are often broken.

The horns of the male in the Southern Mahratta country seldom exceed 19 or 20 inches. The longest seen were a pair of horns from Hyderabad, 24 inches long, with 5 flexures and 50 rings or annuli, and another pair from Kattewai which were 25 inches. The rutting season commences about February or March, but fawns are seen of all ages, at every season. During the spring months the buck often separates a particular doe from the herd and will not suffer her to rejoin it, cutting her off and intercepting every attempt to mingle with the rest. The two are also often found alone but on being followed always rejoin the herd. When a herd is met with, the does bound away for a short distance and then turn round to take a look—the buck follows more leisurely, and generally brings up the rear. Before they are much frightened they always bound or spring and a large herd going off in this way is one of the finest sights imaginable. But when at speed the gallop is like that of any other animal. Some of the herds are so large, that one buck has from 50 to 60 does, and the young bucks driven from these large flocks are found wandering in separate herds, sometimes containing as many as 30 individuals of different ages. They show some ingenuity in avoiding danger. In pursuing a buck once into a field of toor, Mr Elliot suddenly lost sight of him and found after a long search that he had dropt down among the gram and lay concealed with his head close to the ground. Coming, on another occasion, upon a buck and doe with a young fawn, the whole party took to flight, but the fawn being very young, the old ones endeavoured to make it lie down. Finding however, that it persisted in running after them, the buck turned round and repeatedly knocked it over

in a cotton field until it lay still, when they ran off endeavouring to attract his attention. Young fawns are frequently found concealed and left quite by themselves.

Antelope arabica Hemprich and Ehrenberg
Fischer's Synopsis b 5 p 460

<i>Gazella benettii</i> , Jerd	A Bennettii, Syles
Budari, CAN of southern talooks	Chikara, DEK
Mudari, CAN of north-ein talooks	Poysa, of Baori, the Buck
Tiska, CAN	Chari, do the doe

The Indian gazelle inhabits all India except Bengal and the Malabar Coast, but is most abundant in the desert parts of Haurana, Rajputanah and Sindh. Sir W Elliot regards the *Antelope Arabica* and the *Gazella benettii* as identical. He says they abound in the islands of the Red Sea, particularly in Dhalak, and on the western shore about Massowa, and probably all along the Abyssinian Coast. The gazelle of the Hauran and of Syria, appeared to him also to be of this species. If this be the case, the Chikara possesses an additional interest, in being the same animal as the roe and the roe-buck of Scripture. The modern name for the gazelle in Yemen is Dabi or Dzabi which is the same as the Hebrew word translated "Roe" Deut xiv, 5. It is likewise the gazelle of the Arabian poets, as appears from the common saying "The eyes of the Dabi are the most beautiful of all." It is found on the red sandy plains, or among stony open hills, and abounds in the basaltic formation of the Dekhan, in the valleys of the sand-stone formation, and generally among the jungles of the red soil to the eastward of the Southern Mahratta Country. It is never seen on the black plains, nor among the western jungles, nor in the Mulnad. It is found frequently in herds of three, generally a buck with two does, also of 5, 6, or more. The young expelled bucks are also found in separate herds like those of *A. cervicapra*. When two bucks fight they butt like rams, retiring a little and striking the foreheads together with great violence. When alarmed it utters a short hiss, by blowing through the nose and stamps with the fore-foot, whence its Canarese name of Tiska. The dimensions of an adult male procured at Dumbal in the Southern Mahratta country, were as follows: height at the shoulder 2 feet, 2 inches, at the croup 2 feet 4½ inches, length from the nose to insertion of the tail 3 feet 5½ inches, of tail 8½ inches, of ear 6 inches, of horns 11 in of head 9 in. Weight 48 lbs. But these are by no means the largest dimensions observed. At Deesa in Goozerat, he measured three crania, the dimensions of the

horns of which were length $10\frac{1}{2}$ in $10\frac{1}{2}$ in $11\frac{1}{2}$ inches

The third or largest were very little inflated, the 2nd were the strongest and thickest he has also killed the buck weighing 51 lbs, the does weighed from 35 to 40 lbs This is about half the weight of *Cervicapra* which varies from 90 to 100 lbs The adult female has the horns inclining more to the rear, curved backwards, the tips forwards, slightly wrinkled at the base, the rest smooth and black, and nearly equidistant In both, the lachrymatory sinus is small and black There is a dark spot on the nose, and a line from the eyes to the mouth surmounted by a light one Kneebushes, tail and fetlocks behind, black, chin, breast, and buttocks behind, white Rest of the body, dark fawn, deeper where it borders the white on the sides and buttocks Ears long, 3 ridges of hair along the inner surface Inguinal pores, 2 mammæ Horns of the female sometimes with a few imperfect annuli, and never corresponding with each other

In the Dokhan, this is much larger, and the colour varies considerably both from the Hindostan chickara, in which it is of a "uniform bright bay," and in the shades of individuals of different ages in the Dekhan The spurious horns are so small, as rarely to be met with in adult individuals, and are situated on two osseous bumps or risings (strongly marked in the cranium) from which they seem to be easily detached These osseous risings are immediately in front of the true horns, between the orbits, rather in front of a line drawn across the forehead through the centre of the eyes, and become covered with black callous skin, after the loss of the corneous tips The true horns are situated behind the eyes or between the eyes, and the ears, inclining backwards with a scarcely perceptible curve forwards, straight, parallel, round, smooth, thick, and strong at the base which has a few wrinkles, and tapering to a point, then colour black Those of very old males were $4\frac{1}{2}$ inches in length and had 3 strong wrinkles, and one imperfect one at the base The dimensions of a young adult male were,

height at the shoulder, 2 feet $1\frac{1}{2}$ inch croup 2 feet, 3 inches, length from the muzzle to the insertion of the tail, 3 feet, 6 inches, of tail 5 inches, ear $4\frac{1}{4}$, horn $1\frac{1}{2}$, from the muzzle to the base of the horn, 6, of head 8, leg 1 foot 5 inches Weight 42 lbs The doe is about the same size and has no horns, nor any bony projection above the eyes The mammae are four in number The colour is brown, of various shades, not bright, but sometimes so light as to approach a dull fawn, darker than the *Cervicapra*, but not so bright and deep as in the gazelle The shade is browner on the hind quarters, and darkest on the middle of the back It becomes lighter on the sides till it passes gradually into white in the middle of the belly, without the well defined dark line of separation, observable in the other two species The forelegs, particularly above the knee, the inside of the fetlocks, the nose and edge of the ears, are very dark A narrow line between the fore-legs which gradually widens towards the hinder flanks, the inside of the arms and thighs, are white, as is the inside of the ear, in which the hairs are long, and arranged in indistinct ridges The lachrymatory sinus is long, narrow and parallel with the line of the nose In its habits, it is monogamous, and is always found in pairs, frequenting the jungles among the undulating hills of the Mulnad It is never found in the open country, or among the hills on the eastern side of the district, neither does it ever penetrate into the western forests The droppings are always observed in heaps in particular spots It is said to be fond of licking the salt efflorescence of the soil, from which habit the incisors of old individuals are often found to be much worn, and sometimes wanting altogether

Portax pictus, Jerdon, the Nilgai

Ban-paira, at Mundlah		Urna,	„

This, the bison of sportsmen, is one of the largest animals of the Indian fauna, frequenting all the extensive forest tracts from Cape Comorin to the Himalayas, from Tinnevely, through the whole range of the Syhadree mountains up to Mahableshwar, and near Vellore, in the Sherwaroyah hills near Salem, at Aseeiguh, in Kandes, Rajahmundry, and is likewise to be found in all the deeper recesses of the eastern ghauts, and on the banks of all the great rivers passing through them An imperfect cranium which seems to belong to a female of this species, in the United Service Museum, is labelled thus 'Head of a Bison from Kuddah, Straits of Malacca, presented by Lieut Col Frith, Madras Artillery' "It is called Gaviya by the Mahiattas, Jungh khoolga and Uina by the mahomedans (though it has not the slightest affinity with the buffalo to which both of these names apply), and Kai kona by the Cananese, which is of similar import, from Kadu, a forest, and Kona, a buffalo It differs also very remarkably from the common ox, and though it approaches considerably more to the description of the bison, the name generally applied to it by English sportsmen, it exhibits marked structural differences excluding it from the Bisontine group as defined by Cuvier These consist in the plane of the fore-head being "flat and even slightly concave," and in the possession of only 13 pairs of ribs It is not improbable that it will be found to constitute a connecting link between the Bisontine and Taunine groups The most remarkable characters in the animal are an arched coronal, or convex

bony ridge, surmounting the frontal bone, and projecting beyond it so as to make the line from the vertex to the orbit a concave sweep, the continuation of which from the orbit to the muzzle is slightly convex The other distinctive mark is the prolongation of the spinous processes of the vertebrae of the back, from the withers to the loins where they cease abruptly These processes are 12 in number and their prolongation gives the animals a very extraordinary appearance The largest individual Mr Elliot met with was killed in an island of the Kala Nuddee in the district of Soonda, in 1827. He relates that a noted shikaree, the Patel or headman of Alloor (a Hubshee or negro descendant of some of the numerous African slaves imported in the 15th century by the mahomedan kings of Beejapore and who still exist as a distinct race, in this district), called him at day light and promised to show him one of the animals described by him as the wild buffalo Crossing the river in a canoe, he struck into the forest and soon came upon a track, which he pronounced to be that of a large bull On this he proceeded with the steadiness and sagacity of a blood hound, though it was often imperceptible to our eyes. At times when a doubt caused us to stop, he made a cast round, and on recovering the track summoned us to proceed by a loud whistle, or by imitating the cry of the spotted deer, for not a word was spoken, and the most perfect silence was enjoined As we advanced he pointed silently to the broken boughs or other marks of the passage of a large animal, and occasionally thrust his foot into the recent dung, judging by its warmth of the vicinity of the game We followed his steps for three miles to the river, then along the banks towards Dandely, where the animal appeared to have passed to the other side Wading across, we ascended the bank of a small island covered with thick underwood, and some large trees, amongst which it had lain down, about fifteen yards from where we stood The jungle was so thick that we found it difficult to distinguish more than a great black mass among the underwood On firing, the animal got on his legs, received two balls more, and rushed into the jungle where he became very furious, and we were obliged to shelter ourselves behind the trees to avoid the repeated charges he made, though one ball through the shoulder which had broken the bone above the elbow, prevented his moving with facility He then became exhausted and lay down snorting loudly and rising to charge when any one approached A ball in the forehead caused him to roll over the precipi-

tous bank into the river. Still however he was not dead and several balls were fired into his forehead, behind his ear and the junction of the head and neck without life becoming extinct, one ball which had struck the vertebrae of the neck was taken out almost pulverised. When drawn ashore and examined more minutely, the first sentiment produced in all present was astonishment at his immense bulk and yet but on measuring his height they found him much taller than his breadth at first led them to imagine. The head is very square and shorter than in the common ox, the forehead ample, the bony ridge rising about five inches in height from the plane of the frontal bone over which it inclines. When viewed behind it rises suddenly and abruptly from the nape of the neck, from whence to the vertex it measures seven inches, the horns make a wide sweep in continuation of the arched bony ridge, and turn slightly backwards and upwards forming an angle of about 35° with the frontal bone, the whole of the head in front, above the eyes, is covered with a coat of close short hair of a light greyish brown colour which below the eyes is darker approaching almost to black. The muzzle is large and full, and of a greyish colour, the eyes are smaller than in the ox, with a fuller pupil of a pale blue colour, the ears are smaller in proportion than in the ox, the tongue is very tough and covered with prickles, the neck is short, thick and heavy, the chest broad, the shoulder very deep and muscular, the forelegs short, the joints very short and strong, the arm exceedingly large and muscular. Behind the neck and immediately above the shoulder rises a fleshy gibbosity or hump, the same height as the dorsal ridge, which is thinner and finer, rising gradually as it goes backwards and terminates suddenly about the middle of the back. The hind quarters are lighter and lower than the fore, falling suddenly from the termination of the ridge, the tail very short, the tuft only reaching down to the hocks. The dimensions of this individual were carefully noted as follows

	feet	in
Height at the shoulder	6	1½
Do at the hump (taken from hoof to insertion of tail),	5	5
Length from the nose to the insertion of the tail, ...	9	6½
Do do to the end of the tail which was 2 feet 10 inches	12	4½
Length of dorsal ridge including the hump,	3	4
Height of do do	0	4½

Distance between the points of the horns,	2	1
Circumference of horn at base,	1	7½
Between the roots of horns,	0	13½
Length of the ear, ...	0	10½
Circumference of the neck,	4	4
Depth of the shoulder (from the elbow to the end of the spinal ridge),	4	2½
From the elbow to the knee (i.e. the forearm),	1	5½
From the elbow to the heel,	2	7
Circumference of the arm,	2	6

The skin on the neck and shoulder and on the thighs is very thick and was about two inches in this one, which has already shrunk from lying in the sun. It is used for making shields which are much prized. On examining the skeleton picked clean by the vultures, he could only distinguish thirteen pairs of ribs. The cow differs from the male in having a slighter and more graceful head, a slender neck, no hump, a less defined dew-lap and the points of the horns do not turn towards each other at the points, but bend slightly backwards, the horns are smaller too, and the frontal bone narrower, but the coronal or ridge is distinctly marked. The bulls have the forehead broader in proportion to their age. In the young bull it is narrower than in the cow and the bony ridge scarcely perceptible. The horns too in the young specimen turn more upwards, the general colour is dark brown, the hair thick and short and in old individuals the upper parts are often rather bare. That on the neck and breast and beneath is longer, the skin of the throat is somewhat loose giving the appearance of a slight dew-lap. The legs are white with a rufous tint on the back and side of the forelegs. The skin of the under parts when uncovered is a deep ochrey yellow. The cow has the legs of a purer white. The breeding season is said to be early in the year and the calves are born after the rain. The bulls are often found separate from the herd which consists generally of from ten to fifteen cows and a bull. They generally feed during the night browsing on the young grass and the tender shoots of the bamboos of which they are very fond. In the morning they retire to some thicket of long grass or young bamboos where they lie down to ruminate. When disturbed the first that perceives the intruder stamps loudly with its foot to alarm the rest, and the whole rush through the

forest breaking down every obstacle and forcing their way with a terrific crash,

dat euntibus ingens
Silva locum, et magno cedunt vinctula fragore
Æm. vi. 676

When suddenly approached in the night they start off with a loud hissing snort. The Gowli race say they see great numbers of bison when pasturing their herds in the neighbouring forest. They describe them as very timid and watchful, more so than any other wild animal, always reposing in a circle with their heads turned outside, ready to take alarm. They add that they see most calves from June to October but the greatest number about August. They do not know how long the cow goes with calf, but suppose the period of gestation to be the same as that of the buffalo, or ten months and ten days. The old male drives the others from the herd at the breeding season, and the single ones seen in the jungle are young males of this description, and it is probable the very old bulls are sometimes expelled also by younger and stronger males. Mr. Fischer, of Salem, mentioned that the bison ordinarily frequents the Shevaroyah hills, seeking the highest and coolest parts, but during the hottest weather, and when the hills are parched by the heat, or the grass consumed by fire, the single families, in which they commonly range the hills, congregate into large herds, and strike deep into the great woods and valleys, but after the first showers, and when verdure begins to re-appear, they again disperse, and range about freely. In wet and windy weather, they again resort to the valleys, to escape its inclemency, and also to avoid a species of fly or gnat which harasses them greatly. In the months of July and August, they regularly descend to the plains, for the purpose of licking the earth impregnated with natrium or soda, which seems as essential to them well doing as common salt is to the domestic animal when kept in hilly tracts. The chief food of the bison seems to be the following grasses and plants

Yadanjan cody	} A species of Saccharum used for thatch
Vallam pilloo	
Odeseengam pilloo	} Ricinus communis, Castor oil plant
The cottay moottoo leaf	
Mullum pilloo	} Anthystrina polystachia, Rorb
Canavam pilloo	
Cheevum	} Broom grass, (Aristida)
Cattoo corangan leaf	
	} A species of Convolvulus, Ipomeea staphylina ?

but they will eat with avidity every species of grain commonly cultivated on the hills. The Bison particularly is so fond of the

Amay cottay (Dolichos lablab, Ainslie), Country bean, when in blossom, that they will invade, and destroy fields of it, in open daylight, in despite of any resistance the villagers can offer. In other respects it is a very inoffensive animal, very rarely attacking any one it encounters, except in the case of a single bull driven from the herd. Such a one has occasionally been known to take up his location in some deep bowery jungle, and deliberately quarter himself on the cultivation of the adjacent villages. The villagers, though ready to assist Europeans in the slaughter of Bison, will not themselves destroy them (the inviolability of the cow extending to the Bison), and so bold does this free-booting animal become in consequence, that it has been known to drive the ryots from the fields, and deliberately devour the produce. But in general it is a timid animal, and it is often difficult to get within gun-shot of them. The period of gestation is with the Bison the same as with the domesticated animal, they drop their young in the months of September and October. It seems a slow growing animal. A calf he had for three years was evidently in every respect still a mere calf. They seem very difficult to rear. He had known it attempted at different ages, but never knew the animal to live beyond the third year. The calves he had, never became in any degree domesticated. The domesticated cow could never be induced to suckle them. The persevering ferocity of the bison of the Sub-Himalayan range, described by Mr. Hodgson, is quite foreign to the character of the animal in the southern forests. When wounded, it is true, it charges its assailant with determined courage, and in many instances causes much injury.

Monkeys

Gen Presbytis Illiger

Semnopithecus, F Cuvier

Hanuman, H | Langur, II

Presbytis entellus

Simia, Dufrenoy		P anchises, Ell
Langur, H		Makur, MAHR
Hanuman, II		Musur, CAN
Wanur, MAHR		Bengal Langur, ENG

common in Bengal and Central India

Presbytis schistaceus, Hodgs Horsf

Himalayan Langur, ENG		Langur, HIND
Kubur, BHOI		Kamba Sulu, LLECH

occurs throughout the Himalayas

Presbytis priamus, Ell, Bly, Horsf

Madras Langur, ENG		Gandangi, TRI
--------------------	--	---------------

inhabits the eastern side of the peninsula and the north of Ceylon

Presbytis Johni, Jerdon

Simia Johni, Fisher		Semnopithecus cucullatus, Is Geoff
Semnopithecus Dussmeri, Schinz		Semnopithecus hypoleucos, Blyth Horsf
Semnopithecus Johni, var. of Martin		

The Malabar Langur, of Travancore, Cochin, Malabar and South Canara

Presbytis jubatus, Jerdon

Semnopithecus Johni, Wagner, Blyth, Martin

The Nilgherry Langur, of Nilgherries, Annamally, Pulney and Wynnaad, not below 4,500 and 3,000 feet

Presbytis pileatus, Blyth, Sylhet, Cachar, Chittagong

Presbytis barbei, Blyth interior of Tipperah Hills

Presbytis obscurus, Reid, Meigu

Presbytis phayrei, Blyth, Aikan

Presbytis albo-circus, Malayan Peninsula

Presbytes cephalopterus, Blyth, Ceylon

Presbytes ursinus, Blyth, Ceylon

Sub-fam Papioninae, Baboons

The true baboons of Africa and monkey-like baboons of India

Inuus silenus, Jerdon Lion-monkey

Simia leonina, Linn, Shaw		Silenus veter, Gray, Bly Horsf
---------------------------	--	--------------------------------

Nil bandu, BENG		Nella manthi, MAI
Siahbandu, HIND		

W Ghats, Cochin, Travancore

Inuus ilhesus, Jerdon

Inuus civithanus, Schreb		Pithecanops, Hodg Horsf
--------------------------	--	-------------------------

MAMMALIA

Bengal monkey, ENG		Maient banu, LIT
Bandar, HIND		Banui, "
Moikot, BENG		Suhu, "
Piyu, BHOI		

Inhabits nearly all India

Inuus pelops, Jerdon

Macacus Assamensis, McLelland, Horsf Blyth

The Hill monkey, high up on the Mussoorie Hills

Inuus Sikkamensis, Jerdon

Macacus Sikamensis, Hodgson

Inuus nemestinus, Jerdon Tenasserim and Malayana

Inuus leoninus, Blyth Aikan

Inuus aietoides, Is Geoffroy Aikan

Gen Macacus radiatus, Jerdon

Simia sinica, Linn Ell Bly Horsf

Mungur, CAN		Wanur, MAHR of SYRES
Madras Monkey, ENG		Kedur, MAHR of GHATS
Bandu, H		Koti, TEL
Makidu, MAHR		Vella Munthi, TAM

All over Southern India

Macacus pileatus, Shaw, of Ceylon

Macacus bonapartei, F Cuvier, of Bui mah

Macacus cynomolgus, Linn of Bui mah

Fam LEMURIDAE The Lemurs, mostly of Madagascar, one genus of Africa and two or three from India and Malayana

Nycticebus tardigradus, Jerdon

Stenops Javanicus, Auctori		N Bengalensis, Geoff Horsf Bly
----------------------------	--	--------------------------------

Slow paced Lemur, ENG		Lajawoti banar, BENG
Laja banar, BENG		Shaimmdah billi, HIND

Found in Bengal, Rungpoie and Dacca

Nycticebus javanicus, Blyth, of Java

Loris gracilis, Jerdon

Lorina Ceylonensis, Fischer, Blyth

Tevungu, TAM		The slender lemur, ENG
Dowantsi pilli, TEL		Sloth, of MADRAS

Found in Ceylon, and Southern India

Tarsium a genus of Java

Fam GALEOPITHECIDAE, Flying Lemurs

Gen Galeopithecus, natives of Malayana

SUB-ORDER CHEIROPTERA, Bats

Fam PTEROPODIDAE Frugivorous bats
Many of the Pteropus bats inhabit Malayana, Ceylon, India, Burmah, Malacca, Java

Pteroptis Edwardsi, Jerdon

P medius, Temm		P Assamiensis, McLelland
P leucocephalus, Hodg		Ell Blyth

Hipposideros insignis, Cantor Malay Peninsula

Hipposideros nobilis, Cantor Malay Peninsula

Hipposideros diadema, Cantor. Malay Peninsula

Hipposideros galeatus, Cantor Malay Peninsula

Cœlops Fritzb, Bly Tailless bat of Sundebans

Rhinopoma Hardwickii, Gray, Blyth The long tailed leaf-bat of all India, Burmah, Malayana

Nycterus Javanica, Geoff Java, Malacca.

Fam NOCTILIONIDÆ

Sub-Fam Taphozomæ

MAMMALIA

Taphozous longimanus, *Hard Blyth*
T brevimanus, *Blyth* | *T fulvidus*, *Blyth*
T cantoni, *Blyth*
The long-armed bat of all India
Taphozous melanopogon, *Temm Horsf*
The black bearded bat of Canara, Malayana
Taphozous saccolaimus, *Temm Blyth*
T classus, *Blyth* | *T pulcher*, *Elliot*
The white-bellied bat of Madras, Malayana
Taphozous bicolor, *Temm E Indies?*
Emballonura species from Java
Sub-fam Noctilioninae
Nyctinomus plicatus, *Jerdon*
Vespertilio plicatus, *Buch Bly* | *N dilatatus*, *Horsf*
N Bengalensis *Geoff* | *N tenuis*, *Horsf*
The wrinkled lip-bat of Madras, Calcutta.
Chenomeles torquatus, of Java
Fam VESPERTILIONIDÆ
Sub-fam Scotophilinae
Scotophilus serotinus, *Jerdon*
Vespertilio noctula, *Geoff* | Silky bat, *Eng*
" *serotinus*, *Sch.*
Europe, Himalaya, Tyne range beyond Mussoorie
Scotophilus leisleri, *Jerdon*
Vespertilio dasycarpus *Leisleri*, *Blyth*
Many armed bat and the Tyne Range, of the Himalaya
Scotophilus pachyomus, *Jerdon*, the thick muzzled bat of India?
Scotophilus Coromandelianus, *Jerd*
Kerivoula Sykesii, *Gray Ell*
The coromandel bat of all India
Scotophilus lobatus, *Jerd*
Vespertilio abramus, *Temm*
The lobe-eared bat of India
Scotophilus fuliginosus, *Jerd*
Nycticejus atratus, *Blyth*
The smoky bat of Nepal
Scotophilus fulvidus, *Ell Tenasserim*
Scotophilus pumiloides, China
Noctulmia noctula, *Gray*
Vespertilio lasiopterus, *Sch* | *V labiata*, *Hodgs Bly*
V altivolans, *White*
The noctule bat of England, Nepal
Flies high
Nycticejus heathii, *Horsf Bl*
Large yellow bat *Eng*
Southern and Central India

MAMMALIA

Nycticejus lutens, *Blyth*
N flavcolus, *Horsf* | Bengal yellow bat *Eng*
All India, Assam, Burmah
Nycticejus Temminckii, *Jerd*
Vespertilio belanger, *Geoff* | *V noctulinus*, *Is Geoff*
The common yellow bat of India, Burmah, Malayana
Nycticejus castaneus, *Gr Bly*
Chesnut bat *Eng*
Bengal, Burmah, Malayana
Nycticejus atratus, *Blyth*.
Scotophilus fuliginosus, *Bly* | Sombrio bat *Eng*
Darjeeling
Nycticejus canus, *Blyth*
Scotophilus pitampus, *Gray* | Hairy bat
All India
Nycticejus ornatus, *Blyth*
Harlequin bat. *Eng*
Darjeeling
Nycticejus nivicolus, *Hodg Horsf.*
Alpine bat *Eng*
Near the snows of Sikkim
Sub-Fam Vespertilioninae
Lasiurus Pearsoni, *Horsf Bl*
Noctulmia lasiura, *Hodgson*
The hairy winged bat of Darjeeling.
Muina suillus, *Jerd*
N lasiura, *Hodg* | *L Pearsoni*, *Bl*
The pig bat of Darjeeling, Malayana
Muina formosa, *Jerd* The beautiful bat
Vespertilio, *Hodg* | *Nycticejus Titchell*, *Blyth*
Kerivoula, *Gray* | *N isabellinus*, *Horsf*
Central India, Nepal, Sikkim, Darjeeling
Kerivoula picta, *Jerd*,
Vespertilio kerivoula, *Boddart* | Painted bat *Eng*
All India, Burmah, Malayana
Kerivoula palhda, *Blyth* The pale painted bat of Chybassa
Kerivoula papillosa, *Jerd* The papillose bat of Ceylon, Calcutta, Java, Sumatra
Kerivoula tenuis? *Tomes*
Vespertilio tenuis
Java, Sumatra
Kerivoula hardwickii, *Tomes*
Vespertilio Hardwickii
Java, Samatia
Vespertilio caliginosus, *Tomes*
Mustachod bat, *Eng*
India

MAMMALIA.

Vespertilio silgoiensis, *Hodg. Horsf*
Terai bat, Eng.
Silgoore in the Sikkim Terai
Vespertilio darjelingensis, *Hodg* The
Darjeeling bat, is like *V. mystacinus* of
Europe
Vespertilio Blythii, *Tomes* Nasseerabad
Vespertilio adversus, *Blyth Horsf*
Malayan bat, Eng
Ceylon, Calcutta, Burmah
Vespertilio Horsfieldi, *Temm*
V. tralatitans, *Horsf*
Malayan peninsula and Java
Vespertilio tralatitans, *Temm* of the Mala-
yan peninsula and Java
Myotis murinus, *Jerd*
Vespertilio murinus, *Geoff* | Mouse like bat, Eng
Europe, Mussoorie
Myotis Theobaldi, *Blyth*
M. pallidiventris, *Hong Blyth*
Theobald's mouse bat of Cashmere
Myotis parvipes, *Blyth*
M. pipistrellus, *Bl*
Small footed mouse bat of Mussoorie
Myotis lepidus, *Blyth*, Candahar
Myotis beidmoiei, *Blyth* Tenasserim
Plecotus auritus, *Jerd*
Pl. homochrous, *Hong* | *Pl. Darjilingensis*, *Hong*
Long eared bat, Eng
Darjeeling
Plecotus timorensis, *Geoff* Timor
Barbastellus communis, *G. Bl*
V. barbastellus, *Schreb* | *B. daubentoni*, *Bell*
The barbatelle bat of Himalaya, Mussoorie,
Nepal
Barbastellus leucomelus, *Jerd*
V. leucomelus, *Ruppell*.
Red Sea
Barbastellus macrotis, *Jerd*
V. macrotis, *Temm*
Sumatra
Nyctophilus Geoffroyi, *Bl*, *Leach*
The large eared leaf bat of Europe, Aus-
tralia, Mussoorie

Man, a derivative root, means to think From this we have the Sanscrit manu, originally thinker, then mau In the later Sanscrit we find derivatives, such as mâna-va, mânnsa, mannshya, all expressing man In Gothic we find both man, and mannisks, and in the Modern German mann and mensch

Leibnitz and Lacedpede divide the human race into Europeans, Laplanders, Mongols and Negroes, Linnæus into white, red, yellow and black — Kant into white, copper-coloured, black and olive-coloured races, Blumenbach into Caucasians, Æthiopians, Mongols, Americans and Malays, Buffon into Northern (viz Laplander), Turanian, South Asiatic, Black, European, and American races, Pichard into Irianians (also Indo-Atlantics or Crucasians), Turanians (Mongolians), Americans, Hottentots and Bushmen, Negroes, Papuas (or wool-haired tribes of Polynesia), and Alfouions (or Anstrali-ans), and Pickering divides them in Whites,

Akbars "	" "	34½
Mysore "	" "	163
Hebrew man or Mannah	13,125 grains or	
	lbs 1-14	

The ser of optimum is 2500 grs

The ser of grain about lbs 2, or 3

The man, or maund weight, therefore, varies according to the article weighed In the Punjab villagers use a kucha man which is only 13 to 20 seers, and the Lahori man is=to 3 kucha maunds—Wilson Pouell

MAN, TAM. Sand; earth, (a pronounced short)

MAN a river of Central India written also Maan At Surhaperec on the Maan, Capt Keatinge thought he traced the following succession of rocks, (ascending) a light greenstone, metamorphic or volcanic, a soft sandstone, very fine grained and white, compact limestone, bluish white and then the coral limestone, the latter only containing corals The compact fine limestone, is found at intervals all over the jungle, and has been very largely used for lime in the Mandoo days, the old kilns are without number He found fossils, wherever an edge of stone lay over a convenient mud bed to retain them Echinida and a Brissus were in great plenty, the Bheels call them Panuchia from their five marks, and Pooten 5-costatus Plagiostoma spinosum and Teiphiatula octophcata were numerous, the latter most so and in best preservation, pieces of a large finely marked Echinus eidiaris, also a rude impression on a stone of a very large Inoceramus? To the west of Mhow and Indore, there exist extensive beds of the cotaceous series Dr Carter in the Journal Bombay Asiatic Society, No XX July 1857, page 621, considers that these beds are truly Neocomien The evidence is that these rocks represent the cotaceous era, but is insufficient to enable one to refer them to any subdivision of that great series The following fossils were collected at Baug by Capt Keatinge

MANA HIND a platform erected in tall crops on these people sit to frighten off birds, &c.

MANA, a pass in Garhwal, on the Himalaya, in which the temple of Badamith is placed The people who occupy the Mana district are Bhots dwelling in the passes and their neighbourhood at heights above 6,000 feet The pass-men state that ridges which within the memory of man were covered with forest and pasture lands are now covered with snow, showing the extension of the snow zone The Niti pass on the Dnh, a feeder of the Ganges, is the best, and the Juwai on the Gauri pass, a feeder of the Suda or Gogria, is the worst The number of well-built houses in the Bhot district are in

Mana on the Saraswati,	Villages 3	Houses 125
Niti	10	219
Juwai on the Dnh,	13	155
Bhuse, Piss on the Kali,	9	181

The Bhot, here, as elsewhere, is an agriculturist, and is assisted by slaves who live under the roofs of their masters The people in the Mana, Niti, Juwai and Byanse passes are supposed to be emigrants from Tibet who drove out an earlier body of huddos, and many of the chief families trace their origin to a Tibetan locality The inhabitants of the Darma pass are said to be a body of Mongols left in Kumaon by Timur and if so they are not true Bhot The Darma inter their dead for a time, and in the month Kutiik exhume and burn them, but the other pass-men burn their dead on their demise The Darma practice divination, taking their omens from the warm livers of sheep sacrificed for the purpose The women of the Darma and Byanse passes dress alike, and these two clans

eat the Yik and would eat the cow, while those of Mana, Niti and Juwar abstain from beef of all kinds and look down, as on an inferior caste on the Daima and Byrnse. The Juwar nearest India, have the largest trade, and resort to an annual fair in September at Guntokh, the residence of the Laha viceroy. These passes are the roads from India to Yun or Gnau, Tibetan provinces of the Chinese empire. Immediately below the village of Mina, is the hindu shrine dedicated to an incarnation of Vishnu and one of the most sacred hindu temples in hindu mythology. The temple is built on the bank of the Bishen-ganga immediately over the site of a hot spring, the existence of which no doubt led to the original selection of this remote spot. The ritual, or chief priest, is invariably a Namburi brahmin from Malibu, no other class of brahmin being allowed to touch the idol—*Cunningham's Ladak*—*Latham's Ethnology*

MANAAR, an island close to Ceylon, from which the gulf of Manar has been named, the gulf passage was deepened by a series of engineering operations. Manaar, according to Sir J. E. Tennant, (vol. 2 p. 555) is the island of Eupodorus, which, according to the Periplus, was the seat of the pearl fishery. Manar Gulf separating Ceylon, from the peninsula of India, is so named from the island of Manar near Ceylon, which, with that of Ramisseram near the continent almost connect Ceylon to the peninsula, the two islands receiving the names of Adam's Bridge.

MANABOS See Mindanao

MANASA, the goddess of snakes. She is worshipped as a preservative against the bite of these reptiles and is represented sitting on a water lily environed with snakes. If a hindu has been bitten by one, incantations are pronounced to propitiate the favor of Manasa—*Cole Myth Hind* p. 388—See Serpent

MANASAROVARA LAKE or Mansaraur or Manasa-Saras Lake in Tibetan called Tsho-Mi-phan is the same with the Bindu Sarovara of hindu mythology, produced from the heart of Brahma. It is called Anan Anandit, is supposed to be a crater, that four rivers spring from it, and that it is near Su-mein, the abode of gods, the Vindhya-saras of the Purans. Manasarovara in reality is a lake of no exit in Little Tibet, from which the Ganges was long supposed to rise, it is a place of hindu pilgrimage of peculiar sanctity, and was first visited by Moorcroft in 1811, *As R.* 1816, Vol. XII—See Mansarovara India

MANASSEH See Kiangnanou

MANAPPAN A caste of cultivators originally from Coimbatore, first settled in Panlghat and intermixed, and often confounded, with the Nairs—*Wilson*

MANCE POONGUM TAM Sipindus
rubiginosus

MANCHAM TEL a bed

MANCHE a boat or ship The Calicut Manche, is a boat very similar to that of Mangalore with the exception only of a raking stem, for the purpose of taking the beach, as the port of Calicut is open to the coast and there is no river. These boats are propelled by the paddle and sail, and generally carry eight men. They are much employed in watering and completing the sea-stock of ships homeward-bound, also in loading ships with pepper, timber, &c, from Bombay, and in shipping the produce of the forests of Canara and Malabar, all of which is rafted off to vessels called dow, boatilo, patamar, &c.

The Panyani Manche, is a coasting boat, of about fifty feet long, ten to twelve feet broad, and five to seven feet deep. It is framed with timbers and planks, which are sewed together. The timbers are about four feet asunder, and on them, inside, some few planks are placed as bands and clamps, which are nailed to the frame. These are very rudely put together, and not of much importance, either in form or construction. During the south-west monsoon, or from June to November, they are laid up at Bampur river for safety, and are only used in the fine weather season. They carry the productions of the cocoanut tree, viz. coir, from the husk of the cocoanut, *Cocos nucifera*, from which rope is made. Copra, the inside albumen of the nut, from which oil is expressed. Cajan, the leaf of the *Corypha umbra-culifera* tree, which is used for thatching houses, also for books, and various other purposes. Jageri a kind of sugar, which is made from the toddy or juice of the palm. Oil and arrack, a strong spirit, distilled from the toddy taken from the palm. These vessels keep along shore and take advantage of the sail in rowing. They have generally from eight to ten men, who are fishermen of the Mopila caste, a race of mahomedans, descendants of the first Arabian settlers on the shores of the peninsula, and who, marrying the daughters of the country, obtained the name of Mapillai, or "sons-in-law," corrupted by Europeans into the above term.

The Boatila manche, of the island of Ceylon, navigates the Gulf of Manaar, and the coasts of the southern part of the Peninsula of India. This boat, is about fifty to sixty feet in length, sixteen to eighteen feet in breadth, and eight to ten feet in depth, has more of the European form than any of the Indian-built vessels that are met with. The after part shows the construction to be of Portu-

MANCHI-TUNGA

guese origin as it is very similar to that of many of the boats still in use by the people of that country, which are said to be of the same shape as the vessels in which Vasco da Gama sailed to India. They have a deck fore and aft, and are built with all sorts of jungle wood, in a very rough manner, and fastened with nails and bolts. They are equipped with one mast, which inclines forward, and a square lug sail, also a small bow-sprit, at about the angle of 45° , with a sort of jib fore sail, one pair of shrouds, and a back-stay which completes the rigging. These vessels carry on the trade of the island across the Gulf. The exports are, rice, tobacco, &c, and the imports, cloth. This forms a great part of the revenue of the island, in the district of Sthanapatam.

Mangalore Manche of the western Coast of the Peninsula is a flat bottomed boat of burthen, about twenty-five to thirty-five feet long, six to seven feet broad, and four to five deep. It is formed to meet the river, which is very shallow and flat, and to land the cargoes of the patamars, which are discharged and loaded at the mouth of the rivers. These boats are sewed together similar to the masuli-boat and other native vessels. They are forced along by bamboo poles, as the water is not more than from six to ten feet deep, except in the south-west monsoon, when the rapids swell, and the whole of the river is considered impassible. and at this period all the vessels are taken to the shore and laid up — *Edye*

MANCHAR A little north of Larkhana, on the right bank of the Indus, the Narrah or Snake River, a Sind Serpentine, falls into lake Manchar, flows through it, and issues from the southern extremity under a fresh name, the Aral. The Narrah and the Aral form a semi-circle of about sixty miles from point to point, they are probably artificial, as their tortuous course presents the appearance of man's rather than Nature's design. The country is so level that, when the Indus rises, the water flows up the Aral, and vice versa, when the main stream falls — *Burton's Scinde, Vol II p 231*

MANCHO, JAV *Giacula religiosa* — *Linn*

MANCHU, a race of High Asia and the N Eastern parts of Asia. The reigning dynasty in China are Manchu. A Manchu is under obligation to enrol himself under some banner, and failing to do so, loses his privileges. Many neglect to enrol themselves voluntarily in order to avoid the conscription. The Sifo and Solon are the highest tribes of Manchu. The Manchu had no written character until 1641. Mokden is the native capital of the Manchu. They are a Tartar race. The Amoor, second only to the Mississippi, flows into the Pacific Ocean not far north of Japan. Much of the country along the Amoor is susceptible of farming and grazing. Steamers can ascend from the sea to Chetah, a distance of 2,600 miles, which opens up Siberia to the Pacific through the Amoor, presenting a new field for commerce, the ultimate limits of which can hardly be grasped by the most comprehensive mind. Mongolia, Manchuria, Northern China, all the Tartaries, Thibet, and Siberia, with a population of twenty to thirty millions, are approached by this river, and a new route to the Indies opened. Irkoutsk, the capital of Eastern Siberia, can be approached with only about three hundred miles of land carriage. The Chinese have annexed all the neighbouring parts of their territory from the Manchu and Mongol races. Beyond the Paga Gol lies the country of the Ortoos, which extends a hundred leagues from east to west, and sixty-six from north to south. In A. D. 1635, the tribes of this region were Manchu. Cecina Manchuria, a mollusk of Olga Bay, Manchuria, is eaten and the Laminaria seaweed is largely stacked in the gulf of Pichili by the Manchu — *Adams—Prinsep's Tibet, Tartary and Mongolia*, p 49—57. See India, Japan.

MAND, probably another name for the Med. There are several tribes the Mandai, Mandhor, Mindhia, the Baluch tribe of Mondiani, and the ancient towns of Mandra, Mandropat in Chachgam, to the east of the Gum, Mandrasa, to the north of the Makali hills, and Mundia and other similar names in Cutch.

MANDA or Manga chettu, TEL ? *Randia dumetorum*, *Lam* ?

MANDA, a kind of bread.

MANDAKU or Manda chettu, TEL a plant the juice of which prevents baldness.

MANDAL, that form of oriental divination which owed its celebrity in Europe to Mr Lane. In the Mandal, or palm-divination, a black slave is considered the best subject. European travellers have frequently

marked that nervous sensibility. In Abyssinia the maladies called "bouda" and "tigitya" appear to depend upon some obscure connection between a weak impressionable brain and the strong will of a feared and hated race, the blacksmiths — *Burton's pilgrimage to Meccah*, vol 1 p 18, III p 220.

MANDAL, HIND. *Rhododendron arboreum*, also *Acer cultratum* the maple. In Kulu *Acer caudatum*.

MANDAL or Marwa, Eleusine coracana.

MANDAL. See Mandwah.

MANDAL, straw rope, made of Eleusine coracana.

MANDAL—? *Agallochum*.

MANDALA. See Inscriptions. Vedas.

MANDALAM, SANS a region, as Tondamandalam, Pandu Mandalam, Chola mandalam, Mandalaisu and Oka Mandal. See Mandel.

MANDAJADI. *Adenanthera pavonina*.

MANDALIQUE ISLAND, in lat 6° 22' S, long 110° 53' E, is a small round island off the N Coast of Java — *Horsburgh*.

MANDA MOTUKU, TEL *Dalbergia Oojemensis*.

MANDAPA. The portico of a hindu temple. See Mantapam.

MANDAR, the Mount Mandar, celebrated in the Puranic legends for the churning of the ocean, lies southward of Bhagalpore. On the downfall of buddhism, Mandar fell into the hands of the shivites and became a seat of their god so as to rival Benares and form, as the Kasikhund states, a second Kailasa. The legend of the churning of the ocean is an interpolation in the Mahabharata and evidently refers to the contest between the brahmins (soora) and the buddhists (asooia) the great serpent Vasookee, alluding to the sect of the Naga. *Ti of Hind*. See Mandara.

MANDAR, HIND. *Acer ceticum*, and *A. cultratum*.

MANDAR, PORI. *Alenga saccharifera*, *Labill*.

MANDARA, the mountain which was used by the hindu god Vishnu as a churning stick at the churning of the Chira-Samudra or Sea of Milk. It is remarkable for having on it a colossal figure, carved in granite. See Kurma. Vishnu. Mandar.

MANDARA, SANS. *Calotropis gigantea* Brown, also *Erythrina indica*, *Lam*. Also amongst hindoos, a celestial tree.

MANDARA. A Penang wood, of a pale red colour, specific gravity 0.939. A small tree, used for ornamental furniture — *Col Pith*.

MA'NDHA'TA

MANDEVILLE, Sir John, author of a book of alleged travels in India and China He set out from St Albans in 1332, and returned and died in Lugo in 1386 His descriptions of Ceylon are borrowed from Marco Polo and Odoric of Portendu He seems to have adopted, as regards Sumatra, the accounts of Odoric when he says, "Beside the isle of Lemeris is another isle called Sumobor, and fast beside, a great isle called Java" — *Marsden's History of Sumatra*, p 7, 8

MANDGAI DEKH *Bambusa arundinacea* — *Reich C P*

MA'NDHA'TA, an island in the Nerbada belonging to the Nimai district, remarkable as containing numerous temples, ancient and modern, including the great shrine of Omkar, a form of Siva It is cleft in two by a deep ravine running nearly north and south the eastern end containing about one-third of the whole area The southern bank of the Nerbada opposite Mandhata (called Godapura) is as precipitous as Mandhata, and between them the river forms an exceedingly deep and silent pool, full of alligators and large fish, many of which are so tame as to take grain off the lower steps of the sacred ghats The worship of Siva was established here at an early age On Mandhata the shrine of Omkar, and on the southern bank that of Amarnath (lord of the immortals), are two of the twelve great Lingam which existed in India when Mahmud of Ghazni demolished the temple of Somnath in A D 1021 The name Omkar is from the syllable Om, which says Professor Wilson, is a combination of letters invested by Hindu mysticism with peculiar sanctity, employed in the beginning of all prayers It comprehends all the gods, the Vedas, the three spheres of the world, &c The brahmins who now officiate at the shrine wish to exclude Omkar from the twelve Lingam usually called "A' di" or "hast," as something above and before them all The Narmada Khand supports them in this assertion, but as it contains a prophecy of the time when India shall be ruled by Mlechha (non-Hindus) and other modern allusions, its antiquity is certainly a good deal open to doubt The evidence of the Kasi Khand and other Sivite writings is against them, and the pilgrims, who have vowed to visit the Bani jyoti Lingam, pay their adorations both to Omkar and Amarnath The raja of Mandhata, who is hereditary custodian of all the modern temples, is a Bhilala, claiming descent from a Chauhan Rajput named Bharat Singh, who is stated in the family genealogy to have taken Mandhata from a Bhil chief in the year A D 1165 *Atk*

MANDLA A district lying between L 23° 2' and 22° N and L 80° and 81° 40' E. It is bounded on the east by the state of Rewa and a portion of the Bilaspur district, on the north by the Sohagpur and Chendya taluka of Rewa and a small portion of the Sleemanabad tahsil of the Jabalpur district, on the west by the districts of Jabalpur and Seoni, and on the south by the districts of Seoni, Balaghat, Raipur, and Bilaspur. The population for the whole district in 1866 was 1,87,699 and of these 1,27,958 were agriculturists

The original inhabitants of this district are undoubtedly the Gond and Barga, who at the present time form the larger share of the population. Next to these are brahman families some of whom affect to trace back their arrival in Mandla to the time of Jadhava raya in Samvat 415 (A D 358) though it is much more probable that they settled here in the reigns of Hirde Sah and Narendra Sah, from Samvat 1663 to 1788 (A D 1606 to 1731). The former of these two kings introduced a number of foreigners into the country, especially a large colony of Lodhia, who settled in the valleys of the Banjar, Motiari, and Neibada, gave the name of Hirdenagar to the taluka thus brought into cultivation, and did much by digging tanks and otherwise to colonise the best parts of the district. With these exceptions, and that of the Mahto Tel immigration into Rangarh at a much later period, there is no other trace of the population of the district having been recruited from foreign resources. These Mahto are without exception the best cultivator class in the Rangarh tahsil. These people are hindus, originally of the tel caste, and formerly resident at Mahir. In Mandla the Gond race is divided

MANDLA

into two classes, which again are subdivided into forty-two different castes or got. The two classes are the Raj Gond and the Rawan Bansi. The former is the higher and outdo the highest caste hindus, in the matter of purifying themselves, and ape them in all their religious ceremonies. They wear the janeo or brahminical thread and consider themselves deeply insulted if compared in status with a Gond. Mr Hislop, says that they carry their passion for purification so far that they have the faggots with which their food is cooked sprinkled with water before use. The Gond tribes are

Marobi	Chicham	Korapa	A'mega
Maikam	Maikola	Sima	Mehram
Waikara	Sarota	A'mdan	Kuram
Sin A 'M	Paoh	Temena	Nakma
Tekam	Bhagdy	Dazam	Dhalya
Dhorda	Wuka	Kindam	Bahaya
Karyam	Pandu	Kochu	Bhena
Waiwiti	Kunibara	Kalku	Bhiman
Patih	Danketi	Temirachi	Ghasia
Sarjam	A'rmon		

To these may be added the Aghania or Muki Paidhan Pathari or Gugya, Dhalya, who differ in some slight peculiarities from the Gond, but undoubtedly belong to the same race. The Paidhan act as bards to the Gond and attend at births and deaths and marriages. The Aghania is a worker in iron, he frequents the Barga villages, and acts as blacksmith to the whole community, no light task where the non-iron has to be dug from the hill, carried to the village forge, smelted, and then worked up to meet the wants of the people. These people may be set down as the laziest and most drunken of all the Gond race.

The Gond of the Nagpur country is a little under the average height of "Europeans and in complexion darker than the generality of hindus, bodies well proportioned, but features rather ugly, a roundish head, distended nostrils wide mouth, thickish lips, straight black hair and scanty beard and mustaches. Both hair and feature are decidedly Mongolian," and this description agrees very well with the Mandla Gond above the ghats. Their women are as a rule better looking than the men. The wives of the Gond are looked upon as so much property, for they are expected to do not only all the household work, but the bulk of the agricultural labour also. It is a common expression among them, when speaking of a well-to-do farmer, to say that he is a man of some substance, having four or five wives; occasionally they have seven, but this is exceptional and the poor content themselves with one. In dress the women are usually decent, though they wear only the dhoti and shoulder-cloth of coarse country made stuffs.

white, with a coloured thread border. For ornaments they wear strings of red and white beads, ear rings of brass wire in coil, and polished zinc bosses sometimes nose-rings of the same and anklets and armlets of copper and zinc mixed or of pewter and zinc. They are tattooed at an early age, some much more than others and allow themselves to be put to considerable amount of pain in the performance. The Paidhan and Dolya are the people who practise the art of tattooing and some have quite a local reputation for their skill in the art and for the successful patterns with which they adorn the bodies of their victims. They usually work with needles, and rub in indigo and gunpowder or saltpetre. Though wild, uncivilised and ignorant, the Gond are, among themselves honest, faithful, and trustworthy, courageous and in some points trustful as regards faults they have committed, as a rule, they plead guilty when brought before the courts. As a race they are now well behaved and very amenable to authority. The number of their deities seems every where to differ. Mr Hislop says that he never could get any one man to name more than seven. The best known are Duladeo, Narain Deo, Suraj Deo, Mata Devi, Baia Deo, Khan Mata, Thakun Deo, and Ghansyam Deo. Besides these, the Gond peoples the forests in which he lives with spirits of all kind, most of them vested with the power of inflicting evil and quite inclined to use their power. To propitiate them he sets up "pat," in spots selected either by himself or by his ancestors, and there performs certain rites, generally consisting of small offerings on stated days. These pat are sometimes merely a bamboo with a piece of rag tied to the end, a heap of stones, or perhaps only a few pieces of rag tied to the branches of a tree. The Gond have seven different kinds of marriages, some much more binding than others.

Widows are expected to remain and the Gond customs provide for their re-marriage in two ways, the "Chunia Pahauna Shadi," and the "Kari Shadi." The first consists simply in the woman proceeding to the house of the man she has agreed to live with after her husband's death. The other is where the younger brother marries his elder brother's widow, which he is expected to do by the custom of the tribe, unless the widow should insist upon making some other arrangement for herself. The ceremony in both of these cases consists simply of a presentation of bangles by the husband to the wife, and of a feast to the village elders. Cremation is considered the more honorable mode of disposing of the dead but being ex-

pensive, is very seldom resorted to except in the cases of the elders of the tribe. Formerly the Gonds used to bury their dead in the houses in which they died, just deep enough to prevent them being dug up again by the dogs, now they have generally some place set apart as a burial ground near the villages. Then funeral ceremonies are very few, the grave is dug so that the head shall lie to the south and the feet to the north, the idea being that the deceased has gone to the home of the deities which is supposed to be somewhere in the north, but the Gond do not appear to have any real theory as regards an after life or the immortality of the soul. The Baiga are the acknowledged superiors of the Gond races, being their priests and then authorities in all points of religious observance. In physical appearances the Baiga differ so much as almost to defy description. One sect the Mundiya is known by the head being shaven all but one lock. The Buijwar on the other hand wear their hair long, never cutting it, and tie it up in a knot behind, so do the Bhirandiya. In stature some are taller, than the Gond, but as a rule they are all very much below, the average height of Europeans. The Baiga to the eastwards on the Malkal range are finer men than those near Mandala. In habits too, they are superior being a fine manly race, and better looking than their brethren near Mandala. They have not the flat head, and nose and receding forehead so common among the Gond, the head is longer, the features more aquiline, and the hands are peculiarly small. Some among them have, however, all the types of low civilization, flat heads, thick lips, and distended nostrils, but on the whole the appearance of the Baiga of the Eastern Ghats is striking, as compared with that of other wild tribes. The women are all tattooed and like the Gond they wear bunches of wool tied up in their own hair. They are no cleaner, than their neighbours, neither sex affecting the use of cold water any more than can be helped. In their religious ceremonies they much resemble the Gond, reverencing the same gods, but adding to them as the chief object of worship the mother earth "Ma Dhariti." Thakun Deo is supposed to have special charge of the village, and is honoured accordingly. But the Baiga have a great belief in the spirits, which are supposed to haunt the forests and in the localities which are now especially the homes of these spirits. "Pat," are set up, each under the charge of an appointed Baiga. There appears to be no especial rule regarding the institution of a pat. Sometimes it is the place, where a man

has been killed by a tiger or a snake, sometimes no reason whatever is given for the selection. The dahya cultivation covers a large area in this district. With no other instrument of agriculture but the axe and a small sickle ("humsya,") it is astonishing to see the extent of clearing that one village of Bugra makes on the sides of the hill on which their village is located.—*Central Prov.*

MANDLASIR, in lat. $22^{\circ} 11' N$, long. $75^{\circ} 46' E$, in Malwa on the right bank of the Nirbada. The level of the Nirbada is about 700 ft. *W. I.*

MANDLOI. The title of an officer under native rule.

MANDOH, the ghost of a mahomedan, is in hindu demonology, deemed the most malignant of all demons.

MANDONG. A rush much used by the natives in the manufacture of rice and sugar bags, mats, and for tying up articles, the fibre being strong. It grows spontaneously in the rice fields of Province Wellesley after the crop has been gathered and overpreads them like a second crop. It may possibly be experimented for the manufacture of paper.—*B. I.*

MANDOO, some time the capital of the independent mahomedan kingdom of Malwa. It is on a spur of the Vindhya mountains, overlooking the valley of the Nerbudda and the plains of Ngor, having a site at an elevation of more than 2,000 feet above the sea, and a climate not unlike that of the Mohitoor mountains with similar scenery. The city of Mandoo was founded by Hoshang Shah, the founder of Hoshangabad, the second king, Mohammed Khilji, erected a mausoleum of white marble over the remains of Hoshang Shah, still in good preservation. On the Mandoo hill, is a terrace on which the hindu queen would recline to gaze on the sacred Nerbudda winding through Nimar, close to this terrace was erected a palace, now a well-known spring, which to this day is called the Queen's fountain. In general mahomedan ruins are situated on the plain, without any imposing background to the picture, but at Mandoo the ruins are situated in the midst of beautiful mountain scenery, so that the combination of works of art with the beauties of nature is most charming. Mandoo is built on coralline limestone, but that used for building is derived from near Bugra or Bagh. See Kalmuck, Malwa.

MANDOR. See Rahitor.

MANDORLI, *Fr.* *Amygdalus communis*.

Lakman,	"	Kut juti,	<i>Tur.</i>

The Mandragora, or mandrake, the fetid root of which was so celebrated in the magic rites and toxicology of the ancients, is known in the bazaars of Central Asia and the north of India. It has various names, arising from its fancied resemblance to the human form. It was formerly an article of the Materia Medica, but is now exploded, though the leaves are still sometimes employed in preparing modysine fomentations. The Arabians place the root, which they call Usul-ul-looth, amongst their most powerful cathartics and also suppose it to be of use as an antispasmodic. What of it is found in India is probably brought from Persia or Arabia. It is found in many parts of the South of Europe, is of poisonous qualities, and its smell is very fetid. Loofan is the plant. Tuldih-us-shantan is the fruit. Its properties are identical in nature with those of *A. belladonna* but weaker in consequence of drying and decomposition of the atropia. The mandrakes of Gen. xxx, 11, are generally supposed to be the root of Mandragora officinalis. Calmet regards Dudum and plantains as citrons but, violets, lilies, jasmynes, have all been named.—*O. Shanghai*, p. 166. *Hog's Foot Kingdom* 552. *Emilia*, *Ind. Med.* p. 26. *Calmet*.

MANDRI, *Hind.* *Ribes leptostichum*.

MANDRONG, a rush of province Wellesley, made into rice and sugar bags, mats, &c. It grows spontaneously in the rice fields after the crop has been gathered over-spreading them like a second crop. See Mandong.

MANGANESE

Brunstein,	Dut	Braunstein GlasseiseGER
Oxide non de manga-		Mangan hyperoxyd, "
nese	Fr	Manganesia, "
Manganese,	"	Manganese Nigra, Lat
Mangnese,	"	Manganeseum, "
Savon du Verre,	"	Manganesia, Si

In the bazaars of the Punjab, manganese in the forms of a silicated sesquioxide and a peroxide is obtainable as a black powder, or in lumps of the pyrolusite The metal is very brittle, of a dusky white colour, and without either malleability or ductility But the substance known in commerce under that name, is the peroxide, or black oxide of the metal It occurs native in the Mendip hills, Somerset, in the counties of Devon and Aberdeen and in many parts of India It is found in a

variety of forms, most commonly it is of an earthly appearance, and mixed with other ingredients, but sometimes, in crystals of a black colour and metallic lustre. At the Madras Exhibitions of 1855 and 1857, some very large samples of the silicated sesquioxide were exhibited from Vizianagum, which contributed two tons in blocks, weighing from 2 cwt to 3 cwt each, with from 53 to 54 per cent of metallic manganese. The substance is well suited for glazing pottery, along with galena, and felspar. A great variety of pleasing colors can be imparted to the glaze by varying the proportions of the manganese: thus, in small quantities it gives a yellow color, in large, brown, then a blood-red, purple or black, as the proportion of manganese is increased. It has also the property of hardening the glaze, so as to resist vinegar and weak acids; concentrated mineral acids however will corrode it. Manganese is used in small quantities by the natives of India in giving purple, brown and black colours to glass for bangles. Good ore occurs in Kurnool and Toomkool in Mysore. Peroxide of manganese occurs in the form of a compact black stone, with a smutty brown or black powder on the surface, is of value and is largely employed for manufacturing purposes. It occurs in Soondoor, and Roodiar in the Coileoontlah talook, Cuddapah, Bellary and Bimlipatam. A specimen from the latter locality contained about 30 per cent of peroxide. Brown wad and brown fibrous manganese occur at the Red Hills, Bangalore and Cuddapah, ores of manganese occur at the Neilgherries. Many of the iron ores and iron sands contain manganese. Captain Tiemenheer reported on the manganese of Mergui, and Mr. Mason has seen specimens of manganese mixed with iron from one of the islands south of Mergui. Peroxide of manganese is largely consumed in the manufacture of bleaching compounds, it is also used by potters and glass makers, and in the laboratory it is considered the cheapest material from which to procure oxygen. *M. E. J. R. Waterston* quoted by *Faullner, Powell Handbook, Econ Prod Punjab*, p. 100. *Mason's Tenasserim*.

A tree, generally diffused over all the warmer parts of Asia, but it extends as far north as 30° in the Punjab, in N India up to 3,500 feet and up to Nabu at an altitude of 4,000. It has been successfully introduced into the West Indies. It grows to a great size, with an erect trunk, and dark coloured cracked bark. Its flowering time is January, February and March. The fruit ripens in May, June and July, and is one of the most grateful fruits of the tropical parts of Asia. The Archipelagic names of the cultivated mango are all, according to Crawford, derived from the Sanscrit, Maha-pahala, or great fruit. Through the agency of Europeans, however, the corrupted form of the Sunda name for the wild mango has become prevalent throughout the east from Madagascar to the Philippines, and has extended to America. The mangoes of Mazagaon were once celebrated. The best mangoes come from Goa, Bombay, Multan, Hushyapur and Karmal. The best of all are the 'paiwandi,' or grafted mangoes, at once known by the utter absence of all stingingness of texture, and by their delicate flavor. Natives usually prefer mangoes when they are so ripe that they have lost their firmness, and are quite flabby and soft. The wood is of a dull grey colour, porous, yet pretty durable if kept dry; but soon decays, if exposed to wet, of the effect of which it is very sensitive. In very large old trees it acquires a light chocolate color towards the centre of the trunk and larger branches. This is hard, closer grained and

MANGIUM CELSUM

much more durable. It is generally used for constructing massoolah boats and for packing cases, the cabinet-makers at Madras prefer it to other wood for veneering on. It is also generally used by coach builders, cabinet makers, and others, where common light wood is required, being the cheapest wood obtainable for packing cases, boarding and rough work, and for backs and linings of furniture. The wood holds a nail faster than any other wood. It is very serviceable wood for planks, when not exposed to wet, and is much used for house purposes, but much less for carts. It seems to bear the action of salt water better than that of flesh, is hence used for canoes. It could be readily creosoted. It is used in Mysore for the solid wheels of country carts, and rough furniture. The kernels are large and seem to contain some nourishment, during times of scarcity and famine, they are boiled in the steam of water and used as an article of diet. Propagating by layers, and grafting by approach, are the only modes of certainly continuing fine sorts, as well as of improving them. These have the advantage also of bearing when small in size, that is, only a few feet in height, and therefore well suited to culture in the hot-houses of Europe — Voigt; Edye, Forests of Malabar and Canara, Captains Macdonald, Beddome and Puckle, Cal. Cat. Ex. of 1862, Elliot's Flora Andhra, M. Rohde in Madras Cat. of 1851, also MSS, Eng Cyc, Dr Gibson, Wright and Cleghorn, Madras Ex. Juny Rep. of 1855, Madras Cat. MANGLES, Ross Donnelly was born in 1801, and obtained his appointment as a writer in the Civil Service in Bengal, in April 1819 and after various offices in October 1837, he became officiating Secretary to the Government of India in the Judicial and Revenue Departments, and officiating Private Secretary to the Deputy Governor of Bengal in the same departments, in 1838, a temporary member of the Sudder Board of Revenue. At the general election of 1841 he was returned for the borough of Guildford. He was chosen again, in July, 1847, in 1852 and 1857. Mr Mangles' career in India was marked by ability and vigour. He contributed some able articles to the *Edinburgh Review* on India and Indian affairs, and is the author of a "Vindication of the Honourable East India Company and their Government of Bengal from the Attacks of Messrs Richards and Crawford," published in 1830. For many years a Director of the East India Company of which he was Chairman in 1857. In Parliament Mr Mangles was a strong Liberal and supported the Ballot, the admission of Jews to Parliament, and the abolition of Church rates.

The mango tree, now so extensively cultivated, is said to have been brought into India by Ravana, from Ceylon. There are many varieties of this fruit in India. Some of the most esteemed sorts are the Alphonso,

MANGO

Raspberry, Doriah, Maghiabah and the Mazagong. The practice of engrafting the mango, was first introduced at Madras, by Dr James Anderson, who improved it in so great a degree as to have gained it, and perhaps, justly, the title of the finest of all Indian fruits. Rumphius is of opinion that mangoes heat the blood and produce exanthematic affections. When ripe, it is served up at dessert, and when green, is used for making preserves, pickles, tarts, &c. The mango may be procured twice in the year in Bombay. Propagation may easily be effected by seed and cuttings, &c, but the process is slow, as a tree thus raised will not bear fruit before the 5th or 6th year, whereas those that are grafted produce in the 2nd or 3rd, although it is injurious to the tree to let it bear so early, and the blossoms should be removed. Young grafts will sometimes, indeed very often, blossom the first season they are removed, but if allowed to bear fruit, it checks them for a length of time after. A mango graft may be applied at any time of the year, but the stock must be kept continually moist by watering. When the graft and stock have become united, the former must be partially divided by a notch with a sharp knife. This may be done after six weeks have elapsed from the time of its first being united. A second cutting may be effected a fortnight later, and the complete removal from the parent tree at the expiration of nine or ten weeks. After this, remove the graft into the shade for a fortnight longer, when it may be put into the spot where it is to remain. A graft tree never attains the size of a seedling, neither will it continue to live or bear so long, and it is doubted if the seed of a graft mango would produce the same fruit, whereas a seedling often does so. The time that a seedling takes to produce fruit is the great objection to this mode of rearing trees. Nevertheless a young tree of three years old might have one of its branches brought into blossom by ringing, this would enable the cultivator to judge if the tree was worth preserving or not. The Maghiabah variety is of a greenish tinge inside when ripe, and by far the largest of the whole, being three times the size of an Alphonso and it ripens the last. When the graft is planted out, it requires only a moderate proportion of care, clearing the ground of all weeds, and removing any buds that shew themselves. Within the space from the ground to where the first branches are to rise from, all superfluous and weak shoots should be removed, more particularly those from the centre of the tree, as also all

MANGO

branches that trail on the ground, unless required for grafting from. The tree is better for being pruned, and whenever the interior of a tree may contain superfluous branches or when there is not sufficient room for the growth of the young and fruit-bearing shoots, a clear space must be provided,—and this can only be done by pruning. The best time for this operation is soon after the tree has done bearing fruit. No old and decayed wood should be allowed to remain, and great care must be taken to remove, on the first appearance, the “bores,” should they indicate their presence by their appearance on the bark. When trees are old and have their bark injured, it must be all cleared away, and the parts covered with a composition. One mode of propagating by slips or cuttings is thus described, take slips from the healthy branch of a mango tree, at least two feet long, taking care to cut it one inch above the joint at the top and the same below the joint at the bottom. The cuttings will not all be equal, as in some branches the joints are short and in others long. The thickness of the slip is to be from three quarters to three inches in diameter. Half the length of the slip is to be slightly punctured with an awl, and then inserted into the ground to that depth (half of the slip) perfectly perpendicular, and then make a knob at the top of the slip with plain cowdung. The cuttings must be well watered in such a manner as to keep up an uninterrupted moisture in the ground, and moreover the cuttings are to be well shaded, and the coverings only to be removed by degrees as the plants attain leaves and strength, and not to be transplanted on any account until the next monsoon. The slips begin to bud within a month generally, but sometimes take a much longer period. In all cases the punctures are indispensably necessary, to admit of root fibres being thrown out from them.

The tree and its fruit may both be improved, if, during the cold season, the ground is dug all round the roots, and by the addition of a suitable quantity of good old manure. The seed will only grow when fresh, and seldom after six weeks. Tenasserim mangoes are notoriously inferior. There are two different species, *Mangifera indica*, and *M. sylvestris*, both of which the natives say grow wild, and several varieties are cultivated in the Provinces. The finest is a variety from Siam, which produces a large fruit with a very thin stone. The mango fruit is very plentiful throughout Pegu, but more especially in the Tharawaddy and Toungoo districts. Mangoes are often dried before they are ripe, after having been cut in slices and, then, are called

MANGOSTEEN

“amchui.” The kernels are also occasionally eaten—*Powell, Handb., Ruddell Annals of the Mat Med* p 226 and 260 quoting *Rumphius* tom 1, Cap XXI, p 95 *Mason, McClelland*

MANGO BIRD The bright yellow Oriole

MANGO FISH, a species of *Polynemus* of the Irawadi and Ganges. *P. longifilis* *Ouv* *P. paradisicus* *Linn* and *P. risua*, are splendid fish and favorites with many, are nearly related to the mullets, and the last is remarkable for the long filaments to the pectoral fins—*Mason*

Monggos,	Lau	

The mangosteen plant belongs to the natural order *Clusiaceae* or *Guttiferae*, a small natural order of exogenous plants, inhabiting the hotter parts of tropical countries in both the Old and New World. Their fruit is succulent, juicy, and in many cases resembling a large apple or orange. The plant is about the size of a cherry tree and very handsome. It grows in perfection as far as 14° N of the equator and 7° south of it. A congenial proportion of heat and moisture throughout the year seems much more requisite than soil or latitude on the successful growth of this fruit. Malaya's nectared

mangosteen, is truly a delicious fruit and is by many esteemed as the most palatable of known fruits. It is cultivated to a considerable extent in Meigui and Tavoy and it has been successfully introduced into the Travancore province and both the nutmeg and the mangosteen, have been introduced with singular success at Ceylon, while their cultivation has entirely failed in Bengal.

Bontius thus describes this delicious fruit

"Cedant Hesperu longe hinc, mala aurea fructus
"Ambrosia pascit Mangostam, et nectare Divos"

The mangosteen has never been seen in a fresh state in Europe. It becomes ripe, in Meigui, early in May — *Crawford's Dictionary*, p. 265, *Mason's Tenasserim*, *Bontius Hist Nat Ind Orient* t. vii p. 27, p. 115, quoted in *St Johns Indian Archipelago*, Vol I p. 77. See Clusiaceæ, *Garcinia mangostana*.

MANGO TOPES, groves of the Mango tree, very numerous throughout all India — *The Hind*, Vol I p. 366.

MANGOUSTE Fr. *Hepestes*

MANGO, WILD Eng. Syn of *Spondias mangifera*, PERS.

MANGROVES, are plants, shrubs and trees, of the natural order *Rhizophoriaceæ*, of Lindley, and in the East Indies, the principal of them are

<i>Bruguiera caryophyll-</i>	<i>Carallia lanceifolia</i>

<i>Carallia garcinifolia</i>	<i>Kandelia Rhedii</i>

Mangroves abound on the coasts of the Bay of Bengal of the Indian Islands and at the mouth of the Indus. In the W Indies, cordage is made of the bark of a species of mangrove, which is hence called Rope Mangrove. Its bark has been used for tanning purposes, for which it is probably more suitable than for cordage. The species of mangrove most abundant along the Tenasserim shores furnishes a hard and durable timber. This species is easily distinguished from its associates, for it drops no roots from its branches, but the trunk for half its height is divided into numerous roots, like a small bamboo pavilion. The black or common mangrove, the *Rhizophora mangle*, is a tree attaining an altitude of from 30 to 50 feet, and occupying marshy situations in the vicinity of the city. Almost every part of this mangrove—the bark, roots, and the fruit more particularly—abounds in an astringent principle, which is successfully applied to the purposes of tanning and dyeing. For tanning leather, nets and sails the man-

grove is said to be infinitely superior to oak bark, completing in six weeks an operation which with the latter occupies at least six months, and sole-leather so tanned is said to be more durable than any other. The bark and leaves, which contain nearly as much tanning as the oak, are made use of in the West Indies, as well as in Sind and other parts of Asia. 3 713 piculs of mangrove bark, valued at £819, were shipped from Shanghai, one of the Chinese ports, in 1849. *Rhizophora mangle* which grows in the Indian Archipelago, is used in tanning, and its wood gives a red dye. The tree forms a striking feature in the physical geography of the Archipelago as it does indeed of all tropical countries, for a belt of it as deep as the reach of the tide is always found wherever there is a shallow and muddy shore. The tree rises to the height of forty or fifty feet and is invariably found in such situations constituting a dense, and almost impenetrable forest. Each tree stands on a cradle of its own roots from five to six feet high, bare at low water but as the tide rises covered so as to give the appearance of trees growing in the sea. Mangrove jungle is the favorite resort of musquitos and crocodiles, and affords a convenient and almost inaccessible retreat to pirates. The bark of *Rhizophora mangle*, is used in the East and West Indies to dye chocolate color. This was one of the colors introduced by Dr Bancroft, and for the exclusive use of, which he obtained an Act of Parliament. It is procured in plenty at Annam, in Malabar, and at Singapore, and as it is often imported for tanning, can be readily enough obtained if found valuable to the home dyer. The bark of a small tree from the mangrove swamps is used by the Tavoy women in dyeing red, but Mr. Mason thinks only as a mordant. *Rhizophora gymnorhiza*, the Kayu api of the Malays, is used for fuel in the Indian Archipelago. The cuttings of the black mangrove or *Rhizophora (uppu pouna)*, as of the white mangrove, the *Avicennia tomentosa* (*Mada chettu*) and of the *Sonneratia* are used for firewood at Masulipatam. Mangrove bark sells at Singapore, for tanning leather, nets and cloth, 9d per lbs 3-13 $\frac{3}{4}$. —*Royle Fib. Pl*, p. 301. *Mason Crawford*, p. 266. *Cat Erh* 1862. See Mangrove, also *Rhizophora*.

MANILLA HEMP

south-west coast of Luzon, about 22 miles in extent each way the city of Manila stands on its eastern shore, about 25 miles from the entrance. The land on both sides of the bay is high. Here cock-fighting is carried to a passion unknown elsewhere. Every Manila Indian has a game cock upon his shoulder, or tucked under his arm, or occasionally perched on his head, and when two men meet they will speak a few words, squat down, and allow their respective birds, who have meanwhile been bristling up with warlike ardour, to take a few quiet pecks at each other, which seem to refresh them amazingly, and without further comment each will go on his way, and each cock resume a peaceful attitude. Yet as there is a tax on cock fighting it is unlawful to allow the cocks to come to a regular pitched battle, excepting at the proper certified cock pits, the same with gambling out of the licensed houses and half the convicts that are seen working on the roads in chains are doing so for the grave offence of fighting their cocks, or playing 'monte' in unlicensed places, by the roadside, or anywhere but at a government establishment. These establishments are numerous. Every village has at least one, and in Manila there are several. The principal saints' days and Sunday afternoons are the favourite cockfighting times. The cocks are spurred with bright pieces of steel, about three inches long, and as sharp as the best razor—generally made out of old razors, and frequently both birds lie dead at the same moment. Sometimes an accidental blow from the inferior bird settles the question, for the spurs are deadly, and do not need much repetition to become effective. In general, the handsomer bird is the vanquished and the lesser and meaner-looking the hero and victor. The Indians are very cruel. Often they pluck a beaten cock alive, in revenge at his having lost, though the poor brute has been the petted and constant companion of his master for months before, and has learnt all the ways which domestic animals do learn when in hourly contact with man. Cholera occurred in Manila in 1819.—*Literary Gazette*. See Pearls Sulphur.

MANILLA HEMP.

Abaca,	Tag,	Bandalá --- ?
La mot,	Bisaya	

MANILLA HEMP

The *Musa textilis* plant, which yields this hemp, was formerly introduced by Dr Roxburgh into the Northern Circars, and during the administration of Lord Harris, Colonel, now Sir George Balfour obtained for Madras a supply of its roots. It is a native of the Philippine Islands where there are several varieties known under different names. The *Abaca brava*, the wild abaca, is called by the Bicoles, *agotai*, but the fibres of the mountain abaca only serve for making ropes, which are called by them "Agotag" "Amoquid" The *Sagig* and "Laquis" of the Bisaya are other varieties. Rumphius states that the Malay name of the "Laquis" is *Pissang utan*, which means wild plantain, it is called in Amboyna *Kula abbal*; in Ternate "Fana," and in Mindanao "Coffo" also the cloth made from it. The "abaca" is abundant in the volcanic region of the Philippine Islands from Luzon to Mindanao, as also in the neighbouring Islands as far south as the Moluccas. It therefore extends from the equator to 20° North, and may, probably, be easily cultivated in Travancore, Arracan, Assam and Northern Circars. The mode of making this hemp at Manila is to strip the plant, which has been cut down, of its outer covering, to rip that outer covering into slips the whole length, and, taking one end of the slip in one hand, and with the other pressing the slip firmly down on a piece of board by a strong broad-bladed knife, like a butcher's knife, and called there a *balo*, drag the slip through under pressure and thus scrape off the pulpy parts and leave the fibres, which is the hemp. Wooded districts and good soil are there considered favorable, and the best hemp comes from latitudes south of Manila, and from several islands as far as the 10th degree. The "Abaca" should be cut when 18 months old, just before its flowering or fructification appears, at which period the fibres are shorter and finer and they are said to become weaker afterward. It is cut near the roots, and the leaves cut off first before their expansion. It is then slit open longitudinally and the sheathing layers removed, as it is from them that the fibres are formed as in all the plantains. The fibres from the outer layers are harder and stronger, and form the "bandala" of commerce, which is employed in the fabrication of cordage. The finer fibres from the inner layers are called *lupis*, and the "nipis" and other delicate fabrics are made from them while the intermediate layers produce the "tupos" which are made into cloths and gauzes of different degrees of fineness and four yards long, and

are universally used as clothing. When well scraped, shaken and washed, the fibres require to be dried and picked, and those for cordage require no further preparation, but the fibres to be employed by the weavers, are made up into a bundle and made soft and pliant by beatings with a wooden mallet, then ends are then gummed together as is done with pine apple fibre, and they are rolled up for the loom. The stuffs, when woven are soaked in warm water, (or lime water) for 24 hours, after which they are soaked in cold water then put into rice water and lastly washed as before, by which means they acquire luster, softness and a white colour. Some are dyed into blue or red colours, some are embroidered and they seem in Europe to be confounded with grass cloth. Manila rope was sold in England at a nett price of £32 per ton, on the average of the ten years prior to 1852, but it rose in that year to £44 and £50 for the average kinds, and in the rise in 1854 it was quoted at £70 to £76. Dr. Oxley of Singapore states that the *Musa textilis* grows freely in Singapore—*Royle, Fibrous plants*. See *Musa textilis*.

MANI-PASUPU, *Tel.* *Coscinium fenestratum*, *Coleb*.

MANIPUR, lies to the south of the Naga districts eastward of the Kuki area and on the drainage of the Irawadi. Manipore is, from its connection with the British Government, and from the tribes around it all admitting its supremacy, the most important of the Hill States on the South East of Bengal. Lying between latitude 23° 50'

and 25° 30' north, and longitude 93° 10' and 94° 30' east, the mountain tract in question is bounded on the north and west by the British provinces of Assam and Cachar, and on the east by the Kubbo valley now subject to British rule. To the north-east and south, the boundary is not well defined, and would much depend upon the extent to which the Manipore government might spread its influence amongst the hill tribes in those directions, but in the north-east, it may be denoted by a line drawn north from the north-western corner of the Kubbo valley until it strikes the Assam boundary, and in the south by one drawn west from the source of the Numsahung river, the fixed south-east boundary, till its junction with the Tooyai river.

Of the space comprised in these bounds, the valley of Manipore occupies nearly the centre. It is called by the Manipore people, "Mei-lei-thei-pak." The Burmese call it Ka-the, the Bengalees Moglai, and Assamese Mekk. The area of the whole territory is about 7,000 square miles, and that of the central valley about 650. Much of the valley is at all seasons, covered with water. It seems indeed at one time to have formed a large lake, and the piece of water in the south, called the Logtak, appears to be the unfilled, but rapidly filling, remnant of it. From the most credible traditions, the valley appears originally to have been occupied by several tribes, the principal of which were named Koonul, Looang, Mouang and Meithei, all of whom came from different directions. For a time, the Koonul appear to have been the most powerful, and after its declension, the Mouang tribe.

Of the population, composed of different classes, the principal is the Mei-thei, next the Phoeng-nai, after whom the Teng-kul, the Ayok-pa, the Kei, the Leee and Mussulman. The Mei-thei population is divided into four parts called "Pinnah," which are designated in the order of their seniority "Kaphum," "Lai phum," "Ahull-oop" and "Nihai-oop." The Leee population consists of people who pay tribute, and is considered so inferior that the name Mei-thei is not given to it. The marshes of the south in the vicinity of the Logtak afford a retreat to serpents of a formidable size, and the whole valley of Manipore is much infested by the serpent tribe. Some of them are exceedingly active and bold, as the Tanglei. It is fond of ascending bamboos, along the branches of which it moves with great velocity, and if enraged, throws itself from an extraordinary height upon the object of its anger. Its bite is said to be mortal. This, added to its great activity and fierceness, makes the Tanglei an

MANIS PENTADACTYLA.

object of much dread The Manipuri native tribes lie on the south of the valley of Assam They are the

Manipuri,	Ka pwi,	Maram,	and
Songnu,	Koreng,	Champhung	Luhuppu

They are bounded on the east by the Shan of the Kynduayn, and on the N, S, and W. by the Naga and Henma. Indeed it may be doubted whether there is any marked transition from the Manipuri tribes and dialects to those of the southern Naga, on the one side, and those of the Yuma range and the Blue Mountains on the other

The inhabitants of the hills around the valley of Manipore, in the west, are known under the general appellation of Naga and Kooki In Manipore they are all embraced in the term Hau, but Koupooee, Quoneng, Khongjai, Kamsol, Anal-Namfan, Aimole, Kom, Koueng, Cheeroo, Chote, Pooroom, Muntuk, Karum, Muiring, Tangkool, Loo-hoopa, Mon, Muam, Miyang-khang, Gnamei are the names in use amongst Munupori to distinguish the principal tribes, though each of these tribes has a distinctive name of its own, often quite different from the Munipor one 'McCulloch's Records Government of India, Foreign Department pp 10, 34, 41' Latham's Descriptive Ethnology. See India, Kuki, Singhpo.

MANKA In the 8th century, hindu physicians went to Baghddad, and practised at the hospitals Two of them named Manka and Saleb, were the physicians of Harun-ur-Rashid

MANKAH, HIND beads or cut agates, pebbles for signet rings

MANKADU In Penang, a wood of a brown color, much used for beams

MANKARI, nobles, persons entitled to honor or distinction

MANGKASAR, the territory in the island of Celebes known to Europe as Macassar Celebes consists of a small irregular central area, with four long peninsulas The two on the south are separated by the Gulf of Boni, in the S. W. peninsula, two languages are spoken, the "Mangkasa" or "Mangkasara," (of which word the Netherland capital, Maccassar, is only a corruption by the Dutch), and the "Wugi" or "Bugi" which originally was more particularly limited to the coast of the Gulf of Boni North of Macassar, in the most western part of the island, is another people, the "Mandhai," who speak a third language On the island of Buton, which may be regarded as a part of the peninsula east of the Gulf of Boni, a fourth tongue is spoken In the northern peninsula are the people speaking the "Gorontalo" and the "Menado" languages Minahassa is in the northern extremity of Celebes In the interior are a people whom the coast tribes call Turaju, who are said to be cannibals, and head hunters This was stated many years ago by Dr Crawford, who says (Vol. 1. p. 243) "some of the savages of Borneo destroy their prisoners and devour their flesh One nation of Sumatra acquainted with the art of writing and possessed of books, are well known to be cannibals Among other tribes, the skulls of enemies are held as trophies round their habitations. Among the people of Celebes, when an enemy falls wounded on some occasions, they actually devour his heart, and there is hardly a warrior of note who at some time or other has not partaken of the horrid repast Dr Crawford had seen several who had done so, and one person told

MANGKASAR

him it did not differ in taste from the offal of a goat or buffalo" Macassar is the most notorious place in the Eastern Archipelago for the Bugi people to run amok On the average, one or two occur in the month It is in fact amongst the natives of Celebes, the national mode of committing suicide, and is therefore the fashionable mode of escaping difficulties Ten or twenty persons are sometimes killed and wounded at one of the amok. Stabbing and killing at all he meets, the amok runner is at last overpowered and dies in all the excitement of battle It is a delirious intoxication, a temporary madness, absorbing every thought and action Macassar men is a common name of the Bugi race The Macassar people were taught mahomedanism in the early part of the 16th century, but the Portuguese arrived A D 1525, and they embraced christianity The Bugi are now the great navigators and traders of the Eastern Archipelago In the beginning of the western monsoon, they go in great numbers to the Arin islands, which is the principal rendezvous for the people of Ceram, Goriam, the Ki islands, Tenimber, Baba, and its adjacent coast of New Guinea, a distance from Macassar of upwards of 1,000 miles, and the return cargoes are tortoise-shell, mother of pearl shell, pearls, birds of paradise, and tipang, the Malay term for all the kinds of *Holothuræ* or Sea Cucumbers Of tipang alone, about 14,000 piculs are yearly shipped from Macassar, of a value of 600,000 dollars, or £150,000 It is estimated that the annual value of goods carried by the Bugi to the Arin islands, from Macassar alone is 80,000 dollars, or 200,000 guilders, and of those taken to the Arru group from other places 20,000 dollars, or 50,000 guilders The Bugi are the most enterprising race of the Eastern Archipelago Although they bear some personal resemblance to the Malays, arising probably from a common origin, in every quality, but that of a practical spirit, they are essentially different Exposed to the same temptations, and most skilful and adventurous navigators, they have never adopted the occupation of piracy, but abhor and resist it, and defend themselves against the Malay prahus with the most heroic and desperate valour whenever they are attacked, proceeding, if overpowered, to blow up their vessels, rather than submit The poorest of these hardy islanders is as impatient of a blow as a European gentleman, and it is permitted to any one to avenge an affront by the death of the person who offers it A more than Spartan training is bestowed on children The lads at the age of five or six are removed from their parents, lest they should be made effe-

minate by indulgence, and they are not restored to their family until they are of an age to marry. The Bugi are the Phœnicians of the Indian Archipelago, and there is not a coast from the northern shores of the Australian continent to the Malay peninsula where then ships are not habitually seen. These adventurers leave their country in the beginning of the eastern monsoon on a trading voyage, and proceed westward until they reach Singapore. With vessels of peculiar build, of from forty to fifty tons burthen, they conduct almost the whole carrying trade of the Archipelago. They own at least 1,000 ships, the outward cargoes consisting of their own manufacture of cotton cloths, English calicos, arrack, Chinese gongs, gold dust, edible bird's nests, tortoise-shell, trepang or sea slugs for Chinese epicures, scented woods, coffee, and rice, and in spite of the jealous and restrictive policy of the Dutch, they have greatly contributed to diffuse British manufactures throughout the islands of the Eastern Seas.—*Professor Bilmore Travels*, 97, 99 101, *Wallace, Archipelago* 1, 174 *Quarterly Review*, No 222

The manna of the south of Europe is the

concrete juice of the *Ornus Europæus*, a species of ash, the *Fraxinus ornus* Linn, but *F. gar gavica* and *F. rotundifolia* Lam are also supposed to yield it. *F. florifera*, the *Ornus florifera* or flowering ash tree, grows in the mountains of the south of France, and *F. rotundifolia*, the *Ornus rotundifolia* or round leaved manna ash tree, is a native of Calabria and Sicily. Other sweetish secretions are exuded by some other plants of those regions and are usually considered to be kinds of manna. These appear to be all produced in warm and dry parts of the world. Of the manna obtainable in Central Asia several kinds are used in native medicine. One of these in the form of small dark grains, is the "turunjabin," said to be derived from the *Alhagi maurorum*, another, somewhat whiter, is the "shurkhust" or "shaklu," which is believed to be produced in Cabul by a species of *Fraxinus*, and lastly, the "shakar taghar," which is a round cell, resembling in shape a small gall, and said to be produced by the puncture of an insect on the *Calotropis procera*, the "akh" or "mudar," it has a sweet taste.

The shur-khust is the best kind known in India, and is said to be procured from a tree of Khoisan, perhaps a species of *Fraxinus*, the Turunjabin, is the produce of *Alhagi maurorum*, the Guzunbeen, of a tamarisk, Shakr-ool-ashur is produced on *Calotropis procera*, or a kindred species and a fifth kind is mentioned as being obtained on an umbelliferous plant.

The manna of ancient Assyria (Exod xvi. 15, 31, 33 and 35. Numb xi 7,) in Turkish, is called kudrat-ul-halwassa, or the divine sweetmeat, is found on the leaves of the dwarf oak, and, also, though less plentifully, and scarcely so good, on those of the tamarisk, (the Turfa, of the Arabs) and on several other plants. It is occasionally deposited on the sand, and also on rocks and stones. The latter is of a pure white colour, and appears to be more esteemed than the tree manna. It is collected in the early part of spring, and again towards the end of autumn, in either case the quality depends upon the rain that may have fallen, or, at least, on the abundance of the dews, for in the seasons which happen to be quite dry, it is understood, that little or none is obtained. Mr. Rich, (Vol 1 p 142) seemed to think this rock product is another kind of manna, but Mr. Rassam, considered it to be the same, with the simple difference of being free from the leaves and other impurities taken up with it, when shaken from the trees or plants. In order to collect the manna, people go out before sunrise, and having

placed cloths under the oak, larch, tamarisk, and other shrubs, the manna is shaken down from the branches - The Kurds eat it in its natural state as they do bread or dates, and their women make it into a kind of paste, being in this state, like honey, and it is added to other ingredients used in preparing sweetmeats, of which all oriental nations are fond. The manna, is partially cleaned, and carried to the market at Mosul in goat-skins, and there sold in lumps, at the rate of 4 $\frac{3}{4}$ lbs for about 2 $\frac{1}{2}$ d. But, before using it, it is thoroughly cleaned from the fragments of leaves and other foreign matter by boiling. In the natural state, it is of a delicate white colour, or, as in the time of the Israelites, like coriander seed, (Num 11 7) and of a moderate but agreeable sweetness, and Calmet compares it to condensed honey. Burkhardt, however, says it is of a dirty yellow colour, slightly aromatic, of an agreeable taste, sweet as honey, and, when eaten in any quantity, it is purgative, he adds, that the time of collecting it lasts six weeks. Under the Persian names gaz or gazn a glutinous substance, like honey, deposited by a small green insect upon the leaves of the oak tree is much used for making sweetmeats in Persia. It is a manna of the chemist. Gazanjabin is a manna produced on branches of the Tamarix indicus by the punctures of the Coccus manna. This is often called Arabian manna to distinguish it from Turanjabin Persian manna and from Sicilian manna - *O'Shaug nassy*, p 434 *Powell, Hand Book*, Vol p 320 *Royle Ill Hum Bot* p 267 *Ferner Journal Diod-Sic Book xvii Chap viii*, See Kudiathalvassi, Calotropis MANAAR. See Adam's Bridge. MANNAESCHE GER Manna. MANNA HEBRAICA, DON Syn of Alhagi maurorum.

MANNERS and ways of the races in the East Indies are as diversified as are the nations dwelling there. The domestic customs of the mahomedans have been described in the Kanoon-i-Islam by Jafir Sharif, and much connected with the household ways of hindus has been noticed in Mr

Forbes Ras-Mala of Guzerat, in Baboo Ishwari Doss in his Domestic Manners and customs of the hindus of Northern India, in the Reverend Mr Ward's view of the hindus, and in the Abbe Dubois Manners and Customs of the people of Southern India Derived; as the modern hindus are, from several distinct branches of northern races, of the Scythic or Tartar and Aryan stems, numbers of their domestic customs differ, but the most prominent manners result from their marriage laws. The hindoo woman, on becoming a wife, ceases to belong to her parent's family, and becomes exclusively a part of the household of her new home. Another domestic custom results from the family institution prevalent throughout nearly all the hindoo races in India, in which every individual of a family, has a share in the family property, sons live with their fathers long after they are married, paying certain portions of or all their earnings towards the support of the whole family. Wealthy hindus living in large cities have great buildings made of stone, or of baked bricks, of two or three stories high, with rooms all around and an open court in the middle. The roofs of these houses are flat and smooth and people sleep on them at night in the hot season. The doors are of board and when closed the rooms are quite dark. Some rooms in the interior of the building are dark even in the day time when the doors are open, and when people have to do any thing they use lights. In such dark rooms they keep their money, jewels, and other valuable things. The reason why these apartments are so dark is that there are no doors in the back part of the house, - the principal gate and the doors of the rooms being in the front. Houses in the country are made mostly of mud, but they are strong and comfortable, according to the hindu idea of comfort. They are mostly one story high, and their height is about six or eight feet. The roofs of some have tiles, others are thatched, and again others have roofs of mud, - these latter have beams or pieces of timber close to each other, on them thin branches of certain shrubs are spread, as dunnages and over these mud is thrown and pounded so as to make the roof smooth, it is then plastered. Some houses are two stories high, but the rooms are very small. Wealthy landlords have comparatively large houses, often three stories high, and have larger rooms. In all the houses, each room has only one door to go in and out and that door is just high enough for a man to enter. Four, five or more houses are found in a little yard, laid out in the form of a

square or triangle or circle with an open space in the middle, where the members of the different families (who are of course related to each other) sit and talk, and where cattle are kept in the cool of the day in the hot season. Each house has two or three small rooms, one of these is exclusively used for the kitchen, and the others for sleeping and keeping things. Besides these rooms there is generally a small verandah in the front of the house where they keep water and where women sit during the day. There is a room at the door or gate of the yard, where men sit when they are not at work and where strangers and visitors are received. Strangers go into the yard, whenever there is occasion but never without asking permission, and always with somebody that belongs to the place.

Hindus may be said to have no furniture, no chairs, nor tables nor chests, nor any of those other things that are seen in the houses of Europeans. The usual furniture in their houses consists boxes or round baskets with covers and locks to keep their clothes and jewels and cooking utensils, the plates and jugs out of which they eat and drink, and the bedsteads and beds on which they sleep. Even wealthy hindus, who are possessed of hundreds of thousands of rupees, have no more than this. There may be perhaps found one in ten thousand, who keeps a few rough chairs and an old ugly table in a corner of the house. In Calcutta, Bombay, and Madras, wealthy hindus have European furniture in their houses, but this is not the case in the provinces. A hindu is known to his neighbours to have wealth or to be in comfortable circumstances by the house he lives in, by the quality of the raiment that he and his family wear, by the jewels that the women of his family use, and the number of his cooking utensils and plates which are made of brass, but more especially by the last two, namely, the jewels and the brass articles. These are valuable, and a thief would sooner break into the house of a rich hindu than into that of a wealthy European, unless the latter has a good deal of cash and plate in his house. From the houses of the former, he could carry away brass pots, plates, jugs, and particularly jewels to the value of hundreds or even thousands of rupees, but in the house of the latter, he would generally find only chairs, tables, book cases, chests, and other wooden things which would not be of the least possible use to him. Hindus that are poor have earthen pots to cook in and have wooden dishes and a brass jug to eat and drink out of. Those that are in somewhat better circumstances

have a few brass pots, plates, and jugs. The love between the hindu wife and her husband, is seen in the husband's anxiety to support his wife and make her as comfortable as he can, in the wife's efforts to manage her household affairs with prudence and make her home attractive and comfortable to her husband, and also in her anxiety when the least thing troubles him in body or mind. Though a hindoo husband believes his wife to be an inferior being, yet he does not look upon her in the light of a slave or servant. On the contrary, he habitually maintains the belief that there is a sort of equality between himself and his wife, and all that he possesses in this world, whether wealth or land or honor or any thing else, is supposed by him to belong to his wife also. In general, however, wives have more of real love to their husbands than husbands have to their wives, and husbands after their death are still remembered with a degree of affection by their widows. Whether widows would remember their departed husbands with the same love were they universally allowed to marry again, is doubtful. But all husbands can marry again when they lose their wives. There are bad husbands and bad wives, but the chief sources of grief in a hindoo household, are supposed or suspected conjugal infidelity in the wife, or a naturally bad temper in one party or both. In the marriage ceremonies the vows between the pair are singularly suggestive. After many tedious ceremonies the bride's pandit thus addresses the bridegroom. "The bride says to you—'If you live happy, keep me happy also, if you be in trouble, I will be in trouble too, you must support me, and must not leave me when I suffer. You must always keep me with you and pardon all my faults, and your pooja, pilgrimages, fastings, incense, and all other religious duties, you must not perform without me, you must not defraud me regarding conjugal love, you must have nothing to do with another woman while I live, you must consult me in all that you do, and you must always tell me the truth. Vishnu, Agni, and the Brahmins are witnesses between you and me.'" To this the bridegroom replies,—“I will all my life time do just as the bride requires of me. But she also must make me some promises. She must go with me through suffering and trouble, and must always be obedient to me, she must never go to her father's house unless she be asked by him, and when she sees another man in better circumstances or more beautiful than I am, she must not despise or slight me.” To this the girl answers,—“I will, all my life time, do just as you require

of me, Vishnool, Agni, Brahmans, and all present are witnesses between us" After this the bridegroom takes some water in his hand, the pandit repeats a prayer, and the former sprinkles it on the bride's head, then the bride and the bridegroom both bow before the sun in worship After this the bridegroom carries his hand over the right shoulder of the bride and touches the region of her heart, and then puts some bundun (a coloured powder) on her mang or the line on her head, and puts his shoes on her feet, but immediately takes them off again The marriage is now over and the pandits put a rolee mark on the foreheads of the bride and bridegroom, bless them, and take their dues All other brahmans also, who are present, receive something Amongst the hindoos of the south of India, the bride and bridegroom circumambulate the family fire, and the bridegroom, as the last act, takes the bride's foot and places it on the family altar Amongst the hindoos, physicians who depend for their living on the art do not, in general, meet with a fair remuneration When they are called to see a patient, they cannot settle beforehand what they will take for their trouble as this would be deemed extremely impolite When the patient recovers he gives them a trifle Some patients, who call at a physician's house for aid, give him nothing This has tended to make hindoo physicians mean and leads them to unfaul ways of remunerating themselves Among hindoos, when a traveller friend arrives at a house he is saluted with great warmth and reiterated questions are put concerning his own and his family's health This done, he is asked to smoke tobacco, and fire is brought in a little earthen tray by the man of the house and is given to the guest, who has his own hooka, if he be of another caste After smoking and talking about different things, such as absent relations and so forth, the guest thinks of cooking his food If he be of another caste, he cannot eat with the family, and the host gives him either from his house or from the market the necessary articles, which are, flour, dal, salt, ghee, red pepper, and fuel Turmeric, garlic, and other stuffs are not used by travellers on account of the trouble of pounding and bruising them If the guest have his own utensils he uses them to cook in and eat out of, if not, the host gets them for him If the host belong to one of the lower castes, and the guest to one of higher ones, he must not give him his own utensils, but must get them from some neighbour, who is of a better caste When there is a well in the court, the guest cooks his food in a verandah be-

longing to the house of the host, but when there is none, he goes outside to some well and cooks by it, for the sake of having water at hand, as he cannot use the water that the host has in his house The chief meal of the day, is usually at 8 P M After dinner is over, the guest and host and other male members of the latter's family sit together, and smoke and talk to a late hour in the night When they retire, the guest sleeps either in the public room where men sit and visitors are received, or in a verandah He leaves in the morning, and is expected to do so When a host has a guest of the same caste with him and of the same subdivision, water is on his arrival given him to wash his hands, feet, and face, and he eats with the family He is also expected to leave in the morning When a guest is a near relation of the host, great attention is paid him, everybody in the house tries to make him comfortable, water is soon brought for him to wash himself, he has constantly fresh charges of tobacco, and, regarding food, women do for him all they best However, the arrival of such a guest, if he be a somewhat elderly man occasions some inconvenience to the women of the family, and especially to those whose husbands are younger than the guest, because they cannot move about freely while he is there But when the guest is young, the women carry on many a joke with him The arrival of guests who are distant relations is not agreeable to the women, partly because they may not be able to move about freely, and partly because they have the trouble of cooking for him if he arrive at an unseasonable hour, but another cause is that the family has to feed him while he stays there —women perhaps feel more in parting with things than men, and if the guest be a distant relation and not a particular friend of the family, his speedy departure is wished for by men as well as by women There is a saying on this point current among people, —Do din ki mahmani, tise din ki be-nani, which means "a guest is entitled to the rites of hospitality for two days if he remain a third day, he is breadless" A striking characteristic of the hindoos, is then fondness for mela or religious fairs The thorough enjoyment which the women and children express on such occasions, is singularly attractive They are to the hindoo what the Derby is to the European, But though religious fairs are a part of the hindoo religion, hindoos do not show the least seriousness in them They are excessively fond of attending mela, but this excessive fondness arises for the sake of the fun or amusement and to enjoy the sight of hundreds of thou-

sands of human beings of all classes Hindoo women, of all degrees of beauty and in dresses of every approved colour, appear in public and the mahomedan inhabitants of cities, (there are comparatively very few out in the country) flock to a hindoo religious fair to gaze. Fond as men are of attending the mela, women are still more so. If a man were prevented from going to a mela, he would not think much of it, but this would be a great trial to a woman and would furnish a subject for talk for sometime. The spectacle rather than religion is the spring that sets them in motion. If the place where the fair is held be quite near to their home, the family start from home on the morning of the fair, but if it be at some distance they leave it one or two days before. Before they leave home, all the members of a family, but especially the women and children are in a great state of happy excitement, it forms all the while the most important part of their talk. The last day that they are at home, the women are chiefly engaged in making preparations for it by dressing food to be used on the way and at the mela. These dishes consist of thin soft cakes of wheaten flour with or without salt and sweet preparations of the same flour, sugar, spices, and vegetables, all dressed in ghee. The poor, however, prepare them in oil. Dishes cooked in ghee and oil can be removed out of the kitchen (chauka) and eaten anywhere, provided they are not touched by people of very inferior castes. Food thus dressed is called pak'ha khana, or food that attaches no ceremonial uncleanness by removal from the kitchen, and food which is not, wholly dressed in ghee or oil is called kachcha khana, or one that attaches ceremonial uncleanness by a removal. Hindoos take their meals in kitchens or in a place adjoining them.

The day that they start for the mela, men and women all attire themselves in their best cloths, and the latter at this time put on all their spare ornaments and jewels, which they do not daily use when at home. The wealthy inhabitants of cities get conveyances (Bahlee) drawn by bullocks, horses or ponies for themselves and the women of their families, and men and women often have separate vehicles. Town people who, though not wealthy are yet in tolerably easy circumstances, get conveyances for their women and children, but they themselves walk. The poorer women and children walk. Many of the people living in the villages, keep clumsy carts (ebhakra) which on such occasions they use for the conveyance of their women. Such carts are kept to carry

grain, timber, &c, and have no covering like the bahlee,—vehicles meant to carry passengers, but a temporary covering is drawn over them whenever required. Thousands, sometimes hundreds of thousands of human beings,—men, women, and children, on foot, in vehicles, and on horseback, with a very few on camels and elephants, are seen flocking to the place of general resort. Women attired in dresses of various gay colours, as well as in white muslin sheets, walking in all the pride and bravery of their tinkling ornaments, which assail the ear on every side, children dressed in their finest clothes with silver and gold rings about their wrists and ancles, walking or riding with their parents with smiling faces, and men with white or dyed turbans and caps, and mostly long coats and the dhotee cloth of the lower limbs with swords, staves or substantial sticks in their hands,—altogether make up one vast stream hurrying in the same direction and mingling in an immense sea of human beings already congregated. So soon as people reach the mela they put up for the time that they are to be there under some tree (when practicable) which in the day protects them from the heat of the sun and at night from the dew. There are very extensive mango orchards in India, in which hundreds of thousands of people can take shelter. Very often three or four families take shelter under one tree. Those that have carriages keep their things in them—those that have not, put them on the ground. Women of respectable families that have come in carriages may have kept themselves screened from public gaze while on the way, but so soon as they arrive in the mela this screening is over. They alight from the conveyances before the crowd, and do not cover their faces with the veil that goes over their head and around their bodies as they would do when seen walking in a street towards a river to bathe. The concealment of women from public view was not originally a hindoo custom, but was brought into practice at the time of the mahomedan government. At the present day it is not a general practice among the hindoos, but is kept up by those people of the Kayast'h caste and a few other that are much in the company of mahomedans and have adopted a few of their manners and customs. Most of the bathing and other religious ceremonies take place before breakfast, after breakfast, the men go about the mela to see things and amuse themselves, they purchase a few play things for their children and also one or two articles for their women if requested. Women in general remain under

the trees singing and gazing and wondering at the vast assemblage of human beings around them. Those of the middle and lower classes pay a visit to some shops where they purchase a few trifles for themselves, such as small looking glasses, rings and bracelets of glass or lac, little bells for their toes, and so forth. In northern India some of the women of the sweeper caste are very beautiful, especially among those who live in cities and do not undergo hard labour and are not exposed to the sun, which in a country life cannot be always avoided. The minutest points in daily life are regulated and regarded as part of a religious duty, washing the mouth after food, is a duty strictly enjoined in the Indian law, which rigidly enforces personal cleanliness.

‘Having eaten, having sneezed, having eaten, having spitten, having told untruths, having drunk water, and going to read sacred books, let him, though pure, wash his mouth.’

The mahomedan or mussulman races in British India are in number about seventeen millions. In their domestic life, within doors, the mahomedans of the E. Indies, approximate to Europeans more than the hindoos, and, unless when moved by religious excitement, their various sects are more friendly amongst themselves than the castes of the hindoos ever are. The hindoos, adhering very closely to the institution of the family, are liberal to each member of their own families, but they are distrustful as to the purity of their nearest relatives, and hindoos of a higher caste would never bestow alms on a pariah or helot. The mahomedans on the contrary, are eminently generous, and deem it a duty to bestow the tenth part of their property in alms, the ‘Zakat,’ of the Arabs, and they are enjoined to avoid inquiring with over minuteness as to the religious belief of a professing mahomedan, but to be content with the profession and the pronunciation of the creed. The half of the hindoo men, in their proper daily attire, use unsewn cloths as garments, and the women similarly, but mahomedans have sewn apparel, and most of their wives use trowsers. A hindoo of any pretensions to birth abstains from many vegetables and eats apart, many of the sects do not allow the glance of a stranger to fall on their food, and their wives are either absent or stand while their husbands eat, and only dine after the husband is satisfied. But a mahomedan sits with his wife and family, and if, while he is eating, a stranger approaches, he is invited to partake, and the invitation is accepted by eating at least a mouthful. Hindoo cookery is little varied, and per-

haps three-fourths of all the hindoos in India, abstain from the use of animal food, and many vegetables are prohibited, but the mahomedan pulao are numerous and diverse, their mixture of grains called khicheria, then bread or roti, their pastry, then roasts or kabab, their curries or salan, then broths, soups, sweetmeats, pickles, and condiments and their use of vegetable and animal food are of the most varied kind. The hindoo is essentially an idolater—a believer in spirits and in transmigration. But the mahomedan is a monotheist and believes in the future state of rewards or punishment. The temples of the hindoos have images in and around them of uncouth or unnatural figures, the gateway or gopuram of the temples are covered with nude figures, and the chief idol is daily worshipped by the deva, dasa, or slaves of the god, who receive any stranger that seeks them, but the interior of a mahomedan mosque is devoid of all ornamentation and the worshippers attention is reverentially absorbed in prayer to the unseen God—*William's Story of Nala Institutes of Manu*, v 145 *Herklots, Qanoon-i-Islam*, by Jaffi, Sheriff *Forbes' Rasa-Mala of Guzerat Ward's View of the Hindoos*. MANTARWE See Ban-teah

MANTCHU, a Tartar race, who, at present, are the rulers of China The original seat of the reigning Mantchu Tartar dynasty is the north-east of China Klaproth gives a list of 61 Mantchu tribes The number of Mantchu troops is estimated at 60,000 men They are habitually under arms, and are assiduously exercised in their profession The government watches over them with great anxiety, for the emperor has a strong interest in not allowing these troops to stagnate in inaction, he takes care that they shall preserve something at least of the warlike character to which they owe their conquest of the empire The Mantchu Tartars forbid marriage between those whose family names are different In this respect, they differ altogether from the brahmins of India who abstain from marrying into families with their own race name Chevalier Bunsen remarks as the first lesson which the knowledge of the Egyptian language teaches, that all the nations which, from the dawn of history to our days, have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning He adds that recent inquiries have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity Those researches have made it more than probable that the Tartar, Mantchu and Tungusian belong to one great stock, that the Turkoman, as well as the Tshude, Fin, Laplander and Magyar (Hungarians) present another stock closely united, and that both these families are originally connected with each other These nations, who probably may be reduced to two families, one centering in the Altai and

the pasture land towards the Himalaya, and the other having its centre in the Ural mountains, have acted in the history of civilization a most powerful episode by conquest and destruction. They appeared in the fifth century as the Hun, a scourge to Romans and Germans, they produced Chengiz Khan, Timur-lung and Mahomed II, they destroyed the Persian empire, subdued Hindustan, and they still sit upon the throne of Byzantium and upon that of China. They seem destined to partake only by conquest in the higher civilization of the surrounding nations, older or younger ones, the Chinese presenting the one extreme, the Iranians the other. Little disposed to learn from them as neighbours or subjects, they become more or less civilized by being their masters. They cannot resist the inward force of the civilization of their subjects, although they repel it, as an outward power. These tribes appear also as the once subdued substratum of Iranian civilization. So in the north of Europe, where the Finnic race preceded the Scandinavians. But the same great family appears also in Asia as the subdued or primary element. It seems probable, that the aboriginal languages of India, which attained their full development in the Dekhan dialects, belong to this stock, not only by a general analogy of structure, but also by an original and traceable connexion. This is one of the two great races occupying the Chinese empire, Chinese and the Tartars, the latter being the ruling people. The Chinese have annexed all the parts neighbouring on China proper, from Mantchu and Mongol races. The dynasty is Mongol and the army Mantchu, and furnishes Mantchu soldiers in Mongolia, Tibet, and Kumaon. *Staunton's Narrative*, p 4. *Wade's Chinese Army*, pp 3 to 48. *Hue, Chinese Empire*, Vol I p 404. *McLennan*, p 146. *Arango's Letters*. *Freycinet's Voyage*, Vol II p 17. *Lubbock Orig of Civil* p 103. MANTIS, several species of this genus of insects occur in India, *M superstitiosa*, *M aridifolia*, and *M extensicollis*. *M tricolor*, *Neitner*, the mantis of the coffee tree, is green, lower wings reddish, with large blackish spot at the posterior margin. The female is 1 inch long with $1\frac{1}{2}$ inch of an expanse of wings. The male is considerably smaller. The eggs are deposited upon coffee leaves, in cocoon like masses, of $\frac{1}{8}$ of an inch in length

but drawn out further at each end. The Mantis religiosa amongst the peasants of Languedoc is held almost sacred, they call it the Prega Deon, or Pie Dien.

MANTRA SANS Counsel, hence mantia, SANS a Counsellor

MANTRA, HIND, SANS A formula, or incantation, in use in invocations of the hindus. There are many of these. That of the Srisampadaya or Ramuja sect of vaishnava is said to be "Om! Ramaya namah," Om! salutation to Rama. The mantra generally consists of the name of some deity or a short address to him, it differs with various sects, forms the chief ceremony of initiation of the hindus of all sects, and is communicated by the teacher to the disciple in a whisper and many mantras, or formulas of prayer, are supposed to have a magic power. The gætic prayer, is a passage in the Veda, and is deemed the holiest in all that sacred book, one of the most holy books of the hindus. Its words are in Sanscrit and are O'M! Bhurbhuvā ssvihā, O'M! Tatsavit'hu varenyām B'huvo dévāy i dhimahi dhizoyonahia pichio dāyāth,—the translation of this prayer being O'M! Au, Earth, Sky O'M! let us meditate on the supreme splendour of the divine sun. May he illuminate our minds. See Aryan Chaim Hindoo Tantra Veda.

MANTRA MAHODADHI, see Tantra

MANTUNG, a river near the Khissya Hills

MANU, according to hindu tradition, the primeval man, son of the sun (Vivasvat). In the primeval Iranian world, however, Jima or Jemshid was the primeval man.

The name Mann is applied to a great legislator of the hindus. In the Indian version of the deluge, Mann is the survivor of the human race, and the second ancestor of mankind. The first Mann is named Swayambhuva, and sprung from Brahma the self-existing. From him came six descendants or other Mannu, each giving birth to a race of his own. The hindus believe their great code of laws to have been promulgated in the beginning of time by Mannu, whom they consider not only the oldest, but the noblest of legislators.

MANU, is the name given to the author of the Manava dharma sastra, comprising the Indian System of duties, religious and civil. It is a volume of religious rules and precepts. It is called the Institutes. It inculcates the worship of inferior gods and goddesses, of the elements and of the heavenly bodies, and the casts of brahmins is held thereon in great reverence, the Institutes

MANU.

are, however, supposed by Bunsen to be a patchwork posterior to Buddha and it may be accepted as a recognised fact that this law book undoubtedly preceded, or was at least contemporary with, buddhism. But it is also posterior to Kapila for the philosophy is that of the Sankhya to a certain extent, and it is probable that the 6th century B C, the date given by Professor Wilson as that of this compilation is the correct one and the book as it has come down to us seems merely an abbreviation of a far larger and more ancient one. The law book of Manu opens with an account of the creation and goes through the category of every difficulty in which a man, a state, or a community can possibly be found. It embraces the whole duty of man and of men, religious, political, social, domestic and private the duties of monarchs are laid down with as little ceremony as those of the humblest panchalla. It was verbally translated from the original, with a preface by Sir William Jones, about A D 1770, and this, with the subsequent sanskrit text by professor Haughton, and the translations of Haughton and Loiseleur Deslongchamps, made this book known in Europe. Professor Wilson is of opinion that the Institutes of Manu though disfigured by interpolations, and only cast into their present form in about 200 B C are still entitled to date many authentic portions of their text from 800 B C which was the estimate of Sir William Jones. In fact, the Institutes of Manu are a compilation of the laws of very different ages, many are word for word the same as the sutra of some of the oldest rishi. There are various unquestionable proofs of high antiquity the people of Bengal, Orissa, and the Dravida race of the south were not hindus, when one passage was written, and Dr Caldwell places Dravida civilization through the brahmans six or seven centuries after Christ. There is no mention of, or allusion to, Siva or Krishna, which places parts of the work before the Mahabharata—there is evident familiarity with the Veda, persons and legends being alluded to not found any where else. All such passages we could consent to consider at least as old as 800 B C. On the other hand there are many references to the merit of Ahimsa “non injury of animal life,” and these are probably later than buddhism—and there is mention of the China race a name that sinologists say, is not older than two centuries B C. It is believed that the work may have been put together at that time though very much of it is a great deal older. The present estimation of the Laws of Manu is somewhat different from that of Sir William

MANUFACTURES.

Jones. Many of the laws are doubtless extremely ancient, in the same way that the laws “Thou shalt not steal” and “Thou shalt not kill” date back in all probability to the primeval period when man first became a living soul. It thoroughly recognises caste. It is not included amongst the sutra or “sacred revelations,” but amongst the Smriti or “traditions.” Indeed the term Smriti implies “recollections,” a name which seems to indicate pretty precisely the character of the code of Manu. There is a form and completeness about the work which indicates that it was compiled long after the age which produced the Pentateuch, and, judging from its intensely brahminical character, we should place it nearer to the Puranic age than to the period when the elemental worship, as exhibited in the Vedas, was the religion of the people of India. In a word the Laws of Manu are not to be illustrated by the Vedas, but by the Puranas, they belong not to the religion of the patriarchs, but to that of the priests and kings. The Vedas exhibit the oldest form of the hindoo religion, with which we are familiar, and that was nothing more than the worship of the elements, of Agni or fire, of Indra or the rain-giving firmament,—of Varuna, or the waters,—of Vayoo, or the wind,—and of some minor deities. Amongst the first items of information we receive on hindu history is in a passage in Manu which gives us to infer that the residence of the Aryan race was at one time between the rivers Saraswati (Sersoty) and Drishadwati (Gaggai), a tract about 100 miles to the north-west of Delhi, and in extent about 65 miles long, and from twenty to forty broad.—*Prim Ind Int* p 223 *Elphinstone, History of India* Vol I p 388 *Englishman, Newspaper, September 15*

MANU BANGHA, SANS from mana, honour, and bānghá, destruction

MANUEL FARIA DE SOUZA, author of *Asia Portuguesa, &c* Lisbon, 1666

MANUFACTURES. There are but few arts or manufactures, in which Eastern nations excel those of Europe. Perhaps in spinning and in the weaving and dyeing of cotton and silk stuffs, of such kinds as are suitable for the clothing that they wear and to their habits, the weavers and dyers of South Eastern Asia are not approached by any European race. In field and garden cultivation, in the economy of water and the utilization of manures, there are several races skilled in varied degrees, though none exceed the Chinese in their knowledge of these subjects, to their acquisition of which they are stimulated by the example of

the imperial family, the emperor annually ploughing the first field and the empress and her attendants watching the silk worms and then produce. The little permanency, since eight hundred years, of any Indian dynasty, has prevented architecture attaining the position of which it was capable, and, in general, are to be seen the results only of spasmodic efforts of hindu and mahomedan sovereigns, such as still exist in the ruins of palaces, and tombs at Agra, Bejapore, Aurangabad, Gogi, Kulbargah, Dowlatabud, and Hyderabad. The hindu sovereignties of India and, prior to them, the buddhist and jaina rulers were of longer duration, and the vast cave temples of Prome, Kaili, Elephanta, Ellora, and Ajunta testify to the stability and power of their projectors, for some of these temples must have been in progress for hundreds of years and been commenced prior to the birth of Christ. The only Indian sovereigns who have long possessed territories are the rajput races of Rajputanah, and the solar dynasty of Mewar have erected numerous magnificent structures in their capital. In the towns of Calcutta, Madras and Bombay, there is as yet no building older than the British rule of any interest. In Ceylon, the buddhist temple of Anurajapura seems to have been erected prior to the present era. At Rangoon and at Prome are buddhist temples, grand in their colossal dimensions, but the dwelling houses and religious buildings generally in Burmah are all of wood and do not permit display.

MANURE The productiveness of any soil depends principally on its natural or artificial capability of retaining or transmitting its moisture, the vehicle, at least, by which the nourishment is conveyed to plants, the soil, whose constituent parts are best adapted for retaining a sufficient supply and transmitting a proper portion in very dry weather to the plants growing in it, without holding it in injurious quantities in the time of very wet weather, is possessed of the principle of vegetation and will be found to be of the most productive nature. The too tenacious clay soils must be made artificially friable, by drainage and the admixture of mails, sands, &c, and kept so, and be pulverized and mechanically altered, before they can become productive. Until this is done, such soils resist effectually the enriching influence of rains and dews, which merely fall on their surface, and either run off or lie there without penetrating into them. The sun and wind also may beat on them and blow over them, but they can never waken up the dormant energy that lies within, they only by their repeated attacks dry and harden the surface, crack it into irregular portions, and more firmly lock up any languid and dormant principles of vegetable life that may be within the mass. When clay is in excess, it is remedied by the application of sand, chalk, mail, or burned clay, light unfermented manures, and perfect pulverization, to make the soil friable. There are in soil eleven substances necessary for the growth of vegetables, viz, potash, soda, lime, manganese, alumina, silica, iron, manganese, sulphur, phosphorus, chlorine, and soil is composed of two classes of ingredients—one, the inorganic or mineral, the other, the organic, or such as have at some time formed parts of individuals of the animal or vegetable kingdoms. Certain phosphates, though present

in soil in the smallest quantity, are its most important mineral constituents and are derived principally from the animal kingdom and the following substances procurable in considerable quantities in India may be employed as manures. Animal manure, stable manure, both fresh and old, dung of all animals. Guano, poultry, night soil, bones of all animals, fresh, calcined or merely crushed, burnt earth, dead animals blood of animals hair, hoofs, horns, prongs of skins, offal, urine, feathers, fish and the quickest way to utilise animal substances is to throw them into a stone-lined tank with water, quicklime and wood ashes, the tank should be kept covered and the liquid parts may be run off from below. Weeds green, dry and burnt, branches and leaves of trees both fresh and dry, the leaves of oil producing plants, and those that contain milky juices being the best, as they yield nitrogen, ammonia and carbonic acid. Rotten wood, tan-bark. Straw, stubble, roots—&c. Lime, burnt shells old mortar, gypsum, refuse of soda water, sulphuric and nitric acid, manufactures, broken bricks and tiles, silt and sand from tank and river beds, muds, soda, potash, and magnesian earth, road dust, house sweepings, wood ashes, coal ashes burnt cowdung, nitrates, carbonates, sulphates, nitrates and acetates of potash and soda, soot, gas, liquor and sulphate of ammonia, phosphate and superphosphate of lime, tartrates and acetates of iron, refuse from dye works, leaf mould leaves both green and dry if steeped for a week in water, decay afterwards much more rapidly, and the brown liquor that comes from them is good liquid manure, the leaves should then be laid in alternate layers with earth and half burnt weeds, and the heap should be covered with matting to prevent the escape of the moisture and gases. If watered and turned once in ten days, the leaf mould will be fit for use in three months keep dung heaps covered and dilute liquid manure in them with one or two waters, by which the escape of ammonia will be in a great measure prevented. Liebig, a soil, says will reach its point of exhaustion sooner, the less rich it is in the mineral ingredients necessary as food for plants. But we can restore soil to its original state of fertility by bringing it back to its former composition, i.e., by restoring to it the constituents removed by the various crops of plants. A fertile soil must contain in sufficient quantity, and in a form adapted for assimilation, all the inorganic materials indispensable for the growth of plants. It is obvious for instance, that we furnish the conditions essential to the formation of starch

or of sugar, when we supply to the plant then necessary constituents, i.e., such as we find always present in them. The sap of such plants as are rich in sugar or in starch contains much potash and soda, or alkaline earth. As experience proves that a deficiency of alkalies causes a deficient formation of woody fibre, sugar, and starch and that, on the contrary, a luxuriant growth is the consequence of their abundant supply—it is obvious that the object of culture, viz a maximum of crops, cannot be obtained unless the alkalies (necessary for the transformation of the carbonic acid into starch or sugar) supplied in abundant quantity and in a form fit for assimilation by plants. In fact, the principle object of scientific agriculture is to restore to land in whatever way the restoration may be most convenient the substances removed from it and which the atmosphere cannot yield." Professor Johnston says lime is indispensable to the land, every thousand pounds of fertile soil contains 56 lbs of lime, every thousand pounds of less fertile, 18 lbs, and of the barren soil, only 4 lbs. Vegetable matter i.e., woody fibre, in the state, technically called "humus," according to Liebig, does not afford nourishment to plants in the form in which we see it in soils, being, in fact, very nearly insoluble, and therefore incapable of being taken up by the roots, which cannot take up any solid matter, but only as the carbon. A mixture of two or three earths, such as lime, silica, and alumina, is better fitted to absorb moisture and gaseous matter than either of the earths taken singly.—*Ben As Soc Journ*, No. CLXXX, April 1848

MANUS or men, descendants of Manu

In the West Indies, arrow-root is obtained from the *Maranta arundinacea*, *M. allongia*, and *M. nobilis*, also from the *Canna glauca* and *C. coccinea* to both of which the local name of tous les mois, or talema, is applied. In the East Indies, arrow-root is prepared from the *Maranta arundinacea*, also from *M. ramosissima*, a Sylhet species. The *Maranta arundinacea* was introduced in 1840-1841,

MARANTA MALACCENSIS

into Rutnagheery, where it throve extremely well, though it is not grown to any extent. It was also introduced into the Tenasserim Provinces, and the arrow-root made from it was not inferior in quality to any *Maranta arundinacea*, is largely grown in Travancore, at Chittoor near Aicot, in the Tenasserim provinces and at the Andaman Islands. Mahabaleshwar arrow-root is obtained from *Cucuma caulina*, *Graham* Travancore arrow-root is obtained mostly from the *Maranta arundinacea*, but the fecula of *Cucuma angustifolia* and of the cassava-meal from the *Jastiopha manihot* is likewise sold under that name. *Cucuma angustifolia* is also the source of an arrow-root prepared at Benares, Bengal and Chittagong. A wild arrow-root plant grows in Cuttack and arrow-root made of it is not distinguishable from that of *Maranta arundinacea*, except, perhaps, by a slightly earthy taste and smell observable in the wild arrow-root, which is easily accounted for by its imperfect manufacture. Genuine *Maranta* arrow-root, when pressed, crackles beneath the fingers. The *Cucuma* or "East India" arrow-root, as exported to England, principally from Calcutta, has a white and a brown variety — *Voigt Roab O'Shaughnessy Cat Ex 1862*

MARANTA ARUNDINACEA, Linn

Pen bwa, BURM

A native of the West Indies but now grown in many parts of the East Indies. This produces the best West India arrowroot which is prepared by maceration of the roots in water, and conducting the further processes similarly to the mode of manufacturing starch from wheat, potatoes or other farinaceous substances — *Voigt*

MARASCHINO This liqueur, 'chiefly manufactured in Venice, Trieste, and Zara in Dalmatia, is prepared from a variety of cherry, named the *Griot marasquin*, the fruit and seed are crushed together, one part to the hundred of honey added, and the whole mass subjected to fermentation, during this process it is distilled, and the product is rectified. To the rectified spirit sugar and water are added, in proportions guided by the taste of the manufacturer, and the resulting liqueur is stored for some months before use, to free it of empyreumatic flavour. The fruit tree is the *Cerasus capromana* — *O'Shaughnessy, p 323*

MARATHA, the Maratha people, consisting chiefly of Maratha brahmins and Kumbi, owing to the prominent and powerful position so long occupied by them in India have imposed their language and some of their customs on about twice their own number of menial and helot races, such as the Dheri, and Mang who, Marathas in Nagpur, speakers of Hindi in the Nerbada valley, only retain their individuality because they are too low in the scale for absorption. Maratha influence, did not penetrate to the north much beyond the Nagpur plain, consisting of the lower valleys of the Wardha and Wainganga. To the south of this area the Telug races are intermingled with the settlers from the west though not in large numbers to the east there is Chhattisgarh, inhabited, after some fifteen centuries of Rajput ascendancy, mainly by Hindu races, except in the remote eastern district of Sambulpur, which, by language, belongs to Orissa. The northern line of demarcation may be drawn along the southern crest of the Satpura range, for though a few Marathas are found on the table-land, there are probably more Hindi speakers below the ghats in the Nagpur plain, and the almost universal language of the three Satpura districts Seoni, Chhindwara, and Betul, is Hindi. The northern limits of the region in which the

Marathi language is spoken stretches on the sea coast from the Kolwan hills, or country of the Kol near the Portuguese settlement of Damán, above the ghauts in a north-easterly direction along the Satpura range parallel to the Nerbudda, intermingling with the Gujarati, about Nandobai, in the jungly valley of the Tapi. It is spoken throughout Berar, in the open parts of the territories of Nagpur and the whole of its eastern border abuts on the countries and languages of the Gonds. From Nagpur, the Marathi extends to the south-west, and near the villages of Murgli-
petta and Ninu, about thirty miles west of Beder it meets with the Telugu, and Canarese, touching, in advance nearly on Bijapur and Shankash-wai, and thence trends south-westerly to the coast at Sidasheghur, skirting the western boundary of the Canarese. From Damán in the northern Konkán, Marathi runs down the coast to the neighbourhood of Goa, both below and above the ghauts. It there meets the Konkáni, a mixed tongue which runs nearly as far as Mangalore, and the southern limits of this mixed language is a village four miles north of Upi or Oodapi near Condapore, where Tulu or the language of Canara begins. The Konkáni, however appears to be only Marathi with a large infusion of Tulu and Canarese words, the former derived from the indigenous inhabitants of Tuluva or Canara, the latter from the long subjection of this part of the Konkán to Canarese dynasties above the ghauts. Mr. H. Mogling however mentions that the Konkáni speaking brahmans of Mangalore, consider it quite distinct from, though cognate with, Marathi. The limits extend from Goa below the ghauts, to the village above-mentioned north of Upi. From this part of the coast in northern Canara, a diagonal line running in a north-eastern direction towards Beder, marks the boundary between Marathi and Canarese, of the latter at least above the ghauts.

From Murgli-petta, however, eastwards through Beder on to Sangam near Sadashepet (Satyassi) the people designate the line of villages and towns as Si-bhasha basti, three-tongue-towns, for in them the Marathi, Canarese and Telugu mingle, though in all that line the people seem rather of the Maratha than of the Canarese or Teling type, as far as Sadashepet, 20 miles further east, where the Teling people and Teling tongue alone occur.

The Maratha people are supposed to have been originally a race of mountaineers, in Baglan, on the crest of the ghauts, and culti-

vating the fertile valleys or mawal and the country called Maharástra, which is first mentioned in Indian history in the Maháwanso, probably obtained its name and received a distinctive language from the existence of a Marathi dynasty at some period not recorded in history. The Maratha race are essentially mountaineers, herdsmen and soldiers, and, until lately, were deemed bad farmers.

The races and tribes and fragmentary nations dwelling in the Maratha country are numerous, with many immigrants. The most prominent are the Kunbi cultivator, the village authorities, amongst whom are the Mhar and Mhang, as pechual slaves, the mahomedans, the brahmans and the Parsee. The races daily seen are,

Brahman, Deshrasth or Marathi, and Konkani	Mahomedans, in every avocation
Kunbi, cultivators	Sempi, or tailor
Kuljagi "	Julari, or weaver
Wani, Lingret cultivators	Witan, or bangle maker
Manwari, cultivators	Kumhar, or potter
Bighwan, or Mah, gardeners,	Sutia, or carpenter
Gohwal, keep sheep and goats	Sonai or goldsmith
Komti, banyan, merchants, generally grain merchants, they wear the sacred thread, and are in several sections	Lohari or blacksmith
Teli, oilmen, oil makers and oil sellers, many are of the Lingret sect, some of their sections are deemed impure and must not enter sacred places	Dhobi or washerman
Jann, shop keepers	Killal, palm-wine drawers
	Hajam or barber, wear clean
	Bhud, Bimhoo basket-makers
	Kulkari, palm leaf do
	Channu, leather workers
	Dheri or Mhan, or pirahi
	Mhang or tinner
	Thakur
	Gosai
	Byagi
	Jingum

In the Maháttá Dekhan, the municipal system is still very perfect and the servants and village authorities are known as Balnto. The individuals and trades or professions, composing the village officers and servants vary, however, in every district. In some are the

Potul	Bhusti	Tulal or Yeskar
Jangam	Ghnapagan	Duri Gosun
Ramusi	Mhan	Garsi or pipai
Bhil	Gondhali	Byantur
Koli	Teli	Kalayuntur
Mah or Baghban	Timbali	Vaidya
Daji, Suti, or Sui	Bhat	Ghotakhori
Sonai		

The village accountant is known as

Patwar,	Manu	Comcopilly,	Tam
Kulkarni,	Can	Karnam,	Tel

and is usually a brahman. He keeps the village accounts for Government and sends same to the tahsildar. The Maháttá village head is the Potul, who rents the lands to cultivators, collects the Government land tax, and forwards it to the tahsildar. He is also

MARAUDU

the civil magistrate, and settles petty civil matters to the extent of two maunds of grain or five or six rupees, and sends higher claims to the tahsildar. In criminal matters he is only the police, and sends all to the amil. In lieu of pay for the above services, the potail is allowed from 25 to 50 bhigahs of land rent free, the land tax is about Rs 3 or 4 the bhigah. For the cultivation of this allotment two to four bullocks would be needed, as 10 to 16 bhigahs, according as the rains are heavy or light, are all that a pair of bullocks can get over. There are generally two to four potails in a village, not always of the same caste, for instance the village of Khanpur, zillah of Nandan, has four potails, two Maratha, a Canarese speaking Lingaet, and a Kulkarga. There are a few brahman and mahomedan and pariah potails but a christian potail is unknown. In the Canarese speaking country the village head is called Gouja or Gouda.

The Maratha Kunbi race chiefly worship the deified heroes Kandoba, and Hanuman. The temple of Kandoba near Poona is famous. Pundarpoor on the left bank of the Kistna river is a celebrated place of pilgrimage and there is a famous temple and image of Ganesha at Morgaum and a tree, said to be 300 years old, is, an object of great veneration, on the belief that, 100 years back, the leaves had the virtue of turning into gold on being taken to Benares.

The establishment of a Marhatta government at Nagpur drew many of the nation into that part of Gondwana, and made their language general for a considerable distance round the capital—*Central Provinces Gazetteer, Elphinstone's History of India*, p 411. See India.

MARATIGO. See India.

MARATI MOGGA, also Marati tige, BENG TEL. *Spilanthus acmella*, R III 410. Dr Roxburgh applies the same name to *Cissus vitiginea*, I 406—Brown describes it as a certain aphrodisiac drug. Heyne gives mandu as a Sanscrit name of this plant and Buddata ramu as the Telugu.

MARATI MOGGU. TAM. *Illicium anisatum*, Linn.

MARATINA, TAM. A Ceylon tree, about twenty inches in diameter, and fifteen to twenty feet in height, used by the Singhalese, for house and boat work—*Edye, on the Timber of Ceylon*.

MARRATTIA ALATA. See Ferns.

MARAUDU, TAM. a Ceylon tree, grows to about twenty inches in diameter, and twenty feet in height furnishing one of the best Ceylon wood, very heavy and close grained, of a dark brown colour—*Edye, on the Timber of Ceylon, Futh*.

MARAVA

MARAVA a race in the extreme south of India, in the Ramnad and Sivaganga districts who differ from other neighbouring races in personal appearance and their language and customs also differ. They worship local deities to whom they offer liquor, flesh and fruits, and they practice divination. The men do not wear turbans. They possess lands. They are robust, hardy, dark-skinned, stalwart race, athletic, with well developed muscles, active, of moderate height, the cranium rounded, narrow in front, forehead low, eyes large and full. They occupy parts of the Madurai and Tinnevely districts, are employed as village watchmen and are honest to their employers, but have been largely given to thieving and gang robbery. They use as food, the flesh of all animals except that of the cow. They wear their hair long and arranged like the women of the Dekhan. In their marriages, disparity of age is not considered, nor is the presence or assent of the bridegroom necessary,—a blade of wood, in his absence, serving as proxy. They worship evil spirits, to whom they sacrifice, and, on the occurrence of a small pox or cholera epidemic, the whole village is excited and devil dances are common. The Muavar women of Ramnad and Sivaganga, wear cloths of 25 or 30 cubits in length, folded in plaits which they fasten behind. This is unlike other women of S India whose cloths do not exceed twenty cubits and are fastened on the right side in front. They intermarry, some of the subdivisions not marrying into the father's family,—but Hindus in general intermarry with the mother's relations. In Ramnad and Tinnevely, the titular surname of all the Maravar is Devei.

The Ramayana describes the forest or wilderness of Dandaca as covering the whole extremity of the southern peninsula, and the rude inhabitants are designated Rakshasa (monsters) or vanara (monkeys) the former term meaning races or tribes hostile to the Aryan race. But vanara is from vana a wilderness and nara a man, that is a wild or uncivilized man, and to this sense, as to the wild races in the extreme south, the fable of Hanuman the chief monkey and that of his army, Mr Taylor thinks may be reduced. He says that those who have seen the Collier and Marava will readily consider them to differ from all family likeness of the Aryan Hindus, and as their visages often resemble baboons more than men, it would require even less than the aid of poetical imagination of a Valmiki to induce the employment of an equivalent word which would so aptly seem to convey the idea imparted by their appearance. Ome, the historian, relates that the Maravar

chief of the Colleen race, in 1752, sent 4,000 peons and colleen to aid Chanda Sahib like the Ramusi of Sholapore and Bombay the Marava are subsidized by being employed as watchmen of houses. The zemindar of Ramnad is a Marava. Maravar marriages are sometimes of an incomplete character and they have a second and more complete one. Maravar or Marava, is perhaps the Marullo of Cosmas Indicopleustes, which was on the continent adjoining Ceylon and produced conch-shells—*Yule Cathay*, i p 81. *Rev Mr Taylor in Madras Government Records*, 1867 p 4. *As Soc Journ Ome's Hindustan*.

MARA-VERI, TAM A Ceylon tree much the same as the Velvet in size and quality. It is used for natives' huts &c, but is not of much value—*Edye, on the Timber of Ceylon*.

MARBLE

Marmor,	DUT	Marmo,	IR
Marbre,	FR	Pualain marmar,	MALY
Marmoi,	GER LAT RUSS	Sung i marmar,	PERS
Marmar,	GUZ HIND	Marmol,	SP

Marble is the granular limestone, or carbonate of lime of mineralogists. It is hard, compact, of a fine texture, and readily takes a fine polish. In colour, some marbles are quite black, others again are of a snowy white, others are greenish, grayish, reddish, bluish, or yellowish, and some are variegated and spotted. The finest solid marbles are those of Italy, Blackenburg, France, and Flanders.

(a) Marble of one plain colour

• Black marble, most of these marbles contain bitumen, and are fetid when bruised as the Namur marble, the marble of Ashford in Derbyshire, Dent in Yorkshire, near Crickhowell, Tenby, Kilkenny, the marble, anciently called Marmor Luculleum, and now Nero Antico, &c.

White marble, as the marble of Paros, in which the Laocoon and Antinous are executed, Carrara marble, of finer grain, much used in modern sculpture, the Skye marble noticed by Dr M'Culloch, that of Inverary, Assynt, Blan Athol, &c.

Ash and Gray marble as the beautiful marble of compact oolitic texture at Orelton, near the Clee Hills in Shropshire.

Brown and Red marble as the Rosso Antico, and marble near Buxton. The mottled brown marble of good quality of Beetham Fell, near Milnthorpe.

Yellow marbles as the Giallo Antico. Siena marble dug at Mafia, near Lisbon. That used in ancient Rome is said to have been from Numidia.

Blue marble, near St Pons, in Languedoc. Green marble, as the Marmor Lacedæmonium of Pliny, dug near Verona.

(b) Marbles of two colours

Black marbles variegated with other colours occur near Ashburton in Devonshire, Torbay in the same county, Biarree, Nero Antico. The Africa Bicecia of the ancients, Giallo and Nero Antico.

White marbles variegated with other colours occur in Italy, Siberia, at Plymouth, at Killarney, in Sweden, &c.

Ash and Gray marbles variegated with other colours, are very numerous, and occur in various parts of Europe.

Brown and Red marbles variegated with other colours.

Yellow marble variegated with other colours.

Green marbles variegated with other colours, as the Egyptian marbles—the Marmor Tiberinum and Augustum of Pliny, some Verde Antico, as that dug near Susa in Piedmont, the beautiful marble of Anglesey (called Mona marble), the marble of Kolmeiden in Sweden.

(c) Marble with many colours occurs near Plymouth, and is the beautiful Brocattello or Brocade marble of Italy and Spain.

(d) Marbles containing shells, corals, and other extraneous bodies.

The blue clouded marble slabs of China are about a foot square, and are exported to India, Sydney, South America, &c for pavement or floors. It is obtained to the northwest of Canton. There is also a red bicecia marble brought to Canton, which is employed in tables, stone stools, &c and is seldom sent abroad. The marbles of the Madras Presidency are of rare colour, and fine quality. Specimens sent to the Great Exhibition of 1851 were favorably reported upon as indicative of a valuable material, well adapted to sculptural and ornamental purposes. At present the Indian manufacture of this article is comparatively insignificant and chiefly confined to small miscellaneous articles for domestic use. The pure white marble of Tinnevely is in large crystals like that of Birmah. The marbles of the Cuddapah district are of greenish colours from pale apple green to deep leek green, and beautifully shaded, they attracted attention in the Exhibition of 1851. At Bhera ghaut, on the Nerbudda ten miles from Jubbalpore, on the line of the railway to Bombay, a white saccharine marble is plentiful and easily accessible. It has been used in a limited degree at Jubbalpore, sometimes to make lime, and other times for metalling roads. It is made up into images

MARBLE

by natives, but does not take a good polish. Nevertheless, a block which was sent to the Paris Exhibition of 1855 was pronounced to be equal to Italian marble for statuary purposes, very large slabs can be easily quarried. The granular white marble from Kohadi, 3 feet by 2 and 9 inches thick, is Rs 2. So soon as the navigation of the Godavery is opened up, this marble and the sandstone and coal of the same locality with the alabaster, gypsum and dolomite of Jubbulpore, will probably become articles of export. At Tinnevely, also, there is an excellent white marble, but considered rather too hard for statuary purposes, and Guntoor and the Ceded Districts abound with marbles of great variety of colours, being tints of grey, yellow, and red. Marble occurs at Attok. Both white and grey occur at Noosliky. The marbles and building stones, and the red sandstone so commonly seen in all ancient buildings from Benares up to Lahore, were formerly imported from these parts and magnificent mosques, tombs, and shrines, yet remain to tell us of that trade.

The marble used by the Burmese in the manufacture of their numerous figures of Gautama for the pagodas, &c., is obtained from the marble quarries in the small steep ridge of the Tsagyen hills, near the village of Mowe in the district of Madaya. The great mass of the limestone forms the summit and eastern face of the hills, and here are situated, all the quarries from which the marble has been extracted. The limestone rests upon hornblende gneissose rocks, which form the lower portion of the hills and is for the most part tolerably pure and massive, but occasionally has an imperfect lamination, given by flaky plates of mica arranged in lines of the mass. It is, in the mass, of nearly a pure white and is largely and finely crystallized. Portions of it have a delicately blue tint, while others are stained by ferruginous spots. A block suitable for a figure three feet high can be had at Amarapooia for about fifty tikals or about £6, and a figure of these dimensions may cost about 150 tikals, or about 180 Rupees = £18. Large blocks can now rarely be had, the largest obtainable do not now average more than four or five feet long by two or three feet thick, but even these are not frequently obtained and are expensive. For smaller blocks there is a constant demand. The marble workers are settled at Amarapooia and Tsagaing. With a hammer and chisel, the workman rapidly gives a rough outline to the mass, and by occasionally, with a few lines of charcoal, marking out the drapery and limbs, he rapidly completes the figure.

MARCO POLO.

Partly owing to the delicate tinge of blue and to the generally large crystallization of the mass, there is a peculiar semi-transparent look about the finished sculptures which has most probably given rise to the general notion that these images are of alabaster. Pallagors speaks of the beautiful marble he found in the island of Si-Hang on the coast of Siam polished as brightly by the waves of the sea as it could have been by the hand of man. — *Report upon the Marbles of Southern India by Edward Balfour, in Government Central Museum, Madras Central Provinces Gazetteer Madras Ex Jui Reports Da Costa on Fossils Powell's Handbook of the Punjab* Mr. Oldham in *Yule's Embassy* p 327 *McCulloch's Commercial Dictionary*, p 787 *Bourning's Siam*, Vol 1 p 30.

MARCO POLO, was of a noble Venetian family, Nicolo and Matthew, two brothers, had mercantile establishments at Constantinople and in the Crimea. They quitted Venice, for the East in 1254, left Constantinople in 1260, and passed through Bokhara to the court of Kablai Khan who sent them back as ambassadors to the Pope and they reached Acre in 1269, when Nicolas found his wife long dead but his son Marco grown to 15 years of age. After two years delay, the two Polo, Nicolo and Maffei, taking with them Marco, the young son of the former, set out on their return along with a priest, who, however, soon left them, delivering the Pope's letters into their hands. Starting from Acre, on the coast of Syria, the Polo were three years and a half upon this journey. They moved by Mosul, Baghdad, Hormuz, they traversed Kerman, and Khorasan, Balkh and Badakhshan, in which last country they seem to have been long detained by the illness of young Marco. From Badakhshan, they ascended the Oxus to the lake of Smikol and the plateau of Pamir. They crossed the steppe of Pamir, and de-

scended into Kashgar, whence they proceeded by Yarkand and Khoten and across the great desert of Gobi to the Tangut province on the extreme N. W. of China, partly within, partly without, the wall. Here they were met by a deputation sent by the Kablai Khan, who was at the time residing at Shang-Tu, about fifty miles north of the wall. Their journey had occupied $3\frac{1}{2}$ years. Upon their arrival at Pekin, which they call by the Tartar name Cambala, or Khinbalig, young Marco, then 21 years of age, was taken immediately into favour, he learned the language and for twenty-six years afterwards was a nobleman of the great Khan's Court, employed in several missions, and in other high offices of State. He came away at last, in A. D. 1295, in charge of a princess, who was to be married to the Tartar sovereign of Persia. He was sent on a mission through Yunnan to the frontiers of Ava, and successively to Kara Koram, to Champu or southern Cochinchina and to the Indian Seas and afterwards by sea via Sumatra and India through Cambay to the Mongol tribe of Bayaut, to select a lady for the Kablai's great nephew Arghun Khan of Persia which he did, handing over the lady in 1291. He returned to Venice A. D. 1295. Marco was subsequently taken prisoner at the battle of Curzola (near Lissa) on the 8th September 1298. On his return to his native country, he circulated his travels, in manuscript, amongst his friends. The narrative was, in 1298, transcribed by a Genoese named Rustiglo, four years after the death of Kublai Khan. They were first published in Latin in 1320. A copy had been presented by the government of Venice to the Infante Don Henrique in 1428, from which an edition was published at Lisbon in 1502. The earliest edition published in France bears date 1556. His book was entitled *Viaggi di Messer Marco Polo Gentiluomo Venetiano*. There are two translations of it into Latin. He treats in his book *De Regionibus Orientis*. Kublai Khan was the conqueror of southern China, which the Arabs call Michin and which Genghiz Khan, his grandfather, had charged his children to conquer, after he himself had gotten the Northern China called Katar.

Marco Polo sojourned in the hills of Badakshan for the sake of his health, and he describes the countries of Wakam, Pamu, Bolor and Kashmu—*History of Genghiz Khan*, p. 443. *Prinsep's Tibet, Tartary, Mongolia*, p. 8. *Yule's Cathay*. See Japan, Kabul, Khoten, Jews, Johore.

MARD HIND PERS A man

MARDA or Marthu, TAM MALEAL Mai-

tha in Karnatica. Trees of Malabar and Canara, probably three species of *Terminalia*, *T. alata*, *T. Berriyi*, *T. chebula* or *T. glabra*, of large dimensions and perfectly straight with wood of a dark brown colour and very close grained, which might be converted with advantage into plank, thick-stuff, beams, &c. for ships, whose strength is required, and whose weight is of little consideration. It runs from sixty-two to seventy pounds the cubic foot, when green the native carpenters use it with the teak for beams in the pagodas, &c., it is considered durable, and contains a quantity of oil. An inferior description is named 'Vellai Marda,' or white Marda, it much resembles the former tree, excepting in size and in leaf, both of which are considerably smaller, and it is said by the natives to be inferior in quality and durability, it is more like the English oak in grain than any wood Mr. Edye met with. These trees, and also the former sort, are found in patches of some hundreds together, and generally on the banks of rivers, another sort, named "Vellai Katti Marda," or White Lump Marda, grows to about twelve or fifteen inches in diameter, and twenty-five feet long. In Malabar there is a fourth sort, named 'Kalu Vithe Marda,' the Dark Stone Marda, of the same quality as the last sort and used for the frames of vessels, and many other purposes, for which it answers well—*Edye Forests of Malabar and Canara*.

MAREB, a dam, which formed a celebrated reservoir above the city of Saba in Yemen, between two hills of Balak. It was constricted or repaired by Balkees queen of Sheba, about the beginning of the christian era, but it burst about A. D. 120, deluged the country far and wide, and reduced it to a state of utter desolation. The Mareb lake

MAR ELIAS

of ul Arem is mentioned in ch 34 of the koran, as the Sail ul Arem, or rush of water from the reservoir, and its bursting is there attributed to a punishment sent from God, for the impiety, pride and insolence of the city of Saba "The descendants of Saba had heretofore a sign in their dwellings, namely, two gardens, one on the right hand and one on the left and it was said unto them, eat ye of the provision of your Lord, and give thanks unto him, ye have a good country and a gracious Lord But they turned aside from what we had commanded them wherefore we sent against them the inundation of El Arem, and we changed their two gardens for them into gardens producing bitter fruit, and tamarisks, and some little fruit of the lote tree" The expedient of constructing reservoirs in which to store rain-water has prevailed in Arabia from a very early date These are generally found in localities devoid of springs, and dependent on the winter rains for a supply of water during the summer months The most remarkable instance on record is this great dam of Mareb, which doubtless suggested similar reservoirs in other parts of Arabia, and the neighbouring coasts of Africa, which have usually been subject to it All the travellers who have penetrated Yemen describe many such in the mountainous districts, and others exist in the islands of Saad-ed-din, near Zailah, in Kutto, in the Bay of Amphila, and in Dhalak, near Massowah See Saba

MAREDU CHETTU or Bilvamu or Vilva, *Ægle marmelos*, *Con* is sacred to Mahadeva or Siva he alone wears a chaplet of its flowers, and they are not offered in sacrifice to any other deity, if a pious saiva hindu should see any of its flowers fallen on the ground, he would remove them reverently to a temple of Mahadeva See *Ægle marmelos* *Kah*

is obtained from the seeds by either expression or boiling and is valuable and much used medicinally The fruit is not unlike a small French olive in size and appearance The oil is of a deep yellow colour, has a strong smell and an unpleasant bitter taste, is much esteemed by native doctors

MARI-AMMUN.

as a warm medicine, as an external application in foul ulcers, and as a liniment in rheumatic and spasmodic affections, &c In the year 1847-48, 1,587 gallons were exported, and in the year 1851-52, galls 1,917, in 1852-53, galls 3-111, but the demand is not constant. It is frequently burnt in lamps, and is sold in the bazar, under the name of "bitter oil" also black oil. Dr Maxwell, found this oil equally efficacious to cod-liver oil in cases of consumption and scrofula. He began with half-ounce doses, morning and evening, which were gradually reduced.

The leaves of the genera *Melia* and *Azadirachta*, dried and kept in books, are much used by the people of India to preserve furs, feathers, books, papers and clothes that are lodged in trunks, book cases, &c from the attacks of insects. It is useful to place along with them small packets of camphor, or little cups of camphor dissolved in alcohol.—*M E J R Simmonds' Comm'l Products*, p 537 *Edye, Ceylon Faulkner*

MAR GRIGORIUS son of hakim Harun ul Malati, is the Abul Phaiagnus of historians, and is known to the Arabs as Abul Faragh. He was a Christian by religion. He wrote the Book of Dynasties, in Arabic, in the reign of Aghun Khan, the last of Chenghis Khan's grandsons. He was a Jacobite christian of the city of Malatia in Cappadocia. His book was arranged in ten chapters, (1) On the Saints since Adam (2) The Judges of Israel (3) The Kings of Israel (4) The Chaldean Kings (5) The Kings called the Magi (6) The Ancient Greek Kings (7) Latin Roman Kings (8) Christian Greek Emperors (9) Malomedan Arabic Kings (10) The Mogul Kings

MARINE GLUE, patented by Mr. Jeffery in 1842, possesses very powerful cementing properties. It is formed by dissolving 7 lb of caoutchouc in small pieces, in 4 gallons of coal naphtha, with frequent stirring, the solution occupying 10 or 12 days. 2 parts shell-lac are then fused in an iron vessel, and 1 part of the solution being stirred well in, the glue is poured out on slabs to cool. Marine glue is valuable for pitching or prying the seams of ships. An inferior but strong marine glue is formed by simply dissolving shell-lac in naphtha. — *Tomlinson*

Rawachch, of Little Tibet | Race of the Oxus
Taura or water goat, "

Capra megaceros of Hutton, the wild goat of Hazara and the N. W. Himalaya, &c. is called markhor because fabled by the mountaineers, to kill snakes by looking at them, and in Yaghistan and Chilas they say that when its foam falls on certain stones it turns them to zahr-mohra. The Ibex and Markhor often dispute each other's footing, and Dr. Adams is not aware that they are ever met with on the same ranges. It is found on the mountains of Persia, Afghanistan, and is plentiful on the ranges around the Khyber Pass. From Toibela and Little Tibet it wanders down the Suliman range

MARKING NUT

as far as Mitenkote on the Indus, at the junction of the latter and the Sutlej. It is common on the north-western ranges of Cashmere, including Dardu, from thence a few herds are to be met with all along the southern or Futi Punjab as far as Kishtewar on the Chenab. The northern ranges of Cashmere and Ladakh are apparently without a single individual, perhaps on account of the ibex and wild sheep frequenting these mountains. Mr. Blyth and Dr. J. E. Gray consider this species as most likely a variety of the domestic goat, but from all Dr. Adams could learn of its habits and appearance, there is perhaps more cause to consider it the progenitor of the domestic animal than even the ibex. The markhor is usually found in small herds. Like the ibex, it delights to browse on steep and rocky mountains, ascending and descending with the seasons. In winter, in common with other alpine species, the fur becomes dense from the woolly pileage, which gives a lighter colour to the coat than during midsummer and autumn, when it disappears, and the fur is short and brown. Hunters have strange stories of the serpent eating disposition of the markhor. Ajaz Khan assured Dr. Adams that an ammonite he picked up on the mountains had become petrified from having passed through the intestines of a markhor. — *Adams Jerdon*

Dran,	TIBET	Pheea,	RUNNIA

occurs at 8,000 to 10,000 feet in Kashmir and the N W Himalaya. The total length of an adult diun is from 2½ to 3 feet, the colour, chestnut, with black splashes on the back and hip. It is seldom met with under 8,000 ft above the level of the sea

Arctomys bobie Schieber, is the Tibet Marmot or white Marmot. Dr Adams when crossing the Tang Lang Pass came on a colony of white marmot, distinguished at once from the red species by its lighter colour, being a yellowish white but also by its call which more resembles a whistle than a scream. One side of a spur was riddled by their burrows. The white seems to take the place of the red marmot on the more barren and higher ranges, above 10,000 and 12,000 feet. The bearded vulture and larger eagles are among their chief enemies. He has seen the former bear off a marmot with great ease. The marmots are generally supposed to be the animals alluded to by Herodotus, as gigantic ants, which dug up gold — *Jerdon's Mammalia*, pp 181-182. *Adam's Naturalist in India* *Mrs Hervey's adventures of a Lady in Tartary*, Vol I, p 197

MARMUT, A lichen abundant in the crevices of the rocks of Baluchistan used medicinally by hindoos, in diseases of languor and oppression of the *vis vitæ*. The plant, replete with juice, and extremely

MARRI A race or tribe occupying part of Baluchistan. Kahan town, in Kach-Gandava, is in the hill ranges east of the plain of Kach. It belongs to the Doda Marri, a division of the great and widely dispersed Marri tribe who have been located in the neighbourhood for several centuries. The Marri are a brave race and have long been distinguished as daring depredators.—*Masson's Journeys* See India, Kadjak, Kahan, Kelat

MARRI AI, literally the Death-Mother, the goddess worshipped by the Beldar race of Beiar

MARRIAGE CUSTOMS In the East Indies, amongst its various races, forms for the union of men and women are to be seen from the simplest modes of mutual consent, through all the various known procedures of marriage—by capture, community of right, polygamy, polyandry, temporary marriages, permanent lifelong marriages, endogamous marriage within the tribe or race, exogamous marriage out of the tribe or race, and there are men and women who never marry and men and women who marry only once

Mr M'Lennan and Sir John Lubbock have examined, at length, the subject of primitive marriage and various writers on the tribes and races in the south and east of Asia have furnished notices of the prevailing marriage customs. The popular theory is that marriage sprang from the family, which developed into the clan, and thence into the nation, but Mr M'Lennan argues that this hypothesis though possessing the merit of simplicity, is not supported by evidence. The evidence, he contends, collected everywhere of primitive man, and confirmed by all observation among the savage races still existing in the world, always leads back further than the family—to groups, as in the Andamans,

MARRIAGE CUSTOMS

of naked, squahd savages living by the capture of wild beasts or upon the more easily-caught shell fish. These groups, he contends, for many reasons, only very slowly developed the idea of kinship, the primary one being that as they held their women in common they were never certain of relationship except through the mother's side and this practice of counting from the mother still exists amongst the Nan race in Malabar. In the awful struggle which primitive man must have maintained for existence, it was natural that tribes badly situated as respects food should consider female infants a nuisance, and kill them out, as very many tribes do now. Wanting wives, they would then be tempted to capture them from other tribes who either from a better supply of food or a slight advance in civilization, possessed more women, and they could only capture them in battle. Women came, therefore, to be regarded as booty, and like other booty were held in common, as the possession, first of all, of the tribe which captured them, and afterwards, as tribes grew larger, of those actually engaged in the capture. This is the explanation of the otherwise unintelligible fact that the marriage ceremonies of almost all uncivilized or semi-civilized races represent capture, the form having endured as an etiquette long after the practice had passed away. This, too, is the root of that strangest of all practices, strangest because apparently opposed to the fiercest passions of man, his egotism and jealousy—polyandry. It is not perhaps opposed to his inherent instincts, though some thinkers have contended so, for there are still tribes, such as the Nicobar race who have absolutely no sexual laws, any more than the animals, and, even in civilized Europe, polyandry, under the guise of "the sin of great cities" exists to an enormous extent. The theory of kinship would, under such circumstances, be very slow of development, and would attach only to relationship by the mother's side, and Mr M'Lennan shows by a mass of evidence that this was the earliest idea of man, most nations having a tradition of some one reformer who abolished it, while it flourishes still in a form more or less limited over an amazing extent of the earth's surface.

Polyandry now prevails universally in Tibet, is common in the Himalayan and Sub-Himalayan regions adjoining Tibet, in the valley of Kashmir, in Spiti, in Ladak, in Kistewai, in Sumoi, in the Sivalik range, in Kasia, there are unmistakable traces of its existence, till recently, in Gurwhal, Sylhet, and Cachar, and we find it still prevalent among

the Toda of the Neilgherry Hills, the Coorg of Mysore, and the Nan, the Malere and Polere of Malabar, in Ceylon amongst the Kandyan race, and further east, as an ancient though now almost superseded custom, in New Zealand, in one or two of the Pacific Islands, and in the Aleutian Islands, and to the west and north of the Aleutian, among the Korvak to the north of the Okhotsk Sea. Crossing the Russian empire to the west side we find polyandry among the Saporogian Cossack. Polyandry is also found in several parts of Africa and according to Humboldt it is prevalent in America among the tribes on the Orinoco, and he vouches for its former prevalence in Lancerota, one of the Canary Islands.

The first step of progress seems to have been from promiscuity to polyandry, thence to polyandry such as Cæsar found in Britain and as exists in Tibet and Coorg and Kandy, limited to brothers, thence to the restricted form known to the Jews and early Hindoos noticed in Ruth and Manu, in which only the childless widow fell to the brother, and finally to the system of regular marriage between pairs, ending usually, as in India, in excessively strict rules of kinship. Mr. McLennan's proposition is that the pairing off of mankind which we call marriage, so far from having been the original form of society, was an enormous step in civilization, only reached after ages of progress, and after the strife for subsistence had, by the discovery of agriculture, been rendered less bitter, so easy indeed as to allow the less fortunate tribes to keep their female children alive. This argument is opposed to almost all previous theories, but it is put forward by him supported by an extraordinary array of facts, and deserves the attention due to any speculation obviously begun for the sake of historical truth. The object of the inquiry is of course not merely to ascertain the steps in the history of marriage but the much greater point whether man, as his early history recedes under investigation, draws nearer to or recedes farther from the brute. Mr. McLennan obviously thinks that he draws nearer to it, that there was, in fact, a time when man had only instincts and the real capacity which separates him finally from the animal, the power of advancing endlessly towards higher things. We can, he says, trace the line of human progress far back towards brutishness, finding as we go back the noble faculties peculiar to man weaker and weaker in their manifestations, producing less and less effect—at last scarcely any effect at all—upon his position, and habits. As we go back, we find more and more in men the

traits of gregarious animals, slighter and slighter indication of operative intellect. As among other gregarious animals, the unions of the sexes were probably in the earliest times loose, transitory, and in some degree promiscuous.

It is not possible to learn from the history of India, all the marriage customs prevailing in it. Its races, from the most ancient times until now, have kept themselves distinct from each other and the evidence of the Mahabharata, of the Ramayana, the Institutes of Manu, the Purana and the Vedas, can only be accepted as relating to portions of the inhabitants. When we read that in the famous Indian city of Vesali marriage was forbidden, and high rank attached to the lady who held office as chief of the courtesans. Such must be regarded as an exceptional or local condition of which, even yet, in British India, there is an instance in the town of in North Canara. It is stated that when Sakyammuni in his old age, visited Vesali, he was lodged in a garden belonging to the chief of the courtesans, who drove out to visit him, attended by her suite in stately carriages. Having approached and bowed down, she took her seat on one side of him and listened to a discourse on Dharma.

On re-entering the town she met the rulers of Vesali, gorgeously apparelled, but their equipages made way for her. They asked her to resign to them the honour of entertaining Sakyammuni, but she refused, and the great man himself when solicited by the rulers in person, also refused to break his engagements with the Lady. This custom, of the temple dancing girls advancing to meet a great man, is still prevalent, and they show this honour alike to a Governor or a Bishop. Until recently, the Deva-Dasi, or slaves of the idols, were the only educated women in India. All the great hindoo temples have bands of the Deva-Dasi attached to them who follow their trade without public shame, and a woman born of, or adopted by one of the temple slave women is not held to pursue a shameless vocation, though other women who have fallen from good repute are esteemed disgraceful. The explanation of this, however, is that in British India, every person, according to the Institutes of Manu, is pure in his or her own vocation, and the Deva-Dasi continue the old custom of the country, under solemn religious sanction, the latter, on the contrary, have given way to lawless inclinations, have outraged public feelings, have probably broken their marriage vows, and brought disgrace on their families. At the present day, the hindoo weaver races near

MARRIAGE CUSTOMS

Chungleput, 35 miles from Madras, devote the eldest daughter to the temple and all classes of hindoos in time of trouble or in hope of offspring, vow their girls to the temples. In Ancient Egypt, again, it would appear that illegitimate children were, under certain circumstances, preferred over those born in wedlock.

Sn John Lubbock further points out that in many cases the exclusive common possession of a wife could only be legally acquired by a temporary recognition of the pre-existing communal rights. Thus in Babylonia, according to Herodotus, (Clio, 199) every woman was compelled to offer herself once in the temple of Venus, and only after doing so was she considered free to marry, the same, according to Strabo, was the law in Armenia (Strabo, lib 2) In some parts of Cyprus, also, among the Nasamones (Melpomene, 172) and other Ethiopian tribes, he tells us there was a very similar custom, and Dulaure asserts, that it existed also at Carthage, and in several parts of Greece. The account which Herodotus gives of the Lydians, though not so clear, seems to indicate a similar law. The Reverend Joseph Roberts relates (p ix) that in Madura, Balau and other places, beautiful virgins used to go to the temple once in their lives to offer themselves in honour of the goddess, the story being that a god had converse with them. That the special marriage was an infringement of these communal rights, for which some compensation was due, seems to Sn J Lubbock the true explanation of the offerings which virgins were so generally compelled to make before being permitted to marry. Among the Sonthal, one of the aboriginal Indian tribes, the marriages take place once a year, mostly in January. For six days, all the candidates for matrimony live together in promiscuous concubinage, after which only are the separate couples regarded as having established their right to marry. Such communism is to be traced in the rite of Bundling an old Dutch, Orkney, Shetland and Hebrides usage, as in Wales. In Scotland, the plan was called Hand-fasting. In Sparta, the youth courted under the veil of night, the lover being supposed not to see the face of his mistress until they were acknowledged man and wife.

The primeval custom of capture of wives, continues to have symbolic representations. The old Norse for marriage is *quan-fang* or wife catching, the German is *Brut louft* or Bride racing. The Bedouin unmistakably follow the rite of marriage by capture and yet the man can claim to marry his cousin,

MARRIAGE CUSTOMS

if only he be willing to give the price demanded for her, and, amongst the mahomedans of Arab origin, in the peninsula of India, to wed the maternal uncle's daughter is a recognized right.

In Chircassia, weddings are accompanied by a feast, in the midst of which the bridegroom has to rush in, and, with the help of a few daring young men, carry off the lady by force, and by this process she becomes his lawful wife. According to Spencer, another important part of the ceremony consists in the bridegroom drawing his dagger and cutting open the bride's corset.

Among the Kalmuk, Dr Hell tells us that, after the price of the girl has been duly agreed on, when the bridegroom comes with his friends to carry off his bride, a sham resistance is always made by the people of her camp, in spite of which she fails not to be borne away on a richly caparisoned horse, with loud shouts and feigned joy.

Major Dalton mentions that among the Kol of Central India, when the price of a girl has been arranged 'the bridegroom and a large party of his friends of both sexes enter with much singing and dancing, and sham fighting in the village of the bride, where they meet the bride's party, and are hospitably entertained.

Occasionally, a few of the young man's friends assemble outside the fields where the women are at work, and rush on them to capture the girl he has fixed on, carrying her off from amongst the labourers, though a defeat and rescue are not uncommon.

Amongst some of the Mongol tribes, the girl mounts on horseback and flies pursued by the lover who only detains her as a wife if he overtake her. The girl is first mounted, and rides off at full speed. Her lover pursues, if he overtake her, she becomes his wife, and the marriage is consummated on the spot, after this she returns with him to his tent. But it sometimes happens that the woman does not wish to marry the person by whom she is pursued, in which case, she will not suffer him to overtake her. And Dr Clarke was assured that no instance occurs of a Kalmuk girl being thus caught, unless she have a partiality to the pursued. Among the Tungus and Kamchkadale, says Ernan, a matrimonial engagement is not definitively arranged and concluded until the suitor has got the better of his beloved by force, and has torn her clothes. Attacks on women are not allowed to be avenged by blood, unless they take place within the court or house. The man is not regarded as to blame, if the

MARRIAGE CUSTOMS

woman have ventured to leave her natural place, the sacred and protecting hearth' Pallas observes that in his time, marriage by capture prevailed also among the Samoyede

The Jakun races of Malacca are badly dressed, many of the women have only a sarong, and if they are married, a ring, the necessary present of the husband before marriage. The greater part of the men have nothing but a strip of the fibrous bark of the terap tree, beaten into a sort of cloth of a reddish brown colour, called a sarawing, round their loins, part of this comes down in front, is drawn between the legs and fastened behind. Their marriages are ordinarily celebrated about the month of July and August when fruits are plentiful. The bridegroom frequents for some time the house of his intended and when he has obtained her consent, he makes a formal demand to the father. A day is then appointed and an entertainment is prepared, more or less solemn, according to the means of the two contracting parties, and their rank in the tribe. When the day of the marriage is arrived, the bridegroom repairs to the house of the bride's father, where the whole tribe is assembled. The dowry given by the man to his intended is delivered, and must consist at least of a silver or copper ring, a few cubits of cloth perhaps a pair of bracelets, or other ornaments, and furniture are added. Sometimes the woman presents also some gifts to her intended and then the bride is delivered by her father to the bridegroom. Amongst some tribes there is a dance, in the midst of which the bride elect darts off into the forest followed by the bridegroom, a chase ensues during which, should the youth fall down, or return unsuccessful, he is met with the jeers and meriments of the whole party, and the match is declared off. A European who inhabited Pahang many years, said that during the banquet a large fire is kindled, all the congregation standing as witnesses the bride runs round the fire till caught up by the groom. Amongst these Jakun races adultery is punishable by death. It is not allowed to keep more than one wife. Only one was seen who had two, and he was censured and despised by the whole tribe. A man can divorce his wife and take another. If the divorce is proposed by the husband, he loses the dowry he has given to the woman, if the woman ask the divorce, she must return the dowry she received. The children follow the father or the mother according to their wishes, if young they follow the mother. In their marriages, the youth

MARRIAGE CUSTOMS

arranges with the girl's parents, but the ceremonial reminds us of the old tale of Hippomenes and Atalanta. If the tribe is on the bank of a lake or stream, the damsel is given a canoe and a double bladed paddle and allowed a start of some distance, the suitor, similarly equipped, starts off in chase. If he succeed in overtaking her, she becomes his wife, if not the marriage is broken off. But the chase is generally a short one, for though the maiden's arms are strong, her heart is soft and her nature warm and she becomes a willing captive. If the marriage takes place where no stream is near, a round circle of a certain size is formed. The damsel is stripped of all but a waist band, given half the circle's start in advance, and if she succeed in running three times round before the suitor come up with her, she is entitled to remain a virgin. If not, she must consent to the bonds of matrimony, as in the other case, but few outstrip their lovers.

According to Mohan Lal, the Sikh Jats are polyandrous, and one brother takes his brother's wife but in saying this he seems to allude to the custom of China, also written karao, seemingly from "karana," to cause to do, the term given among the Jat, Gojari, Ahir, and other races and tribes in western Hindustan to concubinage generally, but more especially to marriage of widow with the brother of a deceased husband. The practice which is also known to the eastward by the name of Oohree, in the Deccan as Buthee, and, in other provinces, by the name of Dhurecha, is followed among these classes, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brothers' widows, but among the Jat of Delhi even this is not prohibited. The practice has been common among several nations of the East. The Jews followed this custom, and in Egypt it was admitted for a childless widow to cohabit with a brother of the deceased husband. When the laws of Menn were enacted, China appears to have been a recognized institution but as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten according to law on the wife of a man deceased, or impotent, or disordered, after the due authority given to her, is called the lawful son of the wife (Ch. IX, v 176)

MARRIAGE CUSTOMS

From the fact of Dianpadu marrying the five Pandoo brothers, we learn that polyandry must have prevailed amongst the heroes of that period, and if polyandry, the practice of Curao was, no doubt, not uncommon indeed, the compiler of the Mahabharata, Vyasa, was himself appointed to raise up offspring to his deceased brother. There is perhaps no circumstance which so strongly shows the northern descent of the deified heroes, as this marriage. Herodotus tells us that the practice prevailed among the nomadic Seythians, as it does at present among the Bhotia. The practice is adopted also by the Nair of Malabar, between whom and the people of the Himalaya Wilson traces the obscure vestiges of a connection.

Amongst the Jat, Goojri, and Ahir, children born Curao are considered legitimate, and are entitled to inheritance accordingly. Children begotten by the woman previous to Curao, except in the case of fraternal Curao, are known by the name of Kudhe-lara, and do not inherit the property of the father-in-law.

Japanese, of all classes, look upon their wives as upon a faithful servant, a Japanese is never known to beat his wife. It is a custom amongst some Japanese to take a woman a few weeks on trial before deciding upon whether to marry her or not. The Japanese marriage ceremony is very simple. The bride and bridegroom drink wine with each other three times, exchanging cups with each other every time, in the presence of a few select friends, after which the young lady gets her teeth blackened, and she is married for better and for worse.

Amongst the mahomedan women of India, also, the custom is followed of blackening the brides teeth with missee on marriage, women never use it before their wedding day, and it is by the black mark in the crevices between the teeth, occasioned by the application of the missee, that a woman can be observed to be married or not.

Among the Aheta of the Philippine Islands, when a man wishes to marry a girl, her parents send her before sunrise into the woods. She has an hour's start, after which the lover goes to seek her. If he find her and bring her back before sunset, the marriage is acknowledged, if not, he must abandon all claim to her.

The custom of capture is also to be traced in the rite of lifting the bride over the doorstep, which has prevailed in such different and distant races as the Romans, Redskins of Canada, the Chinese and the Abyssinians. Hence, also, perhaps the honey moon of England, during which the bridegroom keeps his

MARRIAGE CUSTOMS

bride away from her relatives and friends, hence even, perhaps, as Mr M'Lennan supposes, the slipper is in mock anger thrown after the departing bride and bridegroom.

The Bible shows a progressive change in the Jewish views on women. At the outset, the right of woman to choose her lot seems to have been wholly disregarded, as Abraham twice permitted Pharaoh to have Sara, Judah condemned his daughter-in-law to be burned and God threatened to give David's wives to his neighbours or to his son. Michal was transferred to Phalti from David by Saul, who had quarrelled with David, and kings habitually succeeded to their predecessors' wives.

Among the Hebrew people so far back as the time of Abraham, monogamy was recognized as the only legitimate state of things. The elevated conception of marriage presented in the record of the creation, testifies to a most profound sense of the sacredness of monogamy as the most intimate possible union of two persons. The canticle is a song of wedded love and fidelity. Polygamy was not prohibited amongst the Hebrews, but there is nothing to warrant the terrible seraglio customs depicted in Judges and instituted by David and Solomon as regal.

In later Jewish history, the idea came to be that it was better for a woman to be a transferable concubine than to die an old maid, and virginity and childlessness were the only lots bewailed under the Old Testament regime. A writer in the Westminster Review observes that wherever the regime has been theocratic, as in the Jewish and Papal theocracies, there woman has fared the worst and her position has been most favourable whenever a strong rough moral sense of individual right as in pagan Greece and Rome has been dominant. In pagan Rome, seclusion was not known, but on its change to christianity this became prevalent, divorce became impracticable, and while woman, theologically, was pronounced to be Queen of Heaven and Mother of God, she became a mere chattel of her husband.

Some of the Indian races are not permitted to marry amongst the same lineage while other races marry their near blood relatives. The Kocch are forbidden to marry excepting within the tribe.

Among the Yeikala of Southern India, the first two daughters of a family may be claimed by the maternal uncle as wives for his sons. The value of a wife is fixed at twenty pagodas. The maternal uncle's right, to the first two daughters is valued at eight, out of twenty pagodas, and is carried out thus —if he urge his preferential claim, and

marry his own sons to his nieces, he pays for each only twelve pagodas, and similarly, if he, from not having sons or any other cause, forego his claim he receives eight pagodas of the twenty paid to the girls' parents by anybody else who may marry them.

The Doinguak, a branch of the Chukma, appear to have been endogamous. Captain Lewin mentions that during the chiefship of Jaunbur Khan about 1782, the chief passed an order that the Doinguak should intermarry with the tribe in general. This was contrary to ancient custom, and caused discontent and eventually a break in the tribe.

The Kalang of Java, who have some claim to be regarded the aborigines of the island, are also endogamous, and when a man asks a girl in marriage he must prove descent from their peculiar stock.

The Mantchu Tartar race forbid marriages between those whose family names are different. In Guam brothers and sisters used to intermarry, and it is even stated that such unions were preferred as being most natural and proper. Endogamy would seem to have prevailed in the Sandwich Islands and in New Zealand, where, as Yate mentions, 'great opposition is made to any one taking, except for some political purpose, a wife from another tribe, so that such intermarriages seldom occur.'

Amongst the brahmins, and rajputs of British India, throughout Western and Eastern Africa, in Circassia, Hindostan, Tartary, Siberia, China, and Australia, as well as in north and south America, marriages take place between persons of different tribes. Burton says that 'some clans of the Somah will not marry one of the same, or even of a consanguineous family, and the Bakalan have the same rule. In India, the Warah tribes are divided into sections and no man may marry a woman belonging to his own section. In the Magar tribes the same rule prevails. Col Dalton tells us that the Ho, Moondah, and Oraon are divided into clans or keeli, and may not take to wife a girl of the same keeli.' The Garo are divided into mahari, and a man may not marry a girl of his own 'mahari.' Mr. M'Culloch relates that the Manipui and other tribes inhabiting the hills round Manipui, the Koupooi, Mow, Maia, and Muring, are divided into four families, Koomul, Loong, Angom, and Ningthaja. A member of any of these families may marry a member of any other, but the intermarriage of members of the same family is strictly prohibited.' The Toda race, according to Metz, 'are divided into five distinct classes, known

by the names Peiky, Pekkin, Kuttan, Kennae, and Tody, of which the first is regarded as the most aristocratic. These classes do not even intermarry with each other, and can therefore never lose their distinctive characteristics. General Campbell and Major Macpherson mention that the Khond regard it as degrading to bestow their daughters in marriage on men of their own tribe, consider it more manly to seek their wives in a distant country, and regard marriage between people of the same tribe as wicked, and punishable with death. The Kalink, according to Dr. Hell are divided into hordes, and no man can marry a woman of the same horde, the bride, says Bergman, is always chosen from another stock, 'among the Dubet, for instance from the Torgot stock, and among the Torgot from the Dubet stock. The same custom prevails among the Circassian and the Samoyed. The Ostiak regard it as a crime to marry a woman of the same family or even of the same name.

Polygamy has prevailed in Asia generally from the most ancient times, but as a rule it has been practised only amongst the rich and luxurious, or by those whose first wives gave no children, or amongst tribes whose traditions and customs compelled them to raise up seed to their deceased brethren. The Veda, however, recognise monogamic marriages, the union of one man and one woman, as the natural state, husband and wives are described in the Rig Veda (Mand I, Hymn 131, V 3, also Hymn 43) as presenting their oblations two and two together and at another place (Mand II, Hymn 39) a husband and a wife are given amongst other illustrations of piety. On the other hand, (Mand, I, Hymn 126,) a young Rishi, named Kakshivat, celebrates the generosity of a rajah who had given him his ten daughters in marriage. In ancient times, amongst the mountain tribes, on the western parts of the Himalaya known as Gandharva, and supposed to be the modern Kandahar, the practice was at one time prevalent amongst the kshatriya tribes, of forming a union by mutual consent, and associating together without any preliminary ceremonies. The brahminical legislator Manu (Ch III v 26-32-41) recognises the legality of such marriages, but declares none but the kshatriya race may contract them, he denounces them as base unions, the offspring of which will act cruelly, speak untruthfully and abhor the Vedas. Such unions,—in the present day, are not known to occur. When the two younger sons of King Santanu Vichitravirya died childless, the Maha Bharata mentions that Vichitravirya's widow first asked

MARRIAGE CUSTOMS

Bhishma saying "take the rajah's widows, I pray you, and raise up sons that shall be to him as his own sons," and being refused, in consequence of his vow, how can I do this thing? have I not vowed a vow that I would never become the father of children by any woman," she sent for her own kinsman, Vyasa, to whom was born the blind Dhritrashtra, Pandu and Vidura. This practice is identical with that of the Jews, as described in Ruth.

In most countries, man has arrogated to himself a superiority over woman and has regarded her duty to be to submit to man's decisions. But the ancient Britons, as also some of the Median Cantons, the Pict, and the Getae were polyandrous and the custom is traceable among the ancient Germans. In the present day polyandrous rites prevail in Tibet, in Cashmir, in the Himalaya, amongst the Toda, the Coorg, the Nan, the Kandyan race, in Ceylon, also in New Zealand and some of the Polynesian islands, in the Aleutian Archipelago, among the Koryak, the Sipoigian Kasak, on the Orinoko, amongst the Iroquois in parts of Africa, and in Lancerotti.

The origin of the polyandric custom has been referred to the communist practice still in force amongst Hindus, with respect to all property and earnings, for where small parcels of land were to be subdivided amongst families, it was of consequence that the members should continue limited. The scarcity of women amongst a military class of foreign immigrants and the absence of brothers on pasturing expeditions whilst others stayed at home have also been pointed to.

The Mahabharata, relates that Pandu with money and jewels, purchased Madri from her brother Salya, king of Madra. But in former times the princesses of some parts of India appear to have enjoyed the privilege of selecting a husband from amongst a number of suitors assembled for the purpose at a swayambara or tournament. In the Institutes of Manu (Book III ver 27) eight different forms of marriage are mentioned, but this right of selection is not one of them. In the 9th book, ver 9, there is an allusion to it, but it is doubtful whether this has reference to any but the commercial and servile classes. "Three years let a damsel wait though she be marriageable. After that time let her choose for herself a bridegroom of equal rank." In Kalidasa's celebrated poem, called Raghuvansa, there is a beautiful description of the Swayamvara of Indumati, sister of the king of Vidarbha, in which she chooses Aja, the son of Raghu, out of a large as-

MARRIAGE CUSTOMS

semblage of royal suitors. In professor Johnson's Selections from the Mahabharata we have an account of the Swayamvara of Drupadi, the daughter of Drupada king of Panchala, and afterwards the common wife of the five Pandu princes.

In South Malabar, descent to sons is the law, but in North Malabar, the Nan, the carpenter, brass-smith, black-smith, and gold-smith artisans, the Tiya, who are toddy drawers, and the Mookwa who are fishermen, are all polyandrists and descent of property goes in the female line. In North Malabar this law of descent is called Maruma ka-tayam, and the mahomedan Mopla has conformed to this usage. In Canara, a similar law called Alja-Santana, or nephew inheritance, prevails and is in practice more strictly carried out than in North Malabar. In North Malabar the adherents to Maruma-ka-tayam form united family communities termed Tawaad. The senior member of whatsoever branch is the head of the family and is termed Karmayen, the other members are styled Anandiyen. The remotest member is acknowledged as one of the family and entitled to maintenance if living under subordination to the head of the family and taking part in their religious observances, for the women there is nothing analogous to the state of widow-hood as existing elsewhere, whether in alliance with men or not, they reside in their own families. The Nur marries before he is ten years of age, but though he supports, he never associates with his wife who receives, at her pleasure, any men, provided they be not of lower birth. Consequent on this form of descent, a Nan does not know who his father is. In law, property is held to vest in the females only, practically the males are co-sharers with the females. In default of males, females succeed to the management of the family property. In some families, the management devolves on them preferably to the males and the senior female takes it. There is, however, a growing tendency to convey property from father to son, arising from the gradual abandonment of polyandristism. The connubial connection in question is called in Malabar "goona-dosham,"—"goona" good "dosham," evil (for better for worse). In Travancore, it is styled "mundu-vanga," viz mundu cloth "vanga" receiving, where the girl taken is of ripe age and her consent must be obtained. Personal acquaintance thus precedes the union. The hour selected is 8 P.M., there is an assemblage of friends, the man presents the woman with a "mundu" or white muslin cloth, in a corner of which in North Mala-

MARRIAGE CUSTOMS

bai, a small sum of money is tied. The girl either goes to the man's house, or remains in her own and is visited by him there. Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three. The descent being in the female line, the parentage of the father is immaterial. The *maruma-ka-tayam* law is not followed in North Malabar by the *Aka-Podwal*, a class of pagoda servants, nor by the brahmins of North Malabar or of Canara, but in *Tiruvancore* law only the eldest brother of a brahmin's family is allowed to marry with his equal; the other brothers form other connections. In the *Tuluva* country, "the brahmin widow can devote herself to the temple, and reside outside or inside its walls. If within the walls, she is a servant of the idol and receives the visits of men of her own caste only; the offspring of such if boys are called *Moylai*, and the girls are married to them. But if she elects to reside outside the wall she must pay a monthly sum to the pagoda and may cohabit with any man of pure descent."

Amongst the *Siah posh Kafir*, the marriage ceremonies are extremely simple, consisting merely of procuring two twigs, of rods, of the respective height of the bride and bridegroom, and tying them together. They are then presented to the couple, who preserve them with much care, so long as they find it agreeable or convenient to live together. If desirous to separate, the twigs are broken and the marriage is dissolved.

With the buddhist races of Tibet, and *Burmah*, marriage is more readily contracted, and the tie more easily broken. In *Burmah* marriage and concubinage are regarded as civil contracts, and all breaches are punished by fines; seduction is also punishable by a fine. Girl marriages, as in India, are unknown in *Burmah*, and a *Burmese* girl is counted and won. The period of the day between eight in the evening and midnight, is called counting time during which the girls receive five or six admirers, who act as a check to each other. The women wear as a petticoat a gay coloured cloth, which just wraps the lower part of the body, and opens at every step, and this costume was adopted to attract the men.

According to *Grosse*, (*Histoire Abregee des Cultes*, Vol I, p 431), and particularly in the valleys of the *Ganges*, virgins were at one time compelled before marriage to present themselves in the temples dedicated to *Juggernaut*, and the same is said to have been customary in *Pondicherry* and *Goa*. There is no similar custom known at present,

MARRIAGE CUSTOMS

in any part of India, the most recent notice of it being that at p 163, related by the *Rev'd Mr Roberts*.

Hindus, in sickness, at marriages and other ceremonial occasions, loose a bull which thenceforward rambles at will without an owner. These haunt the market places and landing places, and large towns such as *Benares*, the *Ranb*, *Samli* and *Sulu* or widows' bulls are numerous. The bulls are generally in good condition, are often in the way but rarely mischievous.

The fair inmate of the mahomedan harem, whom we picture to ourselves conversing with her lover in language too delicate and refined to be expressed by anything else but flowers, uses ordinarily words which would shock the ears of even the most depraved amongst the people of England.

Mann says, there are eight forms of the nuptial ceremony used by the four classes, some good and some bad in this world and in the next," They are termed

Brahma	Prajapati	Raehasa
Deva	Asura	Pisacha
Rishi	Gandharvah	

Mann says "the first six ceremonies in direct order are by some held as valid in the case of a priest, &c, &c. *Mann* utterly reprobates the idea of *Gandharvah* marriage. In Chap III para 32 he says that by the *Brahma*, *Deva*, *Rishi* and *Prajapati* marriages, only are born sons illumined by the *Veda*, learned men, beloved by the learned, adorned with beauty and with the quality of goodness, wealthy, etc etc, performing all duties and living a hundred years, while from the other four marriages are produced sons acting cruelly, speaking falsely, abhorring the *Veda* and the duties prescribed in it." And further he declares that "the son of a *brahma* marriage, or wife by the first ceremony, redeems from sin if he perform virtuous acts, ten ancestors, ten descendants and himself the twenty first person. A son born of a wife by the *Deva* nuptials, redeems seven and seven in higher and lower degrees, of a wife by the *Asura*, three and three, of a wife by the *Prajapati*, six and six.

"From the blameless nuptial rites of men springs a blameless progeny, from the reprehensible, a reprehensible offspring. Let mankind, therefore, studiously avoid the culpable forms of marriage.

"By culpable marriage, &c, &c, great families are sunk to a low state.

A marriage procession in the North-West of India has many elements different from those in *Bengal*. The months of April and

MARRIAGE CUSTOMS

May being considered as the most auspicious season for marriage, hymeneal processions may now be daily witnessed in any of the great cities of the North-West. The bridegroom, instead of being carried in a palanquin and followed quietly by a crowd of guests, proceeds in the Upper Provinces on horse-back, with musicians playing right and left, and a band of female songstresses chiming songs suited to the occasion.

The student of social philosophy in determining the stage of civilization at which any nation has arrived, regards as an almost infallible criterion, the degree of esteem in which its women are held. It is only in highly civilized societies that woman takes her proper rank as the equal and companion of man, and as culture declines and intellect narrows, she gradually sinks, till in polygamous communities, the husband only regards the wife as, "Something better than his dog, a little dearer than his horse." The light in which a nation looks upon its women, is not unfrequently reflected in the forms of the national marriage ceremony. With the Spartans, whose women were more respected than any other women of Greece, to commemorate the practice of former days, the bride was seized by the husband and carried away as if by force, though really with the sanction of the parents. In ancient India, the position of the wife was far more honourable than it is in the India of the present day, and against this degradation of the sex, the hindu marriage ceremonies, which have descended from bygone ages, make then constant protest, for in them, the woman is recognised as the first and greatest blessing the gods granted to man. As a hindu poet has said —

Woman is man's better half,
Woman is man's bosom friend,
Woman is redemption's source,

The whole spirit of the hindu ritual is opposed to polygamy, but inculcates firm and undeviating allegiance to each other on the part of both husband and wife.

Much attention is at the present time directed towards this portion of the Hindu Code. An influential and increasing sect of pure theists, the Brahma Somaj, followers of the celebrated Ram-Mohun Roy, have for some time used a revised ritual in which, while idolatrous invocations of the Vedic and Puranic deities are suppressed and the *One without a Second* is entreated to sanctify the union,—the ceremonies which are not idolatrous and which have been consecrated by the use of ages are preserved. In the opinion of Mr. Cowie, the Advocate General

MARRIAGE CUSTOMS

of Calcutta, such marriages are however, according to hindu law, invalid. It was with an immediate view to the relief of the members of the Brahma Somaj, that the Honourable Sumner Maine introduced into the Legislative Council of India, his bill to legalize marriages between natives of India not professing christianity, and objecting to be married in accordance with the rites of the Hindu, Mahomedan, Buddhist, Parsee or Jewish religion. The marriage must be solemnized in the presence of a Registrar to be appointed for the purpose, and of at least three credible witnesses, in whose hearing each of the parties make the following declaration: "I, A B, am a native of British India, I do not profess the Christian religion and I object to be married in accordance with the rites of the Hindu, Mahomedan, Buddhist, Parsee or Jewish religion." The bride and bridegroom are then to repeat words to the following effect: "I, A B, declare, in the presence of the Almighty God, that I take thee O D, to be my lawful wedded wife (or husband)."

It is further provided that the husband must have completed the age of eighteen, and the wife must not be under fourteen. If she is under fourteen the consent of her father or guardian is necessary. With the exception of a small section, the Brahma Somaj sect themselves, think that the bill goes too far. They say it makes the marriage contract "a mere civil union, with no more solemnity about it than a trade partnership with community of interest and goods" while the hindu religion, regards marriage as a sacrament, and they have been accustomed to look upon it as the chief of the sixteen religious rites which are to be performed by every pious hindu in the course of his life. They think that while idolatrous rites and ceremonies should be omitted, some religious ceremonies handed down by their forefathers should be made compulsory.

According to hindu law, a girl is marriageable at eight but many are given in marriage from the age of two. After marriage she remains with her parents till she attain maturity, when another ceremony takes place and her husband fetches her to his own house. A brahmin girl who comes to maturity without having contracted matrimony, loses her caste. The duty of choosing a husband belongs to the girl's father, but should he be dead, it devolves in succession upon the paternal grandfather, brother, paternal uncle, male paternal cousins and lastly upon her mother. If these omit to perform their duty till after the girl has reached the age of eight, she may choose

MARRIAGE CUSTOMS.

for herself. She can only marry with those of her own caste and the preference should be given to the sons of her mother's brother or of her father's sister. Strange to say while this preference is permitted and encouraged, it would be considered a dreadful crime to think of marrying the sons of the father's brother, or of the mother's sister, though among us in all these cases, the relationship being that of first cousins, marriage would be equally legal.

In the present day, marriages generally take place when the youth is about twelve years of age and the girl about five or six. We will suppose then, that a father wishes to procure a wife for his son, the preliminaries have been arranged, the girl's horoscope has been consulted and found propitious, and it now remains to find out a lucky day on which the ceremonies shall commence, for, as the Hindu proverb has it, "even good men cannot help so much as good days." This is done, and on the eve of the day fixed upon, a friend of the youth visits the house of the bride elect, and formally gives notice to the girl's father that on the morrow a religious ceremony is to take place in which his favour and assistance will be needed. As an earnest of his readiness to help on the good work, the father of the bride presents the messenger with two cocoanuts. These are afterwards given to the young man, who is informed of the promise of his future father-in-law, and the ceremonies are now commenced by invoking the favour of the gods and propitiating the brahmin gurus with gifts. Vighnesvaia, the hindu Janus is especially invoked as the remover of obstacles, and an elephant faced and pot-bellied image is made of saffron to represent him. Saffron is considered as peculiarly auspicious and it is as much in request at hindu marriages, as the traditional orange-blossoms are at weddings in Europe. An earthen vessel filled with water, is then placed upon a heap of rice, the symbol of fertility, the brahmins repeat over the vessel several mantra calling upon Varuna the god of the waters to sanctify the contents, which are then poured over the head of the bridegroom. The boy next assumes for the first time the toga virilis, his eyelids are darkened with powder, a brilliant sectarian mark ornaments his forehead, and on each cheek is placed a "beauty spot."

And here follows a very curious part of the ceremony. He is directed to set out on a pilgrimage to Benares. A staff and an umbrella are placed in his hands, sandals are bound on his feet, he wears a tur-

MARRIAGE CUSTOMS

ban on his head, and carries a bundle on his back, and a copy of the Vedas, under his arm, for as a brahmachari or bachelor he must be a student of the Vedas. Thus equipped he commences his journey, but he is met by the father of the bride elect, who diverts him from his professed intention by promising to give him a wife. The youth says he is satisfied, and on receiving two more cocoanuts to ratify the promise he returns home. After removing his pilgrim weeds he enters a palanquin, and with his friends, proceeds to the house of his father-in-law. In the front of the house is erected a pandal or booth, made of leaves and branches of trees, and supported on from four to twelve pillars. An even number must be chosen, as they represent married couples. Plantain trees with overhanging clusters of fruit are placed on each side of the entrance, and the inside of the booth is decked with leaves and boughs and fruits of the mango and the aieca, and with white jasmine flowers, the symbols of purity. The bride is now brought in, and the innocent little maid seems not at all displeased at her newly-acquired importance and her gaydresses and jewels. A swing is fitted up with a broad seat, and on it the bride and bridegroom are caused to sit. Three female relatives now approach and wash the feet of the young couple with milk three times. They are then swung, while the women chant the praises of their favourite deity, Krishna, the lover of the shepherdesses. Balls of rice, mixed with saffron, are thrown towards the four points of the compass. This is an offering to the gods and the manes, who are all supposed to be present and invited guests. The friends of the bridegroom now approach and give fruits to the bride and his friends make like presents to the bride. The girl's mother then lifts her new son-in-law upon her hip (in the usual way in which infants are carried in India), and takes him thus from the pandal into the house. This signifies that she has adopted him as her own son. While this is going on, songs are sung by the women, and all join in the sanskrit chorus, Gouri, kalyana, Vaibhogame—i.e. "a virgin, a wedding, O joy!" Afterwards a dais is raised within the pandal, and upon this dais the young couple sit in state. Here they are blessed by the brahmins and again the women chant songs of joy. There are five things considered essential to the hindoo marriage ceremony, viz., the betrothal, the gift of the virgin, the acceptance, the seizure of the hand, and the seven steps or *Sapta pad*.

In giving away the virgin, the girl's father

MARRIAGE CUSTOMS.

or guardian must say, in the presence of the brahmins, to the father of the bridegroom. "I give you, for your son, my beautiful virgin daughter, accept her therefore." The father of the youth replies—"With my mind, with my voice, and with my body I joyfully accept thy daughter for my son and religiously receive her among my own kindred." The girl's father then declares his gotram (tribe) and gives grains of rice tinged with red and betel leaves to the bridegroom, declaring again that he gives him his daughter and promises to defray all the expenses of the marriage. With the girl there should be given one or more cows, some land and a salagram stone.

The girl's father next makes a solemn declaration in the presence of the assembled brahmins, thus—"O Brahmins! to this youth M learned in the Vedas, the son of N., to him I give my daughter dressed in gay apparel and adorned with gems."

The brahmin answers, "Tatha astu." So let it be. The father-in-law having taken the hand of his daughter, now puts it into the hand of the bridegroom, and pours over them watersacred to Vishnu. The pouring of water according to Eastern custom, makes a gift irrevocable, and the marriage should be now complete. The Sapta padī and the ceremony of tying on the Tah have however been superadded. The wooden yoke of a bullock used to the plough is brought and lightly laid upon the head of the bride. A veil is then held up between her and the bridegroom, and the mangala ashtaga or eight auspicious verses are recited. They form a canticle calling upon the gods, the saints, the trees, the hills and the rivers to witness and to be auspicious to the union. The veil then falls, and the bridegroom binds a golden ornament, called the Tah, around the neck of the bride. This can never be removed except in the unhappy event of her becoming a widow. Then follow the homam or sacrifice to Agni the god of fire, in which the bride and bridegroom take together the Sapta padī, or seven steps amidst the loud chanting of the Vedas. From this observance the term Sapta padīnam has become synonymous with friendship, and it is common for two persons to swear eternal friendship, by taking seven steps together. Next comes the ceremony of eating what is called Madhu pākam, literally mead mixture. No mead is now used, but grains of parched rice are substituted, and it is strange that the name of the ceremony is still allowed to perpetuate the memory of the fact, that in times past, the brahmins did not scruple to drink fermented

MARRIAGE CUSTOMS

liquors, although they now strictly prohibit their use. It is also interesting to observe another evidence of the similarity of tastes and practices which continued to characterize the Aryan races in the East and West, long after their first separation. The old literature of England shows us that formerly the chief glory of an ancient English warrior, was to drink himself drunk on a mead bench. The practice of mead drinking is still kept up in Wales, and it is to this same fermented liquor the poet Grey refers in his lines on the death of Hoel—

"Weathed in many a golden hunk,
From the golden cup they drink
Nectar, that the bees produce,
And the grape's ecstatic juice"

On the third day after marriage, the attention of the bride is directed to a small star named Arundhati near the constellation of the Great Bear, and she is exhorted to follow the chaste example of Arundhati, the wife of the rishi Vasishta, who on account of her conjugal fidelity, was deified and placed among the stars. On the fourth night, a torch light procession sets out and the bride and bridegroom are carried round and round the village in a palanquin, with music and dancing. This goes on till sunrise. They are then conducted home and are received at the threshold by some married women, whose husbands are still living, for the sight of a widow at such a time, is considered most inauspicious. They are then seated and a lamp is waved round their heads to avert the ill effects of "the evil eye," and for the same purpose, the bride sometimes wears a coral bead with the jewel of her Tah. Somewhat in the same way as the English send round wedding cake and cards, the Hindus distribute betel leaves with the nut of the areca palm, and grains of rice coloured red. The friends of the bride now come to offer their congratulations, and a common wish at this time is—"May you live long and bear sixteen." It will be seen that while there is in these ceremonies much that is harmless, and that appears to the Hindu impressive and venerable from its great antiquity, there is still a great deal that is ultimately bound up with polytheism.

There are occasionally practised amongst hindoos of the Cammattee caste a strange ceremony—the marriage of the living and the dead, the principals being, a living woman, and a dead man. In one case, amongst a section of the Camatta or Kompta caste, the relation that had existed between the living and the dead was of a left-handed nature. They had lived together for many long years as man and wife, when after

MARRIAGE CUSTOMS.

suffering from a feeble attack for only four short days, the man died. Agreeably to the peculiar custom of their caste it was imperative, ere the corpse could be removed for interment, that the sacred rites of matrimony should be performed. The sad intelligence was soon communicated to the neighbouring residents, and to a host of friends and acquaintances, and a fluctuating stream of passers-by. A guru or priest, being summoned, and the necessary preparations for the celebration of the nuptials being hurriedly completed, the ceremony commenced. The inanimate form was placed against the outer wall of the verandah of the house in a sitting posture, attired like a bridegroom, and the face and hands besmeared with liquid turmeric. The woman also was clothed like a bride, and adorned with the usual tinsel ornament over the face, which, as well as the arms and the drapery, were daubed over with yellow. She sat opposite the dead, now addressing it light and unmeaning words,—as is customarily done upon such occasions,—and then chewing bits of dry cocoanut and squirting it on the face. And thus the ceremony proceeded and continued for three or four hours. At length, as the sun was nearing the horizon, the nuptial ceremony was brought to a close, and the preparation for the interment commenced. The head was divested of its bridal attire, then bathed, and finally laid upon a bier and covered with a cloth of silk. The face was next rubbed over with some red powder, and in the mouth were placed some betel leaves. The widowed bride then looked her last at the shrouded form of him whom never more she would behold, when, amid agonizing shrieks and deafening tomtomming, the bier was lifted up, and the funeral cortege proceeded in the direction of Sion. One man, preceded the corpse, throwing, at intervals, a handful of pie to the right and left, which were being eagerly picked up.

The Agha offering is made to an idol, a brahmin, to a bridegroom, at the marriage ceremony, or to any venerable person, and on farming operations. It consists chiefly of fruit and flowers, or water, or milk and honey, and when the first bundle of corn is brought home from the threshing floor and deposited, a libation of water is offered between the threshold and the spot where it is so deposited.

The Hindu law does not recognise the second marriage of widows, though seven cases of cohabitation are observed with certain ceremonial rites.

Latterly, however, remarriage of females,

MARRIAGE CUSTOMS

left widows before attaining a really marriageable age, is becoming frequent amongst even the most respectable hindoos in Bengal.

Nothing can be crueller or more unwise than to condemn poor girls, left widows at the ages of 7, 8, and 9 years to a life of celibacy. In the instance of a remarriage of a Hindoo widow, celebrated in the village of Chandikona Zillah, Hooghly, about the middle of the nineteenth century, the bride, whose name was Nilman Das, was the daughter of Baboo Gopi Nath Dutt, of the Kayastha caste, an inhabitant of Baelum in the district of Midnapore. Her first marriage took place when she was only seven years of age, and at eight she became a widow, and at her re-marriage she was twelve years old.

The mere act of being betrothed disqualifies from a second marriage, the affianced becomes a *rand* or widow though a *loman* or maid.

All brahmins marry with persons who have not the same *pravara*, i.e. who do not invoke the same Rishi as their ancestor (*Asvalayana* xi 15), Apastamba says 'Thou shalt not give thy daughter to a man belonging to the same gotra or family.' Yajñeuvalkya says, 'Let a man marry a woman who is free from disease, who has brothers, and who is not the daughter of a man having the same ancestors and belonging to the same gotra as himself.'

Kulin marriages are sought after by the relations of the females, to keep up the honour of their families, and the children of these marriages invariably remain with their mothers, and are maintained by the relations of their females, in some cases, a Koolin father does not know his own children.

Exogamy prevails throughout western and eastern Africa, in Circassia, Hindoostan, Tartary, Siberia, China and Australia, as well as in north and south America, but both exogamy and endogamy prevail in India.

The Korch and the Ho are forbidden to marry excepting within the tribe. The latter at least, however, are not truly endogamous, for as already mentioned, they are divided into 'keeli' or clans and may not take to wife a girl of their own keeli. Thus they are in fact exogamous, and it is possible, that some of the other cases of endogamy might, if we were better acquainted with them, present the same duplex phenomenon.

Silver and golden wedding days appear to be almost as much observed by the Chinese as by the Germans. On these festivals children present parents with magnificently embroidered banners, which are hung up in

MARRIAGE CUSTOMS

the Ancestral Hall, a large room, so appropriated in the house of every wealthy man. In this apartment, besides these tokens of filial affections, are kept boards, on which are painted, in gold on a scarlet ground, the names and titles of the families with which the family has intermarried. When a woman marries, all the boards from her father's Ancestral Hall are carried in procession before her.

The Gond race of Mandla have the "Lamjina Shadi," in which the betrothed lad serves an apprenticeship for his future wife. A Gond girl, however, may exercise her own will and run off with a man, but it is quite allowable for her first cousin or the man whom she has deserted to abduct her from the man whom she has chosen. The Shadi Bandhone is a compulsory marriage. In the Shadi Batho, a woman goes to a man's house. Widows remarry either to a younger brother of the deceased husband, or to some other man.

In China, Borneo and the Fiji islands, a father-in-law after his son's marriage never again visits his daughter-in-law and if they chance to meet, he hides himself. In Australia, a man must not pronounce the name of his father-in-law, mother-in-law or son-in-law.

The Hassaniyeh Arabs have a very curious form of marriage, which may be called, three quarters marriage, that is to say, the woman is legally married for three days out of four, remaining perfectly free for the fourth.

Many savages have no ceremony of marriage. The Badaga can scarcely be said to have any. The Kumbai, another tribe of the Neilgherry Hills, have no marriage ceremonies, (*Trans Ethn Soc* Vol III p 276). According to Colonel Dalton, (*Trans Ethn Soc* Vol VI p 25) the Kenah of Central India have no word for marriage in their own language, and the ceremony used, appears to be little more than a sort of public recognition of the fact.

Among the Reddi race of the peninsula of Southern India, a young woman of sixteen or twenty years of age may be married to a boy of five or six years. She, however, lives with some other adult male, perhaps a maternal uncle or cousin, but is not allowed to form a connection with the father's relations, occasionally it may be the boy-husband's father himself, that is the woman's father-in-law. Should there be children from these liaisons, they are fathered on the boy husband. When the boy grows up, the wife is either old or past child-bearing, when he in his turn takes up with some other "boy's"

MARRIAGE CUSTOMS.

wife in a manner precisely similar to his own, and procreates children for the boy-husband.

Sir W. Elliot says that in several tribes of Central India, the bridegroom seizes his bride by force, either affected or real, and the same was customary among the Badaga of the Neilgherry Hills.

The hill tribes of Chittagong, says Captain Lewin, regard marriage as a mere animal and convenient connection, as the means of getting their dinner cooked. They have no idea of tenderness, nor of chivalrous devotion.

The Kalang of Java, who have some claim to be regarded as the aborigines of the island, are also endogamous, and when a man asks a girl in marriage he must prove his descent from their peculiar stock.

In Ceylon there were two kinds of marriage, the Deega marriage, and the Deena marriage. In the former the woman went to her husband's hut, in the latter the man transferred himself to that of the woman. Moreover, according to Davy p 286, marriages in Ceylon were provisional for the first fortnight, at the expiration of which they were either annulled or confirmed.

In Sumatra there were formerly three perfectly distinct kinds of marriage, the 'Jugui, in which the man purchased the woman, the 'Ambelanak,' in which the woman purchased the man, and the 'Temando,' in which they joined on terms of equality. In the mode of marriage by Ambelanak, says Marsden, p 262, 'the father of a virgin makes choice of some young man for her husband, generally from an inferior family, which renounces all further right to, or interest in him, and he is taken into the house of his father-in-law who kills a buffalo on the occasion and receives twenty dollars from his son's relations. After this, the bank baki'na (the good and bad of him), is invested in the wife's family. If he murder or rob, they pay the bangun, or the fine. If he be murdered, they receive the bangun. They are liable to any debts he may contract in marriage, those prior to it remaining with his parents. He lives in the family, in a state between that of a son and a debtor. He partakes as a son of what the house affords, but has no property in himself. His rice plantation, the produce of his pepper garden, with every thing that he can gain or earn, belongs to the family. He is liable to be divorced at their pleasure, and though he has children must leave all and return naked as he came. The Semando is a regular treaty between the parties on the footing of equality. The adat paid to the girl's friends has usually been twelve dollars.

MARRIAGE CUSTOMS.

In Bali one of the Islands between Java and New Guinea, girls are stolen away by their lovers, who sometimes surprise them alone, or over-power them by the way, and carry them off with dishevelled hair and tattered garments to the woods. When brought back from thence, reconciliation is effected with enraged friends, by a certain compensation price being paid to her relatives.

In the Korea when a man marries, he mounts on horseback, attended by his friends, and having ridden about the town, stops at the bride's door, where he is received by her relations, who then carry her to his house, and the ceremony is complete.

Amongst the Australians the bride is carried off by force.

Forbes relates that the Kuruwa Koonbi celebrate marriages only under a certain side-real conjunction, which occurs about once in thirteen years, and hence it is asserted by others, though they themselves deny it, that their unborn children are often contracted in marriage on the chance of their being male and female. A shepherd caste, called "Bhurwad," fix upon a particular year, about once in ten years, for the celebration of their marriages, and they purchase from the Rajpoot chief, or other ruling power, a piece of ground upon which the hymeneal ceremonies are performed. This caste, also, contracts children of the age of two or three months. The ground cannot be employed for marriage rites a second time, but it is retained henceforth in pasture, and never subjected to cultivation. Upon it the shepherds erect an ornamental wooden post, called a "marriage pillar," which is preserved as an indication of the purpose to which the ground has been applied. In the hills near Rajmahal, it is not uncommon for two neighbours when their respective wives are pregnant, to agree, that the offspring, in the event of their being a boy and a girl, shall be married to each other.

In British India, the rule which principally affects the European community is, the resolution of the Governor-General in Council, dated the 8th October, 1852, which prescribes that certificates of marriage should be transmitted to England in every case when either party to the marriage is what is commonly called a British subject, or the legitimate offspring of such a person, and in other cases, whenever either party to the marriage desires it to be so transmitted. Subjects of foreign European states were provided for in 1854, when returns of births, deaths, and marriages of European Christians, of all dominions, throughout British India, were pre-

MARRIAGE CUSTOMS.

scribed by the Governor General in Council. "European marriages" were explained to include marriages to which Eurasians were parties. These rules provide effectually a record in India of all marriages celebrated in the country, and the recording at home of every marriage in which either of the parties is in any way connected with England. It being, frequently, inconvenient to have to refer to a church register in India for proof of a marriage. There are cases in which, from the destruction of the original books, this inconvenience grows into an impossibility. Every marriage between British people, or in which one of the contracting parties is of legitimate extraction from English parents, has become capable of proof by simply referring to the Registrar General in London.

The 'bride cake' which so invariably accompanies an English wedding, and which should always be cut by the bride, may be traced back to the old Roman form of marriage by 'confarctio' or eating together. The Fiji Islanders have a very similar custom. The act of eating together is, amongst the Burmese, the ceremony of union. Among the Tipperah race of the Hill tribes of Chittagong, the bride prepares some drink, sits on her lover's knee, drinks half and gives him the other half, they afterwards crook together their fingers. Marriage amongst the Romans was of three kinds—the confarctio, which was accompanied with the most awful religious rites, was practically indissoluble, and was jealously restricted to patricians—the Coemptio, which was purely civil and which derived its name from a symbolical sale and which like the confarctio gave the husband complete authority over the person and property of his wife; and the Usus, which was effected by a simple declaration of a determination to cohabit. The Usus became general in the Roman empire, and in it, the married woman remained in her father's house and under his guardianship. Her dowry passed into the husband's hands, but, with that exception, she held her property in her own right, she inherited her share of her father's wealth, and she retained it altogether independent of her husband—and thus, a very considerable portion of Roman wealth passed into the uncontrolled possession of women.

During the ascetic stage of morals in Europe, many Romans and Christians regarded a second marriage as improper.

The Roman actresses were slaves,

The Revd. Mr. Waid relates that at a marriage which he saw, the bridegroom came from a distance, and the bride lived in

MARRIAGE CUSTOMS

Serampore, to which place the bridegroom was to come by water, after waiting two or three hours, at length, near midnight, it was announced, as if in the very words of Scripture, "Behold the bridegroom cometh, go ye out to meet him." All the persons employed, now lighted their lamps, and ran with them in their hands to fill up their stations in the procession, some of them had lost their lights, and were unprepared, but it was then too late to seek them, and the cavalcade, something like the above, moved forward to the house of the bride, at which place the company entered a large and splendidly illuminated area, before the house, covered with an awning, where a great multitude of friends, dressed in their best apparel, were seated upon mats. The bridegroom was carried in the arms of a friend, and placed on a superb seat in the midst of the company, where he sat a short time, and then went into the house, the door of which was immediately shut, and guarded by sepoy, as in our Lord's beautiful parable "And the door was shut!"

Genesis XXIX, 18, relates that Jacob loved Rachel, and said, "I will serve thee seven years for Rachel, thy younger daughter." One of the hindu lawgivers, Vishnuputee, says, "A person may become a slave on account of love, or to obtain a wife" and in several parts of the East Indies this practice is still followed. Among ladies of Egypt girls are prepared for marriage with a very great deal of ceremony. There are women who make the beautifying of brides then especial profession, using scissors and tweezers freely and skilfully to remove superfluous hair, and train the eyebrow to an arched line, perfecting it with black pigments. An adhesive plaster of very strong, sweet gum, is applied all over the body, letting it remain on for a minute or more, then tearing it off quickly, it brings away with it all the soft down on hand, leaving the skin quite bare, with an unnaturally bright and polished appearance, though much admired by Orientals. The face requires very careful manipulation. In some instances this ordeal slightly irritates the skin, and perfumed sesame or olive-oil is applied, or cooling lotions of elder-flower water are used. The bride invites her friends to accompany her to the public bath previous to the wedding day, and sends to each one a packet of henna, two or three pieces of soap and two wax candles. Bridal parties assemble and sometimes pass three successive days in the luxury of the Turkish bath. Pipes, sherbet, coffee and other refreshments are served, and songs are sung in honor of the bride, who of course forms the centre of

MARRIAGE CUSTOMS.

attraction. Her hair is unbraided, she is slowly disrobed, and then, with her loins slightly girdled with crimson silk, she is mounted on high clogs, and led through halls and passages gradually increasing in temperature, with fountains overflowing their marble floors, she is placed on a marble platform, near to a jet of hot water; fullers' earth is rubbed on her head, she is lathered with soap, and brushed with a handful of tow, then hot water is poured over her freely, she is swathed in long towels, and by slow degrees conducted back to a more moderate temperature, and lastly to a fountain of cool water. Her companions in the meantime undergo the same process. Then, shrouded in muslin, crape or linen, they sit together, smoking, till they are rested and refreshed. The edges of the eyelids are blackened thus—a little instrument, like a silver bodkin, is dipped in water, and then into a bottle or box containing an impalpable powder called kohl, made of antimony and carefully prepared soot, the blackened point is drawn gently along between the almost closed lids of the eyes. Poor people use soot alone, and apply it with pins made of lignum vitæ. The arms and hands, legs and feet, are bandaged with narrow tape or braid, like sandals crossing and re-crossing each other, then a paste made of moistened henna powder (the pulverised leaves of the henna tree—*Lawsonia*) is spread and bound over them, and allowed to remain on for several hours. When it is removed, the skin is found deeply dyed wherever the tape (which is now unwound) did not protect it, thus a sort of chequered pattern is produced and when it is artistically and delicately done the feet look, at a distance, as if they were sandalled, and the hands, as if they were covered with mittens of a bright orange or bronze colour. Finally, early on the wedding-day, the bride is dressed in her bridal robes, her hair is braided (in what is called the Grecian plait), small pieces of gold-leaf are stuck on her forehead and on her breast, care is taken not to conceal any of the stars or spots tattooed on her face or chest in infancy; a line of blue dots encircling the lips is sometimes seen, and a spot on the chin is very common. A little rouge is added to heighten the color of the cheeks when considered necessary.

In India, left-hand marriages are common amongst both hindus and mahomedans, and are considered by no means disreputable. On the ground of disparity of rank, left-hand marriages are still sanctioned in Germany, but they seem not essentially different from those here alluded to.

In the old Roman forms of marriage, *confarctio* was the most sacred and the bride and bridegroom were joined together by the Pontifex Maximus in a set form of words, in the presence of at least ten witnesses, the contracting parties having to partake of a cake made of salt, water and flour, called *far*. Of that *panis fariens*, the wedding cake of the British is the relic and their bridesmaids and groomsmen have their origin in the ten witnesses. Amongst the Romans, special honour was given to the children of such marriages and from amongst them were chosen the flamins of Jupiter and the vestal virgins.

In certain African tribes it is deemed a most gallant act for a lover to ride into the presence of his sweet heart, astride a fine boar pig.

Amongst the hindoos of Guzerat, the general rule is that betrothal cannot be set aside, but the practice of different castes varies. Among Rajpoots, if the betrothed bridegroom die, the girl who should have been his wife is treated as his widow, and considered incapable of entering again into the married state. Some brahmins, on the other hand, do not consider themselves bound either by betrothal or by any other ceremony short of the actual joining of hands in marriage. In most castes a betrothed bride is not treated as a widow on the death of the affianced, and in many she may, with permission of the caste, marry another person even in his life-time, should he, before the marriage is concluded, become afflicted with any serious disease. The Kaniwa koonbee, when they cannot procure a husband for their daughter, will sometimes marry her to a bunch of flowers. The next day they throw the flowers into a well, and the bridegroom thus disposed of, the widow is eligible for "*natia*," or second marriage. A similar practice is that of marrying the girl to a person called "a hand husband." This bridegroom may be any male of the caste who is willing to contract, beforehand, that he will receive a certain sum for a divorce and give his bride a release from her marriage the moment the ceremony has been performed. The wife so divorced may then marry in *natia*. The object of these proceedings is the avoidance of expense. No money need be spent by the bride's father upon a "*natia*" marriage, except such as is required for entertaining the friends who accompany the bridegroom. The lady's trousseau is supplied by her husband. An unmarried woman cannot, however, be given in *natia*. About twenty days before the marriage, the house of the parents

are carefully cleansed, and adorned by the wealthy with strings of pearls or handsomely embroidered curtains, and by the poor with garlands of leaves. In front a temporary building, called *mundup*, is erected, which, in the case of poor persons, is merely a thatched hut, but where the higher classes are concerned, is frequently a very brilliant pantomime-like edifice, lined with mirrors and adorned with lamps, rich curtains, soft carpets, and abundance of trussel. Near one of the corners of the *mundup* a wooden post, called a "*jewel-pillar*," is set up, adorned with flowers and other ornaments, and worshipped. Within the *mundup* the planets, *Gunesh*, *Vighan Raj*, and the progenitors are worshipped,—the last mentioned, in order that the household may not, so long as the ceremony lasts, be rendered unclean by the occurrence of a birth or death in the family.

A ceremony, called "*Gotañj*," is performed within the dwelling-house. A flat surface of wall having been whitened, a pyramid is made upon it of red spots, which increase from one at the apex to seven at the base. Below the base line other seven spots are made with clarified butter, which the heat causes gradually to trickle downwards. The figure, which represents a genealogical tree, becomes the 'subject of adoration. The bride performs a ceremony called "*Nyoon-chun*," in which she expresses by significant pantomime the worthlessness in her eyes of even the necessities of life in comparison with her beloved child. Around his head she waves a cake of bread and then a cup of water, both of which she throws from her, she next takes in her hand the "*sumpot*," which is composed of two vessels full of rice fastened together mouth to mouth.

According to the Revd Mr Ward, in Bengal, after entering the house, the bridegroom is led to the place where the marriage rites are to be performed, and where the father-in-law, taking off the old garments and poita of the boy, arrays him in new clothes, and takes him into an inner apartment, where they make him stand on a stool placed on the cow's head and certain other things buried in the earth, adding a number of female superstitious practices, to induce the bridegroom to behave well to the bride. They next bring the bride on a stool covered with the bridegroom's old garments, and carry the girl round the bridegroom seven times, they then permit the bride and bridegroom fairly to look at each other for the first time. The pan are then brought to the former place, and made to sit

MARRIAGE CUSTOMS

near each other, when the father-in-law puts into the hands of the bridegroom fourteen blades of kooshu grass, tied in two separate parts, which the boy ties under his feet. The father-in-law now pours some water into the right hand of the bridegroom, and while the latter holds it there, the former makes an incantation, at the close of which the bridegroom lets it fall on his feet, rice, flowers and doova grass are next given, which he lays on his head, water is presented as at first with a prayer, and then sour milk then again water. The officiating brahmin now directs the boy to put his hand on a pan of water, and places the hand of the bride on that of the bridegroom, and ties them together with a garland of flowers, when the father-in-law says, "of the family of Kasyapa, the great grand-daughter of Bhanava, the grand-daughter of Rama-Hari, the daughter of Rama-Sundara, Kshama, wearing such and such clothes and jewels, I, Tribakura-dasa, give to thee, Ribhaya-charana, of the family of Sandilya, the great-grandson of Sundara-dara, the grand son of Kanai, the son of Bhaja-Hari." The bridegroom says, "I have received her." The father-in-law then makes a present, for good luck, and adds to it household utensils, &c, according to his ability. He then takes off the garland of flowers with which the hands of the married pair were bound, repeating the gayatri. A cloth is now drawn over the heads of the couple, while they again look at each other, and this part of the marriage ceremony here closes, after the boy and girl have been directed to bow to the salagrama and to the company, that they may receive the blessing of the gods and of the brahmins. A brahmin or a woman whose husband and son are living, then fastens the bride and bridegroom together by their garments with the above piece of cloth, as a token of their union, and they are thus led back into the midst of the family.

It was a custom amongst several Scythic races, for widows not to remarry on the demise of their husbands, but to burn themselves or be buried alive or to be destroyed by the sword or dagger and interred along with their husbands remains. This practice prevailed in the East Indies up to the middle of the eighteenth century, when it was prohibited by the British, but it is still followed in some of the islands of the Eastern Archipelago. In a Government Notification in the Foreign Department, Simla the 7th April 1847, the Governor General expresses much satisfaction in publishing a translation

MARRIAGE CUSTOMS

of a proclamation by the Gwahoi durbai, received from the Governor General's Agent for the affairs of Scindia's dominions, prohibiting the practice of suttee within the territories of maharaja Scindiah.

The Political Agent Jeypoor, having collected the shastees, made enquiries of them regarding suttee and they said that the custom was iniquitous, and then this custom was prohibited by the Jeypoor Government. This durbai had previously issued verbal orders prohibiting this custom, and a proclamation was then issued to the effect that the amil should take precautions, and call on the zemindars, chowdies, kanougoes and other officers, not to allow a suttee to take place in their villages. If a suttee take place in any village, and the zemindar do not give information to the sirkar, such zemindar shall be imprisoned for twelve years, and if any amil after having received information of a suttee being about to take place, do not prevent it, such amil shall be deprived of his situation.

The Governor General also in 1847 published for general information, documents received from the Governor General's Agent at Rajpootana, prohibiting female infanticide in Jeypoor, and limiting the demands of the religious bhat, charun, dholi, and merasi sects, on occasions of marriages in Rajpoot families.

In Guzerat, amongst some castes, a man is allowed to marry as many wives as he please, a Rajpoot sometimes marries twenty, an Oudich brahmin frequently five or six, in other castes, a man may not marry a second time in the life-time of his first wife. Rajpoots never permit the re-marriage of a widow, but in some of the other castes, a woman may remarry more than once. Sometimes it is allowed to a husband and wife, who disagree, to separate by mutual consent, which is signified on the part of the woman, by her tearing the hem of her garment, and on that of the man, by his giving his wife a deed of release. In some castes, it is considered indispensably necessary that girls should be married before they are twelve years old, in others, a husband of high family is much sought for, and women remain unmarried at the age of thirty.

Adi Sai, the founder of the Sen dynasty, brought from Kanouj, five Sagun brahmins of the tribe or gotra Sanhila, Kashyapa, Vatsa, Savarna and Bhairudwaja. Sudia families, Ghose, Base Dutto Guba and Mittra accompanied them and these take the position of Kulin Kaists. In the reign of Bahadur Sen, about 284 years before the mahomedan invasion, all these kulin brahmins

and kulin sudias had greatly increased, and though degenerated in learning they arrogated to themselves a position above all the sapta-sah or aboriginal brahmans Bullal Sen ennobled the brahmans by giving to them the title of Kulu. The kulu brahman subsequently consented to marry the daughters of the aboriginal brahman, who eagerly seek alliances with the kulin, who take advantage of this and have established a scale of fees for condescending to accept a daughter of an inferior. They marry for gold. Of the Kayasts who came from Kanouj, Bhaise, Ghose and Mitra were ennobled by Bullal Sing with the title of Kulin Kayasts. Dass, Day, Dutt, Guha, Kai Paulit, Sen and Sing hold a second rank.

Kulin brahman women are married with difficulty and generally to aged men. In 1868, there were 11 kulins in Hooghly and 1 in Burdwan, each of whom had contracted 50 to 80 marriages—24 in Hooghly and 12 in Burdwan, who had contracted from 20 to 50 marriages and 48 in Hooghly and 20 in Burdwan, who had contracted between 10 and 20 marriages.

Kulinism is thus a great polygamic institution and a few women have become prostitutes. In 1867, the abolition of this polygamy was contemplated and will doubtless soon be carried out.

Perhaps there is no portion of the world of the same size, in which could be found so many varied customs as regards marriage and married life as prevail in India. Although in ancient times, about the commencement of the Christian era, the ancient drama of the *Sacountala* shows the heroine not married till an adult age, in the present day, most of the marriages among the hindus are celebrated while the bridegroom and the bride are mere infants, and on these occasions even the most parsimonious parsi, or hindu and mahomedan are wout to expend extravagant sums on the ceremonies. Polygamy amongst the respectable settled people, is probably not more frequent than the irregularities of married men in Europe, indeed is almost unheard of, except among the idle, the extremely wealthy and that race of Kulin brahmans, of Bengal, the honor of an alliance with whom is so great that families give their daughters in wedlock though there may already be seventy or eighty wedded wives. In the bulk of hindu society, the wife is a mere servant to her husband, works for him, cooks for him, washes for him, but does not eat with, or walk with him, and to pronounce her husband's name would be regarded as an act of gross immodesty. Amongst many of the hindu people too, the

customs of the mahomedans have been introduced, though in some parts of India, as in Bombay and the Deccan, women of good caste are allowed more freedom of action. There seems reason to believe that among the aboriginal races of India the practice of polyandry prevailed largely. It exists now among the Toda, who are a Tamul race, among the Khandyan in Ceylon, although they are reluctant to admit the fact, and amongst the Coolie race. From some texts in *Menn* (cix, p 59,64,66) it would seem that in early hindu society it was permitted to the sudias, and in the epic poem, the *Mahabarat*, the five brothers Pandu are married to the same woman. But probably the most remarkable form of marriage which ever existed, is that which prevails amongst the Nair of Malabar, a Sudia race who form the military caste and aristocracy of that part of India. Until the conquest of their country by Hyder Ali, in 1759, the reigning families in the different rajahships, were all of this caste. With them the custom is, for a woman on marriage not to leave her mother's house, or even to consort with her husband. It is his duty to provide her with clothing, food and ornaments, but he is not recognised, as indeed he could not be, the father of her children, for temporary association is allowed to her with any one, provided he be of equal or higher caste to herself. On the death of her mother, the wedded Nairine lives with her brothers, and as a consequence of this strange custom a man's heirs are not his own children, for them he does not know,—but the children of his sister. The Zamorin of Calcut who was the reigning prince on the Malabar coast, when the Portuguese under Vasco de Gama first effected a settlement, in 1498, belonged to the Nair caste, and his descendants are to be found there. The eldest son of the eldest sister, always succeeds to the title, for the sovereignty was lost under Hyder Ali and Teju's supremacy, and Ibn Batuta found the same rule of succession in operation when he travelled through Malabar about 1340.

In the Psalm lxxviii 63, it is said 'Their maidens were not given to marriage'. This is described as one of the effects of God's anger upon Israel. In Hindn families the marriage of daughters is sometimes delayed, but this is always considered as a great calamity and disgrace. If a person see girls more than twelve years of age unmarried in a family, he says, 'how is it, that that brahman can sit at home, and eat his food with comfort, when his daughters, at such an age, remain unmarried'.

Writing of the Khond race of Orissa,

MARRIAGE CUSTOMS

Major General Campbell says that on one occasion he heard loud cries proceeding from a village close at hand, fearing some quarrel, he rode to the spot, and there he saw a man bearing away upon his back something enveloped in an ample covering of scarlet cloth, he was surrounded by twenty or thirty young fellows and by them protected from the desperate attack made upon him by a party of young women. On seeking an explanation of this novel scene, he was told that the man had just been married, and his precious burden was his blooming bride, whom he was conveying to his own village. Her youthful friends (as it appears is the custom) were seeking to regain possession of her, and hurled stones and bamboos at the head of the devoted bridegroom, until he reached the confines of his own village.

In the Hindu marriages, the *kanya dana* is the giving of the bride in marriage and *kanya panigraha* is the act of the bridegroom taking the bride's hand. In northern India, part of the marriage ceremony consists in tying a string or thread round the wrist of the bride and with many of the races in India, whether of Arian or Turanian descent, part of the marriage ceremonial consists in tying the corners of the bride or bridegroom's cloths together (*Phylu bandhna*) and causing them to encumbulate the village deity.

There is also the ceremony of "sat-pheri" or seven turns round the sacrificial fire.

Professor Wilson explains the term "gotia" as meaning a family, lineage, relationship by descent from a common ancestor of the same name, a family, a tribe, who reckon their descent from some celebrated saint or regard him as their primitive spiritual head, and whose designation they bear, as the Bharadwaja-gotia, Kasyapa-gotra, Sandilya-gotia, &c. In Vol II p 12, of the Hindu Theatrical, Professor Wilson says, it is asserted that thirteen gotia or families of brahmins own their origin to as many divine sages called after their name. Kasyapa (Kusip) is one of the number. The Aswalayana Sutra of the Rig Veda contains the enumeration of the gotia, and their subdivisions, but in a very involved and unintelligible style. The popular enumeration of them, however, is not uncommon, but it is nearly, if not wholly, confined to the south of India, where several of the reputed representatives of these tribes yet exist. He also says, at p 3, of his note to "Johnson's Extracts from the Mahabharata" that in the South of India, brahmins are still found pretending to be sprung from some of the patriarchal families. This, however, is not correct, for, throughout the entire penin-

MARRIAGE CUSTOMS

sula every brahmin claims his own Got, every marriage is regulated by the Got, and no brahmin marries into his own Got.

In common parlance, Got has the same meaning as the more classical Gotia of Wilson's Glossary. Properly, those only are Got, which bear the name of some Rishi progenitor, as Sandilya, Bharadwaj, Bishisht, (Vasishtha), Kasyapa, but it has become the custom to call each sub-division of a tribe a Got, and according to the Nanye Sindh, there are no less than ten thousand. The early genealogies of the Rajpoots frequently exhibit them as abandoning their martial habits, and establishing religious sects, or gotia. Thus, Reh was the fourth son of Piroowa of the lunar race from him, in the fifteenth generation, was Hrita, who with his eight brothers took the office of religion, and established the Kausika Gotia, a tribe of brahmins. According to Colonel Tod, both Got and Kaup, denote a clan, and in Rajputana its sub-divisions have the patronymic terminating with the syllable 'ote,' 'awut,' 'sote,' in the use of which euphony alone is the guide thus, Suktawut, 'sons of Sukta,' Kuimasote, of Kuima, Man-awut, or Manote, mountaineers, 'sons of the mountain.'

The expensiveness of marriages in India has been a great curse, generally leading to infanticide. In the year 1850, when the foster brother of the nabob of the Carnatic was married, about £10,000 were expended in idle ceremonial. More recently, the Guicowar of Baroda on the demise of his first wife married a second time. The preliminaries took a long while to arrange, and the result was exceedingly curious and magnificent.

The 19th Regiment B N I furnished a strong guard of honour, which went down to the city in the morning, and there remained inert till about 4 o'clock in the afternoon, when the Guicowar passed by and was received with all the honours. The Resident, with other gentlemen of the camp, went down to the city in carriages, about half-past two, and then the grand procession commenced. His Highness was got up in the highest style of Eastern fashion, and all in yellow,—that being the correct colour for the occasion. A perfectly tight fitting satin jacket and continuations, together with a quaint head-dress, of a shape between a mitre and a beehive, gave a brilliancy to his appearance which was absolutely dazzling, and the occasion and the glowing yellow reminded the devout beholder of the "sun, which cometh forth as a bridegroom out of his chamber." His Highness mounted a

remarkably fine horse, apparently of a bay colour but so hidden under his liney that he was almost invisible. The saddle cloth was especially gorgeous, of brocade, and *khakab* or cloth of gold. The Guicowar, having settled himself down in his seat, led the way to home and beauty, followed by the English gentlemen on elephants, and all the nobles of the court and retainers. The streets were lined with troops, the Highlanders, the Khaki Regiment, and the Rifles, also the Cavalry. The procession passed on its way, winding through the city till it arrived at the bridal abode, which was very tastefully ornamented and fitted up. Close by this little place, the English gentlemen retired to a house where refreshments were provided for them. After a little while they were summoned to the Presence, and now for the first time appeared the bride, modestly and thickly veiled, sitting on a basket. The bands played, the guns thundered a royal salute, the soldiers fired a *feu de joie*,

'Twas not the gun, 'twas not the guns,
'Twas not the *feu de joie* that runs
Fan up and down the double rank,
But one glad shout that softly sank,
At once a thousand voices said
"It is the veiled Marathi maid,"
The Guicowar, who had felt the strain
Deepest of any, and had lain
Some minutes rapt as in a trance,
After the fairy sounds were o'er,
Too only touched for utterance
Now motioned with his hand for more

The bride, as is customary, sat on a basket, and her royal lover sat in front of her, apparently holding her feet, and fine cords were then wound round the two contracting parties to betoken the indissoluble nature of the bond between them.

Amongst hindoos a marriage may be concluded at any time from infancy, as the parents may please. But amongst the priestly and mercantile orders, the brahman and vaisya races, as also among the goldsmiths, guls must be married before they attain puberty. The brahmans believe that they would be as if guilty of murder if they allowed a gul to grow up before being married. And in southern India they, as also the goldsmith tribe or race or caste, regard such an occurrence with so great horror that, theoretically, they consider it would be incumbent on them, if it happened, but which is invariably guarded against, for all the family to drown themselves. In reality, there is no such great care taken in the artizan classes, and with the Kayastha race, their young women are rarely if ever married till grown up. Amongst hindoos in general,

children have no voice in the matter of their marriage. When parents are desirous of having their sons married, they institute inquiries amongst their relatives or friends not of their own 'gotram' or tribe. They visit her parents in a propitious hour, and request their daughter in marriage for their son. The parents of the gul make inquiries as to the character of the boy, and, if satisfied, they promise their daughter for him. It is not customary for a gul's parents to go seeking for a husband for their daughter. When so far arranged, if the gul's parents be poor, they may perhaps stipulate that jewels and money shall be presented to their daughter, at the marriage time. But this practice, which is a remnant of the ancient custom of purchasing a wife, is gradually dying out with all but the humbler people. Now a day, a rich hindu would disdain to receive money from the parents of their son-in-law for giving their daughter to him, and many tribes, for India contains the descendants of numerous distinct races, repel with disdain any insinuation of their readiness to sell their daughters. Indeed sons-in-law do, now, occasionally, receive some dower of money or property with their brides. But the former practice of disposal of their female children, is clearly marked in their marriage law, in which a gul who quits her father's house for her husband, in another family, ceases to be an heir of her own parents, though she acquires rights in the property of her new home.

When all the preliminary arrangements are settled, a day is fixed for the performance of the marriage preparations are made by the father of the gul, who invites relatives and friends to be present on the occasion, the invitations being usually communicated verbally, but sometimes by letter. On the day preceding that of the marriage, by the Snat'haka Vratam rito, the youth is relieved of his bachelor-hood, the ceremony on this occasion consisting in the homa or fire sacrifice and giving of charity. On the marriage eve, the bridegroom, accompanied by his parents, relatives and friends, goes in procession to the bride's house, and presents her with a new cloth of some value and with the jewels that may have been before agreed on, betel nut is handed to the guests, and friends and relations are entertained. The poor brahmans, too, are remembered on the occasion, the money gifts to whom are called *Datchana*. The wedding day at length arrives, but with emotions very different from those of the principal actors in ancient hindu times, for, now-a-days, both bride and bridegroom are usually quite infants—and

MARRIAGE CUSTOMS

if not both so, the bride with most tribes certainly is. Tribes of sudras, however, and a fair intellectual literary race called kayast'ha, or kayast'h, who claim their origin from a deified mortal called Chatagoputi, also many of the pariah tribes, allow their guls to grow up and remain in their fathers' house without any feeling of impropriety being associated with the practice. And the Vedas teach us, that in their times, virtuous maidens remained unmarried in their fathers' house long after they had grown up. On the wedding-day, the bride and bride-groom, are anointed with oil (the Abhaya-gana-s'nanam), are dressed in their best and are decorated with jewels. The father of the bride has erected a temporary canopy in the court of his house, beneath which she is seated beside her groom, and the family priest commences the ceremony by causing them to make a burnt offering by the Homa sacrifice—of pouring ghee into the fire,—whilst the priest utters a mantra or invocation. At the same instant, by the Navagraha Aritanam, and Asht'ha dik palaka aratanam, a series of incantations, they bring Indra, Varuna, Agni, Yama &c, from Swarga-lokum and locate them in any casual article, in some part of the house.

When seated, the gul is formally given to the husband (Kama-danam) literally spinsters giving. A priest blesses some water in a small vessel, and the father of the gul taking this and his daughter's right-hand places them together in the bridegroom's right-hand, saying I do this that my father, grandfathers, and great grand fathers may attain (Swarga) heaven. The bridegroom then rising, and standing before the bride, amidst the deafening din of tom-toms, ties round her neck the mangala sutram, a thread coloured with turmeric to which a golden jewel called Bottu or Talai is attached. Sandal wood paste, perfume, and flowers are presented to the guests, betel-nut is offered to all relatives and friends and money presents are made. The married couple receive 'Asu-vadam' benedictions and congratulations from the assembly, and as they prostrate themselves at their parents' feet, their parents bless them. *Mrs Spiers' life in Ancient India* p 281. *Sir John Lubbock, Orig Civil*, passim. *Spectator Newspaper* Dr Clarke *Travels in Siberia*, Vols I 332, II p 442. *Ernan*, Vol IV p 97. *Kames' History of Man*, vol II p 58. *Astley's Collection of Voyages*, Vol IV p 575. *M'Lennan's Primitive Marriage*, p 30 also *Trans Ethn Society of London, New Series*, Vol
